Spoon or similar article of flatware. M. Weeber. 150,480–1, Aug. 3.
Squeezer for fruit and the like. W. R. Amstutz. 150,392, Aug. 3.
Stroller or similar article. V. R. Trabucco. 150,476, Aug. 3.
Sunglasses and scarf, Combined. G. Stangl. 150,474, Aug. 3.
Table, Cocktail. W. Dziewit. 150,408, Aug. 3.
Tank or similar article, Transport. R. Bernstein. 150,399, Aug. 3.
Tenderizing machine, Meat. S. Bakewell. 150,395, Aug. 3.
Tire. W. E. Hardeman and S. C. Parker. 150,416, Aug. 3.
Tire. L. J. Lambourn and F. B. Jones. 150,432, Aug. 3.
Tool, Combination. W. F. McDowell. 150,435, Aug. 3.
Toy autogiro. H. F. Schmidt. 150,465, Aug. 3.
Toy horse and chariot, Wheeled. H. Sebel. 150,468, Aug. 3.
Toy, Pop. F. Passio. 150,441, Aug. 3.
Toy snail, Wheeled. H. Sebel. 150,467, Aug. 3.
Toy stationary engine. R. R. Zimmer and H. L. Snavely. 150,484, Aug. 3.
Trap, Animal. G. Sakier. 150,463, Aug. 3.
Ventilator, Window. V. E. Sprouse. 150,472, Aug. 3.
Washing machine or similar article. T. R. Smith. 150,471, Aug. 3.
Water closet. L. B. Berg. 150,397, Aug. 3.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 3D DAY OF AUGUST, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Absorption of ammonia in soda ash production. J. R. Taylor. 2,446,442, Aug. 3.
Acetone-chloroform, Preparing. E. Bergmann. 2,446,453, Aug. 3.
Adjustable clamp. R. H. Godwin. 2,446,470, Aug. 3.
Aerial bomb control system. J. H. Hammond, Jr. 2,446,279, Aug. 3.
Air-conditioning unit. H. C. Dearborn. 2,446,411, Aug. 3.
Aircraft engine support. R. J. Woods. 2,446,309, Aug. 3.
Aircraft landing gear. L. H. Leonard. 2,446,480, Aug. 3.
Airplane, Cargo. A. O. Taylor. 2,446,441, Aug. 3.
Alarm, Burglar. H. H. Druffel. 2,446,217, Aug. 3.
Alkali metal salts and alkali earth metal salts of halogenated lower fatty acids, Preparation of. B. T. Lamborn. 2,446,233, Aug. 3.
Alkyl phenols derived from petroleum, Stabilization and purification of. R. L. Shuman. 2,446,250, Aug. 3.
Aluminum halides by the reaction of alumina, carbon, and free halogen, Producing. R. P. Ferguson. 2,446,221, Aug. 3.
Anhydrous ether, Preparation of. W. K. Buchanan and W. Simpson. 2,446,408, Aug. 3.
Animal trap. G. H. Bricker. 2,446,168, Aug. 3.
Animal trap. J. E. Nickell. 2,446,486, Aug. 3.
Apparatus for bending hard grainless fiber sheets. P. H. Esbjornson. 2,446,413, Aug. 3.
Apparatus for coating cylindrical surfaces. W. C. Huebner. 2,446,476, Aug. 3.
Apparatus for inspecting moving transparent objects. H. H. Marshall. 2,446,377, Aug. 3.
Apparatus for preparing dehydrated bread crumbs. C. A. Gerber. 2,446,175, Aug. 3.
Apparatus for producing indications of movement of an element. F. D. Merrill, Jr. 2,446,428, Aug. 3.
Apparatus for working, conveying, and cutting dough. C. G. Turner. 2,446,201, Aug. 3.
Appliance for the access into streamline-shaped vehicles. E. Rechain. 2,446,434, Aug. 3.
Arc lamp or the like. C. G. H. Hallett. 2,446,278, Aug. 3.
Arch support member. H. L. Whitman. 2,446,449, Aug. 3.
Arylbiguanide hydrochlorides, Manufacture of. B. R. Jacobs and Z. E. Jolles. 2,446,421, Aug. 3.
Arrangement for pneumatic relays of the force-balance type, Adjusting. F. B. Newell. 2,446,385, Aug. 3.
Asphalt pump intake. W. V. Murdock. 2,446,384, Aug. 3.
Automobile brake signal. F. R. Good. 2,446,276, Aug. 3.
Baby carriage, Collapsible and inflatable. M. W. Newberry. 2,446,302, Aug. 3.
Beam. A. and F. W. Braun. 2,446,457, Aug. 3.
Beam antenna system. C. L. Rouault. 2,446,436, Aug. 3.
Bearing structures, Forming. R. I. N. Weingart. 2,446,515, Aug. 3.
Bed cover holder. W. R. Curtis. 2,446,362, Aug. 3.
Belt, High-speed. L. W. Mitchell. 2,446,294, Aug. 3.
Belt loading machine. W. J. Mason. 2,446,184, Aug. 3.
Belt, Power-transmission. E. R. Traxler. 2,446,311, Aug. 3.
Belt, V-type. T. W. Steinke. 2,446,310, Aug. 3.
Beta, gamma-alkenyl ethers of glycerol, and esters thereof. T. W. Evans and D. S. Melstrom. 2,446,464, Aug. 3.
Blanks, Cutting. J. E. Socke. 2,446,198, Aug. 3.
Blocking layer rectifier. S. S. Fry. 2,446,466, Aug. 3.
Blouse. J. Brown. 2,446,209, Aug. 3.
Boiler: *See*—
  Liquid air boiler.
Boot, Dog. M. M. Jones. 2,446,371, Aug. 3.
Boot drier. E. H. Lieber. 2,446,234, Aug. 3.
Bowling pins, Making. R. C. and R. E. Clark. 2,446,213, Aug. 3.
Box: *See*—
  Display box.
Brake beam. O. Otterson. 2,446,341, Aug. 3.
Brassière. H. Schoebel. 2,446,437, Aug. 3.
Bridge type modulator circuit. J. M. Miller, Jr. 2,446,188, Aug. 3.
Bridge, Violin. G. Dahn. 2,446,267, Aug. 3.
By-pass for rotary mud screens. I. T. Minyard. 2,446,293, Aug. 3.
Cabinet: *See*—
  Top access refrigerator cabinet.
Cabinet for television receivers. L. F. Cramer. 2,446,214, Aug. 3.
Cable: *See*—
  Shielded cable.
Camera lens. G. H. Aklin. 2,446,402, Aug. 3.
Car having an adjustable ice rack, End ice bunker. F. J. McMichael. 2,446,485, Aug. 3.
Carbon black, Manufacture of. I. Williams and F. W. Selfridge. 2,446,351, Aug. 3.
Carboxylated monosubstituted barbituric acid. W. Wenner. 2,446,504, Aug. 3.
Carburetor, Speed density. A. W. Orr, Jr. 2,446,339–40, Aug. 3.
Carton: *See*—
  Molded pulp carton.
Cell, Blocking-layer. J. J. A. P. van Amstel. 2,446,254, Aug. 3.
Chair: *See*—
  Horizontally swinging bracket supported auxiliary chair.
Chart supporting and feeding means for recording instruments. R. E. Woolley. 2,446,400, Aug. 3.
Check protector. A. M. Goike. 2,446,471, Aug. 3.
Chlorination of hydrocarbons. J. A. Norton. 2,446,430, Aug. 3.
Choke, Automatic. A. G. Winter. 2,446,352, Aug. 3.
Circuit: *See*—
  Bridge type modulator circuit.
Circuit for effecting sequential operation of a plurality of positive displacement hydraulic motors of different sizes, Hydraulic. B. Welte. 2,446,397, Aug. 3.
Circuit for gaseous discharge devices. P. W. Stutsman. 2,446,199, Aug. 3.
Clamp: *See*—
  Adjustable clamp. Universal bumper clamp.
  Earring clamp.
Clasp. R. L. Rank. 2,446,389, Aug. 3.
Cleaner: *See*—
  Window cleaner.
Closure and receptacle for gas ranges, Combined. H. M. Reeves. 2,446,291, Aug. 3.
Clutch and torque responsive friction coupling, Combination positive. E. W. Dunn. 2,446,363, Aug. 3.
Coffee filter. D. E. Van Denberg. 2,446,499, Aug. 3.
Coin device. O. A. Hokanson. 2,446,510, Aug. 3.
Color television tube. L. E. Swedlund. 2,446,440, Aug. 3.
Comb, Handy. C. S. Wilson. 2,446,398, Aug. 3.
Combustion chamber structure with spiral air inlet. M. B. Hanna. 2,446,473, Aug. 3.
Compass. R. C. Burt. 2,446,258, Aug. 3.
Condiment holder. H. Brenner. 2,446,407, Aug. 3.
Connector bars, Producing. W. R. Scherer. 2,446,490, Aug. 3.
Container. P. J. Jensen. 2,446,422, Aug. 3.
Container and closure cap to be used therewith. G. Glocker. 2,446,226, Aug. 3.
Control apparatus for internal-combustion engines. S. W. Gilbert. 2,446,469, Aug. 3.
Control apparatus for internal-combustion engines. L. Lee, II. 2,446,335, Aug. 3.
Convertible table. N. P. Schreiner. 2,446,491, Aug. 3.
Conveyer, Adaptable. L. A. Graf. 2,446,472, Aug. 3.
Cord treating device. C. D. Hullinger. 2,446,419, Aug. 3.
Coupling. R. C. Beyerle. 2,446,406, Aug. 3.
Coupling device for opposed pistons in free-piston engines. W. Kilchenmann. 2,446,423, Aug. 3.
Coupling for conduits, Swivel. A. H. Heinrich. 2,446,327, Aug. 3.
Coupling means for ground rods. R. D. Nelson and H. B. Behlmer. 2,446,300, Aug. 3.
Cover: *See*—
  Cushion cover. Plant cover.
Cracked metal walls, Repairing and repaired. C. E. McAfee. 2,446,291, Aug. 3.
Crane and material-moving device, Combined. N. M. Erdahl. 2,446,220, Aug. 3.
Crystal bodies, Method and apparatus for shaping. R. W. Tibbetts. 2,446,443, Aug. 3.
Cushion cover. T. Waranch. 2,446,896, Aug. 3.
Dampener, Liquid seal pulsation. C. F. Yates and C. B. Nolte. 2,446,358, Aug. 3.
Deicing and engine silencing construction, Airplane. F. P. Chadsey. 2,446,210, Aug. 3.
Detector, Cooling system leak. B. H. Eaton. 2,446,219, Aug. 3.
Detent mechanism for pressure regulators. F. J. Wright. 2,446,355, Aug. 3.
Device for night fishing. E. M. Digmon. 2,446,459, Aug. 3.
Dial holding means for weighing scales. J. G. Juhasz. 2,446,332, Aug. 3.
Differentiating discharge tube. M. Cawein. 2,446,260, Aug. 3.
Dishwasher, Conveyer type. A. H. Haberstump. 2,446,868, Aug. 3.
Disk, Selenium rectifier. G. F. Mueller. 2,446,230, Aug. 3.

Dispensing device for viscous materials. W. J. Weber. 2,446,501, Aug. 3.
Display box. T. B. Epps. 2,446,306, Aug. 3.
Doffing and donning apparatus. C. W. Geier. 2,446,416, Aug. 3.
Double seal valve. M. Sitney. 2,446,196, Aug. 3.
Drawbench. D. V. Strock. 2,446,498, Aug. 3.
Drier: *See*—
  Boot drier.
Drive control mechanism for vehicles, Hydraulic. E. Orshansky, Jr. 2,446,242, Aug. 3.
Drum pedal. M. E. Crowell. 2,446,506, Aug. 3.
Dry plate rectifier. S. S. Fry. 2,446,467, Aug. 3.
Dryer: *See*—
  Drier.
Earring clamp. J. A. Stromeily. 2,446,252, Aug. 3.
Electric discharge tube, Very high frequency. K. S. Knol and J. M. van Hofwegen. 2,446,374, Aug. 3.
Electric iron. M. Ireland. 2,446,284, Aug. 3.
Electric water heater. F. Graves. 2,446,367, Aug. 3.
Electrical conductor, Insulated. H. S. McConnell, W. K. Priestley, and V. F. Volk. 2,446,292, Aug. 3.
Electrical control apparatus. A. E. Dodd. 2,446,216, Aug. 3.
Electrical measuring instrument. W. E. Pfeffer. 2,446,431, Aug. 3.
Electrode mounting structure for electron tubes. D. F. Drieschman. 2,446,269, Aug. 3.
Electrodeposition of aluminum. F. H. Hurley. 2,446,331, Aug. 3.
Electrodeposition of aluminum. T. P. Wier, Jr. 2,446,350, Aug. 3.
Electrodeposition of aluminum. T. P. Wier, Jr., and F. H. Hurley. 2,446,249, Aug. 3.
Electrolytic apparatus for using bagasse to make paper pulp. H. L. Horn. 2,446,418, Aug. 3.
Electrolytic manganese, Production of. D. Vedensky. 2,446,313, Aug. 3.
Electron tube. W. W. Eitel and J. A. McCullough. 2,446,270, Aug. 3.
Electron tube grid structure. W. W. Eitel. 2,446,271, Aug. 3.
Electron tube structure. E. D. McArthur. 2,446,379, Aug. 3.
Engine: *See*—
  Internal-combustion engine.
Engine starter. J. E. Burton. 2,446,458, Aug. 3.
Engine throttle control. R. H. Hieger. 2,446,320, Aug. 3.
Ester-acetals of polypentaerythritols. R. H. Barth. 2,446,257, Aug. 3.
Exothermic catalytic reactions. F. W. Scheineman. 2,446,247, Aug. 3.
Extraction of oxygenated organic compounds from aqueous solutions thereof. C. E. Johnson. 2,446,231, Aug. 3.
Extractor, Juice. W. L. Piazco. 2,446,432, Aug. 3.
Eyepiece with nonabrasive cap member. H. J. Enter. 2,446,305, Aug. 3.
Fan antenna with tail. A. S. Meier. 2,446,186, Aug. 3.
Feeder for wrapping machines, Strip. O. Sandberg. 2,446,505, Aug. 3.
Fibrous molding compositions, Preparing. H. Snow and E. H. Hocutt. 2,446,345, Aug. 3.
Fillers, Joint. T. W. Stricklin. 2,446,251, Aug. 3.
Filter: *See*—
  Coffee filter.
Filtering device. D. D. Demarest. 2,446,364, Aug. 3.
Fire extinguisher fluid. M. O. Farris, J. M. O'Connor, and E. B. Gottschalk. 2,446,272, Aug. 3.
Fishing reel. B. M. Wolfe. 2,446,354, Aug. 3.
Fishing rod holder. P. R. Hart. 2,446,282, Aug. 3.
Fishing signaling device. A. Linder. 2,446,427, Aug. 3.
5-monoalkyl-barbituric acids, Making. W. Wenner. 2,446,503, Aug. 3.
Fixing coloring material in textile goods, Steam. J. Wehrli. 2,446,502, Aug. 3.
Fixture, Fluorescent lighting. M. H. Kruger. 2,446,425, Aug. 3.
Fixture, Lighting. P. H. Irmischer. 2,446,280, Aug. 3.
Flange, Reducing. L. Letterman. 2,446,481, Aug. 3.
Flow measuring device. H. A. Hulsberg. 2,446,283, Aug. 3.
Fluid valve. G. J. Koehler. 2,446,334, Aug. 3.
Footwear and corrective sole therefor, Article of. H. L. Whitman. 2,446,448, Aug. 3.
Force lasted shoes and making same. J. S. Kamborian. 2,446,286, Aug. 3.
Form clamping support. D. Vocisano. 2,446,255, Aug. 3.
Forming bearing structures. R. I. N. Weingart. 2,446,515, Aug. 3.
Frame support and spacer, Honeycomb. I. A. Stoller. 2,446,346, Aug. 3.
Frames of handbags, Offset axes multiple. J. Ritter. 2,446,435, Aug. 3.
Froth flotation of ores employing a water-soluble salt of a cymene sulfonic acid. W. T. Bishop. 2,446,207, Aug. 3.
Fuel injection apparatus. A. P. Thomas. 2,446,497, Aug. 3.
Funnel, Self-centering. S. C. Nelson. 2,446,301, Aug. 3.
Furnace blast, Preheating. C. F. Ramseyer and C. M. Comman. 2,446,353, Aug. 3.
Fuse for projectiles. P. J. Dawson. 2,446,268, Aug. 3.
Garment. R. H. MacCloskey. 2,446,482, Aug. 3.
Garment, Child's. M. H. Sunseri. 2,446,394, Aug. 3.
Gas cocks, Making. H. E. Tautz. 2,446,496, Aug. 3.
Gas generator. J. A. Starr. 2,446,309, Aug. 3.
Gear: *See*—
  Aircraft landing gear.
Generator: *See*—
  Gas generator.
Glass to metal seal in electrical devices. R. Gordon. 2,446,277, Aug. 3.
Glassware, Producing. C. W. Carlson. 2,446,359, Aug. 3.
Guard, Trailer ball bolt. E. L. Walkowiak. 2,446,347, Aug. 3.
Gun sighting and training apparatus. B. D. Willis. 2,446,316, Aug. 3.
Gun-sling. F. P. Sloan. 2,446,197, Aug. 3.
Gyroscope controlling means. R. Haskins, Jr. 2,446,180, Aug. 3.
Hair dressing device. E. L. Kline. 2,446,424, Aug. 3.
Hairbrush, Electric. T. S. Morris. 2,446,236, Aug. 3.
Half-tone relief imbibition matrices, Producing. R. E. Rice. 2,446,193, Aug. 3.
Hand cultivating and weeding tool. L. B. Miller. 2,446,512, Aug. 3.
Hanger: *See*—
  Garment hanger.
Headrest. F. C. Martin. 2,446,483, Aug. 3.
Heat regenerator, Chimney type. W. J. Irwin. 2,446,420, Aug. 3.
Heat-sealable labels, Applying. R. A. Farrell and C. L. Wagner. 2,446,414, Aug. 3.
Heat-treated rivets, Handling. J. H. Eades. 2,446,166, Aug. 3.
Heater: *See*—
  Electric water heater.
Heel adjuster, Flexible. D. H. Hardy. 2,446,369, Aug. 3.
Hem marker. S. O. Orthwin. 2,446,319, Aug. 3.
Hitch, Extensible and retractable draft. H. R. Forney. 2,446,223, Aug. 3.
Hoisting device. C. E. Pierce. 2,446,488, Aug. 3.
Holder: *See*—
  Bed cover holder. Line holder.
  Condiment holder. Vacuum work holder.
  Fishing rod holder.
Holder for tubular lamps. J. D. Diver. 2,446,461, Aug. 3.
Holders and dispensers, Embroidery floss. D. B. Mota. 2,446,383, Aug. 3.
Holding means for ice cream cans and cartons. J. P. Williams. 2,446,315, Aug. 3.
Horizontally swinging bracket supported auxiliary chair. R. J. Littlejohn. 2,446,376, Aug. 3.
Hydraulic control oil ring. F. D. Frisby and M. W. Marien. 2,446,224, Aug. 3.
Imitation maple flavor. R. E. Kremers. 2,446,478, Aug. 3.
Induction heat-treatment. A. Vang. 2,446,202, Aug. 3.
Inhibiting the growth of mold. S. W. Arenson. 2,446,505, Aug. 3.
Insert. F. V. Flynt. 2,446,174, Aug. 3.
Instrument for measuring and indicating ultra high frequencies. J. Hillier. 2,446,228, Aug. 3.
Interlocking relay. M. G. Nelsen. 2,446,299, Aug. 3.
Internal-combustion engine. W. T. Hancock. 2,446,280, Aug. 3.
Iron: *See*—
  Electric iron.
Jar ring. C. L. Silvia and A. Smith. 2,446,493, Aug. 3.
Jet propelled helicopter rotor. T. L. Cummings. 2,446,266, Aug. 3.
Jig, Hood and fender. J. F. O'Kelley. 2,446,487, Aug. 3.
Joint material, Pulpstone. Y. H. Nordstrom. 2,446,513, Aug. 3.
Lamp construction. E. D. L. Bowman. 2,446,455, Aug. 3.
Lasting machine. E. A. Holmgren. 2,446,230, Aug. 3.
Leveling support. W. H. Gille. 2,446,325, Aug. 3.
Light: *See*—
  Oscillating warning light.
Line drawing attachment for typewriters. B. L. Clark. 2,446,360, Aug. 3.
Line holder. H. E. Tresidder. 2,446,253, Aug. 3.
Lined igniter-charge tube. L. T. Meister. 2,446,187, Aug. 3.
Liquid air boiler. G. T. Underwood. 2,446,498, Aug. 3.
Lock joint panel construction. R. E. Davis and T. E. Weber. 2,446,323, Aug. 3.
Lubricating oils, Regenerating spent internal-combustion engine. A. Schaafsma. 2,446,489, Aug. 3.
Magnetic refrigerator door closure and seal. V. E. Mark and L. L. Anderson. 2,446,336, Aug. 3.
Magneto, Breakerless. E. F. Wargin and J. B. Harkness. 2,446,446, Aug. 3.
Marginal portions of shoes, Machine for securing together. H. E. Reasor. 2,446,343, Aug. 3.
Mending device, Pneumatically operated. M. Vitoux. 2,446,203–4, Aug. 3.
Mercaptans from a liquid mixture of hydrocarbons containing low-boiling and high-boiling mercaptans, Removing. S. P. Cauley. 2,446,507, Aug. 3.
Metallic structure within high-temperature furnaces. J. Fletcher and C. L. Norton, Jr. 2,446,222, Aug. 3.
Moisture vapor indicator for packaged goods. H. B. Clibbon. 2,446,361, Aug. 3.

Mold form. A. Basescu. 2,446,404, Aug. 3.
Molded pulp carton. J. W. Cox. 2,446,264, Aug. 3.
Money changer, Correct. H. H. Lannom. 2,446,182, Aug. 3.
Motor: *See*—
  Toy motor.
Mud shield for shoe heels. C. G. Jacobsen. 2,446,285, Aug. 3.
Multiaxle vehicle. M. E. Wickersham and W. D. Allison. 2,446,205, Aug. 3.
Navigation instrument, Geometrical. J. P. Putnam. 2,446,438, Aug. 3.
Needle, Hosiery reknitting. B. Georgi. 2,446,225, Aug. 3.
Nest, Hen marking. M. E. Bowers. 2,446,208, Aug. 3.
Normal ammonium fluoride to ammonium bifluoride, Converting. F. M. McClenahan. 2,446,484, Aug. 3.
Nursery toilet seat. H. K. Middleton. 2,446,381, Aug. 3.
Nursing unit with retractable container therefor. A. M. Allen. 2,446,451, Aug. 3.
Open-hearth steelmaking. F. G. Kerry and E. T. W. Bailey. 2,446,511, Aug. 3.
Oscillating tilt drop adjusting table. J. A. Glasin. 2,446,275, Aug. 3.
Oscillating warning light. J. D. Kennelly. 2,446,333, Aug. 3.
P-quinone dioxime, Preparing. J. H. Trepagnier. 2,446,165, Aug. 3.
Package. L. B. Smith. 2,446,308, Aug. 3.
Perforator, Gun. S. L. Markham. 2,446,235, Aug. 3.
Permanent waving of hair. S. Grant. 2,446,227, Aug. 3.
Phase shift distortion in sound recording systems, Method and apparatus for correcting. S. J. Begun. 2,446,479, Aug. 3.
Phosphor screen. R. E. Schrader. 2,446,248, Aug. 3.
Photocopy machine. E. R. Sabel and F. I. Galbrecht. 2,446,246, Aug. 3.
Pilot, Automatic electric. U. Ekblom. 2,446,173, Aug. 3.
Pipe wrench having a fixed jaw and a cooperating reciprocating rotary jaw. M. A. Clark. 2,446,212, Aug. 3.
Piston. P. S. Webster. 2,446,348, Aug. 3.
Plant cover. A. C. Fischer. 2,446,509, Aug. 3.
Plate for locks, Striker. E. J. Beckman. 2,446,206, Aug. 3.
Plate, Selenium rectifier. G. F. Mueller. 2,446,238, Aug. 3.
Plug board arrangement. E. L. Koenig. 2,446,232, Aug. 3.
Plug for electric circuit. W. L. Wilshusen. 2,446,317, Aug. 3.
Potentiometric amplifier. K. Rath. 2,446,390, Aug. 3.
Precooler system for refrigerated drinking fountains. L. C. Love, C. H. Slauter, and R. H. Orthoefer, Jr. 2,446,289, Aug. 3.
Preparation of acetals. W. J. Croxall and H. T. Neher. 2,446,171, Aug. 3.
Protective apparatus for preventing the accumulation of ice on airfoils. E. E. Heston. 2,446,328, Aug. 3.
Protector: *See*—
  Check protector.
Pry-and-boom structure, Combination. K. W. Couse. 2,446,410, Aug. 3.
Pulley, Aircraft cable guide. C. F. Young. 2,446,318, Aug. 3.
Pull-off and clamp for thread cutters. R. G. Turner. 2,446,444, Aug. 3.
Pulse-echo system. M. R. Richmond. 2,446,244, Aug. 3.
Pump construction. D. Samiran. 2,446,194, Aug. 3.
Rail anchoring means. C. B. Smithers. 2,446,495, Aug. 3.
Railway draft gear friction shock absorbing mechanism. G. E. Dath. 2,446,215, Aug. 3.
Rapping mechanism for confection coating machines. G. S. Perkins. 2,446,386, Aug. 3.
Rearrangement process. G. W. Hearne and D. S. La France. 2,446,475, Aug. 3.
Recording and reproducing apparatus. U. L. di Ghilini. 2,446,324, Aug. 3.
Reel: *See*—
  Fishing reel.
Removable steering and propulsion unit for shallow draft vessels. W. H. House. 2,446,229, Aug. 3.
Replacement means, Fastening. C. A. Oding. 2,446,189, Aug. 3.
Resin, Cellular phenolic. J. D. Nelson and P. V. Steenstrup. 2,446,429, Aug. 3.
Rheostat. D. F. Hastings. 2,446,417, Aug. 3.
Ring: *See*—
  Hydraulic control oil ring. Jar ring.
Rivet sorting machine. A. N. Andrews. 2,446,320, Aug. 3.
Roll, Ring. L. D. Clark. 2,446,211, Aug. 3.
Safety attachment for shoes. W. B. Henderson. 2,446,370, Aug. 3.
Saliva key for trombones, Automatic. W. H. Maxwell. 2,446,378, Aug. 3.
Salt deposition. O. L. Branson. 2,446,456, Aug. 3.
Sanding device. G. A. Larson. 2,446,183, Aug. 3.
Scaffolding, Metal tubular. W. C. Jones and L. S. Richards. 2,446,372, Aug. 3.
Screen: *See*—
  Phosphor screen.
Screw-threaded mechanical movement. R. C. Russell. 2,446,393, Aug. 3.
Seal construction. N. S. Reynolds. 2,446,243, Aug. 3.
Seal, Fluid, G. L. Meyers and J. C. Shutt. 2,446,380, Aug. 3.
Seat: *See*—
  Nursery toilet seat.
Seat slide structure. H. E. Nofz. 2,446,241, Aug. 3.
Seat supporting means, Sliding. P. F. Masucci and L. Zola. 2,446,185, Aug. 3.
Secondary and tertiary halogenated alcohols, Production of. E. Bergmann and M. Sulzbacher. 2,446,454, Aug. 3.
Selenium rectifier. S. S. Fry. 2,446,465, Aug. 3.
Selenium rectifier. G. F. Mueller. 2,446,237, Aug. 3.
Selenium rectifiers. S. S. Frey. 2,446,468, Aug. 3.
Separation of hydrocarbon mixtures. H. Stewart and A. A. Schaerer. 2,446,514, Aug. 3.
Sewing machine. N. V. Christensen, G. Sauer, and C. C. Smith. 2,446,261, Aug. 3.
Sewing machine. A. C. Peterson and R. A. Hayes. 2,446,342, Aug. 3.
Sewing machine. C. F. Rubel. 2,446,245, Aug. 3.
Sewing machine. G. Sauer. 2,446,306, Aug. 3.
Shielded cable. T. F. Peterson. 2,446,387, Aug. 3.
Shock resisting retainer. F. J. Van Dusen. 2,446,445, Aug. 3.
Shoe with stiffening means, Open-back. T. A. Cochary. 2,446,169, Aug. 3.
Shutter and lens combination for camera film holders, Coacting. W. E. Tait and A. W. Stellpflug. 2,446,200, Aug. 3.
Shutter, Photographic. C. W. Crumrine. 2,446,265, Aug. 3.
Signal: *See*—
  Automobile brake signal.
Silicone grease and preparation. G. M. Hain and W. A. Zisman. 2,446,177, Aug. 3.
Sled, Hand. M. K. Benson. 2,446,452, Aug. 3.
Sludge acid and activation of clays, Purification of. W. W. Gary. 2,446,273, Aug. 3.
Slurry feeding apparatus. W. B. Klein. 2,446,373, Aug. 3.
Snow fence machine. J. D. Smith. 2,446,494, Aug. 3.
Snubbed bolster car truck. C. D. Barrett and C. R. Whitehead. 2,446,506, Aug. 3.
Soft cushion lining for artificial dentures and process. A. A. Nelson. 2,446,298, Aug. 3.
Solid fats in liquid fatty mixtures, Incorporating. B. S. Harrington. 2,446,178, Aug. 3.
Soluble polymers of unsaturated esters of polycarboxylic acids, Preparation of. J. K. Wagers and E. C. Shokal. 2,446,314, Aug. 3.
Starter. R. M. Nardone. 2,446,297, Aug. 3.
Stoker, Underfeed domestic. J. C. Scott. 2,446,492, Aug. 3.
Stopper, Inflatable leak. C. A. Oding. 2,446,190, Aug. 3.
Storage elevator system for automobiles. W. G. Smith. 2,446,344, Aug. 3.
Strainer, Downspout. J. C. Young. 2,446,256, Aug. 3.
Stuffing box mounting for pumps. V. C. Ehrig. 2,446,463, Aug. 3.
Support: *See*—
  Aircraft engine support. Leveling support.
  Form clamping support. Vehicle support.
Supporter, Vehicle spring. C. C. Wallace. 2,446,395, Aug. 3.
Switch: *See*—
  Vacuum tube electronic switch. Warp switch.
Switching mechanism for electrical computers. J. C. Pemberton. 2,446,191, Aug. 3.
Switching system, Motor protective. M. C. Harrold. 2,446,474, Aug. 3.
Synthesis of hydrocarbons with sulfur containing catalyst. E. T. Layng. 2,446,426, Aug. 3.
System for controlling lighting circuits. E. F. Ziegler. 2,446,450, Aug. 3.
Table: *See*—
  Convertible table.
  Oscillating tilt drop adjusting table.
Tank cleaning apparatus. C. C. Melton. 2,446,338, Aug. 3.
Telemetering. H. J. Lovegrove. 2,446,290, Aug. 3.
Teletracing system, Luminous. S. Rey. 2,446,392, Aug. 3.
Temperature responsive control device. R. A. Wittmann. 2,446,353, Aug. 3.
Tester for electrical shieldings. S. L. Shive. 2,446,195, Aug. 3.
Threonine and derivatives thereof, Preparation of. K. Pfister, III and M. Tishler. 2,446,192, Aug. 3.
Tie shaper, Steam. J. Emmanuel. 2,446,412, Aug. 3.
Tilting adjustment for reciprocating concentrating tables. G. H. Gruss. 2,446,176, Aug. 3.
Tool: *See*—
  Hand cultivating and weeding tool.
Top access refrigerator cabinet. J. H. Benson. 2,446,322, Aug. 3.
Top cap for electron tubes. E. F. Dillaby. 2,446,460, Aug. 3.
Top, Spinning. F. Wartell. 2,446,447, Aug. 3.
Torque responsive transmission means. R. Chilton. 2,446,409, Aug. 3.
Toy, Bouncing whistling. M. A. Strumor. 2,446,439, Aug. 3.

Toy building block. H. W. Harnquist. 2,446,179, Aug. 3.
Toy motor. P. Movitz. 2,446,296, Aug. 3.
Transmission. A. Y. Dodge. 2,446,462, Aug. 3.
Transmission, Change gear. F. T. Court. 2,446,263, Aug. 3.
Trap: *See*—
  Animal trap.
Trunks, Man's. L. B. Gulthues. 2,446,326, Aug. 3.
Tube: *See*—
  Color television tube. Lined igniter-charge tube.
  Differentiating discharge tube. Very high frequency electric discharge tube.
  Electron tube.
Tube for color televisions, Pickup. A. C. Schroeder. 2,446,249, Aug. 3.
Tube manufacture, Corrugated. W. G. Harding. 2,446,281, Aug. 3.
Turn shoe and manufacture. A. Vigorith. 2,446,357, Aug. 3.
Turn signal control for vehicles. G. F. McDougall. 2,446,337, Aug. 3.
2-Acylamino-1,3-butadienes. J. B. Dickey. 2,446,172, Aug. 3.
2-Fluoro-1,3-diene polymers. W. E. Mochel. 2,446,382, Aug. 3.
2,3-Dicyano-3-buten-2-yl esters. E. J. Prill. 2,446,167, Aug. 3.
Ultra high frequency resonator system, Tunable. B. A. Bels. 2,446,405, Aug. 3.
Undercarriage for aircraft, Retractable. C. H. Fiurscheim and W. G. C. Vance. 2,446,415, Aug. 3.
Universal bumper clamp. O. H. Dunlap. 2,446,218, Aug. 3.
Upholstery spring structure. D. H. Van Hove. 2,446,500, Aug. 3.
Vacuum production of magnesium, Process and apparatus for the. G. Bassereau. 2,446,403, Aug. 3.
Vacuum tube electronic switch. B. Conley. 2,446,170, Aug. 3.
Vacuum work holder. C. Morrison. 2,446,295, Aug. 3.
Valve: *See*—
  Double seal valve. Fluid valve.
Valve. J. N. Gladden. 2,446,274, Aug. 3.
Vaporized metal halides, Condensing. P. B. Kraus. 2,446,181, Aug. 3.
Vehicle: *See*—
  Multiaxle vehicle.
Vehicle support. W. F. Bartholomew. 2,446,321, Aug. 3.
Vernier for mechanically measuring angles. E. W. Kelley. 2,446,287, Aug. 3.
Visor, Rain. L. L. Lindley. 2,446,288, Aug. 3.
Warp switch. B. E. Shaw. 2,446,307, Aug. 3.
Weeder attachment for cultivators and the like. H. G. and B. G. Bybee. 2,446,250, Aug. 3.
Well logging apparatus. J. E. Owen. 2,446,303, Aug. 3.
Window, Air-locked. J. B. Liberty. 2,446,375, Aug. 3.
Window cleaner. S. Ziskind. 2,446,401, Aug. 3.
Window stool air outlet. J. H. Van Alsburg. 2,446,356, Aug. 3.
Wire grip for electrical fittings. F. W. Clark. 2,446,262, Aug. 3.
Wiring device. S. R. Naysmith. 2,446,240, Aug. 3.
Wood product, Composite. C. Roman. 2,446,304, Aug. 3.
Wringer and the like. W. L. Kaufman, II. 2,446,477, Aug. 3.

CLASSIFICATION OF PATENTS

ISSUED AUGUST 3, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

U. S. GOVERNMENT PRINTING OFFICE: 1948

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE FREY ET AL.

No. 5181. Decided March 2, 1948

[— F.2d —; 77 USPQ 116]

1. APPLICATION—DISCLOSURE—ORIGINAL CLAIM.
Held that it long has been the practice of the tribunals of the Patent Office to treat subject matter recited in a claim embraced in an application as originally filed as being itself a part of the disclosure, even though it may not be defined in the specification and that practice has been sustained by this court in numerous decisions.

2. SAME—SAME—SAME.
Though an original claim is a disclosure of itself and may be looked to for disclosure in considering the subsequently added claims, *Held* that mere naked disclosure does not render the subject matter expressed patentable.

3. SAME—SAME—SAME—INADEQUATE.
Where the original claim recites a time correlated with the amounts of material introduced to maintain a molar ratio in excess of 100 to 1, and where the alleged novelty in the process lies in the variation of the rate of flow of the reactant materials in the circuit, *Held* that, in order to enable those skilled in the art to understand and practice the invention, the rate of flow which necessarily involves a time element should be stated in units or terms customarily used in stating time and *Held* that the claims were properly rejected for inadequate support.

4. SAME—SAME—SAME—INDEFINITE.
Where an analysis of the subject matter embraced in the claims shows that appellants seek patent for a process whereby the molar ratio of the reactants is in excess of 100 to 1 which is a statement of result and that result is obtained by increasing the rate of flow of the materials in the circuit, and the necessary rate of flow to accomplish the result is not stated in units of time, but as in a time correlated with the amounts of materials to maintain the molar ratio in excess of 100 to 1, *Held* that this time clause can mean nothing more than that those skilled in the art by experimenting might learn something, and that the rejection for indefiniteness was proper.

5. PATENTABILITY—PROCESS OF ALKYLATION.
Certain claims to a process of alkylation which defined the step of maintaining the olefine concentration in the reactants not greater than about 0.5 per cent at the point where the olefine initially contacts the catalyst *Held* improperly rejected on the prior art.

6. APPEALS TO BOARD OF APPEALS—RULE 135 CONSTRUED.
Since appeals from the Examiner to the Board of Appeals is provided by statute and rule 135 is a rule of practice, applicable after and only after an appeal has been taken, *Held* that a failure on the part of the Examiner fully to comply with the rule, may not properly be held to govern appeals to the Board.

7. APPEAL TO COURT—MOTION TO STRIKE REASON OF APPEAL ON REJECTION NOT IN EXAMINER'S STATEMENT—REMANDED.
Where the Primary Examiner in his statement under rule 135 failed to discuss or even refer to one substantial ground of rejection—which he had previously applied—and where the decision of the Board of Appeals made no reference to this ground of rejection, but appellant in one of his reasons of appeal to the court alleged that the Board erred in sustaining the Examiner's rejection on double patenting and the brief of the Solicitor for the Patent Office did take note of the matter and discussed it and where appellant just prior to the date assigned for argument filed a motion to strike from the record the reason of appeal relating to double patenting and to strike those portions of the Solicitor's brief which relate to that question, *Held* that since there is enough in the record to indicate that the question of double patenting should be passed upon definitely on its merits by the Board before being considered on its merits by us, appellant's motion to strike is denied, but the case is remanded to the Patent Office to the end that the Board of Appeals may determine (*a*) whether the question of double patenting is in the case and, if so (*b*) consider and decide that question.

APPEAL from the Patent Office. Serial No. 430,980.
MODIFIED AND REMANDED.

J. Paul Jones (*T. B. Hudson* of counsel) for Frey et al.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

GARRETT, *P. J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming that of the Primary Examiner rejecting claims 2, 5, and 11 to 18, inclusive, of appellants' application for a patent on a process for alkylating hydrocarbons to render them "suitable for use in an aviation or premium motor fuel." There are no allowed claims. The rejection was based upon various grounds hereinafter recited.

It appears that appellants' application was filed February 14, 1942, as a continuation in part of an application, Serial No. 355,529, filed September 5, 1940, which, on September 22, 1942, matured into Patent No. 2,296,512, and which was a division of another application, Serial No. 87,790, filed June 27, 1936, that, on February 25, 1941, matured into Patent No. 2,233,363. The drawing of the application consists of a single figure which is identical with Figure 2 of the earlier applications, as is its description in the specification. All the claims are process claims.

Vol. 613 • No. 1 Tuesday, August 3, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

It further appears that in filing the involved application appellants sought an interference with a patent, No. 2,238,802, issued April 15, 1941, upon an application filed November 6, 1939, to Joe A. Altshuler et al., claim No. 1 of the patent being copied and made claim No. 1 of the application. The interference was duly declared, but on May 29, 1943, appellants (their assignee consenting) filed notice of abandonment of the contest in the Patent Office. On June 8, 1943, the Examiner of Interferences dissolved the interference, and ex parte prosecution was thereafter resumed, portions of the specification and certain of the claims being canceled as hereinafter related.

The claims are divisible into two groups, the first embracing claims Nos. 2, 5, 13, 14, 17, and 18; the second, Nos. 11, 12, 15, and 16. Inasmuch as the respective groups require separate consideration, we shall first take up those of group 1, of which claim 2 is representative. It reads:

> 2. In a process of alkylation in which olefinic and iso-paraffinic hydrocarbons are reacted in the presence of a condensation catalyst while flowing in a circuit comprising a reaction zone into which reaction zone the iso-paraffinic and olefinic hydrocarbons are introduced in a feed in which the molar quantity of the iso-paraffinic hydrocarbon is greater than the molar quantity of the olefinic hydrocarbon, *the improvement which comprises increasing the molar ratio of the iso-paraffinic hydrocarbon to the olefinic hydrocarbon in the reaction zone in excess of one hundred to one by increasing the rate of flow of the materials in the circuit such that they traverse said circuit in a time correlated with the amounts of said introduced iso-paraffinic and olefinic hydrocarbons to maintain said molar ratio in excess of 100:1.* [Italics ours.]

It will be observed that almost half of the context of the claim constitutes a preamble. The improvement claimed is embraced in the portion which we have italicized.

There is no contention that any one of this group of claims has any limitation which differentiates it patentably from the other claims of the group. In other words, all the claims of this group stand or fall together. So, there is no necessity for a separate analysis of them.

All the claims in group 1 were rejected (1) as lacking adequate support in the disclosure of the application; (2) as not defining the claimed invention sufficiently to meet the requirements of section 4888 R. S., and (3) as being unpatentable over the issue of the interference hereinbefore alluded to; that is, over claim 1 of the Altshuler et al. patent and the disclosure of that patent, which is the only reference cited in connection with the group.

The general idea expressed by appellants is that of producing saturated hydrocarbons of higher molecular weight by catalytic synthesis. In his statement following the appeal to the Board, the Examiner said:

> The catalysts disclosed by applicants are aluminum chloride combined with lithium, sodium, calcium, or potassium chloride and the corresponding double compounds in which chlorine is replaced by bromine, zinc chloride, zinc bromide, hydrous alumina, and hydrous alumina deposited on or combined with hydrous silica. The catalyst is used in granular form or disposed on an inert granular support.

The specification teaches that the saturated oils are produced by a mixture of paraffins and olefins subjected to catalyst action, the ratio of olefins to paraffins being very low. During the course of the reaction and prior to contact with the catalyst olefin is added in small proportions, each addition of it being consumed before another addition is made. In this way the concentration of the olefin reactant is maintained at a low value and the paraffin reactant at a high value It is said:

> • • • By the practice of our invention it is practical to have the ratio of isoparaffins to olefins in the presence of the condensation catalyst in excess of 100:1, and practical operation can be obtained in accordance with our invention with this ratio as high as about 200:1 or more, i. e. an olefin concentration as low as 0.6%, as previously mentioned.

The drawing of the application is quite clear and the operation is easily understood when the specification is read in connection with it. The olefins and paraffins enter the process together through a pipe from which they are forced by a pump through another pipe into a reaction chamber. There the hydrocarbons (the paraffins and olefins) are carried into contact with the catalyst. From the chamber the reacted material is discharged into a conduit and divided into two streams. One of the streams flows through a valve into a pipe from which it is forced by a pump through another valve back into the entrance pipe to be recycled. The other stream flows through a valve into a pipe through which it passes into a separator in which the hydrocarbons of higher molecular weight are separated from those of lighter weight and discharged through a conduit controlled by a valve. It is further recited that a certain recycling backwardly from the reaction chamber may be desirable or necessary, with only a minimum amount of the reacted hydrocarbons passing directly from the reaction chamber, in which event the valve in the line of the second stream referred to may be set at any desired partially closed position. It is said that by control of the several valves referred to, the flow into the separator and the flow for recycling can be readily controlled and regulated.

[1] It appears that claim 2, supra, and claim 5 were a part of the application as filed, and the brief for appellants lays great stress upon that fact in connection with the matter of disclosure, citing our decision in the cases of *Guy H. Buchanan* v. *Albert C. Burrage, Jr.*, 17 CCPA (Patents) 1194, 41 F.2d 98, 5 USPQ 420, 400 O. G. 6, and *In re Burke et al.*, 25 CCPA (Patents) 795, 93 F.2d 50, 36 USPQ 64, 490 O. G. 486, and several decisions of the Board of Appeals of the Patent Office. The Solicitor for the Patent Office concedes that an original claim is considered as part of the disclosure, as set forth in *In re Mason, Deceased*, 25 CCPA (Patents) 873, 94 F.2d 220, 36 USPQ 337, 491 O. G. 236, but adds, "However, that fact, in and of itself, is not conclusive upon the question of whether the claim is allowable, as pointed out in *In re Ware*, 29 CCPA 1106; 129 F.2d 552, 544 O. G. 457, and *In re Moore*, 33 CCPA 1083; 155 F.2d 379; 69 USPQ 524, 590 O. G. 516."

It is contended on behalf of appellants not only that the disclosures of the specification of their application supports the first group of claims, but that claims 2 and 5, as original claims, were a part of the original disclosure and, therefore, support themselves, and also support claims 13, 14, 17, and 18.

The Examiner's discussion relating to inadequate disclosure is as follows:

> • • • After the motion period in the interference proceeding, applicants abandoned the contest and upon resumption of ex parte prosecution, applicants canceled from their specification all reference to specific times for the materials to traverse the circuit comprising the reaction zone. They also canceled all claims which mentioned any specific time periods. Claim 1, for example, which constituted the sole count of the interference, called for the traversal of the circuit of the material in less than 70 seconds.
>
> Appealed claims 2, 5 and 14 differ in the statement of the time element for traversal of the circuit over the count of the interference which calls for a time "less than 70 seconds" by calling for "a time correlated with the amounts of said introduced iso-paraffinic and olefinic hydrocarbons to maintain said molar ratio in excess of 100:1." In view of the cancellation from the specification of all reference to specific times for traversal of the circuit by the materials, it has been held by the Examiner that claims 2, 5 and 14 are inadequately supported. These claims have accordingly been rejected as inadequately supported by the disclosure.

In the decision of the Board it is said:

> • • • The [copied] claim contained a time limit in which the materials flow in the circuit, which was stated to be less than seventy seconds. This limitation has also been eliminated from the specification of this case where it occurred in Example 1 as sixty-seven seconds, and in Example 2 as sixty-nine seconds. Thus, specific reference to time limit has been canceled from the present specification. It will be noted that the claims, where they refer to a time period, correlate the time in which the materials traverse the circuit in terms of rate of flow with the amounts of the isoparaffin and olefin introduced.
>
> Claims 2, 5 and 14, which bring out the correlation of the rate of flow with the amounts of introduced materials, stand rejected as being inadequately supported by the disclosure in view of the cancellation from the specification of all reference to the specific time for traversal of the circuit by the materials. Appellants controvert this rejection by pointing out that the cancellation of specific times in pages 8 and 9 of the specification was made as a result of a discovery of an inadvertent error in calculating such times and since calculation errors would affect the specific time of recirculation, but not the ratio of isoparaffin to olefin, a specific numerical time is not and cannot per se be critical. While this may be true as a broad proposition, it seems to us that in specific examples involving percentages of reactants, temperatures, pressures and other essential factors involved in the process, the time of traversal of the materials in the circuit should be given in connection with other features in order to disclose a completely operative process. The claims under consideration merely state that the rate of flow of the materials is such that they traverse the circuit "in a time" correlated with the amounts of introduced isoparaffins and olefins to maintain the ratio called for in the claims. When this correlation in terms of time is sought to be interpreted in the light of the disclosure, it cannot be found. We, therefore, agree with the Examiner that the disclosure, in so far as it supports the limitation in claims 2, 5 and 14 with respect to the time involved, is inadequate.

So far as we are advised, it long has been the practice of the tribunals of the Patent Office to treat subject matter recited in a claim embraced in an application as originally filed as being itself a part of the disclosure, even though it may not be defined in the specification, and that practice has been sustained by this court in numerous decisions.

Original claim 2, supra, instead of reciting a flow of materials within a time limit expressed in seconds, recites "a time correlated with the amounts of said introduced iso-paraffinic and olefinic hydrocarbons to maintain said molar ratio in excess of 100:1," and original claim 5 recites the same.

[2] Certainly the quoted clause is a disclosure of itself and the claims being original claims they may be looked to for disclosure in considering the subsequently added claims. Also, it may be said that so far as disclosure per se is concerned, the specification itself seems to support the particular clause of the claim which we are considering, but mere naked disclosure does not render the subject matter expressed in a clause patentable. The important holding of the Board in this case is to the effect that a completely operative process is not disclosed because no units or terms of time in which the materials may flow through the circuit are given.

[3] It is contended that appellants did make disclosure sufficient to define an operative process in the specification, particularly in two examples therein set forth in which matters relating to circulation and recirculation were discussed, along with statements as to temperatures, fractionation, and analysis of hydrocarbon material after its passage to a separator, and in which tables were given showing the weight, value, density, etc., of various fractions. It was from the examples that specifically stated units of time expressing the rate of flow were canceled, but it is contended that sufficient remains to constitute adequate disclosure.

We have made careful study of the example given as well as of other portions of the specification quoted and referred to in appellants' brief in the light of the arguments of counsel for appellants and those of the Solicitor for the Patent Office. It appears obvious that, as stated in substance in the brief of the latter, the alleged novelty in the process here involved lies in the variation of the rate of flow of the reactant materials in the circuit, and it seems to us that, in order to enable those skilled in the art to understand and practice the invention, the rate of flow, which necessarily involves a time element, should be stated in units or terms customarily used in stating time.

We are of opinion that the first ground of rejection—inadequate support—and the second ground—indefiniteness—are somewhat related. Concerning the second ground the Examiner said:

> Claims 2, 5 and 14 [the ground of rejection being applied also to claims 13, 17, and 18] have further been rejected as failing to clearly define the invention in accordance with the requirements of sec. 4888 R. S. The time element is of the essence of the alleged invention and must therefore be clearly and distinctly defined whereas the foregoing claims define the time very indefinitely and in terms of the desired result and therefore do not properly point out the invention as required by the noted statute.

[4] In affirming the Examiner's holding respecting indefiniteness, the Board said:

> These claims stand further rejected as failing to clearly define the invention since the time element is indefinitely stated in terms of the desired result. Claim 2 defines the improvement as an increase in the molar ratio of isoparaffin to olefin in excess of 100 to 1 by increasing the rate of flow of the materials in the circuit such that they traverse said circuit in a time correlated with the amounts of materials introduced to maintain said ratio. Claim 5 is similarly drawn, as is also claim 14, which is somewhat differently worded in that the molar ratio is said to be established and maintained by establishing and maintaining the rate of flow of the materials such that they traverse the circuit in a time correlated with the amounts of the introduced hydrocarbons to maintain the desired molar ratio. It appears to us that the new result alleged for appellants' process is stated in terms which merely point out the result desired rather than in terms of a step or steps which define an invention. *In re Caunt*, 1936 C. D., 205, 23 CCPA, 855, 81 F.2d, 405; *In re Duggan*, 1942 C. D., 209 and *In re Stack*, 1937 C. D., 230.

An analysis of the subject matter embraced in the claimed improvement shows that appellants seek patent for a process whereby, in the reaction zone, the molar ratio of iso-paraffinic hydrocarbon to olefinic hydrocarbon is in excess of 100 to 1. That is the result. It is so stated in the beginning of the material part of the claim. The method of obtain-

ing the result is to increase the rate of flow of the materials in the circuit. The necessary rate of flow to accomplish the result is not stated in units of time, such as seconds, minutes, hours, days, etc., but as "in a time correlated with the amounts of said introduced iso-paraffinic and olefinic hydrocarbons to maintain said molar ratio in excess of 100:1." As we view it, this time clause can mean nothing more than that those skilled in the art by experimenting might learn something.

We are not convinced that the Board erred in sustaining the Examiner's rejection of the first group of claims—that is, claims 2, 5, 13, 14, 17, and 18—on the grounds of (1) lack of disclosure of an operative process and (2) for indefiniteness.

Since rejection upon those grounds is conclusive of the case, so far as this group of claims is concerned, it is unnecessary to here pass upon the rejection based upon other grounds.

[5] Of the second group comprising claims 11, 12, 15, and 16, we quote 11 as representative:

> 11. A process of producing paraffins boiling in the motor fuel range from a lower-boiling isoparaffin and a lower-boiling olefin, which comprises alkylating a low-boiling isoparaffin with an olefin by contacting an admixture of the olefin and the isoparaffin with a condensation catalyst under alkylating conditions, and maintaining the olefin concentration in the paraffinic reactants not greater than about 0.5 per cent at the point where the olefin initially contacts the condensation catalyst.

Claims 15 and 16 define the process as being continuous, and claim 12, like claim 16, defines the ratio of isoparaffin to olefin as being "at least about 100:1" at the point where the olefin initially contacts the condensation catalyst.

In a decision rendered January 20, 1944, before claims 15 and 16 had been introduced into the application, the Examiner rejected claims 11 and 12 (along with two claims numbered 4 and 10), first, "for double patenting over claim 5 of [appellants'] Patent No. 2,233,363," and, second, as being "so broad as to be met" by a Patent No. 2,169,809, issued to Jacque C. Morrell, August 15, 1939, upon an application filed May 3, 1939, which purported to be a continuation in part of an application, Serial No. 32,638, filed July 22, 1935. The references cited in the rejection of this group of claims are: Morrell, 2,169,809, August 15, 1939; Frey et al., 2,233,363, February 25, 1941; Frey et al., 2,296,512, September 22, 1942.

The rejection on both grounds was repeated by the Examiner, after proceedings hereinafter related, in a decision of October 19, 1944, and appeal was taken to the Board of Appeals which expressly affirmed the decision of the Examiner as to the rejection on prior art but made no reference to double patenting.

The instant appeal to this court followed.

Concerning the question of double patenting an issue has been raised before us but before discussing it we take up the rejection based on the Morrell patent.

As may be seen from claim 11, supra, the process comprises two steps, the first being that of carrying a mixture of lower-boiling olefin and lower-boiling isoparaffin into contact with a condensation catalyst under alkylating conditions and, the second, that of maintaining the olefin concentration at an amount "not greater than about 0.5 per cent" at the point where the olefin initially contacts the catalyst. In claim 12 the amount is defined as "at least about 100:1"—that is, as we understand it, 100 parts of isoparaffin to 1 part of olefin. Claims 15 and 16 are duplicates of 11 and 12, respectively, except that 15 and 16 designate the process as continuous.

That the Morrell patent discloses an alkylation process wherein lower-boiling isoparaffin is brought in contact with an olefin in the presence of a condensation catalyst, which corresponds to the first step of the claims now under discussion does not seem to be questioned by appellants, but it is contended on their behalf that the second step is not met by the Morrell disclosure.

It may be said at this point that the Examiner gave the Morrell patent an effective date of July 22, 1935, for disclosure of the subject matter of the claims, this being the date upon which what may be designated as the Morrell parent application was filed, and appellants seem to have been accorded an effective date of June 27, 1936, which was the filing date of their parent application.

The Morrell parent application as filed is included in the record before us, and it is contended on behalf of appellants that there are "many differences and discrepancies" affecting the question of patentability between the earlier disclosure and that of the patent.

The specification of the patent teaches that in a "simple type of batch operation" isobutane (an isoparaffin) and sulfuric acid (Morrell's catalyst) are heated to the proper temperature and alkylation is effected "by the gradual introduction of an olefin, such as, for example, isobutylene, under the surface of the liquid which may be mechanically stirred to effect intimate contact between catalyst and reacting compounds * * *." It also teaches that "It is preferable to maintain an excess of paraffin at all times in the reaction zone * * *."

In an illustrative example it is stated "50 parts of isobutane was alkylated by an approximately equal volume of n-butylene * * * The butylene was added at such a rate that it was substantially completely absorbed * * *."

Evidently referring to the several quoted recitations from the specification the Examiner said:

> In the batch operation of the specific example of Morrell, the olefins are introduced in small increments over a substantial period of time and therefore the isoparaffin to olefin ratio is very high, clearly in excess of 100 to 1.

It seems evident that this statement on the part of the Examiner represented his construction, or interpretation, of the teachings of the Morrell disclosure, because as a matter of fact Morrell did not state in either of his specifications that he introduced olefins "in small increments over a substantial period of time," nor did he state any percentage of olefin or any ratio of isoparaffin to olefin. His specification does teach the "gradual introduction of an olefin" and the adding of it "at such a rate that it was substantially completely absorbed."

When the controversy was carried before the Board by appeal the presentation made in the brief for appellants upon this point was replied to by the Examiner, acting under Patent Office rule 137. In the course of his reply he said:

> In speaking of the specific example of operation of the Morrell patent at the bottom of page 9 and the top of page 10 of their brief, applicants interpret the word "absorbed" as meaning physical solution. This is unwarranted. The Examiner is of the opinion that what is meant by "absorbed" is "chemical reaction." The olefin is absorbed due to disappearance thereof because of reaction. Alkylation conditions are present and the reaction is generally established as being instantaneous when the olefin is added to an isobutane-acid solution maintained under alkylation conditions of operation. Since all the paraffin is present and the olefin is introduced portionwise or gradually, then the paraffin to olefin ratio is obviously very high.

In the course of its decision the Board said:

> The patent to Morrell discloses an alkylation process wherein alkylation is effected by the gradual introduction of olefin. This process would maintain a low olefin concentration which, the Examiner considers, would produce over a substantial period of time an isoparaffin to olefin ratio easily in excess of 100 to 1 at the point where the olefin initially contacts the catalyst. Appellants point out that certain portions of the Morrell patent specification were added at a date which is too late to anticipate the appealed claims, but it is noted that the earliest Morrell application filed in 1935 has a disclosure to the effect that alkylation is effected by the gradual introduction of an olefin which is added at such a rate that it is substantially completely absorbed, or, as the Examiner interprets the term "absorbed," reacted with [, to ?] which interpretation we agree. The earlier application also points out that 85 parts by weight of hydrocarbon product produced was paraffinic in nature. As above indicated, the claims are broadly drawn and we consider that they are amply met by Morrell who maintains his olefin concentration in the paraffinic reactants of the order defined in the claims, as the Examiner points out. The continuous process defined in claims 15 and 16 is obviously unpatentable since it calls for no more than continuously maintaining the molecular ratio at least of 100 to 1. We consider the Morrell patent a proper reference and the rejection of claims 11, 12, 15 and 16 thereon will be sustained.

In the brief before us it is asserted on behalf of appellants:

> Although not stated by Morrell, the isobutane was presumably a liquid, although no pressure is recited and the reaction temperature of "between 15° and 20° C." is well above the normal boiling temperature of isobutane (−10° C.). In any event, the normal boiling point of n-butylene (−5° C.) is *higher* than that of isobutane and, in view of the well known mutual solubility and complete miscibility of hydrocarbons, a rate of addition of n-butylene to isobutane such "that it was substantially completely absorbed" [The Examiner took the stand that "absorbed" meant "chemical reaction," which is certainly not so stated by Morrell, and is not the *inherent* meaning of Morrell's language.] would *not inherently result in a "very high"* ratio of isoparaffin to olefin "clearly in excess of 100:1," *nor* in introduction of olefin "in small increments." It is well established that an *inherent* result is not one which *might* be obtained but, instead, is one which *must inevitably* be obtained. [Italics quoted.]

Another contention on behalf of appellants is that Morrell's early application failed to disclose the maintaining of an excess of paraffin in the reaction zone at all times. (This is disclosed as being "preferable" in the patent but, as we understand it, the tribunals of the Patent Office were of opinion that in order to meet appellants on that point it was necessary that it should have been disclosed also in the early application.) The brief of the Solicitor for the Patent Office discusses this contention (omitting record page references) as follows:

> Although it is true as appellants state that the early Morrell application failed to disclose the concept of maintaining an excess of paraffin at all times * * *, it is also true, as stated by the Board of Appeals, that, since the earlier Morrell application did disclose that "alkylation is effected by the gradual introduction of an olefin at such a rate that it is substantially completely absorbed" * * *, the broad subject matter of the claims is amply met by Morrell. In arriving at this conclusion it is believed to be apparent that the Board considered that in an operation in which one material is added "gradually" to another it inherently results that the material being incorporated is added in steps or degrees or in increments of the total quantity to be added. This is a necessary conclusion in order to give effect to the teaching that the olefin is introduced gradually.

It is also contended on behalf of appellants that neither of the Morrell specifications makes any reference at any point to any feature of olefin concentration or to its control at any level. The brief (omitting record page references) asserts:

> In fact, the very general reference in the patent to maintaining "an excess of paraffin at all times" * * * is conspicuous by its complete absence from this earlier disclosure, but the statement that "the best products from the standpoint of motor fuel usually are produced by the condensation of equimolar quantities," * * * is common to *both* disclosures. At one place it is suggested that the paraffin and olefin be mixed and the catalyst added * * *. The single example of this earlier application is concerned with the reaction of *normal* butane with propylene at −25° C.; further emphasis of *low temperature* as "the essential feature." [Italics quoted.]

In the brief of the Solicitor for the Patent Office it is conceded that the allegation to the effect that there is nothing stated in either of Morrell's disclosures about olefin concentration is "technically" true, but it is argued that "the gradual introduction taught by Morrell inherently means that the olefin is in low concentration as compared to the paraffin concentration." Also, it is urged, in effect, that since nothing critical is disclosed for the particular per cent of olefin defined in the appealed claims (the specification states that olefin concentrations "below 20%, and preferably below 10%," are maintained) the limitation in the claims respecting olefin concentration is of no patentable significance.

From the facts so far recited it seems obvious to us that the teachings of the Morrell specifications do not meet appealed claims 11, 12, 15, and 16 in any clearly defined respect. We apprehend that if Morrell had sought to obtain a patent upon claims reading just as those claims read, based upon either his early application or his later one, or upon the two taken together, he would have been denied for lack of sufficient disclosure to support those particular claims. It is not meant to imply that a reference in order to be valid always must be in such form that it would support claims rejected upon it, but it is sometimes helpful in trying to reach a correct conclusion to apply such a test.

A careful reading of Morrell's specification fails to disclose any specific statement as to the respective percentages of isoparaffin and olefin. There is nothing which goes so far even as to say that the olefin content, or concentration, is low, and a low percentage of olefin surely is a vital feature of the appealed claims.

It is true that the patent (but not the parent application) of Morrell states (and this is not in the single example) that "It is preferable to maintain an excess of paraffin at all times in the reaction zone as in the method of operation above described. This tends to minimize undesirable polymerization reactions." This statement, assuming that it properly may be looked to although not in the early specification, lacks much of being a teaching that the olefin percentage is low.

So far as the decisions of the tribunals of the Patent Office are concerned, the only teaching of Morrell

from which any deduction is made by them relative to the respective proportions of isoparaffin and olefin appears to be that of the "gradual introduction" of the olefin, or of it being "added at such a rate that it was substantially completely absorbed."

We regard this as being too strained an interpretation of the quoted phraseology, and, in our opinion, claims 11, 12, 15, and 16 should be allowed so far as the prior art cited against them is concerned.

We now revert to the issue relating to the matter of double patenting.

As has been stated, the Examiner in a decision rendered January 20, 1944, before claims 15 and 16 had been introduced into the case, rejected claims 11 and 12 and also claims numbered 4 and 10, then in the case, not only as being met by the Morrell patent, but "for double patenting over claim 5 of [appellants'] Patent No. 2,233,363."

In response to that action appellants canceled claims numbered 4 and 10 "without prejudice," requested reconsideration of claims 11 and 12, and added claims 15 and 16, stating them to be similar to claims 11 and 12 but somewhat more limited because restricted to continuous process. In the "Remarks" accompanying the request and amendment, the Examiner's holding as to both grounds were challenged and arguments presented. The Examiner adhered to his position and in a decision rendered October 19, 1944, which he declared to be final, stated, "Claims 11, 12, 15 and 16 are rejected on both grounds as against claims 11 and 12 in the previous Office action."

Following that decision of the Examiner, declared to be final, appellants, on February 5, 1945, proposed more amendments. None of the proposed amendments related to claims 11, 12, 15, and 16, but in the "Remarks" accompanying the proposal the two grounds of rejection which had been applied to them—prior art and double patenting—were again challenged and argued. Certain affidavits were also presented in one of which the matter of double patenting was discussed along with the other ground of rejection.

In an Office action of March 16, 1945, the Examiner stated that the proposed amendment and affidavits "have not been entered," and gave his reasons for refusing their entry, but he also took occasion to reiterate the rejection of claims 11, 12, 15, and 16 on the ground of double patenting.

On April 3, 1945, appellants took appeal to the Board of Appeals, expressly stating that it was from the Examiner's decision of October 19, 1944—his final decision. In one of the reasons of appeal error was alleged on the part of the Examiner in rejecting the claims on the ground of double patenting.

The Examiner's statement following the appeal to the Board, provided by rule 135 of the Patent Office rules, was filed June 21, 1945. In this statement no reference was made, directly or indirectly, to the rejection on the ground of double patenting.

The brief for appellants was filed with the Board May 13, 1946. A copy of it was made part of the record before us. No reference of any character was therein made to the question of double patenting.

The Examiner made a reply to appellants' brief on July 11, 1946, in which no reference was made to the question of double patenting.

The decision of the Board was rendered August 5, 1946. It made no reference to the question of double patenting.

Appellants took the instant appeal to this court September 19, 1946, and in one of the reasons of appeal alleged that the Board "erred in sustaining the Examiner's rejection of claims 11, 12, 15, and 16 for double patenting over claim 5 of applicants' Patent 2,233,363," but the brief for appellants filed in this court October 1, 1947, made no reference to the question. The brief of the Solicitor for the Patent Office, filed December 1, 1947, however, did take note of the matter and discussed it.

The case was assigned for argument before us on January 12, 1948. On January 7, 1948, appellants filed a motion to strike from the record the reason of appeal relating to double patenting, and to strike from the brief of the Solicitor for the Patent Office those portions which relate to that question. The motion was taken with the case, supplemental briefs upon it being subsequently filed at the request of the court.

The briefs have been carefully studied and considered.

[6] The situation presented is unusual in the experience of this court in that the Primary Examiner in his statement made under Patent Office rule 135 failed to discuss or even refer to one substantial ground of rejection which he had previously applied in disposing of claims before him. Since the act of March 2, 1929, 45 Stat. 1476, transferring to this court the jurisdiction in respect of appeals from the Patent Office in patent and trade-mark cases, we are unable to recall or find any record of a case in which the Examiner's statement failed to refer in some way to each ground of rejection which he had applied in his final decision.

The here pertinent portion of rule 135 reads:

> 135. Upon the filing of the appeal [to the Board of Appeals] the same shall be submitted to the Primary Examiner who, if he find it to be regular in form, and to relate to an appealable action, shall within ten days from the filing thereof furnish the Board of Appeals with a written statement of the grounds of his decision on all points involved in the appeal * * *. [Italics ours.]

In view of the failure of the Examiner to refer to the matter of double patenting in his statement the Board might have been justified in concluding that he had abandoned that ground of rejection, but if it was of that opinion, there is nothing in its decision to indicate it. We may not lose sight of the fact that appeals from the Examiner to the Board of Appeals is provided by statute (Sec. 4909 R. S., 35 U. S. C., sec. 57) and rule 135 is a rule of practice, applicable after—and only after—an appeal has been taken. A failure on the part of the Examiner fully to comply with the rule, therefore, may not properly be held to govern appeals to the Board.

[7] Whatever may have been the view of the Board on the question of double patenting, if it had any view on the subject, it was not expressed in its decision. We are of opinion that there was sufficient in the record to elicit from the Board, if its attention had been properly directed to it, a statement upon the subject. It should (had its attention been properly directed to it) at least have stated whether or not double patenting was an issue before it. We suppose that Patent Office practice would have permitted the Board to remand (or whatever may be the Patent Office equivalent of "remand" as used in judicial proceedings) the Examiner's statement with a request that it be made definite as to whether he (the Examiner) did rely upon the ground of double patenting. However, in fairness to the Board it should be emphasized that neither the brief of appellants before it, nor the statement of the Examiner, contained anything which directed its attention to the question of double patenting.

So far as this court is concerned, we do not feel that it is within our province to pass upon a question concerning which so much doubt exists as to whether it really is an issue in the case. The statute (sec. 4914 R. S., 35 U. S. C., sec. 62) provides that, upon appeals taken from the decision of the Board, this court "shall hear and determine such appeal, and revise the decision appealed from in a summary way * * *." This means, of course, that we shall revise it, in our opinion, revision be necessary, and it readily will be realized that we cannot determine whether we regard revision necessary unless we know what we are asked to revise.

There is enough in the record to indicate that the question of double patenting should be passed upon definitely, but it should be passed upon on its merits by the Board before being considered on its merits by us.

Sustaining the motion on behalf of appellants to strike the reason of appeal hereinbefore described would probably have the effect (in view of our holding that claims 11, 12, 15, and 16 are not rejectable upon the prior art cited by the tribunals of the Patent Office) of a patent embracing those claims being issued to appellants and that might result in double patenting which would render the patent worthless.

For the reasons hereinbefore stated, we hold:

First, the rejection of claims 2, 5, 13, 14, 17, and 18 on the grounds of inadequate disclosure and indefiniteness is affirmed.

Second, the rejection of claims 11, 12, 15, and 16 on the prior art cited is reversed.

Third, the motion on behalf of appellants to strike reason of appeal No. 18, relating to double patenting, and the portions of the brief of the Solicitor for the Patent Office referring to that question, is denied, but the case is remanded to the Patent Office to the end that the Board of Appeals may determine (*a*) whether the question of double patenting is in the case and, if so (*b*) consider and decide that question.

MODIFIED AND REMANDED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

RAY v. KRONMILLER

No. 5457. Decided April 6, 1948

[— F.2d —; — USPQ —]

1. INTERFERENCE—APPEAL TO COURT—QUESTION OF PATENTABILITY.

   It is well settled that the question of patentability cannot be considered on appeal from a decision awarding priority of invention.

2. SAME—SAME—SAME.

   A contention that one party can make the counts while the other cannot may properly be considered on such an appeal, since the party who is entitled to make the counts should be awarded priority, if his opponent is not so entitled but when the contention is that neither party can make the counts no issue of priority is raised.

3. SAME—SAME—SAME.

   Where appellant appealing from a decision awarding priority of invention to appellee contends that appellee is not entitled to make the counts, and also concedes that appellant is not entitled to make them, although they are claims in appellant's patent, *Held* that his real contention is that the counts are not patentable to either party, and *Held* that the appeal raises no issue of priority of invention and that the issue presented cannot be considered by this court.

APPEAL from the Patent Office. Interference No. 82,330.

DISMISSED.

John Flam (*I. Richard Paris* of counsel) for Ray.

George H. Fisher (*Frederick E. Lange* of counsel) for Kronmiller.

HATFIELD, *J.*:

This is an appeal in an interference proceeding from the decision of the Board of Interference Examiners of the United States Patent Office awarding priority of invention of the counts in issue to appellee Carl G. Kronmiller. The interference is between appellant's Patent No. 2,381,926, granted August 14, 1945, on an application filed May 20, 1941, and appellee's application No. 87,706, filed June 27, 1936.

For reasons which will hereinafter appear, it is unnecessary to reproduce any of the counts of the interference, or to consider the nature of the subject matter which they involve.

The record discloses that the preliminary statement filed in the interference by appellant failed to allege any date as early as the filing date of the application of appellee, and that an order to show cause was, therefore, issued, notifying appellant that judgment on the record would be entered against him unless sufficient cause was shown why such action should not be taken. In response to the notice, appellant filed a motion to dissolve, asserting that there had been "such informality or irregularity in declaring the interference as will preclude the proper determination of the question of priority of invention." In support of appellant's motion, it was alleged that all the counts of the interference were so inaccurate or indefinite that they were not readable on the disclosure of either appellant's patent or appellee's application.

The Board of Interference Examiners stated that appellant's motion to dissolve was "an attack upon

the patentability of the counts as well as a denial of the moving party's right to his patent" and held that the motion did not constitute a sufficient response to the order to show cause. Priority was, accordingly, awarded to appellee. A petition by counsel for appellant for reconsideration by the Board of Interference Examiners was denied and counsel for appellant then petitioned the Commissioner to exercise his supervisory authority and dissolve the interference. The petition was denied and appellant appealed to this court.

A motion to dismiss the appeal was filed by appellee on May 19, 1947, which motion was denied by the court on May 29, 1947, appellee being given the right to renew the motion at the time of the hearing of the case on its merits. The motion has been renewed and is now before the court for consideration.

It is to be noted that appellant did not contend, during the interference proceedings in the Patent Office, and does not now contend that he is entitled to an award of priority. It is his position that priority was improperly awarded to appellee, not because appellant is the prior inventor, but because the interference counts are not patentable to appellee. The issue raised by the appeal, therefore, is not one as to which party is the prior inventor, but as to whether the counts define an invention which is patentable to either party.

[1] It is well settled that the question of patentability cannot be considered on appeal from a decision awarding priority of invention. See *Erben* v. *Yardley*, 267 Fed. 345, 1920 C. D. 220; *Isaac Stern and Jacob Huether* v. *Louis H. Schroeder and Joshua Wagner*, 17 CCPA (Patents) 690, 36 F.2d 518, 3 USPQ 351, 393 O. G. 4; *Albert Broadmeyer* v. *Harmon E. Lindbladh*, 18 CCPA (Patents) 1004, 47 F.2d 381, 8 USPQ 155, 408 O. G. 831; *Derby et al.* v. *Whitworth*, 20 CCPA (Patents) 791, 62 F.2d 368, 16 USPQ 85, 429 O. G. 191; and *Hendrickson and Nelson* v. *Ronning and Ronning*, 22 CCPA (Patents) 1040, 76 F.2d 137, 25 USPQ 42, 458 O. G. 4.

[2] A contention that one party can make the counts while the other cannot may properly be considered on such an appeal, since a party who is entitled to make the counts should be awarded priority, if his opponent is not so entitled; but where the contention is that neither party can make the counts no issue of priority is raised.

The situation here presented is similar to that in the case of *Schuster* v. *Brown*, 21 CCPA (Patents) 932, 69 F.2d 373, 21 USPQ 11, 445 O. G. 100. In that case appellant's contention as to counts 1 and 3 was not that he should have been awarded priority, but that priority should not have been awarded to appellee for several reasons, one of which was that the counts were "invalid because inoperatively vague and incomplete." It was held that the question thus raised could not be considered by the court in an appeal from an award of priority in an interference proceeding, and it was further stated that a contention "that the counts are so broad that neither party can make them" could not properly be considered.

[3] Although counsel for appellant here contends at some length that appellee is not entitled to make the counts, he also concedes that appellant is not entitled to make them, although they are claims in appellant's patent. His real contention, therefore, is simply that the counts are not patentable to either party.

We are of opinion that the appeal raises no issue of priority of invention and that the issue presented cannot be considered by this court.

For the reasons stated, the appeal is dismissed.

DISMISSED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE MCNAMARA ET AL.

No. 5422. Decided March 2, 1948

[166 F.2d 948; 77 USPQ 219]

1. INVENTION—ABRASIVE SHEETS—CHANGE OF MATERIAL.
   Where the device disclosed in the reference patent contains each of the limitations contained in the appealed claim, except that the film forming material, though a polymer, does not comprise a cross-linked polymer, and where appellants' application discloses some polymers which are cross-linked and some which are not, *Held* no invention since we do not see that by the use of the particular polymers that there is anything here to show an unexpected result.
2. SAME—SAME—IMPREGNATED OR SIZED.
   Where the appealed claims require that the backing be "impregnated or sized" we cannot agree to appellants' contention that such language limits the claim to an impregnation.
3. SAME—SAME—SAME.
   Where the plain meaning of sizing is to cover or glaze the surface of an article, *Held* that to size an article or material is utterly different than to impregnate the article.
4. SAME—SAME—SAME.
   Where there is no question but that the coating disclosed in the reference patent must penetrate the backing to some extent, *Held* that whether the penetration amounts to impregnation or not is merely a matter of degree.
5. SAME—SAME—EVIDENCE.
   Where there is nothing in the record to show that the product and process of appellants is better in any respect than those of the cited references, and it appears that the materials proposed to be used and the degree of penetration involve nothing more than choice, *Held* that, if the materials used produce unexpectedly superior results, this fact should be established by evidence and not left to conjecture.
6. SAME—SAME.
   Certain claims to a flexible abrasive article *Held* properly rejected as unpatentable over the cited references.

APPEAL from the Patent Office. Serial No. 480,520.

AFFIRMED.

William H. Abbott (*Carpenter, Abbott, Coulter & Kinney* of counsel) for McNamara et al.

W. W. Cochran (*H. L. Reynolds* of counsel) for the Commissioner of Patents.

JACKSON, *J.*:

The Primary Examiner finally rejected claims 2, 3, 9, 10, and 13 to 17 inclusive of appellants' application, Serial No. 480,520, filed March 25, 1943, for a patent "For Abrasive Sheets and Belts," as unpatentable over the prior art. The Board of Appeals of the United States Patent Office, in its decision, affirmed the action of the Examiner and from that decision this appeal was taken. The appeal as to claims 2, 9, 14, 16, and 17 was withdrawn in appellants' brief, which leaves claims 3, 10, 13, and 15 for our consideration. Three claims were allowed.

The following references were cited: Carlton, 1,775,631, September 16, 1930; Klingspor, 1,833,715, November 24, 1931; Courtney, 2,124,055, July 19, 1938; Bartling, 2,186,001, January 9, 1940; Carlton et al., 2,230,934, February 4, 1941.

The involved claims read as follows:

3. A flexible abrasive article of the coated abrasive type comprising a strong woven fibrous material; an impregnating or presizing coat for said fibrous material which comprises a film-forming elastic waterproof adhesive material comprising a cross-linked resin polymer; a waterproof synthetic grit-bonding coat joined to the impregnated sheet or backing aforesaid; and a multiplicity of abrasive particles embedded in said grit-bonding coat; said grit-bonding coat being less flexible and very substantially harder than said impregnating or sizing coat.

10. In the production of abrasive articles of the coated abrasive type, that improvement which comprises treating a porous hydrophilic backing sheet with an aqueous dispersion of a synthetic resin, produced by polymerization of monomeric material in aqueous dispersion, applying a grit-bonding coat to a surface of the thus treated backing, and coating a layer of abrasive grains on said bonding coat, so that they become partially embedded and bonded therein, said grit-bonding coat being very substantially harder than the said impregnating coat of the finished abrasive article.

13. An abrasive belt adapted to be used wet in the abrading or polishing of glass, steel and the like comprising a porous backing sheet impregnated or sized with a coating comprising an elastic synthetic resin which is of the thermoplastic type but has a melting point much above room temperatures and has a molecular weight of at least several thousand; a grit-bonding coat which is non-thermoplastic and is very much harder than the aforesaid impregnating or sizing coat; and a layer of abrasive grits over said grit-bonding coat and bonded and anchored thereby.

15. An abrasive article of the coated abrasive type having a porous absorbent backing impregnated or sized with a continuous dried film of an aqueous dispersion of a resinous material, said film comprising a synthetic elastic resin produced from monomeric materials by emulsion polymerization, and a layer of abrasive grains bonded to said impregnated backing with a bonding coat comprising a heat-convertible synthetic resin, said grit-bonding coat being very substantially harder than said impregnating or sizing coat.

As may be observed from the claims, the application discloses an article of the coated abrasive type in which a porous backing sheet is impregnated with a sizing coat comprising an aqueous emulsion or dispersion of synthetic resin, a drying of the coated sheet, and the application of a phenolaldehyde grit-bonding coat in which are anchored abrasive grits. The grit-bonding coat is harder and less flexible than the sizing coat.

The patent to Carlton relates to an abrasive article, such as sandpaper, and method of making the same wherein certain resinous material is used, particularly synthetic resins such as phenol-formaldehyde condensation products, as a binder. Abrasive grits are fastened in the binder. It appears in the specification that one of the principal objects of the invention is the making of an abrasive article with a binder of a desired degree of flexibility. The binder is said to be characterized by extensibility and compressibility so that it will conform to the flexion of its base without permanent distortion or deleterious disintegration. The binder is characterized by great tensile strength and resistance to shearing stresses. It is stated to be very adhesive and tenacious and also non-hygroscopic, moisture resistant, and penetrative on a penetrable base, forming a strong union therewith, and resistant to solvents usually encountered in abrading operations. It is said that the flexibility of the article may be varied by heat treatment after the application of the binder and grit.

The Klingspor reference relates to waterproof polishing paper and discloses a grit grinding agent secured to a backing sheet base by a binding agent, such as animal glue or the like. The glue is then hardened by liquid condensation products of phenol or the like with formaldehyde or the like which are mixable with solvents. The animal glue is first dissolved or soaked in water, then mixed with the condensation products at a temperature not over 75° C. to avoid premature hardening of the glue. That mixture is then applied as a coating to the paper or other carrier and the grinding material applied to the surface. If paper is used as a base, it is preferably impregnated with linseed oil and dried.

The patent to Courtney relates to an abrasive article such as sandpaper and is said to be particularly directed to a method and product involving an improved bonding medium for attaching abrasive grains to a fibrous base. It is stated in the specification that there were disadvantages involved in the use of varnishes made of drying oils, raw or modified, and either with or without natural or synthetic resins, or of resins alone dissolved in suitable solvents in the bonding of abrasive particles to fibrous bases such as paper, cloth and the like. It is said that in that procedure it is essential that the bonding coat should not penetrate too deeply into the base of the article if in the drying or baking of the varnish adhesive it results in a brittle article lacking both strength and shock resistance. It is further stated that, even if the dried varnish be flexible, it should not penetrate very deeply for reasons of economy in the use of the binding medium. The patent discloses that the bond which contains the abrasive material is applied to the backing sheet in the form of an emulsion.

The Bartling patent is for a flexible abrasive sheet material such as sandpaper, including that of the waterproof variety. It discloses an article made with a paper backing and a bond coat holding the abrasive grits, and chemically treated so that the finished sheet is insoluble in water. The article contains what is called a barrier coating which is applied to the backing member into which it penetrates to some degree. The bond coat is applied on the barrier coat, which appears to penetrate the bonding coat securely cementing the abrasive elements. The patentee seeks to produce pliability in his finished sheet by the use of materials such as gelatine, which will penetrate into and impregnate the backing material to some extent.

The Carlton et al. patent relates to stable, waterproof, flexible sandpaper and the process of manufacturing the same. It discloses a flexible backing which first has a sizing coat applied thereto upon which is placed the bonding coat containing the abrasive material.

The Primary Examiner rejected the involved claims as unpatentable over any one of the patents to Carlton et al., Bartling, or Klingspor, in view of the patent to Courtney, stating that no invention was seen in the use of the emulsion disclosed in the Courtney patent as the preliminary bond in the abrasive device of those patents. He noted that in the patent to Carlton, the practice of controlling the hardness of the bonding and sizing coat is disclosed, and so for that reason saw no invention in the control of relative hardness in the bonding and sizing coats of any of the devices of the patents. He stated that the setting or drying of the sizing coat before applying the bond coat is illustrated in the patent to Carlton et al. With respect to claim 13 he noted that abrasive belts are commonly made from strips of abrasive and their ends joined together.

The Board of Appeals in its decision pointed out that appellants and the patentee, Courtney, recognized that it was old in the art to impregnate a porous backing with resinous material dissolved in a solvent and that both appellees and Courtney proposed, instead of dissolving resious material in a solvent, to use resinous material emulsified in water or other non-solvent. The Board stated that Courtney desired most of his resinous material to remain on the surface of the sheet, while appellees desired thorough impregnation of the backing sheet. The Board then observed that in the Courtney structure there must be some penetration of the resinous material into the backing sheet for, if this were not so, the coating would not adhere thereto. It further pointed out that the coating of the backing sheet in the Courtney structure also served as the grit-bonding coat, whereas appellants, instead of using the impregnated sheet for the purpose of bonding the grits, applies a special coating for that purpose.

The Board held that the references disclose it to be old in the art to provide for a special grit-bonding coat on an impregnated backing sheet, and that the question of patentability with respect to the involved claims hinged on whether or not it would involve invention to use the emulsion disclosed in the Courtney patent to impregnate the backing sheet when, as in the application, a separate grit-bonding coat is employed. The Board concluded that those skilled in the art would recognize that the emulsion of the Courtney patent could be used to impregnate the porous backing sheet, and that no invention would be involved in so doing, where an impregnated backing sheet with a separate grit bonding coat was desired.

In a subsequent decision of the Board based on appellants' request for reconsideration, the Board stated that the presently involved claims (to which the request for reconsideration was solely directed) include resinous materials in such a broad fashion as to cover materials shown by the cited prior art to have been used as constituents of abrasive articles, and that no invention was seen to be involved by reason of the Courtney patent in applying those materials to a backing sheet in an aqueous emulsion or dispersion. It concluded that those claims are not sufficiently specific as to the resinous materials so as to distinguish them from the materials disclosed in the prior art.

Appellants, in their said request for reconsideration of the Board's decision, pointed out what they claimed to be the limitations in the involved claims upon which they predicated patentability thereof as follows:

Claim 3 specifies an impregnating coat for the backing

"which comprises a film-forming elastic water-proof adhesive material comprising a cross-linked resin polymer."

Claim 10 defines the impregnant as

"an aqueous dispersion of a synthetic resin, produced by polymerization of monomeric material in an aqueous dispersion."

Claim 13 defines the impregnant as

"comprising an elastic synthetic resin which is of the thermo-plastic type but has a melting point much above room temperatures and has a molecular weight of at least several thousands."

Claim 15 defines it as

"a continuous dried film of an aqueous dispersion of a resinous material, said film comprising a synthetic elastic resin produced from monomeric materials by emulsion polymerization."

Those contentions are the same, but in extended form, in appellants' brief before us.

The sole issue is whether or not the claims on appeal are sufficient to define invention over the references.

The combination of a porous or fibrous backing of a presizing coating, and a bonding coating containing a layer of abrasive grains is old as disclosed by the Klingspor, Bartling, and Carlton et al. patents. Therefore, it would appear that the limitations in the involved claims upon which patentability is said to reside are in the kind of presizing or impregnating coat and the extent to which it penetrates the backing sheet, as is shown in the claims.

[1] There can be no question but that the device disclosed in the Carlton et al. patent contains each of the limitations contained in claim 3, except that the film-forming, elastic, waterproof, adhesive material does not comprise a cross-linked polymer. It is also clear that, since the entire article of the Carlton et al. patent is flexible, both of its coats are flexible. We do not think that the relative hardness between the two coats, as set out in the claims, involves invention for the reason that the control of hardness in plastics is old, as disclosed in the Carlton reference. Obviously the coating in which the grits are bonded should be tough and hard.

The resins of the Carlton et al. patent may be polymers of the condensation type, but they are not cross-linked. The examples that are preferred in the specification of appellants disclose some polymers which are cross-linked and others which are not, as pointed out by the Solicitor in his brief, and this has not been controverted by appellants. In

The Carlton et al. patent relates to stable, waterproof, flexible sandpaper and the process of manufacturing the same. It discloses a flexible backing which first has a sizing coat applied thereto upon which is placed the bonding coat containing the abrasive material.

The Primary Examiner rejected the involved claims as unpatentable over any one of the patents to Carlton et al., Bartling, or Klingspor, in view of the patent to Courtney, stating that no invention was seen in the use of the emulsion disclosed in the Courtney patent as the preliminary bond in the abrasive device of those patents. He noted that in the patent to Carlton, the practice of controlling the hardness of the bonding and sizing coat is disclosed, and so for that reason saw no invention in the control of relative hardness in the bonding and sizing coats of any of the devices of the patents. He stated that the setting or drying of the sizing coat before applying the bond coat is illustrated in the patent to Carlton et al. With respect to claim 13 he noted that abrasive belts are commonly made from strips of abrasive and their ends joined together.

The Board of Appeals in its decision pointed out that appellants and the patentee, Courtney, recognized that it was old in the art to impregnate a porous backing with resinous material dissolved in a solvent and that both appellees and Courtney proposed, instead of dissolving resious material in a solvent, to use resinous material emulsified in water or other non-solvent. The Board stated that Courtney desired most of his resinous material to remain on the surface of the sheet, while appellees desired thorough impregnation of the backing sheet. The Board then observed that in the Courtney structure there must be some penetration of the resinous material into the backing sheet for, if this were not so, the coating would not adhere thereto. It further pointed out that the coating of the backing sheet in the Courtney structure also served as the grit-bonding coat, whereas appellants, instead of using the impregnated sheet for the purpose of bonding the grits, applies a special coating for that purpose.

The Board held that the references disclose it to be old in the art to provide for a special grit-bonding coat on an impregnated backing sheet, and that the question of patentability with respect to the involved claims hinged on whether or not it would involve invention to use the emulsion disclosed in the Courtney patent to impregnate the backing sheet when, as in the application, a separate grit-bonding coat is employed. The Board concluded that those skilled in the art would recognize that the emulsion of the Courtney patent could be used to impregnate the porous backing sheet, and that no invention would be involved in so doing, where an impregnated backing sheet with a separate grit bonding coat was desired.

In a subsequent decision of the Board based on appellants' request for reconsideration, the Board stated that the presently involved claims (to which the request for reconsideration was solely directed) include resinous materials in such a broad fashion as to cover materials shown by the cited prior art to have been used as constituents of abrasive articles, and that no invention was seen to be involved by reason of the Courtney patent in applying those materials to a backing sheet in an aqueous emulsion or dispersion. It concluded that those claims are not sufficiently specific as to the resinous materials so as to distinguish them from the materials disclosed in the prior art.

Appellants, in their said request for reconsideration of the Board's decision, pointed out what they claimed to be the limitations in the involved claims upon which they predicated patentability thereof as follows:

Claim 3 specifies an impregnating coat for the backing

"which comprises a film-forming elastic water-proof adhesive material comprising a cross-linked resin polymer."

Claim 10 defines the impregnant as

"an aqueous dispersion of a synthetic resin, produced by polymerization of monomeric material in an aqueous dispersion."

Claim 13 defines the impregnant as

"comprising an elastic synthetic resin which is of the thermo-plastic type but has a melting point much above room temperatures and has a molecular weight of at least several thousands."

Claim 15 defines it as

"a continuous dried film of an aqueous dispersion of a resinous material, said film comprising a synthetic elastic resin produced from monomeric materials by emulsion polymerization."

Those contentions are the same, but in extended form, in appellants' brief before us.

The sole issue is whether or not the claims on appeal are sufficient to define invention over the references.

The combination of a porous or fibrous backing of a presizing coating, and a bonding coating containing a layer of abrasive grains is old as disclosed by the Klingspor, Bartling, and Carlton et al. patents. Therefore, it would appear that the limitations in the involved claims upon which patentability is said to reside are in the kind of presizing or impregnating coat and the extent to which it penetrates the backing sheet, as is shown in the claims.

[1] There can be no question but that the device disclosed in the Carlton et al. patent contains each of the limitations contained in claim 3, except that the film-forming, elastic, waterproof, adhesive material does not comprise a cross-linked polymer. It is also clear that, since the entire article of the Carlton et al. patent is flexible, both of its coats are flexible. We do not think that the relative hardness between the two coats, as set out in the claims, involves invention for the reason that the control of hardness in plastics is old, as disclosed in the Carlton reference. Obviously the coating in which the grits are bonded should be tough and hard.

The resins of the Carlton et al. patent may be polymers of the condensation type, but they are not cross-linked. The examples that are preferred in the specification of appellants disclose some polymers which are cross-linked and others which are not, as pointed out by the Solicitor in his brief, and this has not been controverted by appellants. In any event we do not see that by the use of polymers as contrasted with unpolymerized materials, that there is anything here to show an unexpected result. It is admitted in appellants' application that the use of thermo-plastics in the involved art is well known.

Claim 10 is in method form and differs somewhat from claim 3 in that it states that the improvement in the abrasive art "comprises treating a porous hydrophilic backing sheet with an aqueous dispersion of a synthetic resin, produced by polymerization of monomeric material in aqueous dispersion, * * *." The patent to Courtney discloses an aqueous dispersion of polymerized synthetic resin which serves to coat the backing and also bonds the grits to the backing, and we see nothing in the record which indicates that the presizing coating of appellants would be superior to the presizing layer shown in the Carlton et al., Bartling, or Klingspor patents. It is clear to us that it would not require invention merely to use an emulsion or dispersion as a presizing coat in those patents.

It is true, as pointed out by appellants, that the sizing coat of the Courtney patent does not completely impregnate the backing of his article. It is also true that the polymers shown in appellants' application are formed during or after emulsification, whereas the polymers of the Carlton patent occur before emulsifying. However, we find nothing in the record to indicate that emulsion polymerization results in a materially different or superior abrasive article.

Appellants argue vigorously in their briefs that the complete impregnation of their backing sheet should lend patentability to their claims. We do not think such argument is supported by the application in which it is stated that the backing may be either coated or impregnated. Therefore, it would seem that coating or impregnating the backing sheet with appellants' synthetic substance would be equally effective. It will be noticed that claim 10, which merely calls for "treating" the backing sheet, could involve any treatment, either by complete impregnation, an adhesive coating, or a very slight penetration.

[2], [3] Both claims 13 and 15 require that the backing "be impregnated or sized." We can not agree to appellants' contention that such language limits the claim to an impregnation. The plain meaning of sizing is to cover or glaze the surface of an article. That is the common meaning of the term as defined by all the lexicographers. Therefore, it appears that to cover or glaze the surface of an article or material with a sizing is utterly different than to impregnate the article.

[4] There can be no question but that the coating disclosed in the Courtney patent must penetrate the backing to some extent, and whether the penetration amounts to impregnation or not is merely a matter of degree.

The statement in claim 13, that the resin comprising the sizing coat "has a molecular weight of at least several thousand;" in the absence of any showing to the contrary, is not critical. The same reasoning is applicable to the statement in claim 15 that the elastic resin is produced from monomeric materials by emulsion polymerization.

[5] We find nothing in the record to show that the product and process of appellants, as defined in the involved claims, is better in any respect than those in the cited references and it appears to us that the materials proposed to be used in those claims and the degree of penetration involve nothing more than choice. We agree with the Solicitor in his statement that, "If the materials used produce unexpectedly superior results, this fact should be established by evidence and not left to conjecture."

[6] Considering the withdrawal of the appeal as to claims 2, 9, 14, 16, and 17 as equivalent to a motion to dismiss, the motion is granted and the appeal as to those claims is dismissed. The decision of the Board as to claims 3, 10, 13, and 15 is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE BURKE

No. 5442. Decided April 6, 1948

[— F.2d —; 77 USPQ 387]

PATENTABILITY—SHOE TESTING APPARATUS.

Certain claims for a shoe testing apparatus *Held* properly rejected in view of the prior art and common knowledge, and that while appellant has shown an ingenious device for the testing of new shoes, his structure does not involve exercise of the inventive faculty.

APPEAL from the Patent Office. Serial No. 509,099.

AFFIRMED.

James M. Naylor, Theodore H. Lassagne, and *N. Douglas Parker, Jr.*, for Burke.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

JACKSON, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office affirming that of the Primary Examiner rejecting all of the claims of an application for a patent alleging new and useful improvements in the "Method and Apparatus for Testing Shoes."

The claims read as follows:

5. A shoe testing apparatus comprising, a plurality of surfaces disposed on different planes to provide abbreviated walk surfaces, the several walk surfaces each being characterized by the fact that when walked upon they will induce characteristically different flexures of various parts of the shoe in varying degrees.

6. A shoe testing apparatus, comprising, a plurality of surfaces disposed on different planes to provide abbreviated walk surfaces, the several walk surfaces each being characterized by the fact that when walked upon they will induce characteristically different flexures of various parts of the shoe in varying degrees, each of said surfaces being covered with material providing traction incident to normal walking but sufficiently non-abrasive to avoid any substantial marring of factory finished shoes.

7. A shoe testing apparatus comprising, a portable, unitary structure including stairs, a ramp and a level surface each in abbreviated form, each of the elements of the structure being covered with material providing traction incident to normal walking but sufficiently non-abrasive to avoid any substantial marring of factory finished shoes.

The tribunals of the Patent Office rejected the claims on the following prior art. Wiltse, 821,391, May 22, 1906; Cook, 1,994,981, March 19, 1935; Hill, 2,141,651, December 27, 1938; Montgomery Ward & Co., Catalogue 135 (1941), page 692, item 72a, 1908; Display World, January 1941, page 42; Display World, June 1940, page 7. The Examiner also based his decision upon judicial notice of carpeted stairs, floors, and ramps in stores and homes and the walking on carpet floors to try out shoes.

The Examiner further held the claims to be aggregative, which holding was reversed by the Board of Appeals.

As may be observed from the quoted claims, the involved article is portable, covered with carpet and so constructed as to comprise a flat elevated platform, reached on one side by a few steps and on the other by a ramp. It is designed for use in trying out new shoes by walking upon the various parts of the structure, thereby giving the same flexing to the shoes as they would receive in ordinary wear. The carpet is for the purpose of preventing scratches or other marks on the soles of the shoes while they were being tried out.

The Wiltse patent relates to an exercising apparatus for children. It comprises two flights of stairs, each having a broad landing at the top on the same plane and butted together. The two parts are hinged together so that when the apparatus is not in use it may be closed up.

The Cook patent relates to an apparatus designed for demonstrating the cushioning effect of underlays or lining for carpets and rugs. It discloses a short platform upon which is placed a lining under a part of a section of carpet or rug. When a person stands with one foot upon the lined part of the rug and the other foot on the unlined part thereof, the effect of the lining under the rug is readily noticeable.

The Hill patent is for a shoe testing device and discloses a flat surface with a slot in the middle. In the slot, freely moving therein, is a ball about a half of which extends above the flat surface. When testing new shoes, the shoe is put on the foot and moved backwardly and forwardly upon the ball so that the impression thereof may be felt by the purchaser of the shoe and compared with the effect produced by another shoe tested in the same manner.

The Display World references disclose shoes placed on ramps for advertising purposes. The Montgomery Ward catalogue discloses a short flight of stairs, the treads of which are covered with material to prevent slipping and probably wear on the treads.

While appellant has shown an ingenious device for the testing of new shoes, we are of opinion that his structure does not involve exercise of the inventive faculty. It is commonly known that shoes are used as a protection for feet, and that shod feet are used in moving from place to place, going uphill, downhill, and over rough and flat surfaces. It is further commonly known that in the purchase of new shoes, they are ordinarily tested on a strip of carpet or a carpeted floor in a shoe store. The buyer walks to and fro and flexes his prospective purchase in every manner that seems desirable to him. We do not see where the flexing of a new shoe in going up a flight of steps is any different than a flexing of the shoe when one is in a standing position and presses the toe of his shoe with some force against the carpeted floor. Flexing likewise is obtained in somewhat the same degree in climbing an inclined plane. But, of course, it is clear that, in walking, shoes are flexed on the floor or the street or other flat surface.

The prior art discloses a shoe testing device, a cushioning effect, a device shown with steps on either side, a platform, and a ramp.

It is clear in our opinion, not only in view of the prior art but because of common knowledge, that no invention is involved in the rejected claims.

Therefore, the decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE BURGESS

No. 5373. Decided April 6, 1948

[167 F.2d 537; 77 USPQ 353]

1. PATENTABILITY—PROCESS FOR FORMING YARN.
   Certain claims to a process for forming yarn containing intermingled fibers of a plurality of different colors, which are broad enough to cover the production of wool textiles, *Held* properly rejected as unpatentable over the prior art.
2. SAME—SAME.
   Certain claims to a process for forming cotton yarn containing intermingled fibers of a plurality of different colors *Held* to represent a patentable advance over the prior art.

APPEAL from the Patent Office. Serial No. 486,208.

MODIFIED.

Emery, Varney, Whittemore & Dix (*Nichol M. Sandoe* of counsel) for Burgess.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting all the claims in appellant's application for a patent for an alleged invention relating to a process of forming yarn.

Claims 1, 3, and 7 which are typical of the appealed claims are as follows:

1. A process for forming yarn containing intermingled fibers of a plurality of different colors which comprises forming a plurality of rovings from staple fibers, dyeing at least one of said rovings a color different from that of at least one other of said rovings, doubling and drawing said rovings of different color to form a roving in which the fibers of the rovings of different color are intermingled, thereafter repeatedly doubling and drawing said roving with another similarly doubled and drawn roving of similar color characteristics to increase the thoroughness of the intermingling, and spinning the resulting roving to form a yarn.

3. A process for forming yarn containing intermingled fibers of a plurality of different colors which comprises doubling and drawing a plurality of staple fiber rovings of different color to form a roving in which the fibers of the rovings of different color are intermingled, thereafter repeatedly doubling and drawing said roving with another similarly doubled and drawn roving of similar color characteristics to increase the thoroughness of the intermingling, and spinning the resulting roving to form a yarn.

7. In the cotton system for forming yarn from staple fibers of cotton or rayon in which the fibers are processed successively in drawing frames, slubbers, intermediates and spinning frames; the process for forming yarn containing intermingled fibers of a plurality of different colors which comprises carrying undyed fibers through such drawing frames and slubbers and forming rovings from such fibers in such slubbers, dyeing such rovings a plurality of different colors, doubling and drawing a roving of one color with at least one roving of different color at a stage prior to said intermediates to form a roving in which the fibers of different color are intermingled, thereafter carrying said roving through said intermediates and repeatedly doubling and drawing said roving in said intermediates with another similarly doubled and drawn roving of similar color characteristics to increase the thoroughness of the intermingling, and spinning the resulting roving to form a yarn.

The references relied on are: Watson's Textile Design and Color, pages 144–145, and Midgley Technical Terms in the Textile Trade, pages 152–153.

Appellant's application relates to the making of yarn from fibers, particular emphasis being placed on yarns made from cotton fibers. As stated in the application, the usual process of making yarn involves first carding the fibers, then forming them into slivers, which are strands of loosely matted fibers, then doubling, drawing, and slightly twisting the fibers of two or more slivers to form what is known as a roving, and then further doubling and twisting two or more rovings together to form the yarn. The step of doubling, drawing, and twisting the slivers to form rovings is known as slubbing.

Appellant's process departs from the usual procedure, just described, by dyeing the rovings in two or more different colors and combining rovings of different colors in the final doubling and twisting, by which the yarn is formed, thus producing a blended color.

It is alleged in the affidavit of John Hoye, a textile expert, that prior to appellant's invention, mixed color yarns of cotton and rayon have not been produced except by the so-called "stock dyeing," which involves a dyeing in different colors and mixing of the raw fibers prior to carding, or by cross dyeing which involves the use of fibers of different kinds and selective dyes which will color fibers of one kind but not of the other. The affiant also points out a distinction between the production of wool and cotton yarns, namely, that wool yarns are carded or combed in such manner as to remove the short fibers, leaving a material known as "tops" which, because of the length of the fibers, has substantial strength and may be wound on springs for dyeing, whereas cotton yarns, after carding, contain short fibers and are too loosely connected to permit such winding and dyeing.

The Watson and Midgley publications, relied on in the rejection of the appealed claims, disclose the stock dyeing process described in the Hoye affidavit, and the Watson publication also discloses the cross dyeing process described in that affidavit. In addition, the Watson publication states that blended yarns have been made by dyeing fibers in the "raw or the sliver condition" and mixing them, and the Midgley publication refers to a process of "slubbing dyeing" which is "usually obtained by dyeing the material in the top form" and which is "the result of running together, in the first process of drawing, tops of different colour." It is also stated in the Watson publication that the mixing of differently dyed fibers "may be done in the later stages prior to spinning with the object of producing a colour mixture in which each colour retains its purity."

The Midgley publication is expressly limited to dyeing "as practised in the woollen trade." The Watson publication is not expressly so limited. However, it is clearly indicated in appellant's application and in the Hoye affidavit that cotton fibers in the sliver stage are too loose and fragile to permit dyeing, and the Examiner states that cotton slivers are "unsuited for dyeing." It is clear, therefore, that the Watson publication must be referring to wool slivers or tops which, as hereinbefore stated, have sufficient strength to permit dyeing. The mixing of differently dyed fibers, referred to in that publication, in "the later stages prior to spinning" evidently refers to operations taking place at a considerably later stage than that at which appellant mixes his dyed fibers, since it is stated that a mixture results in which "each colour retains its purity," whereas appellant's mixing takes place early enough to produce a blended colour. This disclosure in the Watson publication of dyeing "in the later stages," therefore, is not, in our opinion, pertinent to the subject matter of the appealed claims.

It thus appears that the most pertinent portions of the disclosures of the references are limited to the dyeing of wool. Watson's most pertinent disclosure is that of dyeing the fibers in different colors in the "sliver condition," the term "sliver," as used by him, being synonymous with "top condition," and Midgley's most pertinent disclosure is substantially identical with that of Watson and involves the dyeing of the fibers "in the top form" and "running together, in the first process of drawing, tops of different colour." Although Midgley refers to this process as "slubbing dyeing" it is clear that the dyeing is actually done immediately before slubbing since he states that the fibers are dyed in top form, which is their form prior to slubbing and since he also states that the colored fibers are run together in the first process of drawing, which process is the one called "slubbing."

The references, therefore, although they do not expressly teach the dyeing of rovings prior to doubling them together, do teach, in the art of woolen textiles, the dyeing of fibers in different colors immediately prior to the production of the rovings. In order to justify the allowance of claims on the basis of such a slight change in procedure it would be necessary to show that some unexpected result was produced.

[1] So far as the blending of the colors is con-

cerned, it is evident that the mixture of fibers of different colors before the rovings are made will produce at least as good a blending in the final product as will appellant's process. It is stated in the Hoye affidavit that if wool is dyed in the condition of tops, it is necessary to recomb it before making it into rovings. Neither the Watson nor the Midgley publications make any reference to such a recombing in connection with top dyeing but, even assuming the combing to be necessary, Hoye admits that "In the manufacture of worsted yarns such reprocessing is permissible because of the higher cost of worsted yarns and fabrics." So far as woolen textiles are concerned, therefore, appellant's process involves merely the deferring of the dyeing step to a slightly later stage, with the only advantage, if any, being the elimination of a recombing step which does not involve a prohibitive cost. Appellant's process, so far as it relates to woolen yarn, clearly does not represent the difference between success and failure in the commercial production of blended colors in such yarns. Under the related circumstances, we are of opinion that appealed claims 1, 2, and 3, which are broad enough to cover the production of wool textiles, were properly rejected.

It may be noted that claim 3 does not even state that the fibers are dyed while in the form of rovings, but merely states that the rovings used are of different colors. So far as that claim is concerned, the colors might have been imparted to the rovings by dyeing the fibers of which they are composed while in the form of stock or tops. Claim 3, therefore, does not define a process having any advantage over the stock dyeing or top dyeing of the prior art.

[2] Appealed claims 7 and 8 are limited to a process involving cotton or rayon fibers. Although those fibers are generally similar to wool fibers, there is no stage in the processing of cotton or rayon fibers which accurately corresponds to wool in the state of tops, since rayon and cotton fibers, after combing, are too loose and fragile to permit dyeing. Accordingly, the disclosure in the references of the top dyeing of wool has no direct pertinence to the cotton or rayon art, and the closest approach to appellant's process in those arts is stock dyeing. As compared with stock dyeing, appellant's process has marked advantages, as pointed out in the affidavit of Hoye. One of those advantages is that stock dyeing is practicable only in relatively large quantities, whereas rovings can be dyed in smaller amounts. Another is that a considerable percentage of stock is lost in combing and, if the stock is dyed prior to combing, there is a corresponding loss of dye. Still another is that it is more difficult and expensive to card dyed stock than stock which has not been dyed. In view of those facts, we are of opinion that, so far as cotton and rayon are concerned, appellant's process represents a patentable advance over the prior art, and that claims 7 and 8 should, therefore, have been allowed.

For the reasons stated, the decision of the Board of Appeals is modified, being affirmed as to claims 1, 2, and 3, and reversed as to claims 7 and 8.

MODIFIED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

NOTICES

Substitute Attorney

Hereafter when the attorney appointed by an applicant appoints a "substitute" attorney, such "substitute" attorney shall be considered the associate of the principal attorney. The name of the principal attorney will be left on the file and his responsibility to the applicant shall not be considered as having been discharged. In any case, where the membership of a firm of attorneys is changed and the new firm is substituted for the old, the original firm name may be cancelled from the file.

LAWRENCE C. KINGSLAND,
Commissioner of Patents.

July 19, 1948.

Disclaimer

2,402,917. *William A. Miller,* Port Jefferson Station, N. Y. ELECTRONIC SWITCH. Patent dated June 25, 1946. Disclaimer filed June 2, 1948, by the assignee, *Radio Corporation of America.*

Hereby enters this disclaimer to claims 1, 5, 6, and 7 of said patent.

Adverse Decisions in Interferences

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed.

Pat. 2,368,921, G. B. Greene and Paul O'Connor, Dual automatic radio direction finding system, decided June 29, 1948, claims 1, 5, 6, and 10.

Pat. 2,419,100, V. L. Weaver, Dynamometer type electrical measuring instrument, decided July 2, 1948, claim 2.

Adjudicated Patents

(C. C. A. Wis.) Miller patent, No. 1,888,234, for method of and apparatus for applying wall finishes, claims 3, 4, 6, and 7 *Held* invalid. *Miller* v. *Zaharias,* 168 F.2d 1; 77 USPQ 355.

(C. C. A. Wis.) Miller patent, No. 1,960,276, apparatus for applying wall finishes, claims 1, 2, and 5 *Held* invalid. *Id.*

(C. C. A. Ill.) Borden patent, No. 2,221,213, for tape dispenser, claims 3 and 5 *Held* invalid. *Minnesota Mining & Mfg. Co.* v. *Industrial Tape Corp.,* 168 F.2d 7; 77 USPQ 495.

Cancellation Notices

Metro Hosiery Co., Inc., its assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Northmont Hosiery Corporation, Fairmont and Alton Sts., Reading, Pa., to effect the cancellation of trade-mark registration of Metro Hosiery Co., Inc., 51 Canal St., New York, N. Y., No. 299,925, dated December 27, 1932, and the notice of such proceeding sent by registered mail to the said Metro Hosiery Co., Inc. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Metro Hosiery Co., Inc., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

July 15, 1948.

Tampa Importers, Inc., its assigns or legal representatives take notice:

A cancellation proceeding has been instituted by this Office upon the petition of Manuel A. Fernandes, 225 West 74th St., Los Angeles 3, Calif., to effect the cancellation of trade-mark registration of Tampa Importers, Inc., No. 334,671, dated May 12, 1936. The assignment records of this Office show a transfer of title to this registration to Harold W. Bonwit, Scarsdale, N. Y., who has been substituted for said Tampa Importers, Inc., to defend the registration concerned. The notice of such proceeding sent by registered mail to said Bonwit, at his address of record, Scarsdale, N. Y., having been returned by the post office undeliverable, notice is hereby given that unless said Tampa Importers, Inc., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

July 9, 1948.

Ralph Galowin, his assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Stauffer Chemical Company, 636 California St., San Francisco, Calif., to effect the cancellation of trade-mark registration of Ralph Galowin, 2815 West 2d Street, Brooklyn, N. Y., No. 280,147, dated February 10, 1931, and the notice of such proceeding sent by registered mail to the said Galowin at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Galowin, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

July 6, 1948.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,364,113. APPARATUS FOR STACKING POWDER GRAINS. Patented Dec. 5, 1944. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A machine for stacking powder grains in layers in containers. The powder is placed in a hopper and fed by an agitator into four adjustable feed tubes to form upright columns, the lower ends of which rest in a trough and then discharge into four guideways provided with rotating cams for advancing the powder grains. The guideways intersect and join a disk-like ram on which the powder grains are forced. A plunger is attached to base of rim and to a cylinder. When the cylinder is operated, the grains are forced in the guideways and onto the ram and then pushed into the container. Each container is provided with a cylindrical follower to maintain the grains in stacks. (Owner) Robert Van Roo, 4200 South 7th Road, Arlington, Va. Group 35—59. Reg. No. 9,803.

Pat. 2,429,808. TOBACCO PIPE. Patented Oct. 28, 1947. Smoker's pipe has a tobacco bowl of metal supported almost wholly in the atmosphere so it is air-cooled. Tobacco bowl is connected to a metal condenser bowl beneath it by a ring of heat-insulating material which holds an intermediate heat-resisting bowl (preferably of plastic) in spaced relation between the tobacco and condenser bowls. Fumes are spread over the condenser through orifices in the tobacco and intermediate bowls and are drawn in a cool dry state through the stem. Several variations shown. (Owner) Montague Downing, 22 Links Road, Weymouth, England. Group 39—96. Reg. No. 9,804.

Pat. 2,423,048. BOOKHOLDER. Patented June 24, 1947. Bookholder may be adjusted both vertically and angularly to hold a book at proper height and at desired inclination. A book is securely retained on base of holder in open position by pairs of upstanding posts, a pair of pins which engage break in book at bottom and top, and a pair of pivoted marginal page holders. Bookholder is supported in elevated position by a pivoted upright having its lower end secured to a curved section of tubing. The tubing adjustably receives a pair of curved legs which are bent upon themselves to form feet. (Owner) Anthony Poch, Nelson, B. C., Canada. Groups 34—99; 39—96; 40. Reg. No. 9,805.

Pat. 2,437,842. MORTAR AND CEMENT COMPOSITIONS. Patented Mar. 16, 1948. In this patent water soluble alkanol amines in varying amounts between predetermined limits are incorporated in various lime plasters and cements to enhance their plastic properties, decrease the time for initial and final setting, and increase their ultimate hardness. Typical alkanol amines falling within the generic scope of the invention are mono, di, and triethanol amine, dimethyl ethanol amine, methyl diethanol amine, and triisopropanol amine. (Owner) Frank G. Uhler, 2409 Taylor Ave., Alexandria, Va. Groups 32—41—42. Reg. No. 9,806.

Pat. 2,435,568. METHOD OF AND MEANS FOR PROTECTING RIVER BANKS. Patented Feb. 10, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Revetment for preventing erosion of river banks may be constructed of available material usually found along river banks with minimum labor and equipment. A series of hinged timber mattresses of cellular construction having anchoring legs are constructed on pontoons alongside barges, with the barges constituting a platform for workmen. Sufficient ballast is enclosed within the cells for submerging mattresses and causing penetration of the anchoring legs into a river bed when pontoons are withdrawn. Pontoons with completed mattresses are permitted to float away from the barges to a desired point by paying out cables where the mattresses are anchored while a prefabricated section of concrete slabs is placed with one end on river bank and other end on end of mattress nearest shore. Pontoons are then withdrawn, permitting gravitation of mattresses and concrete section to river bed. After submergence, the concrete section rests with its upper end on river bank. Piling (which is subsequently covered with weather-resistant material) is then driven into bank near upper end of concrete section. (Owner) Hershell N. Anderson, 1403 Murl St., New Orleans 14, La. Group 32—71. Reg. No. 9,807.

Pat. 2,433,199. CULTIVATOR SHIELD. Patented Dec. 23, 1947. Two or more rotary disk type shields are attached at a distance behind front wheels of a cultivator. Disks are carried on an axle supported by bearings in angle of a V-shaped frame back of each front wheel. One arm of V-shaped frame extends upward and is slidably connected to a rod which is pivotally attached to end of a lever mounted on the frame of cultivator. This lever is operated by a crank from the seat of tractor to vertically adjust the shields by raising and lowering the frame while tractor is in motion. The forwardly extending arm is pivotally connected to front of cultivator for up and down movement. These adjustments facilitate terrace cultivation. Shields contain peripheral indentations to produce turning rather than sliding along ground. (Owner) Frank F. Carter, Route 2, Merkel, Tex. Group 35—22. Reg. No. 9,808.

Pat. 2,415,633. AUTOMATIC WEEDLESS FISH LURE. Patented Feb. 11, 1947. Dual spring-urged hooks of this lure when in set position are partially enclosed by tail to minimize liability of fouling by weeds, etc. A slight tug on lure by fish will release hooks, permitting them to spring outwardly in opposite directions for impalement in

mouth of fish. Both hooks are formed from a single strand of steel wire bent medially of its length to form a helix. Trigger pins on shanks of hooks slidably engage loops in body portion of lure to retain hooks inwardly in set position. (Owner) William Hietala, Poplar, Wis. Groups 39—49; 40. Reg. No. 9,809.

Pat. 2,436,285. MOTOR OR PUMP. Patented Feb. 17, 1948. A rotary machine which may be constructed for use either as a fluid pump or as a motor for the transmission of power from a motor to a machine. Comprises a stator formed with a zigzag channel in which the vanes extending through slots in the rotor disk travel as the rotor rotates. The rotor and the channel form two series of chambers. Each chamber has a fluid inlet port and a discharge port which communicate with like chambers in the stator. Fluid entering the chambers acts against the vanes and causes rotation of the rotor. The fluid which has acted on a vane is exhausted through the discharge port by the following vane. (Owner) Frank A. Booth, 324 Whiting St., El Segundo, Calif. Group 35—69. Reg. No. 9,810.

Pat. 2,440,974. COMBINED HUMIDIFIER AND TOILET PAPER DISPENSER. Patented May 4, 1948. Box-like container made to conform to the size of a standard roll of toilet tissue is provided with a hinged cover which functions as a front face. The lid is provided with a slot through which the tissue is dispensed. To soften the tissue the container features a slidable wire tray mounted above the roll on which is supported a sponge moistened with water, or a medical, deodorising, or disinfectant solution if preferred. The container may be fabricated of plastic or enameled metal and lined with a moisture-absorbing material if necessary. (Owner) Stewart H. Resch, R. D. 1, Temple, Pa. Groups 33—73—99; 39—91; 40. Reg. No. 9,811.

Pat. 2,364,426. BOAT WITH MEANS FOR ENCLOSING THE PROPELLER WHEN NOT IN USE. Patented Dec. 5, 1944. This patent relates to the streamlining of a sailboat hull equipped with an auxiliary motor. Stern of boat has a pair of sheet metal lined longitudinal slits, the outer faces of which are in alignment with the outer edges of the opening in the keel extension in which a propeller is arranged. The keel opening may be covered and the propeller enclosed by a pair of slidable plates placed at opposite ends of the longitudinal slits. The plates may be quickly lowered by a manually rotated screw arrangement when the boat is at rest or underway. Thus the maneuverability and speed of a sail boat equipped with a motor used only to a limited extent is not detrimentally affected when driven by sails alone inasmuch as variable eddy currents are not formed in and around the propeller opening. (Owner) Dybwad Danielsen. Address correspondence to Walter H. Popp, 355 Skinnerville Road, Route 3, Buffalo 21, N. Y. Group 37—32. Reg. No. 9,812.

Pat. 2,437,133. BABY FEEDER. Patented Mar. 2, 1948. Easel-like stand has a pocket formed in its upper end in which a bottle is seated. An elastic harness, which includes a loop for the nipple end of the bottle, is attached to the easel and fitted on the bottle in such a way as to allow the bottle universal movement. The stand may be adjusted to raise the height of the bottle by attachable telescopic leg ends. The feeder may be supported in any angular position and held to the tray of a high chair by a weighted anchoring means, or attached to a table or crib by a strap. Samples and leaflets may be obtained from the owner upon request. (Owner) Walter M. Sirks, P. O. Box 1571, Huntington, W. Va. Groups 25—99; 39—91; 40. Reg. No. 9,813.

Pat. 2,436,344. PORTABLE VENTILATOR HAVING ADJUSTABLE MOUNTING MEANS. Patented Feb. 17, 1948. This portable ventilator is motor-operated and has an adjustable mounting so that it fits in top or bottom of window frames of various widths without the use of fasteners. Comprises two main body members, one with a ventilating opening for a motor and a fan. A pressure member at one end of the ventilator has spring means for urging the pressure member away from the adjacent body member. The body members are adjusted and held in the window opening by locking means comprising a ratchet rack in channel at bottom of members. (Owner) Milton J. Winogrond, 100 North La Salle St., Chicago 2, Ill. Group 34—95. Reg. No. 9,814.

Pat. 2,429,058. SURGICAL SUPPORT. Patented Oct. 14, 1947. A surgical support for a floating kidney, in which a pressure pad is held where initially applied. Includes a two-piece girdle laced at back and snapped at front, an unattached pressure pad, and a spring frame with an adjustable fastening. The frame, shaped to provide a U-shaped loop and parallel spaced arms contiguous with the loop, is positioned around and attached adjustably to the girdle, with its arms astride the hip bones and the loop fitting into a pocket in the girdle. The pressure pad is inserted in desired position, under the girdle, and becomes impressed into the loop. (Owner) Max L. Holycross, Rural Route 6, Columbia City, Ind. Group 39—16. Reg. No. 9,815.

Pat. 2,441,396. ANTIDOTE FOR HEAVY METAL POISONING. Patented May 11, 1948. The effects of mercury poisoning and similar heavy-metal poisoning may be ameliorated by an antidote compound made as follows: P-hydrazinobenzenesulfonic acid dissolved in liquid ammonia, to which carbon bisulfide is added drop by drop, is stirred constantly for approximately an hour and then allowed to evaporate. The sticky mass resulting is heated and worked until it becomes granular. On standing, hydrogen sulfide is given off, and the remaining carbazide dissolved in a sodium hydroxide solution (or a similar base) oxidises to a highly colored carbazone. Substitute compounds also described. (Owner) Research Corporation, 405 Lexington Ave., New York 17, N. Y. Group 28—31. Reg. No. 9,816.

Pat. 2,285,386. SHEET METAL WORKING TOOL. Patented June 9, 1942. Tool has a detachable cutting member for use in cutting sheet metal on the outer or inner panels of vehicle bodies. Comprises an elongated shank with a curved tapered end provided with a slot for detachably mounting a cutting blade. When blade is removed, the tool may be used for driving or prying a vehicle body back to alinement, or the rounded surface may be used for hammering out dents or used as an anvil by placing under the surface to be straightened. (Owner) W. R. Atwood, P. O. Box 331, Odessa, Tex. Group 35—43—69. Reg. No. 9,817.

Pat. 2,331,764. VANITY KIT. Patented Oct. 12, 1943. Case has provision for various cosmetic articles held in place so they will not spill when the case is opened and any of the items removed. The kit has a metal or plastic frame having tabs on the bottom and sides so that a flexible leather cover may be secured. Back portion of frame is rolled to provide a round end in which a lipstick may be accommodated. A powder compact, having a cover mirrored on both sides, slides within the walls of the case, the compact being spaced to provide room for tissues, cigarettes, etc. The leather cover is closed by snap fasteners. (Owner) Louis H. Campos, % Benita Products Co., 1947 Broadway, New York 23, N. Y. Groups 31—72; 39—72; 40. Reg. No. 9,818.

INTERNATIONAL CONVENTION FOR THE PROTECTION OF INDUSTRIAL PROPERTY

Signed at London June 2, 1934; ratification advised by the Senate June 5, 1935; ratified by the President June 27, 1935; ratification of the United States deposited at London July 12, 1935; Proclaimed by the President October 26, 1938; came into force August 1, 1938, between the countries ratifying it prior to that date.

[Translation]

Convention of Union of Paris of March 20, 1883, for the Protection of Industrial Property, Revised at Brussels December 14, 1900, at Washington June 2, 1911, at The Hague November 6, 1925, and at London June 2, 1934.

ARTICLE 1

(1) The countries to which the present convention applies constitute themselves into a Union for the Protection of Industrial Property.

(2) The scope of the protection of industrial property shall include patents, utility models, industrial designs and models, trade marks, commercial names and indications of origin, or appellations of origin, as well as the repression of unfair competition.

(3) Industrial property shall be understood in the broadest meaning and shall apply not only to industry and commerce as such, but likewise to agricultural and extractive industries and to all manufactured or natural products, for example, wines, grains, tobacco leaves, fruits, cattle, minerals, mineral waters, beers, flowers, flours.

(4) The term "patents" shall extend to the various types of industrial patents recognized by the laws of the countries of the Union, such as patents of importation, improvement patents, patents and certificates of addition, etc.

ARTICLE 2

(1) Nationals of each of the countries of the Union shall, in all other countries of the Union, as regards the protection of industrial property, enjoy the advantages that their respective laws now grant, or may hereafter grant, to their own nationals, without any prejudice to the rights specially provided for by the present convention. Consequently they shall have the same protection as the latter, and the same legal remedy against any infringement of their rights, provided they observe the conditions and formalities imposed upon nationals.

(2) Nevertheless, no condition as to the possession of a domicile or establishment in the country where protection is claimed can be required of those who enjoy the benefits of the Union for the enjoyment of any industrial property rights.

(3) The provisions of the legislation of each of the countries of the Union relative to judicial and administrative proceedings and to competent authority, as well as to the choice of domicile or the appointment of an authorized agent, which may be required by the laws on industrial property are expressly reserved.

ARTICLE 3

Nationals of countries not forming part of the Union who are domiciled or who have real and effective industrial or commercial establishments in the territory of one of the countries of the Union shall be assimilated to the nationals of the countries of the Union.

ARTICLE 4

A. (1) Any person who has duly applied for a patent, the registration of a utility model, industrial design or model, or trade mark in one of the countries of the Union, or his legal representative or assignee, shall enjoy for the purposes of registration in other countries a right of priority during the periods hereinafter stated.

(2) Any filing having the value of a formal national filing by virtue of the internal law of each country of the Union or of international treaties concluded among several countries of the Union shall be recognized as giving rise to a right of priority.

B. Consequently, subsequent filing in one of the other countries of the Union before the expiration of these periods shall not be invalidated through any acts accomplished in the interval, as, for instance, by another filing, by publication of the invention or the working thereof, by the sale of copies of the design or model, or by use of the trade mark, and these facts cannot give rise to any right of third parties or any personal possession. The rights acquired by third parties before the day of the first application on which priority is based shall be reserved by the internal legislation of each country of the Union.

C. (1) The above-mentioned periods of priority shall be 12 months for patents and utility models and 6 months for industrial designs and models and for trade marks.

(2) These periods shall start from the date of filing of the first application; the day of filing is not counted in this period.

(3) If the last day of the period is a legal holiday, or a day on which the Patent Office is not open to receive applications in the country where protection is claimed, the period shall be extended until the next working day.

D. (1) Any person desiring to take advantage of the priority of a previous application must make a declaration giving particulars as to the date of such application and the country in which it was made. Each country will determine the latest date at which such declaration must be made.

(2) The particulars referred to shall be stated in the publications issued by the competent authority, and in particular in the patents issued and the specifications relating thereto.

(3) The countries of the Union may require any person making a declaration of priority to produce a copy of the application (with the specification, drawings, etc.) previously made. The copy, certified as correct by the authority receiving this application, shall not require legal authentication, and in all cases it can be filed, without fee, at any time within the period of 3 months from the filing of the application. They may also require that the declaration later be accompanied by a certificate by the proper authority showing the date of application, and also by a translation.

(4) No other formalities may be required for the declaration of priority at the time application is filed. Each of the countries of the Union shall decide upon the consequences of the omission of the formalities prescribed by this article, but such consequences shall in no case exceed the loss of the right of priority.

(5) Further proof in support of the application may be required later.

E. (1) Where an application is filed in a country for the registration of an industrial design or model by virtue of a right of priority based on the registration of a utility model, the period of priority shall be the same as that fixed for industrial designs and models.

(2) Furthermore, it is allowable to deposit in a country a utility model by virtue of rights of priority based on a patent application, and vice versa.

F. No country of the Union can refuse an application for patent on the ground that it claims multiple priorities provided there is unity of invention in the sense of the law of the country.

G. If the examination shows that an application for patent is complex, the applicant can divide the application into a certain number of divisional applications preserving as the date of each the date of the initial application, and the benefit of the right of priority, if any.

H. Priority cannot be refused on the ground that certain elements of the invention for which priority is claimed do not appear among the claims made in the application in the country of origin, provided that the application, as a whole, discloses precisely the aforesaid elements.

ARTICLE 4 bis

(1) Patents applied for in the various countries of the Union by persons entitled to the benefits of the Union shall be independent of the patents obtained for the same invention in other countries, whether or not such countries be parties to the Union.

(2) This stipulation must receive a strict interpretation; in particular, it shall be understood to mean that patents applied for during the period of priority are independent, both as regards the grounds for refusal and revocation and as regards their normal duration.

(3) This stipulation shall apply to all patents already existing at the time when it shall come into effect.

(4) The same stipulation shall apply, in the case of the accession of new countries, to patents in existence, either on one side or the other, at the time of accession.

(5) Patents obtained with the benefit of priority shall enjoy, in the different countries of the Union, a duration equal to that which they would have enjoyed if they had been applied for or granted without the benefit of priority.

ARTICLE 4 ter

The inventor shall have the right to be mentioned as such in the patent.

ARTICLE 5

A. (1) The introduction by the patentee into the country where the patent has been granted of objects manufactured in any of the countries of the Union shall not entail forfeiture.

(2) Nevertheless, each of the countries of the Union shall have the right to take the necessary legislative measures to prevent the abuses which might result from the exercise of the exclusive rights conferred by the patent; for example, failure to use.

(3) These measures will only provide for the revocation of the patent if the granting of compulsory licenses does not suffice to prevent these abuses.

(4) In any case the issuance of a compulsory license cannot be demanded before the expiration of 3 years beginning with the date of the granting of the patent and this license can be issued only if the patentee does not produce acceptable excuses. No action for the cancelation or revocation of a patent can be introduced before the expiration of 2 years beginning with the issuance of the first compulsory license.

(5) The preceding provisions, subject to necessary modifications, shall be applicable to utility models.

B. The protection of designs and industrial models cannot be liable to cancelation either for failure to work or for the introduction of objects corresponding to those protected.

C. (1) If in a country the use of a registered mark is compulsory, the registration can be canceled only after a reasonable period, and if the interested party cannot justify the causes of his inaction.

(2) The use of a trade mark by the owner, in a form which differs by elements not altering the distinctive character of the mark, in the form under which it was registered in one of the countries of the Union, shall not entail invalidation of the registration, nor shall it diminish the protection accorded to the mark.

(3) The simultaneous use of the same mark on identical or similar products by industrial or commercial establishments considered as joint owners of the mark according to the provisions of the national law of the country where protection is sought shall neither prevent registration nor diminish in any way the protection accorded the said mark in any country of the Union, provided the said use does not result in inducing the public into error and is not contrary to public interest.

D. Articles shall not be required to bear any sign or mention of the patent, the utility model, or the registration of the trade mark or of the deposit of the industrial design or model for recognition of the right.

ARTICLE 5 bis

(1) A period of grace of at least 3 months shall be granted for the payment of charges prescribed for the maintenance of industrial property rights, subject to the payment of a surcharge, if the internal legislation so provides.

(2) For patents of invention, the countries of the Union undertake, moreover, either to prolong the extended period to 6 months at least, or to provide for the restoration of the patent which has lapsed owing to the nonpayment of fees, such provisions remaining subject to the conditions prescribed by internal legislation.

ARTICLE 5 ter

In each one of the countries of the Union, the following shall not be considered as infringing the rights of the patentee:

1°. The use on board ships of other countries of the Union of any article forming the subject matter of his patent in the body of the ship, in the machinery, tackle, rigging, and other accessories, when such ships shall enter temporarily or accidentally the waters of the country, provided that such article is used there exclusively for the needs of the vessel.

2°. The use of any article forming the subject matter of the patent in the construction or operation of air or land locomotive engines of the other countries of the Union, or of accessories to these engines, when the latter shall enter the country temporarily or accidentally.

ARTICLE 6

A. Every trade mark duly registered in the country of origin shall be admitted for registration and protected in the form originally registered in the other countries of the Union under the reservations indicated below. These countries can demand, before proceeding to a final registration, the production of a certificate of registration in the country of origin issued by the competent authority. No legalization shall be required for this certificate.

B. (1) Nevertheless, the following marks may be refused or canceled:

1°. Those which are of such a nature as to infringe upon rights acquired by third parties in the country where protection is applied for.

2°. Those which have no distinctive character, or which consist exclusively of signs or indications which serve in trade to designate the kind, quality, quantity, destination, value, place of origin of the products, or time of production, or which have become customary in the current language, or in the bona fide and unquestioned usages of the trade in the country in which protection is sought. In arriving at a decision as to the distinctiveness of the character of a mark, all the circumstances of the case must be taken into account, and in particular the length of time that such a mark has been in use.

3°. Those which are contrary to morality or public order, especially those which are of a nature to deceive the public. It is to be understood that a mark cannot be considered as contrary to public order for the sole reason that it does not conform to some legislative requirement concerning trade marks, except in circumstances where this requirement itself concerns public order.

(2) Trade marks cannot be refused in the other countries of the Union on the sole ground that they only differ from the marks protected in the country of origin by elements not altering the distinctive character and not affecting the identity of the marks in the form under which they have been registered in the aforesaid country of origin.

C. The following shall be deemed the country of origin:

The country of the Union where the applicant has an actual and genuine industrial or commercial establishment; and, if he has not such an establishment, the country of the Union where he has his domicile; and, if he has not a domicile in the Union, the country of his nationality in the case where he is under the jurisdiction of a country of the Union.

D. When a trade mark shall have been duly registered in the country of origin, then in one or more of the other countries of the Union, each one of these national marks shall be considered, from the date on which it shall have been registered, as independent of the mark in the country of origin, provided it conforms to the internal law of the country of importation.

E. In no case shall the renewal of the registration of a trade mark in the country of origin involve the obligation of renewal of the registration of the mark in other countries of the Union in which the mark has been registered.

F. The benefits of priority shall subsist in trade-mark applications filed in the period allowed by Article 4, even when the registration in the country of origin is completed only after the expiration of such period.

ARTICLE 6 bis

(1) The countries of the Union agree to refuse or to invalidate either administratively, if their legislation so permits, or at the request of an interested party, the registration of a trade mark which constitutes a reproduction, limitation, or translation, liable to create confusion with a mark considered by the competent authority of the country of registration to be well known there as being already a mark of a person entitled to the benefits of the present convention and used for

identical or similar products. The same shall apply when the essential part of the mark constitutes a reproduction of a well-known mark or an imitation likely to cause confusion therewith.

(2) A period of at least 3 years must be granted in order to claim the cancelation of these marks. The period shall start from the date of registration of the mark.

(3) No period shall be established to claim the cancelation of marks registered in bad faith.

ARTICLE 6 ter

(1) The countries of the Union undertake to refuse or invalidate registration, and to prohibit by appropriate means the use, failing authorization from the competent authority, whether as a trade mark or as the components of such, of all coats of arms, flags, and other state emblems of countries of the Union, official control and guarantee signs and stamps adopted by them, and any imitation thereof from an heraldic point of view.

(2) The prohibition of official control and guarantee signs and stamps shall apply only in cases where marks which comprise them are intended to be used on merchandise of the same or a similar nature.

(3) For the application of these provisions the countries of the Union agree to communicate reciprocally, through the intermediary of the International Bureau of Bern, the list of state emblems and official control and guarantee signs and stamps which they desire, or will desire, to place, wholly or with certain reservations, under the protection of the present article, as well as any subsequent modifications added to the list. Each country of the Union shall place the communicated list at the disposal of the public in due course.

(4) Each country of the Union may, within a period of 12 months from the receipt of the notification, and through the intermediary of the International Bureau of Bern, transmit its possible objections to any other country concerned.

(5) For state emblems which are well known, the provisions of paragraph 1 shall be applicable only to marks registered after November 6, 1925.

(6) For state emblems which are not well known, and for official signs and stamps, these provisions shall be applicable only to marks registered more than 2 months after the receipt of the notification contemplated in paragraph 3.

(7) In case of bad faith, the countries shall have the right to cancel even the marks registered before November 6, 1925, and embodying state emblems, signs, and stamps.

(8) Nationals of each country who are authorized to make use of state emblems, and signs and stamps of their country, may use them even if there be a similarity with those of another country.

(9) The countries of the Union undertake to prohibit the unauthorized use in trade of state coats of arms of other countries of the Union, when such use is liable to cause confusion as to the origin of the product.

(10) The preceding provisions shall not prevent the countries from exercising the right to refuse or to invalidate, by application of item 3°, paragraph (1), letter B, of Article 6, marks including, without authorization, coats of arms, flags, decorations, and other state emblems or official signs and stamps adopted by a country of the Union.

ARTICLE 6 quater

(1) When in accordance with the laws of a country of the Union the assignment of a mark is valid only if it takes place at the same time as the transfer of the enterprise or business and goodwill to which the mark belongs, it will suffice, for the admission of the validity of such transfer, that the part of the enterprise or business and goodwill which is located in this country be transferred to the assignee with the exclusive right therein to manufacture or sell products under the mark which has been assigned.

(2) This provision shall not impose upon the countries of the Union the obligation of considering as valid the transfer of any mark whose use by the assignee would, in fact, be of such a nature as to deceive the public, especially as regards the place of origin, the nature, or the material qualities of the products to which the mark is applied.

ARTICLE 7

The nature of the goods on which the trade mark is to be used can in no case form an obstacle to the registration of the trade mark.

ARTICLE 7 bis

(1) The countries of the Union undertake to allow the filing of and to protect collective marks belonging to associations, the existence of which is not contrary to the law of the country of origin, even if these associations do not possess an industrial or commercial establishment.

(2) Each country shall be the judge as to the particular conditions under which a collective mark shall be protected, and it can refuse protection if this mark is contrary to public interest.

(3) However, the protection of these marks cannot be refused to any association whose existence is not contrary to the law of the country of origin, on the ground that it is not established in the country where protection is sought, or that it is not organized in conformity with the law of that country.

ARTICLE 8

A trade name shall be protected in all the countries of the Union without the obligation of filing or registration, whether or not it forms part of a trade mark.

ARTICLE 9

(1) All goods illegally bearing a trade mark or trade name shall be seized at importation into those countries of the Union where this mark or name has a right to legal protection.

(2) Seizure shall likewise be effected in the country where the mark or name was illegally applied, or in the country into which the article bearing it has been imported.

(3) The seizure shall take place at the request either of the proper government department or of any other competent authority, or of any interested party, whether an actual or a legal person, in conformity with the domestic laws of each country.

(4) The authorities shall not be bound to effect the seizure in transit.

(5) If the law of a country does not permit seizure at importation, such seizure shall be replaced by prohibition to import or by seizure within such country.

(6) If the law of any country permits neither seizure at importation, nor prohibition to import, nor seizure within the country, and until such time as this law shall be accordingly modified, these measures shall be replaced by the remedies assured to nationals, in such cases, by the law of such country.

ARTICLE 10

(1) The stipulations of the preceding article shall be applicable to every product which may falsely bear as indication of origin, the name of a specified locality or country when such indication shall be joined to a trade name of a fictitious character or used with intent to defraud.

(2) Any producer, manufacturer, or trader engaged in the production, manufacture, or trade of such goods and established either in the locality falsely designated as the place of origin, or in the district in which the locality is situated, or in the country falsely designated, or in the country where the false indication of origin is used, shall be deemed in all cases a party concerned, whether such person be actual or legal.

ARTICLE 10 bis

(1) The countries of the Union are bound to assure to nationals of countries of the Union an effective protection against unfair competition.

(2) Any act of competition contrary to honest practice in industrial or commercial matters constitutes an act of unfair competition.

(3) The following particularly are to be forbidden:

1°. All acts whatsoever of a nature to create confusion in any way whatsoever with the establishment, the goods, or the services of the competitor;

2°. False allegations in the conduct of trade of a nature to discredit the establishment, the goods, or the services of a competitor.

ARTICLE 10 ter

(1) The countries of the Union undertake to assure to the nationals of other countries of the Union appropriate legal remedies to repress effectively all acts set forth in Articles 9, 10, and 10 *bis*.

(2) They undertake, moreover, to provide measures to permit syndicates and associations representing the manufacturers, producers, or merchants interested, and of which the existence is not contrary to the laws of their country, to take action in justice or before the administrative authorities, with a view to the repression of the acts set forth in Articles 9, 10, and 10 *bis*, so far as the law of the country in which protection is claimed permits such action to the syndicates and associations of that country.

ARTICLE 11

(1) The countries of the Union shall, in conformity with their own national legislation, accord temporary protection to patentable inventions, to utility models, and to industrial designs or models, as well as to trade marks in respect of products which shall be exhibited at official, or officially recognized, international exhibitions held in the territory of one of them.

(2) This temporary protection shall not prolong the periods provided by Article 4. If later the right of priority is invoked, the competent authority of each country may date the period from the date of the introduction of the product into the exhibition.

(3) Each country may require, as proof of the identity of the object exhibited and of the date of introduction, such proofs as it may consider necessary.

ARTICLE 12

(1) Each one of the countries of the Union undertakes to establish a special government service for industrial property, and a central office for communication to the public of patents, utility models, industrial designs, or models and trade marks.

(2) This service shall publish an official periodical paper. It shall publish regularly—

(a) The names of the owners of the patents granted with a short designation of the patented inventions;

(b) Reproductions of the marks which have been registered.

ARTICLE 13

(1) The international office, established at Bern under the name of International Bureau for the Protection of Industrial Property, is placed under the high authority of the Government of the Swiss Confederation, which is to regulate its organization and supervise its working.

(2) The official language of the International Bureau shall be French.

(3) The International Bureau shall centralize information of every kind relating to the protection of industrial property; it shall collect and publish such information. It shall make a study of all matters of common utility to the Union and shall prepare, with the help of documents supplied to it by the various administrations, a periodical paper in the French language, dealing with questions regarding the purpose of the Union.

(4) The numbers of this paper, as well as the documents published by the International Bureau, are circulated among the administrations of the countries of the Union in proportion to the number of contributing units as mentioned below. Such further copies as may be ordered, either by said administrations or by companies or private persons, shall be paid for separately.

(5) The International Bureau shall, at all times, hold itself at the service of members of the Union, in order to supply them with any special information they may need on questions relating to the international system of industrial property. The Director of the International Bureau will furnish an annual report on management which shall be communicated to all the members of the Union.

(6) The ordinary expenses of the International Bureau will be borne by the countries of the Union in common. Until further instructions,

they must not exceed the sum of 120,000 Swiss francs per annum. This sum may be increased, in cases of necessity, by a unanimous decision of one of the conferences provided for by Article 14.

(7) The ordinary expenses shall not include the costs relating to the work of plenipotentiary or administrative conferences nor the costs brought about by special work or by publications made in conformity with the decisions of a conference. These costs, of which the annual amount cannot exceed 20,000 Swiss francs, shall be apportioned among the countries of the Union in proportion to their contribution for the working of the International Bureau in accordance with the provisions of paragraph (8) hereinafter.

(8) To determine the part which each country should contribute to this total of expenses, the countries of the Union and those which may afterwards join the Union shall be divided into six classes, each contributing in the proportion of a certain number of units, namely:

	Units
First class	25
Second class	20
Third class	15
Fourth class	10
Fifth class	5
Sixth class	3

These coefficients shall be multiplied by the number of countries in each class, and the sum of the results thus obtained shall give the number of units by which the total expense must be divided. The quotient shall give the amount of the unit of expense.

(9) Each one of the countries of the Union will designate, at the time of its accession, the class in which it wishes to be placed. However, each country of the Union may state later that it wishes to be placed in another class.

(10) The Government of the Swiss Confederation shall superintend the expenses of the International Bureau, advance the necessary funds, and render an annual account which shall be communicated to all the other administrations.

ARTICLE 14

(1) The present convention shall be submitted to periodical revisions with a view to the introduction therein of amendments calculated to improve the system of the Union.

(2) For this purpose conferences shall be held successively in one of the contracting countries between the delegates of the said countries.

(3) The administration of the country in which the conference is to be held shall prepare for the work of that conference, with the assistance of the International Bureau.

(4) The Director of the International Bureau shall be present at the meetings of the conferences, and shall take part in the discussions, but without the privilege of voting.

ARTICLE 15

It is agreed that the countries of the Union respectively reserve to themselves the right to make separately as between themselves special arrangements for the protection of industrial property insofar as such arrangements do not contravene the provisions of the present convention.

ARTICLE 16

(1) The countries which have not taken part in the present convention shall be permitted to adhere to it upon their request.

(2) Such adherence shall be notified through diplomatic channels to the Government of the Swiss Confederation, and by the latter to all the other Governments.

(3) It shall entail, as a matter of right, accession to all the classes, as well as admission to all the advantages stipulated in the present convention, and shall take effect 1 month after the dispatch of the notification by the Government of the Swiss Confederation to the other countries of the Union, unless a subsequent date has been indicated in the request for adherence.

ARTICLE 16 bis

(1) Each one of the countries of the Union may, at any time, notify the Government of the Swiss Confederation, in writing, that the present convention shall be applicable to all or a part of its colonies, protectorates, territories under mandate or all other territories subject to its authority, or all territories under sovereignty, and the convention shall apply to all territories specified in the notification 1 month after the sending of the communication by the Government of the Swiss Confederation to the other countries of the Union, unless a subsequent date has been indicated in the notification. In the absence of this notification, the convention shall not apply to these territories.

(2) Each one of the countries of the Union may, at any time, notify the Government of the Swiss Confederation, in writing, that the present convention has ceased to be applicable to all or a part of the territories which have been made the object of the notification provided for in the preceding paragraph, and the convention shall cease to apply in the territories designated in this notification 12 months after receipt of the notification addressed to the Government of the Swiss Confederation.

(3) All notifications sent to the Government of the Swiss Confederation, in conformity with the provisions of paragraphs 1 and 2 of the present article, shall be communicated by this Government to all the countries of the Union.

ARTICLE 17

The execution of the reciprocal engagements contained in the present convention shall be subordinated, insofar as necessary, to the observance of the formalities and rules established by the constitutional laws of those of the countries of the Union which are bound to enforce the same, which they undertake to do with as little delay as possible.

ARTICLE 17 bis

(1) The convention shall remain in force for an unlimited time, until the expiration of 1 year from the date of its denunciation.

(2) This denunciation shall be addressed to the Government of the Swiss Confederation. It shall be effective only for the country in whose name it shall have been made, the convention remaining in operation as regards the other countries of the Union.

ARTICLE 18

(1) The present act shall be ratified and the instruments of ratification shall be deposited in London not later than the 1st of July 1938. It shall come into force, between the countries in whose names it shall have been ratified, 1 month after such date. However, if before July 1, 1938, it is ratified in the name of at least six countries, it shall come into force between those countries 1 month after the Government of the Swiss Confederation has notified them of the deposit of the sixth ratification, and for the countries in whose names it shall have been ratified thereafter, 1 month after the notification of each of these ratifications.

(2) The countries in whose names no instruments of ratification shall have been deposited within the period of time contemplated in the preceding paragraph shall be permitted to adhere under the terms of Article 16.

(3) The present act shall replace, as regards relations between the countries to which it applies, the Convention of the Union of Paris of 1883 and the subsequent acts of revision.

(4) As regards the countries to which the present act does not apply, but to which the Convention of the Union of Paris, as revised at The Hague in 1925, does apply, the latter shall remain in force.

(5) Likewise, as regards the countries to which neither the present act nor the Convention of the Union of Paris, as revised at The Hague, applies, the Convention of the Union of Paris as revised in Washington in 1911 shall remain in force.

ARTICLE 19

The present act shall be signed in a single copy, which shall be deposited in the archives of the Government of the United Kingdom of Great Britain and Northern Ireland. A certified copy shall be forwarded by the latter to each of the governments of the countries of the Union.

Done at London in a single copy, on June 2, 1934.

Note: The text of the original Convention of Paris of 1883 was published in the Official Gazette for July 26, 1887, 40 O. G. 448; the revision of Brussels of 1900 in the Official Gazette for November 11, 1902, 101 O. G. 1372; the revision of Washington of 1911 in the Official Gazette for July 21, 1914, 204 O. G. 1011; and the revision of The Hague of 1925 in the Official Gazette for June 9, 1931, 407 O. G. 298. The revision of London of 1934 is now published in the Official Gazette to make the latest revision more readily available.

The London 1934 revision of the Convention came into force August 1, 1938, between Denmark, Germany, Great Britain, Japan, Norway, and the United States, and has since been adhered to by Austria, Belgium, France, Lebanon, Luxemburg, Morocco (French Zone), New Zealand, Switzerland, Syria, Tangier Zone, Tunis and the Union of South Africa.

The following countries adhered to the Convention as revised at The Hague in 1925 but have not adhered to the London 1934 revision (see Article 18 (4)): Australia (including certain territories); Brazil; Canada; Czechoslovakia; Palestine, Tanganyika and Trinidad and Tobago, through Great Britain; Hungary; Italy (including certain territories); Lichtenstein; Mexico; Netherlands (including certain territories); Poland; Portugal (including certain territories); Spain (including certain territories); Sweden; Turkey; Yugoslavia.

The following countries adhered to the Convention as revised at Washington in 1911 but have not adhered to either of the later revisions (see Article 18 (5)); Bulgaria; Ceylon; Cuba; Dominican Republic; Esthonia; Finland; Greece; Ireland; Latvia; Roumania.

The following tabulation gives the dates on which the various countries adhered to the last three revisions of the Convention or on which the particular revision came into effect with respect to that country. The second column, headed "Original Date," gives the date on which the country first became a party to the Convention. All changes effected during the war are not accounted for.

Country	Original date	Washington 1911	The Hague 1925	London 1934
Australia	Aug. 5, 1907	Oct. 10, 1925	Feb. 12, 1928	
Papua and New Guinea	Feb. 12, 1933		Feb. 12, 1933	
Norfolk Islands and Nauru	July 30, 1936		July 20, 1936	
Austria	Jan. 1, 1909	May 1, 1913	June 1, 1928	July 19, 1947.
Belgium	July 7, 1884	Aug. 5, 1914 [2]	July 27, 1929	Nov. 24, 1939.
Brazil	July 7, 1884	Dec. 17, 1914	Oct. 26, 1929	
Bulgaria	June 13, 1921	June 13, 1921		
Canada	Sept. 1, 1923	Sept. 1, 1923	June 1, 1928	
Cuba	Nov. 17, 1904	Jan. 3, 1922		
Czechoslovakia	Oct. 5, 1919	Oct. 5, 1919	Mar. 3, 1933	
Denmark (including Faroe Islands)	Oct. 1, 1894	Aug. 30, 1914	Sept. 10, 1937	Aug. 1, 1938.
Dominican Republic	July 11, 1890	May 1, 1913		
Esthonia	Feb. 12, 1924	Feb. 12, 1924		
Finland	Sept. 23, 1921	Sept. 20, 1921		
France (including Algeria and colonies)	July 7, 1884	May 1, 1913	Oct. 20, 1930	June 25, 1939.
Germany	May 1, 1903	May 1, 1913	June 1, 1928	Aug. 1, 1938.
Great Britain	July 7, 1884	May 1, 1913	June 1, 1928	Aug. 1, 1938.
Ceylon	June 10, 1905	June 20, 1913		
Palestine	Sept. 12, 1933		Sept. 12, 1933	
Tanganyika	Jan. 1, 1938		Jan. 1, 1938	
Trinidad and Tobago	May 14, 1938	June 20, 1913	Oct. 21, 1929	
Greece	Oct. 2, 1924	Oct. 2, 1924		
Hungary	Jan. 1, 1909	May 1, 1913	May 16, 1930	
Ireland	Dec. 4, 1925	Dec. 4, 1925		
Italy	July 7, 1884	May 1, 1913	June 1, 1928	
Eritrea	Jan. 19, 1942		Jan. 19, 1942	
Lybia	Jan. 19, 1942		Jan. 19, 1942	
Japan	July 15, 1899	May 1, 1913	Jan. 1, 1935	Aug. 1, 1938.
Latvia	Aug. 20, 1925	Aug. 20, 1925		
Lebanon	Sept. 1, 1924 [1]	Sept. 1, 1924 [1]	Nov. 17, 1930 [1]	Sept. 30, 1947.

Footnotes at end of table.

Country	Original date	Washington 1911	The Hague 1925	London 1934
Liechtenstein	July 14, 1933		July 14, 1933	
Luxemburg	June 30, 1922	June 30, 1922		July 30, 1948.
Mexico	Sept. 7, 1903	May 1, 1913	Jan. 16, 1930

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 3, 1948

[VOL. 613. No 1]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 510,179. KRASBEY & MATTISON COMPANY, Ambler, Pa. Filed Oct. 3, 1946.

SPRAYED "LIMPET" ASBESTOS

No claim is made to the words "Sprayed" and "Asbestos" apart from the mark.

FOR PARTLY PREPARED ASBESTOS AND REQUIRING FURTHER TREATMENT OR MIXING WITH OTHER MATERIALS.

Claims use since May 11, 1901, as to the word "Limpet"; and since May 1, 1936, as to the mark shown.

Ser. No. 511,810. THE B. F. GOODRICH COMPANY, Akron, Ohio. Filed Oct. 31, 1946.

Koroseal

FOR FUSIBLE RESINOUS PLASTIC MOLDING COMPOUNDS FOR GENERAL USE IN THE INDUSTRIAL ARTS.

Claims use since 1934.

Ser. No. 520,625. INDUSTRIAL SYNTHETICS CORPORATION, Irvington, N. J. Filed Apr. 14, 1947.

VOLTRON

FOR RODS, TUBES, AND PARTLY PREPARED ARTICLES CONSISTING OF BENDABLE NON-METALLIC MATERIALS—NAMELY, RUBBER, SYNTHETIC RUBBER, OR PLASTICS AND FOR USE IN THE MANUFACTURE OF HANDBAGS, BELTS, WRIST-WATCH BANDS, LUGGAGE, TOYS, UMBRELLA HANDLES, SUSPENDERS AND GARTERS, SHOE TRIMMINGS, SHOES, BRIEF CASES, TAGS, KEY CHAIN TAGS, FISHING LINES, AND BATHROOM ACCESSORY ITEMS.

Claims use since December 1943.

Ser. No. 523,132. ERNEST S. SPOTTS, Wooster, Ohio. Filed May 27, 1947.

TOP-O-CROP

The word "Crop" is disclaimed apart from the mark.

FOR SEEDS FOR AGRICULTURAL USE—NAMELY, HYBRID CORN, WHEAT, OATS, CLOVER, SOY BEANS, ALFALFA, TIMOTHY AND ALSACK.

Claims use since Mar. 10, 1946.

CLASS 2

RECEPTACLES

Ser. No. 513,518. LAMINET COVER COMPANY, Chicago, Ill. Filed Nov. 30, 1946.

Laminet

FOR GARMENT STORAGE BAGS, GLOVE, SLIP, SWEATER, SHIRT AND PURSE BAGS, COMPOSED OF TRANSLUCENT OR TRANSPARENT PLASTIC MATERIAL, OR OF TEXTILE FABRIC MESH MATERIAL LAMINATED OR COATED WITH A TRANSLUCENT OR TRANSPARENT FILM OF PLASTIC MATERIAL.

Claims use since Aug. 11, 1941.

Ser. No. 525,528. D. J. ANDERSON, INC., Madison, Conn. Filed July 2, 1947.

HANDY MAN

The word "Handy" is disclaimed apart from the mark.

FOR UNFITTED TOOL BOXES.

Claims use since May 19, 1947.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 507,316. INGERSOLL STROPPER CO., Union City, N. J., assignor, by mesne assignments, to Durham-Enders Razor Corporation, Mystic, Conn., a corporation of New York. Filed Aug. 13, 1946.

PlaStroP

No claim is made to the exclusive use of the term "Strop" apart from and except in association with the rest of the mark.
FOR RAZOR STROPS.
Claims use since June 3, 1946.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 491,360. PHOENIX CHEMICAL COMPANY, Phoeinx, Aris. Filed Nov. 9, 1945.

D.D.T

The letters "D D T" and the word "Dust" are disclaimed apart from the mark.
FOR INSECTICIDES.
Claims use since Oct. 10, 1945.

Ser. No. 493,427. CLEAN HOME PRODUCTS, INCORPORATED, Chicago, Ill. Filed Dec. 17, 1945.

DeeDusT

No claim is made to the letters "D D T" nor to the word "Dust", apart from the mark.
FOR AN INSECTICIDE.
Claims use since Oct. 22, 1945.

Ser. No. 501,041. HENRI BENDEL, INC., New York, N. Y. Filed Apr. 27, 1946.

un peu d'elle

FOR PERFUME, TOILET WATER, FACE POWDER AND LIPSTICK.
Claims use since 1913.

Ser. No. 503,015. SOCIETE A RESPONSABILITE LIMITEE: LABORATOIRES DU "SANOPOL", Seine, France. Filed May 29, 1946.

MARIETTA ENIKSON

FOR SACHET POWDERS, BATH SALTS AND CRYSTALS AND BATH POWDERS, FACE AND SKIN BLEACHES, COLOGNES, CLEANSING AND SKIN CREAMS, DEODORANTS, HAIR DRESSING, HAIR OIL, NAIL ENAMEL, NAIL POLISH, NAIL POLISH REMOVER, FACIAL MASKS AND FACE PACKS, GLYCERINE FOR TOILET USE, INCENSE, EYEBROW PENCILS, LIPSTICK, ROUGE, MASCARA, FACE AND BODY POWDER, NON-SAPONACIOUS SHAMPOO PREPARATIONS, PERFUMES, TOILET WATERS, POMADES, DOUCHE POWDERS, FOOT POWDERS, BRILLIANTINE, ASTRINGENTS, EYE SHADOW, EYE WASHES, AFTER-SHAVE PREPARATIONS, SMELLING SALTS, MOUTH WASHES, DENTIFRICES, AND HAIR WAVING FLUIDS.
Claims use since Oct. 18, 1945.

Ser. No. 503,626. AVON PRODUCTS, INC., New York, N. Y. Filed June 11, 1946.

SUMMER MOON

FOR COSMETIC SET CONSISTING OF COLOGNE AND BODY POWDER.
Claims use since Feb. 20, 1946.

Ser. No. 506,964. HELENA RUBINSTEIN, INC., New York, N. Y. Filed Aug. 6, 1946.

COMMAND PERFORMANCE

FOR COMPLEXION AND FACE POWDERS, COMPACT ROUGE, CREAM ROUGE, EAU DE PARFUME, LIPSTICK, NAIL LACQUER, CREAM TINT FOUNDATION, PERFUME.
Claims use since July 17, 1946.

Ser. No. 508,785. CAMERON DISTRIBUTORS, Mount Vernon, N. Y. Filed Sept. 10, 1946.

KAYAK

FOR FACE AND BODY LOTION, COLOGNE, FACE AND BODY POWDER, BODY DEODORANT, HAIR DRESS, AND SHAMPOO.
Claims use since Mar. 1, 1946.

Ser. No. 510,012. CORNELL PHARMACAL CO., Union City, N. J. Filed Oct. 1, 1946.

COFEBEX

FOR VITAMIN B-COMPLEX EXTRACT DERIVED FROM YEAST.
Claims use since June 1, 1945.

Ser. No. 511,064. CARRIER-STEPHENS COMPANY, Lansing, Mich. Filed Oct. 18, 1946.

CASCO

FOR GENERAL CHEMICALS—NAMELY, TRI-SODIUM PHOSPHATE USED AS A WATER SOFTENER, ANHYDROUS GENERAL PURPOSE SOLVENTS, LAY-OUT MARKING DYE, CUTTING OILS DISINFECTANT, CHERRY BLEACH, INSECTICIDES, AND FUNGICIDES.
Claims use since Jan. 15, 1929.

Ser. No. 514,835. IRVING A. MORSE, doing business as Morse Laboratories, New York, N., Y. Filed Dec. 26, 1946.

VASODOL-Morse

No claim is made to the surname "Morse" apart from the mark.
FOR MEDICINAL TABLET FOR HIGH BLOOD PRESSURE.
Claims use since Dec. 2, 1946.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 516,742. TRAUBER PRODUCTS, INC., Brooklyn, N. Y. Filed Jan. 31, 1947.

THE PERFECT HOUSEWIFE

FOR COOKING UTENSILS—NAMELY, PRESSURE COOKERS, METAL POTS AND PANS.
Claims use since Nov. 1, 1946.

CLASS 15

OILS AND GREASES

Ser. No. 508,624. SUN OIL COMPANY, Philadelphia, Pa. Filed Sept. 6, 1946.

SUNOCO WAY

Applicant is the registrant and owner of the following registered trade-marks and renewals thereof: No. 124,943, dated May 25, 1919; Nos. 133,187 and 133,188, dated July 13, 1920, re-registered Feb. 4, 1941, No. 384,759; No. 126,183, dated December 23, 1919; No. 287,738, dated October 6, 1931; No. 315,719, dated August 7, 1934; No. 335,124, dated May 26, 1936; and No. 397,094, dated August 18, 1942.
FOR MACHINERY LUBRICATING OIL HAVING ADHESIVE CHARACTERISTICS.
Claims use since May 13, 1946.

Ser. No. 509,129. ATOMITE, INC., Fort Dodge, Iowa. Filed Sept. 16, 1946.

Atomite

FOR LUBRICATING OILS AND GREASES, AND GASOLINE FOR TRANSPORT VEHICLES SUCH AS TRUCKS, BUSSES, AUTOMOBILES, STATIONARY GASOLINE ENGINES, FARM TRACTORS, AND THE LIKE.
Claims use since Oct. 15, 1945.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 495,977. MAAS & WALDSTEIN COMPANY, Newark, N. J. Filed Feb. 4, 1946.

OPTICLEER

FOR SYNTHETIC AND OTHER RESINS IN SOLID FORM AND SOLUTIONS THEREOF IN ORGANIC SOLVENTS INTENDED FOR INCORPORATION WITH OTHER CONSTITUENTS TO FORM LACQUERS AND SYNTHETIC RESIN COATING COMPOSITIONS.
Claims use since Jan. 17, 1946.

Ser. No. 496,760. WALTER N. BOYSEN COMPANY, Oakland, Calif. Filed Feb. 18, 1946.

PLASOLUX

FOR PAINT ENAMELS, READY MIXED PAINTS, VARNISHES, PRIMERS, AND BULLETIN COLORS.
Claims use since Oct. 15, 1945.

Ser. No. 499,964. THE PATTERSON-SARGENT COMPANY, Cleveland, Ohio. Filed Apr. 10, 1946.

COLORONICS

FOR DRY AND READY MIXED PAINTS AND PAINT ENAMELS HAVING COLORING MATERIALS INCLUDED THEREIN, FOR THE INTERIORS AND FURNISHINGS OF PUBLIC AND COMMERCIAL BUILDINGS FOR ENHANCEMENT OF VISIBILITY AND REDUCTION OF EYE STRAIN.
Claims use since Mar. 8, 1946.

Ser. No. 507,163. VITA-VAR CORPORATION, Newark, N. J. Filed Aug. 9, 1946.

VITA-FLOOR

The word "Floor" is disclaimed apart from the mark.
Applicant is the owner of registrations Nos. 291,479, 314,842, 378,732, 415,888, 416,976, and 430,207.
FOR READY-MIXED PAINT, PAINT ENAMEL, AND VARNISH.
Claims use since July 12, 1946.

Ser. No. 509,524. MANUFACTURERS WAREHOUSE, Atlanta, Ga. Filed Sept. 21, 1946.

BLACK BOY

The word "Black" is disclaimed apart from the mark.
FOR TIRE PAINT CONCENTRATE.
Claims use since July 6, 1946.

Ser. No. 510,874. BOYLE-MIDWAY INC., Jersey City, N. J. Filed Oct. 15, 1946.
The drawing is lined to indicate the color red. Applicant is the owner of registrations Nos. 327,866, 355,333, 355,458, 355,456, 355,457, 355,459, and 355,460.

FOR FURNITURE POLISH AND POWDERED, PASTE, AND LIQUID WAX PREPARATIONS FOR CLEANING, POLISHING, AND PROTECTING WOODWORK, FLOORS OF ALL KINDS, FURNITURE, LINOLEUM, AND AUTOMOBILES; LIQUID PAINT, PAINT THINNER, CRACK FILLER, AND WOOD PUTTY, CHEMICAL PAINT AND VARNISH REMOVER, CHEMICAL PAINT BRUSH CLEANER.
Claims use since July 9, 1937.

Ser. No. 512,018. H. WM. POLLEY, doing business as The Southern Paint & Varnish Company, Macon, Ga. Filed Nov. 4, 1946.

FOR READY-MIXED PAINTS, PAINT ENAMELS, PRIMERS, HOUSE PAINTS, TECHNICAL FINISHES IN THE NATURE OF PAINTS HAVING ACID, ALKALI, AND HOT WATER RESISTANT QUALITIES AND INDUSTRIAL FINISHES IN THE NATURE OF PROTECTIVE PAINT AND/OR STAIN COATINGS FOR IRON, STEEL, ALUMINUM, AND VARIOUS OTHER METALS, CREOSOTE STAINS, VARNISH AND VARNISH STAINS.
Claims use since May 1929.

Ser. No. 513,287. CELCO SALES CORP., New York, N. Y. Filed Nov. 29, 1946.

FOR LIQUID PAINT BRUSH CLEANER.
Claims use since Nov. 18, 1946.

Ser. No. 514,968. THE MASTER MECHANICS CO., Cleveland, Ohio. Filed Dec. 28, 1946.

EISEN-HEISS

FOR READY MIXED LIQUID PAINT AND PAINT THINNER.
Claims use since Dec. 1, 1918.

Ser. No. 516,859. MINNESOTA MINING & MANUFACTURING COMPANY, St. Paul, Minn. Filed Feb. 3, 1947.

CENTERLITE

FOR PAINT CONTAINING GLASS BEADS FOR APPLICATION TO SURFACES TO PRODUCE THEREON A REFLECTIVE COATING.
Claims use since November 1944.

Ser. No. 521,607. NEW METHOD PAINT CO., Kansas City, Mo. Filed Apr. 30, 1947.

STARSPAR

FOR VARNISH AND PAINT ENAMEL.
Claims use since February 1939.

Ser. No. 524,789. FLOOR-O-MATIC INC., New York, N. Y. Filed June 25, 1947.

FLOOROMATIC

The word "Floor" is disclaimed apart from the mark.
FOR FLOOR WAX.
Claims use since May 1, 1947.

CLASS 19
VEHICLES

Ser. No. 516,506. PRICE PRODUCTS, INC., Middletown, Ohio. Filed Jan. 28, 1947.

OB-ROUND

No claim is made to the word "Round" apart from the mark.
FOR FUEL TANKS, COMBINED FUEL TANKS AND TOOL CHESTS AND JACK WELLS, AND MOUNTING BRACKETS AND FUEL CONNECTIONS THEREFOR.
Claims use since Jan. 14, 1947.

Ser. No. 524,080. PIPER AIRCRAFT CORPORATION, Lock Haven, Pa. Filed June 12, 1947.

PIPER TAXICUB

The word "Piper" is disclaimed.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 547,840. EMBASSY PLASTIC PRODUCTS, INC., New York, N. Y. Filed Jan. 23, 1948.

EMBASSY TRAVELERS

FOR LADIES' LEATHER HANDBAGS.
Claims use since Dec. 10, 1947.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 516,656. AMERICAN OIL AND DISINFECTANT CORP., New York, N. Y. Filed Jan. 19, 1948.

GL-O-WASH

The term "Wash" is disclaimed apart from the mark.
FOR CHEMICALLY NEUTRAL AQUEOUS PASTE CONTAINING 25 TO 30% OF A SULFONATED FATTY ACID AMIDE, USED AS A SPOT REMOVER AND DETERGENT FOR FABRICS AND TEXTILE GOODS, AND FOR ALL DETERGENT PURPOSES WHICH EXCLUDE THE USE OF ALKALINE SOLUTIONS FOR CLEANING.
Claims use since September 1941.

Ser. No. 526,783. CHURCH & DWIGHT CO., INC., New York, N. Y. Filed July 5, 1947. Under section 2f of the act of 1946.

JOHN DWIGHT & CO'S

Applicant claims ownership of registrations Nos. 369,752, 369,753, 369,754, 369,829, 434,455, 437,703, and 438,538.
FOR BICARBONATE OF SODA (BAKING SODA) FOR USE AS A DETERGENT, CLEANING AND WASHING AGENT.
Claims use since 1876.

Ser. No. 526,969. KRANO SANITARY & JANITOR SUPPLY CO., Chicago, Ill. Filed July 5, 1947.

KRANO

FOR LIQUID FLOOR CLEANER, LIQUID HAND SOAP, LIQUID TOILET BOWL CLEANER, LIQUID GLASS CLEANER, LIQUID DISHWASHING COMPOUND, WAX BASE LIQUID CLEANER FOR FLOORS, LIQUID SILVER AND ALUMINUM CLEANER, LIQUID CLEANER FOR COMPOSITION LAID FLOORS, AND LIQUID METAL POLISH.
Claims use on the wax base liquid cleaner for floors, liquid silver and aluminum cleaner, liquid cleaner for composition laid floors, since August 27, 1946; on liquid toilet bowl cleaner, liquid glass cleaner, liquid dishwashing compound, since April 9, 1947; on liquid floor cleaner since May 1, 1947; on liquid hand soap, since June 10, 1947; and on liquid metal polish since June 20, 1947.

Ser. No. 532,402. MINNESOTA MINING & MANUFACTURING COMPANY, St. Paul, Minn. Filed Aug. 13, 1947. Under section 2f of the act of 1946.

MINNESOTA

Applicant claims ownership of registration No. 346,318.
FOR COATED ABRASIVES.
Claims use since August 1933.

Ser. No. 535,469. JAMES J. BRADLEY, doing business as James J. Bradley & Co., New York, N. Y. Filed Sept. 24, 1947. Under section 2f of the act of 1946.

English Tub Soap

No claim is made to the exclusive use of the word "Soap" apart from the mark.
Applicant claims ownership of registration No. 157,256.
FOR TOILET SOAP.
Claims use since May 1913.

Ser. No. 539,362. JOHN T. STANLEY CO. INC., New York, N. Y. Filed Oct. 28, 1947. Under section 2f of the act of 1946.

STANLEY'S

Applicant claims ownership of registrations Nos. 106,379 and 344,171.
FOR SOAP, DOG SOAP, HOUSEHOLD POLISHING POWDERS AND CLEANSERS.
Claims use since 1875.

Ser. No. 541,818. DUREX ABRASIVES CORPORATION, Jersey City, N. J. Filed Nov. 30, 1947.

DURIZED

Applicant claims ownership of registrations Nos. 209,366, 262,555, 275,822, 279,281, 281,527, 285,448, 297,106, 298,424, 363,738, and 275,755.
FOR NATURAL AND ARTIFICIAL ABRASIVES—NAMELY, ABRASIVE-COATED CLOTH OR PAPER AND COMBINATIONS OF ABRASIVE PAPER AND CLOTH.
Claims use since July 11, 1947.

Ser. No. 547,099. JOE C. BODE, JR., doing business as Manson Distributors, Aurora, Ill. Filed Jan. 15, 1948.

"THAWEX"

FOR CHEMICAL SOLUTION APPLIED TO WINDOWS TO PREVENT FOGGING AND FORMATION OF ICE IN COLD WEATHER.
Claims use since Oct. 1, 1947.

Ser. No. 549,687. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich. Filed Feb. 13, 1948.

SKORTEX

FOR A WASHING COMPOSITION, PARTICULARLY ADAPTED FOR THE LAUNDERING OF TEXTILE FABRICS.
Claims use since Oct. 8, 1947.

Ser. No. 550,993. CADDO PRODUCTS COMPANY, Bossier City, La. Filed Mar. 2, 1948.

Kutz-All

FOR A CREAM HAND CLEANER FOR USE WITHOUT WATER.
Claims use since Sept. 1, 1947.

CLASS 5

ADHESIVES

Ser. No. 532,446. THE GUMMED PRODUCTS COMPANY, Troy, Ohio. Filed Aug. 26, 1947. Under section 2f of the act of 1946.

ACT-ON

FOR ADHESIVE GUMMED PAPER TAPE AND ADHESIVE GUMMED CLOTH TAPE.
Claims use since Nov. 25, 1940.

Ser. No. 532,448. THE GUMMED PRODUCTS COMPANY, Troy, Ohio. Filed Aug. 26, 1947. Under section 2f of the act of 1946.

Sterling

Applicant claims ownership of registration No. 302,362.
FOR GUMMED PAPER TAPE.
Claims use since Jan. 21, 1931.

Ser. No. 533,737. THE GUMMED PRODUCTS COMPANY, Troy, Ohio. Filed Sept. 8, 1947. Under section 2f of the act of 1946.

Trojan

Applicant claims ownership of registration No. 227,105.
FOR FIBROUS SHEET AND WEB MATERIAL BACKED WITH ADHESIVE—NAMELY, GUMMED TAPE, CLOTH TAPE, SISAL TAPE, LINER BOARD TAPE, KRAFT TAPE, PAPER TAPE, BOX TAPE, LOCKER TAPE, CORD REINFORCED TAPE, WATERPROOFED GUMMED TAPE, VENEER TAPE, DUPLEX TAPE, FLAT GUMMED SHEETS OF PAPER, FLAT GUMMED LAMINATED STOCK, HEAT-SEAL GUMMED SHEETS AND TAPE, COATED AND LAMINATED SHEETS OF PAPER, CLOTH AND OTHER LAMINAR.
Claims use since June 1, 1914.

Ser. No. 534,528. THE GUMMED PRODUCTS COMPANY, Troy, Ohio. Filed Sept. 15, 1947. Under section 2f of the act of 1946.

PREE-FOLD

Applicant claims ownership of registration No. 368,811.
FOR GUMMED PAPER TAPE.
Claims use since Mar. 24, 1937.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 490,426. FRANKLIN RESEARCH COMPANY, Philadelphia, Pa. Filed July 18, 1947.

LiFe

The drawing is lined for the color blue.
FOR WATER REPELLENT AND CONDITIONER FOR FABRICS.
Claims use since Oct. 15, 1945.

Ser. No. 512,901. THE EMPIRE VARNISH COMPANY, Cleveland, Ohio. Filed Sept. 15, 1947.

Applicant claims ownership of registrations Nos. 294,696 and 296,982.
FOR LIQUID CHEMICAL WATERPROOFING COMPOUND FOR STEEL, LINOLEUM, RUBBER, CORK, WOOD, TEXTILES, PAPER, LEATHER, CANVAS, CEMENT, OR PLASTER, OR FOR MIXING WITH PAINTS AND VARNISHES OR USED OVER THEM, OR AS A VEHICLE FOR ALUMINUM AND GOLD BRONZE POWDERS.
Claims use since Dec. 18, 1931.

Ser. No. 515,696. BURROUGHS WELLCOME & CO. (U. S. A.) INC., New York, N. Y. Filed July 22, 1947.

'TUBARINE'

FOR THERAPEUTIC PREPARATION USED TO INHIBIT THE TRANSMISSION OF NERVE IMPULSES.
Claims use since Dec. 31, 1946.

Ser. No. 522,151. OSCAR A. LOCK, Mangum, Okla. Filed Sept. 23, 1947. Under section 2f of the act of 1946.

LOCK'S

FOR LINIMENT.
Claims use since Aug. 30, 1941.

Ser. No. 523,124. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich. Filed Nov. 12, 1947.

DICOL

FOR LOWER MOLECULAR WEIGHT DI-ALKYLENE GLYCOLS AND MIXTURES THEREOF, R. G., MIXED DI-ETHYLENE GLYCOL AND DI-PROPYLENE GLYCOL, FOR INDUSTRIAL USES.
Claims use since May 6, 1947.

Ser. No. 526,725. DON BAXTER, INC., Glendale, Calif. Filed July 5, 1947. Under section 2f of the act of 1946.

BAXTER

FOR SOLUTIONS FOR PARENTERAL USE COMPRISING: VARIOUS CONCENTRATIONS OF HYDROLYZED PROTEIN IN WATER; VARIOUS CONCENTRATIONS OF DEXTROSE IN WATER; VARIOUS CONCENTRATIONS OF DEXTROSE AND SODIUM CHLORIDE IN WATER; VARIOUS CONCENTRATIONS OF SODIUM CHLORIDE IN WATER; VARIOUS CONCENTRATIONS OF SODIUM CHLORIDE AND SODIUM R-LACTATE IN WATER; VARIOUS CONCENTRATIONS OF SODIUM SULFATE IN WATER; VARIOUS CONCENTRATIONS OF DEXTROSE IN VITAMINS IN WATER; VARIOUS CONCENTRATIONS OF DEXTROSE WITH SODIUM CHLORIDE AND VITAMINS IN WATER; VARIOUS CONCENTRATIONS OF DEXTROSE AND ALCOHOL WITH SODIUM CHLORIDE AND VITAMINS IN WATER; VARIOUS CONCENTRATIONS OF DEXTROSE AND ALCOHOL WITH VITAMINS IN WATER; SODIUM CHLORIDE, POTASSIUM CHLORIDE, AND CALCIUM CHLORIDE IN WATER; VARIOUS CONCENTRATIONS OF DEXTROSE WITH SODIUM CHLORIDE, POTASSIUM CHLORIDE, AND CALCIUM CHLORIDE IN WATER; SODIUM R-LACTATE, SODIUM CHLORIDE, POTASSIUM CHLORIDE, AND CALCIUM CHLORIDE IN WATER; SODIUM R-LACTATE IN WATER; VARIOUS CONCENTRATIONS OF DEXTROSE AND ALCOHOL WITH SODIUM CHLORIDE IN WATER; VARIOUS CONCENTRATIONS OF DEXTROSE AND ALCOHOL IN WATER; VARIOUS CONCENTRATIONS OF CALCIUM LEVULINATE IN WATER; VARIOUS CONCENTRATIONS OF MAGNESIUM SULFATE IN WATER; VARIOUS CONCENTRATIONS OF PROCAINE HYDROCHLORIDE U. S. P.; WATER FOR INJECTION, U. S. P.; VARIOUS CONCENTRATIONS OF SODIUM CITRATE IN WATER; VARIOUS CONCENTRATIONS OF SUCROSE IN WATER; VARIOUS CONCENTRATIONS OF SODIUM IODIDE IN WATER; SOLUTION FOR ENTERAL USE, COMPRISING: VARIOUS CONCENTRATIONS OF HYDROLYZED PROTEIN IN WATER; SOLUTION FOR TOPICAL USE, COMPRISING: ISOTONIC SODIUM CHLORIDE SOLUTION; BLOOD ANTICOAGULANT AND PRESERVATIVE AGENTS COMPRISING THE FOLLOWING: VARIOUS CONCENTRATIONS OF SODIUM CITRATE IN WATER; VARIOUS CONCENTRATIONS OF DEXTROSE IN WATER; VARIOUS CONCENTRATIONS OF DEXTROSE, SODIUM CITRATE, SODIUM CHLORIDE IN WATER; VARIOUS CONCENTRATIONS OF DEXTROSE, SODIUM CITRATE, CITRIC ACID IN WATER; LABORATORY REAGENTS, COMPRISING: VARIOUS CONCENTRATIONS OF COPPER SULFATE IN WATER; DRY PREPARATION FOR TOPICAL USE, COMPRISING: SULFANILAMIDE CRYSTALS.
Claims use since July 19, 1929.

Ser. No. 526,788. CHURCH & DWIGHT CO., INC., New York, N. Y. Filed July 5, 1947. Under section 2f of the act of 1946.

DWIGHT'S

Applicant claims ownership of registrations Nos. 369,754, 369,829, and 435,333.
FOR SAL SODA, BICARBONATE OF SODA (BAKING SODA).
Claims use since 1876.

Ser. No. 526,906. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo. Filed July 5, 1947.

ALKON

Applicant claims ownership of registration No. 418,385.
FOR ALKANOLAMINE CARBONATE POLYMERS.
Claims use since May 1, 1945.

Ser. No. 529,960. THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill. Filed July 30, 1947.

CUE GLIDE

FOR TALCUM POWDER FOR BILLIARD PLAYERS.
Claims use since Dec. 1, 1935.

Ser. No. 531,792. GRIFFIN CHEMICAL COMPANY, San Francisco, Calif. Filed Aug. 19, 1947.

GAMMANOL

FOR PETROLEUM SULPHONATES USEFUL AS EMULSIFIERS AND WETTING AGENTS.
Claims use since July 10, 1940.

Ser. No. 532,442. DOROTHY GIBSON PERFUMES CORP., New York, N. Y. Filed Aug. 26, 1947.

sea-dew

FOR BATH SALTS.
Claims use since July 23, 1947.

Ser. No. 532,443. DOROTHY GIBSON PERFUMES CORP., New York, N. Y. Filed Aug. 26, 1947.

DUNROVIN

FOR PERFUME.
Claims use since July 22, 1947.

Ser. No. 532,445. DOROTHY GIBSON PERFUMES CORP., New York, N. Y. Filed Aug. 26, 1947.

JUSWEETU

FOR PERFUME.
Claims use since July 23, 1947.

Ser. No. 533,575. E. F. HOUGHTON & Co., Philadelphia, Pa. Filed Sept. 5, 1947. Under section 2f of the act of 1946.

SOL LUSTRE

FOR TEXTILE FINISHING OILS.
Claims use since Mar. 28, 1931.

Ser. No. 534,204. ROSS STARR, doing business as Starr Pharmacal Co., New York, N. Y. Filed Sept. 11, 1947.

DESAMINE

FOR PREPARATION FOR THE TREATMENT OF OBESITY, IN CAPSULE AND TABLET FORM.
Claims use since Mar. 15, 1941.

Ser. No. 537,046. KALAK WATER CO., OF NEW YORK, INC., New York, N. Y. Filed Oct. 7, 1947.

Kalak

Applicant claims ownership of registrations Nos. 110,132 and 252,750.
FOR ARTIFICIALLY-PREPARED ALKALINE WATER FOR NEUTRALIZING THE ACIDITY OF THE URINE.
Claims use since June 26, 1915.

Ser. No. 537,178. MAURICE HANDMAN, doing business as Maurella Products Co., New York, N. Y. Filed Oct. 8, 1947.

The picture in the drawing is fanciful.
FOR SHAMPOO.
Claims use since Oct. 1, 1939.

Ser. No. 537,642. WHITEHALL PHARMACAL COMPANY, New York, N. Y., assignor to Affiliated Products, Inc., New York, N. Y., a corporation of Illinois, now by change of name Whitehall Pharmacal Company, a corporation of Illinois. Filed Oct. 11, 1947. Under section 2f of the act of 1946.

ATWOOD'S

Applicant claims ownership of registration No. 61,257.
FOR PREPARATION FOR THE TREATMENT OF JAUNDICE, HEADACHE, DYSPEPSIA, WORMS, DIZZINESS, LOSS OF APPETITE, DARTING PAINS, COLDS, FEVERS, LIVER COMPLAINTS, STRANGUARY, DROPSY, CROUP, AND PHTHISIC.
Claims use since 1870.

Ser. No. 537,976. BOYLE-MIDWAY INC., Jersey City, N. J. Filed Oct. 16, 1947. Under section 2f of the act of 1946.

Kwik-Lite

Applicant claims ownership of registration No. 250,371.
FOR CHEMICAL FLUID FOR CIGARETTE LIGHTERS.
Claims use since Sept. 28, 1927.

Ser. No. 544,332. CUTTER LABORATORIES, Berkeley, Calif. Filed Dec. 15, 1947.

TRISULFANOL

FOR SOLUTION FOR THE TREATMENT OF PINK-EYE OF CATTLE AND SHEEP.
Claims use since July 1947.

Ser. No. 545,319. WORLD PRODUCTS CORP., New York, N. Y. Filed Dec. 23, 1947.

Caro-Prot

FOR PREPARATION CONTAINING SPECIALLY PROCESSED EXTRACTED ANIMAL LIVER MEAL, CAROTENE EXTRACT, AND SOY BEAN MEAL IN POWDER FORM FOR INCORPORATION IN ANIMAL AND POULTRY FEEDS.
Claims use since Dec. 3, 1947.

Ser. No. 545,412. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed Dec. 24, 1947.

Cyclopyrazate

FOR MEDICINAL PREPARATION FOR USE AS AN ANTISPASMODIC.
Claims use since Sept. 18, 1947.

Ser. No. 545,472. GARRY LABORATORIES, INC., Buffalo, N. Y. Filed Dec. 26, 1947.

Rustpruf

Applicant claims ownership of registration No. 428,044.
FOR A PREPARATION, TO BE USED AS AN ADDITIVE, TO PREVENT AND ELIMINATE RUST, SCALE, AND MINERAL DEPOSITS FROM RADIATORS AND OTHER WATER CIRCULATING SYSTEMS.
Claims use since Oct. 1, 1931.

Ser. No. 546,088. CALIFORNIA SPRAY-CHEMICAL CORPORATION, Wilmington, Del., and Richmond, Calif. Filed Jan. 3, 1948.

VAPOPHOS

FOR PARASITICIDES—NAMELY, INSECTICIDES AND FUNGICIDES.
Claims use since Nov. 24, 1947.

Ser. No. 546,354. BRIARDALE CO., San Francisco, Calif. Filed Jan. 7, 1948.

WESTLAKE

Applicant claims ownership of registration No. 266,487.
FOR WASHING AMMONIA AND LIQUID BLUING.
Claims use since Nov. 1, 1928.

Ser. No. 546,694. THE GLIDDEN COMPANY, Cleveland, Ohio. Filed Jan. 10, 1948.

GUAI-A-PHENE

Applicant claims ownership of registration No. 369,168.
FOR MIXTURE OF PHENOLS OBTAINED FROM RESINOUS PINE WOOD USED AS AN ANTIOXIDANT FOR THE PREVENTION OF GELLING, SKINNING, AND OXIDATION IN PAINT, PAINT ENAMEL, VARNISH, PRINTING INK, LINOLEUM, RUBBER, PETROLEUM, AND THE LIKE.
Claims use since June 1932.

Ser. No. 546,818. A. R. BRAMON, doing business as Crusader Products Co., Los Angeles, Calif. Filed Jan. 13, 1948.

CRUSADER 90

No claim is made to the numeral "90" apart from the mark.
FOR VITAMIN TABLETS.
Claims use since May 10, 1946.

Ser. No. 547,013. J. C. MENDENHALL MEDICINE CO., INCORPORATED, Mt. Vernon, Ind. Filed Jan. 14, 1948.

The portrait is of Mr. J. C. Mendenhall, deceased.

FOR COUGH SYRUP, FOR MALARIA CHILL AND FEVER TONIC, AND FOR AN ALTERATIVE LAXATIVE.

Claims use on cough syrup since June 1, 1940; on malaria chill and fever tonic since Jan. 2, 1921; and on an alterative laxative since Mar. 4, 1936.

Ser. No. 549,050. CHESEBROUGH MANUFACTURING COMPANY CONSOLIDATED, New York, N. Y. Filed Feb. 7, 1948.

VIRATOL

FOR AN EMULSIFIABLE COMPOUND OF OILS AND WAXES USED AS AN INGREDIENT IN HAIR PREPARATIONS AND FOR HAIR DRESSINGS AND HAIR TONICS.

Claims use since Jan. 5, 1948.

Ser. No. 549,145. THE GLIDDEN COMPANY, doing business as The A. Wilhelm Company, Reading, Pa., and Cleveland, Ohio. Filed Feb. 9, 1948.

TRIX

FOR NAIL POLISH REMOVER.

Claims use since July 15, 1947.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 512,078. JOHN HUDSON MOORE, INC., New York, N. Y. Filed Aug. 2, 1947. Under section 2f of the act of 1946.

LONDON HOUSE

Applicant claims ownership of registration No. 335,511.

FOR SMOKERS' PIPES, TOBACCO POUCHES, CIGARETTE PAPERS CUT TO SIZE, AND ASHTRAYS, ASH RECEIVERS, HUMIDORS, CIGAR AND CIGARETTE HOLDERS MADE OF BASE METAL OR COMPOSITION MATERIAL.

Claims use since Apr. 14, 1935.

Ser. No. 535,834. DEFIANCE SALES CORPORATION, New York, N. Y. Filed Sept. 26, 1947.

PREMIER

FOR ASH TRAYS OF GLASS.

Claims use since January 1938.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Ser. No. 532,033. THE KING POWDER COMPANY, Cincinnati, Ohio. Filed Aug. 21, 1947.

KING

FOR BLACK POWDER, BOTH POTASSIUM NITRATE AND SODIUM NITRATE BASE, HIGH EXPLOSIVES, BLASTING CAPS AND ELECTRIC BLASTING CAPS.

Claims use since Jan. 18, 1884.

Ser. No. 542,566. J. HALPERN COMPANY, Pittsburgh, Pa. Filed Nov. 28, 1947.

AMERICAN BEAUTY

FOR SPARKLERS.

Claims use since June 1925.

Ser. No. 542,568. J. HALPERN COMPANY, Pittsburgh, Pa. Filed Nov. 28, 1947.

HALCO

FOR FIREWORKS AND TOY PISTOL CAPS.

Claims use since June 1920.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 547,166. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Jan. 15, 1948.

ADAMANT

FOR PRINTING INK.

Claims use since 1937.

Ser. No. 547,167. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Jan. 15, 1948. Under section 2f of the act of 1946.

African

FOR PRINTING INK.

Claims use since 1910.

Ser. No. 547,168. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Jan. 15, 1948.

ANNIVERSARY

FOR PRINTING INK.

Claims use since March 1940.

Ser. No. 547,170. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Jan. 15, 1948. Under section 2f of the act of 1946.

Colorado

FOR PRINTING INK.

Claims use since 1910.

Ser. No. 547,171. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Jan. 15, 1948. Under section 2f of the act of 1946.

Constant

FOR PRINTING INK.

Claims use since December 1931.

Ser. No. 547,178. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Jan. 15, 1948.

Inketine

FOR PRINTING INK

Claims use since 1910.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 538,088. BASIC REFRACTORIES, INCORPORATED, Cleveland, Ohio. Filed Oct. 17, 1947.

The portrait is fanciful.

FOR REFRACTORY MATERIALS FOR FURNACE LINING AND REPAIRING.

Claims use since the first week of January 1933.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 526,717. BUNDY TUBING COMPANY, Detroit, Mich. Filed July 5, 1947. Under section 2f of the act of 1946.

Applicant claims ownership of registrations Nos. 273,027, 207,185, and 289,329.

BUNDY

FOR METAL TUBING AND SHAPED METAL TUBE LENGTHS.

Claims use since Oct. 15, 1922.

Ser. No. 529,971. THE DILL MANUFACTURING COMPANY, Cleveland, Ohio. Filed July 30, 1947.

DILL

FOR PNEUMATIC TIRE VALVE STEMS, PNEUMATIC TIRE VALVES, VALVE CORES, VALVE STEM CAPS, VALVE EXTENSION STEMS, PNEUMATIC TIRE AIR CHUCKS, VALVE STEM BRIDGE WASHERS, VALVE STEM HEX NUTS, PNEUMATIC PILLOW VALVES.
Claims use since January 1925.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 535,446. ALPHA METALS, INC., Brooklyn, N. Y. Filed Sept. 24, 1947.

DEPEND-A-BOND

FOR SOLDERS COMPOSED PRIMARILY OF LEAD AND TIN.
Claims use since July 30, 1941.

CLASS 15

OILS AND GREASES

Ser. No. 527,279. THE PURE OIL COMPANY, Chicago, Ill. Filed July 5, 1947.

WHITE CLOVER

No claim is made to the word "White" apart from the mark.
Applicant claims ownership of registration No. 174,333.
FOR LUBRICATING OIL FOR HAND CREAM SEPARATORS.
Claims use since May 1912.

Ser. No. 529,377. HAGGERTY REFINING CO., New York, N. Y. Filed July 24, 1947.

Thermo

Applicant claims ownership of registrations Nos. 58,255 and 139,142.
FOR LUBRICATING OILS.
Claims use since Aug. 6, 1906.

Ser. No. 529,447. FISKE BROTHERS REFINING CO., Newark, N. J. Filed July 25, 1947. Under section 2f of the act of 1946.

FISKE'S

Applicant claims ownership of registrations Nos. 104,504, 106,095, 141,548, 255,619, and 256,733.
FOR LUBRICATING OILS AND GREASES.
Claims use since January 1918.

Ser. No. 529,975. FISKE BROTHERS REFINING CO., Newark, N. J. Filed July 30, 1947. Under section 2f of the act of 1946.

FISKE'S

Applicant claims ownership of registrations Nos. 104,504, 106,095, 141,548, 255,619, and 256,733.
FOR LUBRICATING OILS AND GREASES.
Claims use since January 1918.

Ser. No. 532,201. W. H. BARBER COMPANY, Minneapolis, Minn. Filed Aug. 23, 1947.

Universol

Applicant claims ownership of registrations Nos. 236,017, 268,854, and 268,842.
FOR LUBRICATING OILS AND GREASES.
Claims use since Mar. 31, 1947.

Ser. No. 533,147. THE CONSOLIDATED FLOUR MILLS COMPANY, Wichita, Kans. Filed Sept. 3, 1947.

KANSBEST

FOR PETROLEUM PRODUCTS—NAMELY, LUBRICATING OIL.
Claims use since 1937.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 499,862. SOUTHERN STATES IRON ROOFING COMPANY, Savannah, Ga. Filed Oct. 10, 1947. Under section 2f of the act of 1946.

SOUTHERN STATES

FOR READY-MIXED PAINT.
Claims use since August 1938.

Ser. No. 526,603. THE A. BURDSAL COMPANY, Indianapolis, Ind. Filed July 5, 1947.

Steamboat

Applicant claims ownership of registration No. 114,869.
FOR SEMI-PASTE HOUSE PAINT.
Claims use since Dec. 23, 1936.

Ser. No. 528,730. KELCO COMPANY, San Diego, Calif. Filed July 16, 1947.

The words "Refined Algin Products" are claimed only in the association shown in the drawing.
FOR ALGIN PRODUCT FOR USE IN WATER PAINTS AS A SUSPENDING AND VISCOSITY CONTROLLING AGENT AND TO IMPROVE THE BRUSHING CHARACTERISTICS.
Claims use since July 1930.

Ser. No. 528,860. THE GREAT AMERICAN TEA COMPANY, New York, N. Y. Filed July 18, 1947.

Golden Key

Applicant claims ownership of registration No. 244,904.
FOR POLISH FOR FURNITURE AND WOODWORK.
Claims use since January 1925.

Ser. No. 530,028. SAINT LOUIS SURFACER AND PAINT COMPANY, St. Louis, Mo. Filed July 30, 1947.

FOR CANNED PAINTS IN DRY, PASTE, AND LIQUID FORM; OLEO-RESINOUS VARNISHES; VARNISH STAINS AND OIL STAINS; PAINT ENAMELS AND BAKING ENAMELS.
Claims use since May 26, 1936.

Ser. No. 530,413. M. J. MERKIN PAINT CO., INC., New York, N. Y. Filed Aug. 4, 1947. Under section 2f of the act of 1946.

MERKIN

Applicant claims ownership of registrations Nos. 273,025 and 413,497.

TULIP

FOR LUMP, GRANULATED AND PULVERIZED CHARCOAL, COAL, COKE, COAL BRIQUETTES, AND CHARCOAL BRIQUETTES.
Claims use since April 1904.

CLASS 2

RECEPTACLES

Reg. No. 366,873. Registered May 2, 1939. Crown Can Company, Philadelphia, Pa. Republished by Crown Cork & Seal Company, Inc., Baltimore, Md., a corporation of New York.

CROWNTAINER

FOR METAL CANS.
Claims use since on or about Nov. 23, 1938.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Reg. No. 338,488. Registered Sept. 8, 1936. Jacob Neumann, doing business as Crown Luggage Company, Baltimore, Md. Republished by Crown Luggage Co., Inc., Baltimore, Md., a corporation of Maryland.

SKI—LITE by CROWN

FOR LUGGAGE—NAMELY, WARDROBES, FITTED LUGGAGE, OVERNIGHT CASES, WEEK-END CASES, HAT BOXES, EMPTY VANITY AND MAKE UP CASES, AND UTILITY CASES.
Claims use since Mar. 20, 1936.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Reg. No. 57,258. Registered Nov. 6, 1906. CHAS. W. YOUNG & Co., Philadelphia, Pa. Republished by Grace B. Young, doing business as United States Soap Manufacturing, Philadelphia, Pa.

PEARL

FOR LAUNDRY SOAP.
Claims use since on or about September 1877.

Reg. No. 57,259. Registered Nov. 6, 1906. CHAS. W. YOUNG & Co., Philadelphia, Pa. Republished by G. B. Young, doing business as United States Soap Manufacturing, Philadelphia, Pa.

CHAS. W. YOUNG & CO. CHIPPED PEARL BORAX SOAP PHILADA. & NEW YORK

FOR LAUNDRY AND POWDERED SOAP.
Claims use since about 1879.

Reg. No. 57,309. Registered Nov. 13, 1906. CHAS. W. YOUNG & Co., Philadelphia, Pa. Republished by G. B. Young, doing business as United States Soap Manufacturing, Philadelphia, Pa.

PEARL BORAX SOAP

FOR LAUNDRY AND POWDERED SOAP.
Claims use sinbe about 1879.

Reg. No. 197,308. Registered Apr. 14, 1925. B. A. RAILTON Co., Chicago, Ill., a corporation of Illinois. Republished by registrant.

SUNNY

FOR LIQUID PASTE AND POWDER, SOAPS, AND CLEANSER—NAMELY, CHIPS, LAUNDRY, POWDER, AND TOILET.
Claims use since July 1922.

Reg. No. 293,735. Registered May 3, 1932. AMERICAN MULTIGRAPH Co., Wilmington, Del., and Cleveland, Ohio. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

BLANKROLA

FOR MATERIALS AND SOLUTIONS WHICH ACT AS THE SOLVENT IN REMOVING INK, GREASE, ETC., FROM PRINTING BLANKETS AND ROLLERS.
Claims use since August 1931.

Reg. No. 300,651. Registered Jan. 31, 1933. THE DRACKETT CHEMICAL COMPANY, Cincinnati, Ohio. Republished by The Drackett Company, Cincinnati, Ohio, a corporation of Ohio.

Windex

FOR LIQUID CLEANER FOR GLASS AND VITREOUS SURFACES.
Claims use since July 22, 1932.

Reg. No. 314,756. Registered July 10, 1934. MULTIGRAPH COMPANY, Cleveland, Ohio. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

Deoxit

FOR PREPARATION FOR CLEANING PRINTING PLATES.
Claims use since Feb. 23, 1934.

Reg. No. 341,276. Registered Dec. 1, 1936. HARRY J. THEOBALD, doing business as Industrial Soap Works, Kearny, N. J. Republished by The Theobald Industries, Harrison, N. J., a corporation of New Jersey.

Industrasol

FOR SOAPS FOR USE IN THE TEXTILE INDUSTRIES, FOR LAUNDRY PURPOSES, AND FOR GENERAL CLEANING.
Claims use since on or about January 1935.

Reg. No. 345,665. Registered May 4, 1937. WALLERSTEIN COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

RSP

The drawing is lined for the colors red and black.
FOR ENZYMATIC PRODUCT FOR USE AS A CLEANING COMPOUND AND FOR THE REMOVAL OF PROTEIN STAINS, SUCH AS BLOOD, ALBUMIN, CASEIN, ETC., AND STARCH FROM TEXTILE AND OTHER MATERIALS.
Claims use since July 1936.

ATOMIK

FOR GENERAL HOUSEHOLD CLEANSER FOR THE CLEANING OF FLOORS, WALLS, DISHES, CLOTHES, PAINTED SURFACES AND CLEANSER FOR GARAGE AND OTHER FLOORS.
Claims use since Feb. 12, 1946.

CLASS 5

ADHESIVES

Reg. No. 123,471. Registered Nov. 12, 1918. NASHUA GUMMED AND COATED PAPER COMPANY, Nashua, N. H., a corporation of Massachusetts. Republished by registrant.

RHINO

FOR GUMMED PAPER-BOX STAYS.
Claims use since fall of 1912.

Reg. No. 231,222. Registered Aug. 16, 1927. WORTENDYKE MFG. CO., Richmond, Va., a corporation of Virginia. Republished by registrant.

TIP TOP

FOR GUMMED PAPER TAPE AND GUMMED CLOTH TAPE.
Claims use since Feb. 25, 1927.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 26,592. Registered May 28, 1895. JOHN CARNRICK, New York, N. Y. Republished by Reed & Carnrick, Jersey City, N. J., a corporation of New Jersey.

ROBOLINE

FOR CORDIAL TONIC FOR TONING THE GENERAL AND NERVOUS SYSTEM.
Claims use since Apr. 1, 1895.

Reg. No. 29,884. Registered Apr. 20, 1897. JOHN CARNRICK, New York, N. Y. Republished by Reed & Carnrick, Jersey City, N. J., a corporation of New Jersey.

TROPHONINE

FOR METABOLIZED FOOD IN THE NATURE OF A NUTRITIVE TONIC.
Claims use since Nov. 2, 1896.

Reg. No. 74,331. Registered July 6, 1909. E. W. VACHER, New Orleans, La. Republished by Altone Chemical Company, Inc., New Orleans, La., a corporation of Louisiana.

E. W. Vacher

FOR REMEDY FOR CROUP.
Claims use since Nov. 6, 1908.

Ser. No. 148,939. Registered Nov. 29, 1921. REED & CARNRICK, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

PANCRO-BILIN.

FOR MEDICINE FOR PHTHISIS, NEURASTHENIA, CONSTIPATION, AND INTESTINAL INDIGESTION.
Claims use since Feb. 1, 1888.

Reg. No. 199,108. Registered June 2, 1925. LUTHER FORD & COMPANY, Minneapolis, Minn. Republished by Luther Ford Products Company, Minneapolis, Minn., a corporation of Minnesota.

MRS. STEWART'S

FOR LIQUID BLUING.
Claims use since Apr. 1, 1890.

Reg. No. 202,369. Registered Aug. 18, 1925. B. A. RAILTON CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

SUNNY

FOR BAKING POWDER AND BLUING.
Claims use since July 1922.

Reg. No. 204,204. Registered Oct. 13, 1925. B. A. RAILTON CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR TARTARIC AND CITRIC ACIDS, DENATURED ALCOHOL, BAKING POWDER, BLUING, AMMONIA, GLYCERIN, AND CREAM OF TARTAR.
Claims use since about July 1922.

Reg. No. 211,461. Registered Apr. 13, 1926. MORANA INCORPORATED, New York, N. Y. Republished by Van Ameringen-Haebler, Inc., New York, N. Y., a corporation of New York.

VELOIL

FOR ESSENTIAL OILS SUITABLE FOR PERFUMERY PURPOSES.
Claims use since May 6, 1925.

Reg. No. 213,756. Registered June 1, 1926. HOLLAND-RANTOS COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

KOROMEX

FOR HYGIENIC PREPARATIONS FOR THE TREATMENT AND PREVENTION OF VAGINAL CATARRH AND OTHER FEMALE DISORDERS.
Claims use since June 15, 1925.

Reg. No. 217,984. Registered Sept. 14, 1926. REED & CARNRICK, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

Ovacoids

FOR PREPARATION IN TABLET, POWDER, AND LIQUID FORM TO BE USED IN THE TREATMENT OF SEXUAL GLANDULAR INSUFFICIENCY AND ACCOMPANYING CONDITIONS, SUCH AS NERVOUS DEBILITY, NERVE DEPRESSION, PRESENILITY, HYPOGONADISM, AND KINDRED AFFECTIONS AND AS A GENERAL ACTIVATOR OF THE SEXUAL GLANDS.
Claims use since Mar. 15, 1926.

Reg. No. 217,985. Registered Sept. 14, 1926. REED & CARNRICK, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

Testacoids

FOR PREPARATION IN TABLET, POWDER, AND LIQUID FORM TO BE USED IN THE TREATMENT OF SEXUAL GLANDULAR INSUFFICIENCY AND ACCOMPANYING CONDITIONS, SUCH AS NERVOUS DEBILITY, NERVE DEPRESSION, PRESENILITY, HYPOGONADISM, AND KINDRED AFFECTIONS AND AS A GENERAL ACTIVATOR OF THE SEXUAL GLANDS.
Claims use since Mar. 15, 1926.

Reg. No. 224,018. Registered Feb. 15, 1927. ARNOLD LOUIS VAN AMERINGEN, New York, N. Y. Republished by Van Ameringen-Haebler, Inc., New York, N. Y., a corporation of New York.

DIAPHOL

FOR SYNTHETIC OIL OF JASMINE.
Claims use since Sept. 16, 1926.

Reg. No. 229,734. Registered July 5, 1927. REED & CARNRICK, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

AMPACOID

FOR MEDICINAL PREPARATIONS FOR PARENTERAL USE TO BE ADMINISTERED BY INJECTION WHEN SOLD IN VIALS, BOTTLES, AMPULES, OR THE LIKE.
Claims use since Jan. 26, 1927.

Reg. No. 229,950. Registered July 12, 1927. ARNOLD LOUIS VAN AMERINGEN, New York, N. Y. Republished by Van Ameringen-Haebler, Inc., New York, N. Y., a corporation of New York.

ALVA JASMIN

The word "Jasmin" is disclaimed.
FOR PERFUME, ESSENCES OF PERFUMES, ESSENCES FOR PERFUMERY MATERIALS, AROMATIC MATERIALS, SYNTHETIC PERFUME MATERIALS, AND ETHEREAL OILS.
Claims use since July 7, 1925.

Reg. No. 230,168. Registered July 12, 1927. ARNOLD LOUIS VAN AMERINGEN, New York, N. Y. Republished by Van Ameringen-Haebler, Inc., New York, N. Y., a corporation of New York.

EPICINE

FOR NATURAL AND SYNTHETIC ESSENTIAL OILS SUITABLE FOR PERFUMERY PURPOSES.
Claims use since Jan. 22, 1927.

Reg. No. 252,231. Registered Jan. 29, 1929. ARNOLD LOUIS VAN AMERINGEN, New York, N. Y. Republished by Van Ameringen-Haebler, Inc., New York, N. Y., a corporation of New York.

PERROL

FOR ESSENCE OF PERFUMES, ESSENCES FOR PERFUMERY MATERIALS, AROMATIC MATERIALS FOR PERFUMING PURPOSES, SYNTHETIC PERFUME MATERIALS, ODORIFEROUS MATERIALS FOR PERFUMING PURPOSES, AND ETHEREAL OILS.
Claims use since June 14, 1928.

Reg. No. 259,547. Registered July 30, 1929. REED & CARNRICK, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

Thyracoid

FOR MEDICINAL PREPARATIONS FOR USE IN THE TREATMENT OF DEFICIENCIES OF THE THYROID GLAND OR IN CASES WHERE THYROID EXTRACT IS INDICATED.
Claims use since Mar. 16, 1929.

Reg. No. 265,044. Registered Dec. 10, 1929. REED & CARNRICK, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

Endomin

FOR MEDICINAL PRODUCTS CONTAINING IRON AND OTHER METAL SALTS FOR THE TREATMENT OF ANAEMIA AND THE RESTORATION OF THE NORMAL METAL CONTENT OF THE BLOOD.
Claims use since Feb. 13, 1929.

Reg. No. 266,177. Registered Jan. 14, 1930. VAN AMERINGEN-HAEBLER, INC., New York, N. Y., a corporation of New York. Republished by registrant.

Lemonal

FOR NATURAL AND SYNTHETIC ESSENTIAL OILS SUITABLE FOR PERFUMING PURPOSES.
Claims use since July 18, 1929.

Reg. No. 266,410. Registered Jan. 14, 1930. HORTON & CONVERSE, Los Angeles, Calif., a corporation of California. Republished by registrant.

ANTIACIDS, ANTIPYRETICS, APHRODISIACS, ANTIHYDROTICS, ALTERATIVES, ANTISEPTICS, ASTRINGENTS, ANTISYPHILITICS, BACTERINS, CARMINATIVES, CATHARTICS, CHOLAGOGUES, DEMULCENTS, DIAPHORETICS, DEODORIZERS, DISINFECTANTS, DIURETICS, EMMENAGOGUES, EMETICS, EXPECTORANTS, FEBRIFUGES, HAEMOSTATICS, HYPNOTICS, LAXATIVES, NARCOTICS, AND PURGATIVES.
Claims use since Aug. 5, 1927.

Reg. No. 286,251. Registered Aug. 25, 1931. S. C. WELLS & COMPANY, Le Roy, N. Y., a corporation of New York. Republished by registrant.

B·C·B

FOR SOOTHING AND HEALING PREPARATION FOR BURNS, CUTS, AND BRUISES.
Claims use since Mar. 10, 1931.

Reg. No. 286,597. Registered Sept. 1, 1931. REED & CARNRICK, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

Panacoids

FOR MEDICINAL PREPARATIONS FOR TREATMENT OF INTESTINAL INDIGESTION AND FUNCTIONAL DISORDERS OF THE PANCREAS.
Claims use since Apr. 6, 1931.

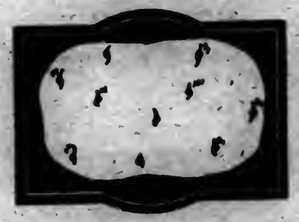
Reg. No. 298,068. Registered Oct. 11, 1932. REED & CARNRICK, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

Toniçine

FOR GENERAL TONIC.
Claims use since Feb. 16, 1932.

Reg. No. 315,300. Registered July 24, 1934. MONSANTO CHEMICAL COMPANY, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

Monsanto



FOR ORGANIC CHEMICALS GENERALLY—NAMELY, ACETANILID ACETPHENETIDIN (PHENACETIN), ACID SALICYLIC AND THE OTHER CHEMICALS LISTED IN THE ORIGINAL CERTIFICATE OF REGISTRATION NO. 315,300, EXCEPT HALAZONE AND CHLORINATED PARAFFIN.
Claims use since about 1901.

Reg. No. 343,165. Registered Feb. 9, 1937. NATIONAL INSTITUTE OF NUTRITION, Los Angeles, Calif., and Buffalo, N. Y. Republished by Neoco Corporation, Los Angeles, Calif., a corporation of California.

RAY-D YEAST

The word "Yeast" is disclaimed.
FOR YEAST TABLETS.
Claims use since Sept. 22, 1936.

Reg. No. 357,841. Registered June 14, 1938. PRESQUE ISLE STARCH CO., Presque Isle, Maine, a corporation of Maine. Republished by registrant.

FOR LAUNDRY STARCHES.
Claims use since Dec. 29, 1937.

Reg. No. 363,156. Registered Dec. 13, 1938. THE ODORONO COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

ODO-RO-DO

FOR DEODORANTS AND PREPARATIONS FOR PREVENTING EXCESSIVE PERSPIRATION, ALSO DEPILATORY.
Claims use since on or about Feb. 10, 1934.

Reg. No. 364,443. Registered Jan. 31, 1939. THE NATIONAL COLLOID CO., Steubenville, Ohio, a corporation of Ohio. Republished by registrant.

BOILER COLLOIDENE

The word "Boiler" is disclaimed.
FOR BOILER COMPOUND FOR USE IN REMOVING SCALE AND OTHER FOREIGN MATTER FROM THE INTERIOR OF STEAM PRODUCING BOILERS.
Claims use since Aug. 1, 1938.

Reg. No. 383,188. Registered Nov. 26, 1940. THE VENOMIN COMPANY, Venice, Fla., a corporation of Florida. Republished by registrant, present location Lorain, Ohio.

Venomin

FOR VENOM EXTRACTED FROM POISONOUS SNAKES FOR TREATMENT OF ARTHRITIS AND PAINS IN CARCINOMA.
Claims use since June 29, 1940.

Reg. No. 389,055. Registered July 22, 1941. NATIONAL INSTITUTE OF NUTRITION, Los Angeles, Calif., and Buffalo, N. Y., now by change of name Nion Corporation, a corporation of California. Republished by Neoco Corporation, Los Angeles, Calif., a corporation of California.

TRI-NUTRON

FOR YEAST CONTAINING VITAMIN D IN POWDER AND TABLET FORM.
Claims use since Feb. 19, 1941.

Reg. No. 395,652. Registered June 2, 1942. S. C. WELLS & COMPANY, Leroy, N. Y., a corporation of New York. Republished by registrant.

SHILOH

FOR PREPARATION FOR THE RELIEF OF COUGHS DUE TO COLDS.
Claims use since 1873.

Reg. No. 396,169. Registered June 30, 1942. S. C. WELLS & COMPANY, Leroy, N. Y., a corporation of New York. Republished by registrant.

C-K-TEA

The word "Tea" is disclaimed.
FOR A LAXATIVE.
Claims use since Oct. 23, 1941.

Reg. No. 398,830. Registered Nov. 24, 1942. S. C. WELLS & COMPANY, Leroy, N. Y., a corporation of New York. Republished by registrant.

MUSTARINE

FOR REMEDIES FOR RELIEF OF PAIN, LAMENESS, AND SORENESS, FOR USE IN PLACE OF MUSTARD PLASTERS.
Claims use since about the middle of July 1904.

Reg. No. 401,369. Registered May 11, 1943. JULIUS SCHMID, INC., New York, N. Y., a corporation of New York. Republished by registrant.

Ramses

FOR VAGINAL JELLY.
Claims use since on or about Dec. 29, 1932.

Reg. No. 409,076. Registered Sept. 12, 1944. WILLER CHEMICAL COMPANY, Houston, Tex., a firm. Republished by registrant.

RICO

FOR INSECTICIDES.
Claims use since February 1940.

Reg. No. 420,259. Registered Apr. 2, 1946. REED & CARNRICK, Jersey City, N. J., a corporation of New Jersey. Republished by registrant.

PEPTENZYME

FOR PREPARATION USED IN THE TREATMENT OF INDIGESTION AND DYSPEPSIA.
Claims use since Sept. 11, 1893.

Reg. No. 422,368. Registered July 16, 1946. S. C. WELLS & COMPANY, Le Roy, N. Y., a corporation of New York. Republished by registrant.

DR. FENNER'S

FOR LIQUID PREPARATION FOR THE TREATMENT OF COLIC AND FOR EXTERNAL APPLICATION TO THE HUMAN BODY FOR MINOR CUTS, BRUISES, MUSCULAR SORENESS AND AS A COUNTER-IRRITANT FOR SUPERFICIAL CONGESTION.
Claims use since 1875.

Reg. No. 423,297. Registered Aug. 27, 1946. S. C. WELLS & COMPANY, Le Roy, N. Y., a corporation of New York. Republished by registrant.

GOLDEN RELIEF

FOR LIQUID PREPARATION FOR THE TREATMENT OF COLIC AND FOR EXTERNAL APPLICATION TO THE HUMAN BODY FOR MINOR CUTS, BRUISES, MUSCULAR SORENESS AND AS A COUNTER-IRRITANT FOR SUPERFICIAL CONGESTION.
Claims use since 1875.

Reg. No. 423,298. Registered Aug. 27, 1946. S. C. WELLS & COMPANY, Le Roy, N. Y., a corporation of New York. Republished by registrant.

DR. FENNER'S

GOLDEN RELIEF

FOR LIQUID PREPARATION FOR THE TREATMENT OF COLIC AND FOR EXTERNAL APPLICATION TO THE HUMAN BODY FOR MINOR CUTS, BRUISES, MUSCULAR SORENESS AND AS A COUNTER-IRRITANT FOR SUPERFICIAL CONGESTION.
Claims use since 1875.

Reg. No. 423,343. Registered Aug. 27, 1946. HORTON & CONVERSE, Los Angeles, Calif., a corporation of California. Republished by registrant.

HISTOPEPTINE

FOR STERILE AQUEOUS SOLUTION OF 1-HISTIDINE MONOHYDROCHLORIDE.
Claims use since Sept. 15, 1937.

Reg. No. 424,740. Registered Oct. 22, 1946. HORTON & CONVERSE, Los Angeles, Calif., a corporation of California. Republished by registrant.

MICROZOLE

FOR AQUEOUS SUSPENSION OF MICROCRYSTALLINE SULFATHIAZOLE FOR TOPICAL USE.
Claims use since Aug. 14, 1940.

Reg. No. 425,140. Registered Nov. 5, 1946. HORTON & CONVERSE, Los Angeles, Calif., a corporation of California. Republished by registrant.

BENZO-GUAIATONE

The word "Benzo" is disclaimed.
FOR PREPARATIONS USED IN THE TREATMENT OF SPASMODIC COUGH, HICCOUGH, WHOOPING COUGH, ETC.
Claims use since May 1, 1936.

Reg. No. 427,448. Registered Feb. 11, 1947. HORTON & CONVERSE, Los Angeles, Calif., a corporation of California. Republished by registrant.

D-V-R

The letter "D" is disclaimed.
FOR MULTIVITAMIN PREPARATIONS.
Claims use since May 1, 1942.

Reg. No. 431,824. Registered Aug. 12, 1947. TEEN TIMER LABORATORIES CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

Teentimer

FOR PERFUMES, COLOGNES, DEODORANTS, HAND LOTIONS, SHAMPOOS, FACE AND HAND CREAMS, AND FACE AND BODY DUSTING POWDERS.
Claims use since Apr. 30, 1945.

CLASS 7

CORDAGE

Reg. No. 153,203. Registered Mar. 14, 1922. THE HOOVEN & ALLISON COMPANY, Xenia, Ohio, a corporation of Ohio. Republished by registrant.

FOR CORDAGE—NAMELY, MANILA, SISAL, AND HEMP ROPE AND TWINE.
Claims use since 1878.

Reg. No. 170,000. Registered July 10, 1923. THE HOOVEN & ALLISON COMPANY, Xenia, Ohio, a corporation of Ohio. Republished by registrant.

The star is lined for red.
FOR CORDAGE—NAMELY, MANILA, SISAL AND HEMP ROPE AND TWINE.
Claims use since Mar. 15, 1920.

Reg. No. 370,791. Registered Sept. 5, 1939. SAMSON CORDAGE WORKS, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

FOR CLOTHESLINE.
Claims use since Dec. 21, 1937.

Reg. No. 391,884. Registered Nov. 25, 1941. R. G. LE TOURNEAU, INC., Stockton, Calif., and Peoria, Ill., a corporation of California. Republished by registrant, present location, Stockton, Calif.

TOURNAROPE

FOR WIRE ROPE OR CABLE.
Claims use since July 7, 1941.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 214,474. Registered June 22, 1926. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

ROYTYPE

FOR INKING RIBBONS AND CARBON PAPER.
Claims use since Jan. 5, 1926.

Reg. No. 222,921. Registered Jan. 11, 1927. LUTHER FORD & COMPANY, Minneapolis, Minn. Republished by Luther Ford Products Company, Minneapolis, Minn., a corporation of Minnesota.

STEWART'S

FOR WRITING INK.
Claims use since July 1, 1915.

Reg. No. 392,421. Registered Dec. 23, 1941. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

PARK AVENUE

FOR INKING RIBBONS AND CARBON PAPER.
Claims use since Sept. 13, 1940.

Reg. No. 392,422. Registered Dec. 23, 1941. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

VULCAN

FOR INKING RIBBONS AND CARBON PAPER.
Claims use since January 1937.

Reg. No. 392,540. Registered Dec. 30, 1941. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

VALUE

FOR INKING RIBBONS AND CARBON PAPER.
Claims use since 1929.

Reg. No. 392,541. Registered Dec. 30, 1941. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

VERTEX

FOR INKING RIBBONS AND CARBON PAPER.
Claims use since 1929.

Reg. No. 392,671. Registered Jan. 6, 1942. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

VARSITY

FOR INKING RIBBONS AND CARBON PAPER.
Claims use since July 1937.

Reg. No. 399,085. Registered Dec. 15, 1942. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

VOGUE

FOR INKING RIBBONS AND CARBON PAPER.
Claims use since early in 1929.

Reg. No. 400,189. Registered Feb. 16, 1943. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

Mayfair

FOR INKING RIBBONS AND CARBON PAPER.
Claims use since at least as early as July 10, 1942.

Reg. No. 400,659. Registered Mar. 23, 1943. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

Mayflower

FOR CARBON PAPER.
Claims use since July 30, 1942.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 54,538. Registered June 26, 1906. THE WHITEHALL PORTLAND CEMENT CO., Cementon and Philadelphia, Pa. Republished by The Whitehall Cement Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania.

WHITEHALL

The drawing is lined for the color red.
FOR PORTLAND CEMENT.
Claims use since August 1900.

Reg. No. 261,826. Registered Sept. 24, 1929. THE CLEVELAND HEATER COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

REX

FOR THERMAL INSULATING JACKETS, CASINGS, AND PIPE COVERINGS FOR USE IN CONNECTION WITH HOT-WATER-SUPPLY SYSTEMS AND STEAM, VAPOR, AND HOT-WATER HEATING APPLIANCES.
Claims use since prior to September 1924.

Reg. No. 311,268. Registered Mar. 20, 1934. WHITE PINE SASH COMPANY, Spokane, Wash., a corporation of Washington. Republished by registrant.

PRIM-A-TOX

FOR PRIMED AND TREATED LUMBER, FINISHED LUMBER AND MILLWORK, INCLUDING DOOR AND WINDOW FRAMES, DOORS AND SASH, OR PARTS THEREOF, OR CERTAIN PORTIONS THEREOF.
Claims use since Oct. 1, 1933.

Reg. No. 337,864. Registered Aug. 25, 1936. THE INSULITE COMPANY, Minneapolis, Minn. Republished by Minnesota and Ontario Paper Company, Minneapolis, Minn., a corporation of Minnesota.

BILDRITE

FOR FIBER COMPOSITION BOARD AND SHEATHING CONSISTING OF FIBROUS MATERIAL AND A WATER-PROOFING PRODUCT.
Claims use since Jan. 24, 1936.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 62,025. Registered Apr. 16, 1907. KEYSTONE FENCE COMPANY, Peoria, Ill. Republished by Keystone Steel & Wire Company, Peoria, Ill., a corporation of Illinois.

KEYSTONE

FOR WIRE FENCE.
Claims use since Sept. 15, 1889.

Reg. No. 62,313. Registered Apr. 30, 1907. KEYSTONE FENCE COMPANY, Peoria, Ill. Republished by Keystone Steel & Wire Company, Peoria, Ill., a corporation of Illinois.

MONARCH

FOR WIRE FENCE.
Claims use since Sept. 1, 1902.

Reg. No. 215,507. Registered July 20, 1926. THE CLEVELAND HEATER COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

SPEE-DEE

FOR METAL PIPE FITTINGS.
Claims use since Jan. 16, 1926.

Reg. No. 268,376. Registered Mar. 11, 1930. FRIEDMAN SILVER CO., INC., Brooklyn, N. Y., a corporation of New York. Republished by registrant.

Pilgrim

FOR TABLE HOLLOW WARE OF BASE METAL—NAMELY, PEWTER, HOLLOW WARE UNPLATED WITH PRECIOUS METAL.
Claims use since Mar. 29, 1929.

Reg. No. 271,377. Registered June 3, 1930. THE CLEVELAND HEATER COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

REX

FOR BLOW-OFF VALVES, NEEDLE VALVES, GAS COCKS, PRESSURE RELIEF VALVES, WATER VALVES, FUEL STRAINERS AND TRAPS, AND METAL PIPE FITTINGS.
Claims use since January 1908.

Reg. No. 289,297. Registered Nov. 24, 1931. FRIEDMAN SILVER CO., INC., Brooklyn, N. Y., a corporation of New York. Republished by registrant.

WINTHROP

FOR TABLE HOLLOW WARE OF BASE METAL—NAMELY, PEWTER HOLLOWWARE UNPLATED WITH PRECIOUS METAL.
Claims use since May 20, 1931.

Reg. No. 362,909. Registered Dec. 6, 1938. AMERICAN CAST IRON PIPE COMPANY, Birmingham, Ala., a corporation of Georgia. Republished by registrant.

ENAMELINE

FOR CAST IRON PIPE.
Claims use since May 11, 1938.

Reg. No. 397,683. Registered Sept. 15, 1942. ATLAS FENCE COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

ATLAS

FOR IRON AND WIRE FENCING, METAL SCREEN, AND WIRE MATS.
Claims use since Oct. 6, 1923.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 273,748. Registered Aug. 12, 1930. CALUMET ELECTRIC CASTEEL CO., Hammond Ind. Republished by Calumet Steel Castings Corporation, Hammond, Ind., a corporation of Indiana.

CASTEEL

FOR STEEL CASTINGS.
Claims use since Mar. 10, 1930.

Reg. No. 313,628. Registered June 12, 1934. ADDRESSOGRAPH COMPANY, Cleveland and Euclid Village, Ohio. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

ADDRESSOLOY

FOR FERROUS METAL WITH A NON-FERROUS COATING.
Claims use since Jan. 2, 1934.

Reg. No. 315,744. Registered Aug. 7, 1934. ADDRESSOGRAPH COMPANY, Cleveland and Euclid Village, Ohio. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

ADDRESSOzinc

The word "Zinc" is disclaimed.
FOR METAL STRIPS FOR EMBOSSING FOR PRINTING PURPOSES.
Claims use since Feb. 14, 1934.

Reg. No. 316,706. Registered Sept. 4, 1934. ADDRESSOGRAPH COMPANY, Cleveland and Euclid Village, Ohio. Republished by Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware.

ADDRESSOlite

FOR NON-FERROUS SHEET METAL.
Claims use since Apr. 19, 1934.

Reg. No. 379,625. Registered July 16, 1940. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md., a corporation of New York. Republished by registrant.

CEMCOAT

FOR PLATED METAL AND MORE SPECIFICALLY TIN-PLATE.
Claims use since on or about Mar. 1, 1940.

Reg. No. 404,747. Registered Dec. 21, 1943. ADDRESSOGRAPH-MULTIGRAPH CORPORATION, Cleveland, Ohio, a corporation of Delaware. Republished by registrant.

ADDRESSOloy

FOR FERROUS METAL WITH A FLEXIBLE NON-METALLIC COATING.
Claims use since June 20, 1942.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 140,584. Registered Mar. 22, 1921. DETROIT WHITE LEAD WORKS, Detroit, Mich. Republished by Rogers Paint Products, Inc., Detroit, Mich., a corporation of Michigan.

ROGERS

The words "The Mark of Quality" are disclaimed.
FOR LIQUID PAINTS, VARNISHES, PASTE PAINTS, PAINT STAINS, ENAMEL PAINTS, OIL COLORS, LEADS AND ZINCS IN OIL, LEADS AND ZINCS IN VARNISH, LIQUID AND PASTE WOOD AND METAL FILLERS, FLOOR WAXES, DRIERS, JAPANS, LIQUID SHELLACS, ASPHALT PAINTS AND PAINT AND VARNISH REMOVERS.
Claims use since Mar. 1, 1910.

Reg. No. 167,535. Registered May 1, 1923. DETROIT WHITE LEAD WORKS, Detroit, Mich. Republished by Rogers Paint Products, Inc., Detroit, Mich., a corporation of Michigan.

WALL-TONA

FOR PAINTS (READY-MIXED, PASTE, FORM, OR DRY), PAINT ENAMELS, JAPANS, VARNISHES, STAINS AND FILLERS.
Claims use since Mar. 1, 1910.

CLASS 20

LINOLEUM AND OILED CLOTH

Reg. No. 227,063. Registered Apr. 26, 1927. GOLDENBERG'S, Washington, D. C. Republished by The Goldenberg Company, Washington, D. C., a corporation of Maryland.

LUXOLEUM

FOR FELT-BASE FLOOR RUGS.
Claims use since on or about Feb. 1, 1926.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 149,925. Registered Dec. 27, 1921. FRENCH BATTERY & CARBON CO., Madison, Wis. Republished by Ray-O-Vac Company, Madison, Wis., a corporation of Wisconsin.

RAY-O-VAC

FOR DRY-CELL BATTERIES.
Claims use since about Apr. 1, 1921.

Reg. No. 234,653. Registered Nov. 1, 1927. NOMA ELECTRIC CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

NOMA

FOR CHRISTMAS-TREE LIGHTING OUTFITS; ELECTRIC DECORATIVE DEVICES—NAMELY, ELECTRIC-LIGHTING FIXTURES AND REFLECTORS, MINIATURE ELECTRIC SOCKETS, PLUGS, AND RECEPTACLES, ELECTRIC CANDELABRA, AND ELECTRIC LAMPS.
Claims use since on or about May 23, 1927.

Reg. No. 348,737. Registered Mar. 2, 1937. WEBSTER ELECTRIC COMPANY, Racine, Wis. Republished by Webster Electric Company, Racine, Wis., a corporation of Delaware.

TELETALK

FOR INTER-COMMUNICATING SOUND AMPLIFYING AND TRANSMITTING SYSTEMS COMPRISING SPEAKERS, AMPLIFIERS, MICROPHONES, INTERCONNECTING CIRCUITS, AND ENERGIZING DEVICES WHEREBY CONVERSATION AT EITHER POINT MAY BE HEARD AT THE OTHER POINT OF COMMUNICATION.
Claims use since Sept. 24, 1936.

Reg. No. 352,426. Registered Nov. 30, 1937. WEBSTER ELECTRIC COMPANY, Racine, Wis. Republished by Webster Electric Company, Racine, Wis., a corporation of Delaware.

WEBSTER ELECTRIC Teletalk

The word "Electric" is disclaimed.
FOR INTER-COMMUNICATING SOUND AMPLIFYING AND TRANSMITTING SYSTEMS AND PARTS THEREOF, COMPRISING SPEAKERS, AMPLIFIERS, MICROPHONES, INTER-CONNECTING CIRCUITS AND ENERGIZING DEVICES WHEREBY CONVERSATION AT EITHER POINT MAY BE HEARD AT THE OTHER POINT OF COMMUNICATION.
Claims use since Sept. 24, 1936.

Reg. No. 381,936. Registered Oct. 15, 1940. FRED H. SCHAUB, doing business as Fred H. Schaub Engineering Company, Chicago, Ill. Republished by Fred H. Schaub Engineering Co., Inc., Chicago, Ill., a corporation of Illinois.

MAGNETROL

FOR AUTMOATICALLY ACTUATED ELECTRIC SWITCH FLUID LEVEL CONTROLS.
Claims use since Jan. 10, 1940.

Reg. No. 402,472. Registered July 27, 1943. COMMANDER BATTERY MANUFACTURING CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

COMBAT

The term "Chicago, Ill." is disclaimed.
FOR STORAGE BATTERIES.
Claims use since Jan. 29, 1942.

Reg. No. 432,083. Registered Aug. 19, 1947. ERIE RESISTOR CORPORATION, Erie, Pa., a corporation of Pennsylvania. Republished by registrant.

PLEXICON

FOR ELECTRICAL CONDENSER ASSEMBLIES AND PARTS THEREOF.
Claims use since Oct. 3, 1945.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 324,480. Registered May 21, 1935. THE EXHIBIT SUPPLY COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

STAR - LITE

FOR COIN-CONTROLLED AMUSEMENT APPARATUS.
Claims use since Dec. 24, 1934.

Reg. No. 354,843. Registered Feb. 22, 1938. THE EXHIBIT SUPPLY COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

TALLY-HO

FOR COIN-CONTROLLED AMUSEMENT APPARATUS.
Claims use since July 30, 1937.

Reg. No. 426,077. Registered Dec. 17, 1946. PAUL E. ALLEN, Skokie, Ill. Republished by Baby's Pal Company, Chicago, Ill., a corporation of Illinois.

Baby's pal

FOR TOY RATTLES AND FABRIC COVERED STUFFED TOYS.
Claims use since June 21, 1938.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 61,674. Registered Apr. 2, 1907. ROYAL TYPEWRITER CO., Hoboken, N. J. Republished by Royal Typewriter Company, Inc., New York, N. Y., a corporation of New York.

ROYAL

FOR TYPE-WRITING MACHINES.
Claims use since Mar. 19, 1906.

Reg. No. 103,679. Registered Apr. 13, 1915. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

ROYAL

FOR TYPE-WRITING MACHINES AND PARTS THEREOF.
Claims use since October 1911.

Reg. No. 126,955. Registered Oct. 14, 1919. JOHN PRITZLAFF HARDWARE Co., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

FOR POCKET-CUTLERY, SCISSORS, SHEARS, RAZORS, PUTTY AND SCRAPING KNIVES, PARING KNIVES, BREAD KNIVES, BREAD AND MEAT SLICERS, BUTCHER KNIVES, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since February 1909.

Reg. No. 142,117. Registered May 3, 1921. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

ROYAL

FOR TYPEWRITING-MACHINES AND PARTS THEREOF.
Claims use since Oct. 17, 1911.

Reg. No. 156,019. Registered June 13, 1922. NATIONAL RING TRAVELER Co., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

FOR RING TRAVELERS.
Claims use since about 1881.

Reg. No. 156,020. Registered June 13, 1922. NATIONAL RING TRAVELER Co., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

RELEVART METAL

The word "Metal" is disclaimed.
FOR RING TRAVELERS.
Claims use since July 13, 1921.

Reg. No. 161,548. Registered Nov. 14, 1922. MARKEM MACHINE Co., Boston, Mass. Republished by Markem Machine Company, Keene, N. H., a corporation of New Hampshire.

MARKEM

FOR MARKING MACHINES.
Claims use since June 15, 1921.

Reg. No. 188,640. Registered Sept. 2, 1924. NATIONAL RING TRAVELER Co., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

FOR RING SPINNING AND TWISTING TRAVELERS.
Claims use since about May 1921.

Reg. No. 190,595. Registered Oct. 14, 1924. NATIONAL RING TRAVELER Co., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

GRAVITY

FOR RING SPINNING AND TWISTING TRAVELERS.
Claims use since about Dec. 1, 1923.

Reg. No. 190,596. Registered Oct. 14, 1924. NATIONAL RING TRAVELER Co., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

The words "Travelers," "Made in all N. R. T. Co. Standards," "Patented July 10, 1923, Pat. No. 1,461,059," and the representation of the traveler are disclaimed.
FOR RING SPINNING AND TWISTING TRAVELERS.
Claims use since about Dec. 1, 1923.

Reg. No. 252,665. Registered Feb. 12, 1929. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

ROYTYPE

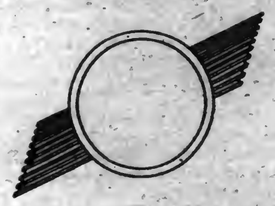
FOR TYPEWRITING-MACHINE ACCESSORIES, AND PARTICULARLY FOR CUSHION OR RUBBER KEYS FOR TYPEWRITING MACHINES, FOR RUBBER CUSHION FEET FOR TYPEWRITING MACHINES, AND FOR RUBBER TWIRLER KNOBS AND RINGS FOR TYPEWRITER PLATENS.
Claims use since Mar. 8, 1928.

Reg. No. 270,936. Registered May 20, 1930. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

FOR TYPEWRITING MACHINES AND PARTS THEREOF.
Claims use since October 1911.

Reg. No. 301,998. Registered Mar. 21, 1933. TWENTY GRAND BLADE COMPANY, INC., Spencer, Ind., assignor to Herman B. Laymon, doing business under the name and style of Twenty Grand Blade Company. Republished by Herman B. Laymon, Spencer, Ind.

TWENTY GRAND



FOR RAZOR BLADES.
Claims use since Oct. 1, 1932.

Reg. No. 332,758. Registered Feb. 25, 1936. EDWARD C. KNUDSON, Chicago, Ill. Republished by registrant.

COLTON'S

FOR FILE CLEANERS.
Claims use since 1889.

Reg. No. 346,587. Registered June 1, 1937. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md., a corporation of New York. Republished by registrant.

FOR MACHINERY FOR CONVEYING CONTAINERS SUCH AS BOTTLES AND FOR FILLING, CAPPING, AND AGITATING SUCH CONTAINERS AND PARTS OF SUCH MACHINES, BEVERAGE MIXING MACHINES, AND PARTS THEREOF, AND APPARATUS FOR CARBONATING LIQUIDS AND PARTS THEREOF.
Claims use since on or about Oct. 27, 1936.

Reg. No. 353,486. Registered Jan. 11, 1938. DEMPSTER BROTHERS, INCORPORATED, Knoxville, Tenn., a corporation of Tennessee. Republished by registrant.

DEMPSTER DUMPSTER

FOR HOISTING UNITS AND DETACHABLE BUCKETS AND CONTAINERS THEREFOR.
Claims use since Sept. 1, 1936.

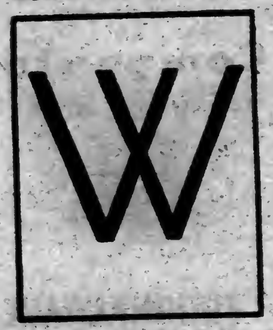
Reg. No. 363,373. Registered Dec. 20, 1938. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

MAGIC

FOR TYPEWRITING MACHINES AND PARTS THEREOF.
Claims use since July 15, 1938.

Reg. No. 375,756. Registered Feb. 27, 1940. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md., a corporation of New York. Republished by registrant.

CEMAC



FOR MACHINES FOR FILLING BOTTLES, JARS, CANS, AND LIKE CONTAINERS WITH FLUIDS, SUCH AS MILK.
Claims use since Dec. 28, 1938.

Reg. No. 376,535. Registered Mar. 26, 1940. R. G. LE TOURNEAU, INC., Peoria, Ill., a corporation of California. Republished by registrant, present location Stockton, Calif.

TOURNAPULL

FOR EARTH WORKING IMPLEMENTS, AND PARTICULARLY SELF-POWERED CARRYING SCRAPERS.
Claims use since Oct. 24, 1938.

Reg. No. 377,100. Registered Apr. 16, 1940. WEBSTER ELECTRIC COMPANY, Racine, Wis., a corporation of Delaware. Republished by registrant.

The lines in the drawing are for shading only.
FOR OIL BURNER FUEL PUMPS.
Claims use since July 1, 1932.

Reg. No. 380,583. Registered Aug. 27, 1940. JOSEPH B. SCHWAB, doing business as Paramount Manufacturing Co., Stockton, Calif. Republished by registrant.

PARAMOUNT

FOR MACHINES AND APPARATUS FOR EITHER SEPARATELY WASHING, PRESIZING, GRADING, OR SACKING VEGETABLES AND FRUITS OR WHICH MAY BE COMBINED BY SUITABLE CONVEYORS OR ELEVATORS OR OTHER CONNECTIONS TO CARRY OUT ALL OR SOME OF SUCH OPERATIONS, AND REPLACEMENT PARTS FOR SUCH MACHINES AND APPARATUS.
Claims use since 1927.

Reg. No. 381,484. Registered Sept. 24, 1940. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

ROYTYPE

FOR TYPEWRITING MACHINES AND PARTS THEREOF.
Claims use since June 12, 1940.

Reg. No. 381,820. Registered Oct. 8, 1940. TIMESAVER PRODUCTS COMPANY, Seattle, Wash., a corporation of Washington. Republished by registrant.

TIMESAVER

FOR TIRE GROOVING TOOLS.
Claims use since June 20, 1939.

Reg. No. 392,265. Registered Dec. 16, 1941. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

ARROW

FOR TYPEWRITING MACHINES AND PARTS THEREOF.
Claims use since July 1939.

Reg. No. 392,266. Registered Dec. 16, 1941. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

Companion

FOR TYPEWRITING MACHINES AND PARTS THEREOF.
Claims use since June 1940.

Reg. No. 392,806. Registered Jan. 13, 1942. R. G. LE TOURNEAU, INC., Stockton, Calif., and Peoria, Ill., a corporation of California. Republished by registrant, present location Stockton, Calif.

TOURNACRANE

FOR PORTABLE INDUSTRIAL CRANES.
Claims use since May 17, 1941.

Reg. No. 393,160. Registered Jan. 27, 1942. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

Varsity

FOR TYPEWRITING MACHINES AND PARTS THEREOF.
Claims use since on or about July 31, 1939.

Reg. No. 397,064. Registered Aug. 18, 1942. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

Aristocrat

FOR TYPEWRITING MACHINES AND PARTS THEREOF.
Claims use since July 1939.

Reg. No. 400,366. Registered Mar. 2, 1943. ADDRESSOGRAPH-MULTIGRAPH CORPORATION, Cleveland, Ohio, a corporation of Delaware. Republished by registrant.

ADDRESSOLOY

FOR PRINTING DEVICES FOR USE IN ADDRESSING AND SIMILAR MACHINES—NAMELY, PRINTING PLATES BEFORE AND AFTER EMBOSSING FOR USE ALONE, PRINTING PLATES BEFORE AND AFTER EMBOSSING FOR USE IN FRAMES, AND FRAMES FOR SAID PLATES.
Claims use since on or about Jan. 22, 1934.

Reg. No. 400,367. Registered Mar. 2, 1943. ADDRESSOGRAPH-MULTIGRAPH CORPORATION, Cleveland, Ohio, a corporation of Delaware. Republished by registrant.

ADDRESSOZINC

The word "Zinc" is disclaimed.
FOR PRINTING DEVICES FOR USE IN ADDRESSING AND SIMILAR MACHINES—NAMELY, PRINTING PLATES BEFORE AND AFTER EMBOSSING FOR USE ALONE, PRINTING PLATES BEFORE AND AFTER EMBOSSING FOR USE IN FRAMES, AND FRAMES FOR SAID PLATES, AND IDENTIFYING DEVICES INCLUDING METAL TAGS AND LABELS.
Claims use since on or about Feb. 14, 1934.

Reg. No. 402,353. Registered July 13, 1943. WHEEL TRUEING TOOL COMPANY OF DELEWARE, Detroit, Mich. Republished by Wheel Trueing Tool Company, Detroit, Mich., a corporation of Delaware.

TRUCO

FOR DIAMOND DRESSING TOOLS.
Claims use since May 1, 1933.

Reg. No. 402,673. Registered Aug. 10, 1943. DEMPSTER BROTHERS, INCORPORATED, Knoxville, Tenn., a corporation of Tennessee. Republished by registrant.

DEMPSTER-DUMPSTER BUCKETRUX

The word "Dempster" is disclaimed.
FOR HOISTING UNITS, DESIGNED FOR INSTALLATION ON ANY STANDARD MOTOR TRUCK CHASSIS AND CAPABLE OF PICKING UP, CARRYING AND DUMPING DROP-BOTTOM AND OTHER DETACHABLE BUCKETS AND CONTAINERS, AND DETACHAELE BUCKETS AND CONTAINERS.
Claims use since November 1940.

Reg. No. 407,589. Registered June 13, 1944. DEMPSTER BROTHERS, INCORPORATED, Knoxville, Tenn., a corporation of Tennessee. Republished by registrant.

DEMPSTER BALESTER

The surname "Dempster" is disclaimed.
FOR PRESSES FOR BALING SCRAP METALS.
Claims use since July 21, 1943.

Reg. No. 407,590. Registered June 13, 1944. DEMPSTER BROTHERS, INCORPORATED, Knoxville, Tenn., a corporation of Tennessee. Republished by registrant.

DEMPSTER-BALESTER

The surname "Dempster" is disclaimed.
FOR PRESSES FOR BALING SCRAP METALS.
Claims use since July 21, 1943.

Reg. No. 407,972. Registered July 11, 1944. WHEEL TRUEING TOOL COMPANY OF DELAWARE, Detroit, Mich. Republished by Wheel Trueing Tool Company, Detroit, Mich., a corporation of Delaware.

The representation of the tool is disclaimed.
FOR DIAMOND POINTED TOOLS FOR DRESSING AND TRUEING.
Claims use since Jan. 1, 1943.

Reg. No. 424,186. Registered Sept. 24, 1946. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md., a corporation of New York. Republished by registrant.

JUMBO

FOR MACHINES FOR APPLYING METAL CLOSURES TO GLASS OR METAL CONTAINERS.
Claims use since on or about April 1919.

Reg. No. 428,837. Registered Apr. 8, 1947. WHEEL TRUEING TOOL COMPANY OF DELAWARE, Detroit, Mich. Republished by Wheel Trueing Tool Company, Detroit, Mich., a corporation of Delaware.

TRU-THREAD

FOR DIAMOND POINTED TOOLS FOR DRESSING AND TRUEING GRINDING WHEELS.
Claims use since June 1, 1943.

Reg. No. 431,628. Registered July 29, 1947. DEMPSTER BROTHERS, INCORPORATED, Knoxville, Tenn., a corporation of Tennessee. Republished by registrant.

DEMPSTER MIXXSTER

The surname "Dempster" is disclaimed.
FOR MACHINES FOR PREPARING AGGREGATES FOR THE MANUFACTURE OF CONCRETE BLOCKS.
Claims use since Apr. 15, 1946.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Reg. No. 130,037. Registered Apr. 6, 1920. AUTOMATIC ELECTRIC WASHER CO., Newton, Iowa. Republished by Automatic Washer Company, Newton, Iowa, a corporation of Delaware.

Auto-Matic

The word "Automatic" is disclaimed.
FOR LAUNDRY POWER WASHING-MACHINES.
Claims use since about 1908.

Reg. No. 215,216. Registered July 13, 1926. THE MAYTAG COMPANY, Newton, Iowa. Republished by The Maytag Company, Newton, Iowa, a corporation of Delaware.

Gyrafoam

FOR CLOTHES-WASHING MACHINES AND AGITATORS THEREFOR.
Claims use since April 1922.

FOR WHISKIES.
Claims use since 1925.

Reg. No. 328,471. Registered Oct. 1, 1935. W. L. WELLER & SONS, INCORPORATED, Louisville, Ky. Republished by Stitzel-Weller Distillery, Shively, Ky., a corporation of Kentucky.

The drawing is lined for the color red.
FOR WHISKEY.
Claims use since about 1905.

Reg. No. 335,800. Registered June 16, 1936. SCHIEFFELIN & Co., New York, N. Y. Republished by Clarence D. Bailey, New York, N. Y.

FOR WHISKY.
Claims use since Oct. 5, 1935.

Reg. No. 347,764. Registered July 6, 1937. SCHIEFFELIN & Co., New York, N. Y. Republished by Clarence D. Bailey, New York, N. Y.

All spoken symbols are disclaimed except "Teacher's Highland Cream," the monogram, and the name "Wm. Teacher & Sons, Ltd." in the drawing.
FOR WHISKY.
Claims use since September 1885.

Reg. No. 394,669. Registered Apr. 21, 1942. BROOKSIDE DISTILLING PRODUCTS CORP., Scranton, Pa. Republished by Brookside Distilling Products Corporation (1942), Scranton, Pa., a corporation of Delaware.

FOR WHISKEY AND GIN.
Claims use since Dec. 5, 1933.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 173,124. Registered Sept. 18, 1923. NEW PROCESS CORK COMPANY, Brooklyn, N. Y. Republished by Crown Cork & Seal Company, Inc., Baltimore, Md., a corporation of New York.

Nepro

FOR BOTTLE CLOSURES OF THE CROWN TYPE.
Claims use since August 1914.

Reg. No. 191,514. Registered Nov. 11, 1924. THE CROWN CORK AND SEAL COMPANY OF BALTIMORE CITY, Baltimore, Md. Republished by Crown Cork & Seal Company, Inc., Baltimore, Md., a corporation of New York.

CCS

FOR CLOSURES FOR RECEPTACLES.
Claims use since January 1922.

Reg. No. 207,810. Registered Jan. 12, 1926. THE CROWN CORK AND SEAL COMPANY OF BALTIMORE CITY, Baltimore, Md. Republished by Crown Cork & Seal Company, Inc., Baltimore, Md., a corporation of New York.

Dalak

FOR CLOSURES FOR RECEPTACLES.
Claims use since April 1925.

Reg. No. 307,697. Registered Oct. 31, 1933. C. H. MASLAND AND SONS, Carlisle, Pa., a corporation of Pennsylvania. Republished by registrant.

LAYFLEX BACK

The word "Back" is disclaimed.
FOR RUBBER BACKS FOR RUGS.
Claims use since Aug. 15, 1932.

Reg. No. 354,306. Registered Feb. 8, 1938. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md., a corporation of New York. Republished by registrant.

FOR CONTAINER CLOSURES.
Claims use since on or about September 1936.

Reg. No. 360,056. Registered Sept. 6, 1938. ADDRESSOGRAPH-MULTIGRAPH CORPORATION, Euclid Village, Cleveland, Ohio, a corporation of Delaware. Republished by registrant, present location Cleveland, Ohio.

MULTEX

FOR PLANOGRAPHIC PLATES.
Claims use since Oct. 1, 1937.

Reg. No. 384,986. Registered Feb. 11, 1941. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md., a corporation of New York. Republished by registrant.

The words "Slip Rubber Ring Lined Closures" are disclaimed.
FOR CONTAINER CLOSURES (OTHER THAN THE SPECIFIC TYPE CONVENTIONALLY TERMED "CROWN CAP")—NAMELY, SCREW CAPS, LUG CAPS, AND FRICTION CAPS.
Claims use since on or about Aug. 21, 1940.

Reg. No. 393,900. Registered Mar. 10, 1942. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md., a corporation of New York. Republished by registrant.

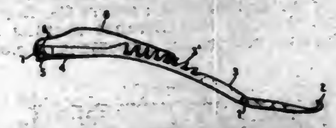
CORAX

FOR CONTAINER CLOSURES.
Claims use since on or about Aug. 2, 1941.

Reg. No. 394,201. Registered Mar. 24, 1942. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md., a corporation of New York. Republished by registrant.

NoCo

FOR CONTAINER CLOSURES OF THE CROWN TYPE.
Claims use since on or about July 21, 1941.



23,022

GYNECOLOGIC INSTRUMENT

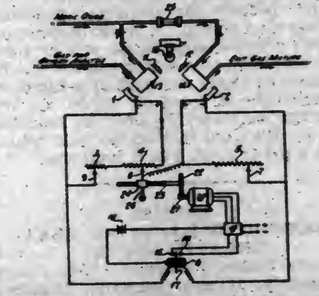
Ellis H. Edwards, Scarsdale, N. Y.

Original No. 2,256,602, dated September 23, 1941, Serial No. 269,859, April 25, 1939. Application for reissue December 17, 1947, Serial No. 792,180

5 Claims. (Cl. 128—127)

1. A gynecologic instrument having a hook at one end, a plurality of hooks on the body thereof, one end being swiveled to the other, means to prevent longitudinal movement of said swiveled portion but which permits its free rotation.

23,023



PHOTOELECTRIC CELL CIRCUIT

Alexander Wolf and Gerhard Hersog, Houston, Tex., assignors to The Texas Company, New York, N. Y., a corporation of Delaware

Original No. 2,431,890, dated December 2, 1947, Serial No. 532,290, April 22, 1944. Application for reissue April 30, 1948, Serial No. 24,244

5 Claims. (Cl. 250—41.5)

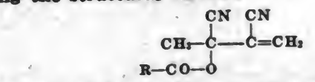
1. In a photocell circuit adapted for the measurement of the relative intensities of a plurality of light beams, the combination of a reference photocell, an adjustable shunt resistance across said reference cell, a second photocell, a second adjustable shunt resistance across said second cell, the total shunt resistance across each of said photocells being substantially less than the minimum operating internal resistance of the cell, a bridge circuit connecting the shunt resistance of

said second cell and a continuously variable portion of the shunt resistance of said reference cell ranging from the total shunt resistance of said reference cell to a fraction thereof so that the potentials across said resistances will be in opposition, and an indicating device in said bridge circuit adapted to indicate balance or unbalance of said potentials.

PATENTS

GRANTED AUGUST 3, 1948

2,446,165
PROCESS FOR PREPARING p-QUINONE DIOXIME
Joseph H. Trepagnier, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 14, 1945, Serial No. 628,671
3 Claims. (Cl. 260—396)

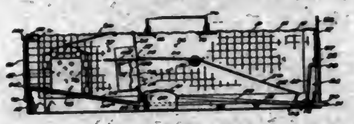


1. In the process for preparing p-quinone dioxime wherein one mol of p-nitrosophenol is reacted with approximately one mol of hydroxylamine in the form of a water soluble salt in from 3 to 20 parts of water per part of p-nitrosophenol at temperatures of from 55° to 95° C., the step which comprises carrying out the reaction in a solution of the hydroxylamine salt which initially has a pH of from 2 to 5, inclusive.

2,446,166
METHOD OF HANDLING HEAT-TREATED RIVETS
John Henry Eades, Baltimore, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
No Drawing. Application August 26, 1942, Serial No. 456,204
10 Claims. (Cl. 148—13)

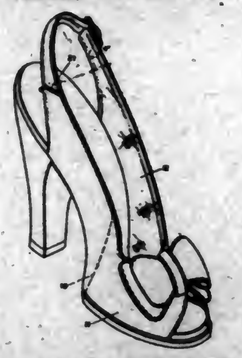
1. The method of treating age-hardening aluminum alloy rivets, the hardening of whch may be arrested by refrigeration, which comprises heating the rivets, quenching said rivets in cold water, at about 32° F. rinsing said rivets in an alcohol bath kept at a lower temperature than the water, and storing said rivets in refrigerated storage cabinets.

2,446,167
2,3-DICYANO-3-BUTEN-2-YL ESTERS
Erhard J. Prill, Cresskill, N. J., assignor to United States Rubber Company, a corporation of New Jersey
No Drawing. Application August 19, 1947, Serial No. 769,535
6 Claims. (Cl. 260—465.4)



1. As a new chemical compound, a 2,3-dicyano-3-buten-2-yl ester of a monocarboxylic acid having the structural formula

where R is selected from the group consisting of hydrogen, alky groups having from one to six carbon atoms and phenyl.



2,446,168
ANIMAL TRAP
Gary R. Bricker, United States Army, Omaha, Nebr.
Application May 30, 1944, Serial No. 538,082
8 Claims. (Cl. 43—76)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

2. An animal trap including a first compartment and a second compartment separated by a partition, the first compartment having an entrance opening, the partition having an opening formed therein to permit communication between the first and second compartments, a first closure movable to open and close the entrance opening, a second closure movable to open and close the opening in said partition, a gravity-actuated platform located in the first compartment and operable when in normal position to support the first closure in open position and actuatable by the weight of an animal which enters the first compartment through the entrance opening to release the first closure for movement to close the

entrance opening, a second gravity-actuated platform located in the second compartment, said second platform being in operable relation with the first and second closures, said two platforms being operable independently of each other, and said second platform being actuatable by the weight of the animal to open the first closure and close the second closure, thereby setting the trap for the entrance of other animals into the first compartment and trapping the animal in the second compartment.

2,446,169
OPEN-BACK SHOE WITH STIFFENING MEANS
Thomas Arthur Cechary, Brockton, Mass.
Application March 28, 1947, Serial No. 737,817
3 Claims. (Cl. 36—8.5)

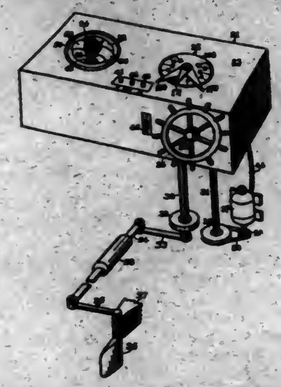
1. An open back shoe including in its structure a lined upper having a French cord binding about its top edge, and a stiffening member cemented to both upper and lining and secured by spaced row stitching along its top and rear edges, said member extending vertically from the sole to the top edge and longitudinally from the edge of the open back throughout the inside shank portion of the upper and to but not in advance of the ball line, the said stiffening member being molded to the contour of the last and resiliently maintaining the upper in smooth condition without wrinkles in wear.

2,446,170
VACUUM TUBE ELECTRONIC SWITCH
Burns Conley, United States Army, Wevaco, W. Va.
Application April 11, 1945, Serial No. 587,822
4 Claims. (Cl. 250—27.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An electrical switch comprising a sealed evacuated envelope inclosing a central cathode, a plurality of anodes radially spaced from said cathode, a fork-like control electrode having two parallel prongs, each prong extending lengthwise of said cathode, and electrical means positioned within said envelope for rotating said control electrode, said electrical means comprising a permanent magnet and a rotatable armature both coaxial with said cathode.

2,446,171
PREPARATION OF ACETALS
Willard J. Croxall, Bryn Athyn, and Harry T. Neher, Bristol, Pa., assignors to Röhm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application August 27, 1945, Serial No. 613,034
13 Claims. (Cl. 260—615)

1. A process for preparing acetals which comprises reacting by mixing a vinyl ester of a carboxylic acid, $RCOOCH{=}CH_2$, wherein R is an alkyl group of one to three carbon atoms, with more than an equivalent proportion of a non-tertiary alcohol of the formula R'OH wherein R' is a hydrocarbon group under controlled conditions between about 0° and 75° C. in the presence of a mercury catalyst and a strongly acidic catalyst, destroying the acidic catalyst in the reaction mixture, and separating therefrom an acetal.



2,446,172
2-ACYLAMINO-1,3-BUTADIENES
Joseph B. Dickey, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application December 22, 1945, Serial No. 637,098
7 Claims. (Cl. 260—558)

5. The 2-acylamino-1,3-butadienes having the general formula:

wherein R represents a member selected from the group consisting of hydrogen, an alkyl group of from 1 to 12 carbon atoms and an aryl group of the benzene series, and R_1 represents a member selected from the group consisting of the acyl radical of an alkyl carboxylic acid of from 2 to 5 carbon atoms and the acyl radical of an arylcarboxylic acid of the benzene series.

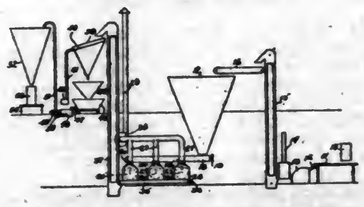
2,446,173
AUTOMATIC ELECTRIC PILOT
Uno Ekblom, Brooklyn, N. Y.
Application September 19, 1944, Serial No. 554,838
9 Claims. (Cl. 318—489)

7. An automatic electric pilot for ships and other craft, including a movable contact member responsive to the influence of the magnetic poles, two spaced contacts stationary upon said craft adapted to be engaged individually by said movable contact member in displaced positions of the craft, and electric correcting mechanism for the rudder including operating mechanism for shifting said rudder when one of the stationary contacts is engaged by said movable contact member in order to restore said craft to a predetermined course, two groups of electric switches connected to said operating mechanism and individually associated electrically with the two spaced contacts, a pair of contacts in each group of switches controlling the other group when the group is operated with which the pair of contacts is associated, and means for determining the extent of the shifting of the rudder to both sides, including two independently manually adjustable contact arms, means associated individually with each of said arms for indicating the movements and positions of said arms at all times, a movable control member moving with the rudder by means of the operating mechanism and having a circuit breaking means thereon, contact means on each arm individually controlling a circuit including one of said two groups of switches and capable of engaging with the circuit breaking means on said movable control member to open the respectively associated circuit of the contact means engaged when the rudder and the control member are moved to effective position for such engagement, and an index member moving between the indicating means of the arms in accordance with the movements of the rudder and control member for indicating the movements and position of the rudder with respect to said arms.

2,446,174
INSERT
Frank V. Flynt, Los Angeles, Calif.
Application May 21, 1946, Serial No. 671,364
9 Claims. (Cl. 85—1)

1. An insert device for providing mounting for a relatively hard object in a bore of softer material, comprising an externally threaded stem having a peripherally splined head on its inner end, said stem being insertable from one side of the workpiece axially head first into the bore with

the splines engaging the side wall of the bore, a driving ring insertable into said bore around the stem, said ring having an internal thread engageable with the thread on the stem and an external



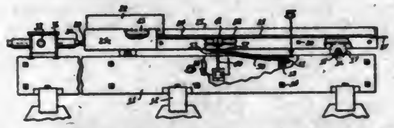
thread of relatively steep pitch engageable with the side wall of the base and being formed to be engageable by a torque applying tool, and means associated with the outer end of the stem for receiving said object.

2,446,175

APPARATUS FOR PREPARING DEHYDRATED BREAD CRUMBS

Charles A. Gerber, Wayne Township, Du Page County, Ill.

Application August 19, 1944, Serial No. 550,147
2 Claims. (Cl. 241—65)



2. Apparatus for preparing dehydrated bread crumbs from loaves, which comprises a hammermill for disintegrating sliced loaves, an indirectly heated rotary kiln defining a dehydrating zone for reducing the moisture content of the disintegrated bread, means for removing from said kiln steam generated on drying of said bread, means for separating any agglomerated condensate-wetted bread particles from the dehydrated material, a Buhr mill for comminuting the residual dried bread material, means for separating oversized particles from the Buhr-milled material, and conveying means for transferring bread material from said hammermill to said kiln, from said kiln to said first separating means, from said first separating means to said Buhr mill, and from said Buhr mill to said second separating means.

2,446,176

TILTING ADJUSTMENT FOR RECIPROCATING CONCENTRATING TABLES

George H. Gruss, San Francisco, Calif.

Application June 19, 1945, Serial No. 600,368
4 Claims. (Cl. 209—504)

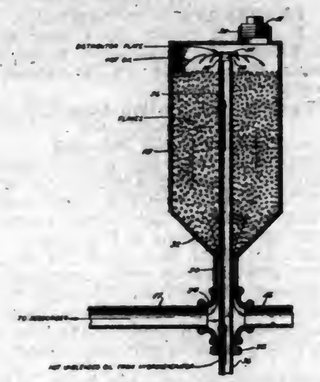
1. An ore concentrator comprising a base frame, longitudinally aligned grooved wheels rotatably mounted thereon with grooves in alignment relatively, a movable table mounted above said base frame, riffles on said table for classifying the ore passing thereover, a longitudinally directed backbone member beneath said table secured rigidly thereto, said back-bone member resting longitudinally reciprocably and axially rotatably movable in the grooves of the wheels of said base frame and thereby supporting said table, means for imparting longitudinal reciprocating movement to said back-bone member and said table in unison, and means for adjusting the rotative position of said back-bone member to vary the lateral inclination of said table.

2,446,177

SILICONE GREASE AND METHOD OF PREPARATION

George M. Hain, United States Navy, and William A. Zisman, Washington, D. C.

No Drawing. Application June 21, 1945, Serial No. 600,777
10 Claims. (Cl. 252—42.1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A lubricant consisting essentially of, an organo-silicon polymer as a base fluid blended with a minor amount of lithium stearate to produce a stable grease.

2,446,178

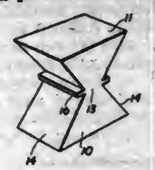
METHOD OF INCORPORATING SOLID FAT IN LIQUID FATTY MIXTURES

Bertie S. Harrington, Chicago, Ill., assignor to Armour and Company, Chicago, Ill., a corporation of Illinois

Application September 16, 1942, Serial No. 458,910
6 Claims. (Cl. 260—409)

1. In a process for blending solid fat with liquid fat, the steps of passing a restricted stream of heated liquid fat through a body of said solid fat to melt said solid fat about said stream, passing the heated fat from said stream into contact with the fat of said body to produce blended fat and separating blended fat from the body of solid fat while passing the blended fat in heat transfer relation with said stream to maintain the blended fat in liquid form.

2,446,179



TOY BUILDING BLOCK

Harry W. Harnquist, Rockford, Ill.

Application November 12, 1946, Serial No. 709,383
7 Claims. (Cl. 46—25)

1. A toy building block comprising two truncated equilateral triangles of equal size rigidly joined at their apexes with their bases disposed parallel to each other, the included angle at the apex of each triangle being substantially ninety

degrees, and rectangular projections extending outwardly and parallel to said triangle bases at

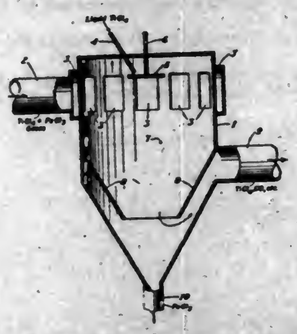
the bottoms of the V-shaped notches defined by the sides of said triangles.

2,446,180

GYROSCOPE CONTROLLING MEANS

Robert Haskins, Jr., Greensboro, N. C., assignor to The Sperry Corporation, a corporation of Delaware

Application April 5, 1944, Serial No. 529,616
4 Claims. (Cl. 74—5)



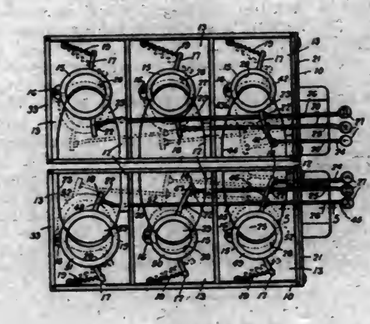
1. In a vertical gyroscope control system wherein a gyroscope is maintained in vertical position by erection torque devices controlled by individual gravity responsive members disposed along quadrantal axes of the gyroscope, means for maintaining pitch error at a low value during a tuning movement of a craft supporting the gyroscope which comprises a power erection arrangement including a torque device for correcting error in pitch and a device for correcting error in roll, the device for correcting error in pitch having a greater torque gradient than the other device.

2,446,181

PROCESS FOR CONDENSING VAPORIZED METAL HALIDES

Philip Berkeley Kraus, Chadds Ford, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

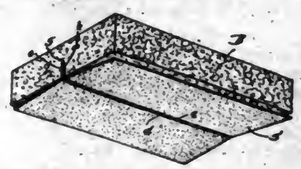
Application April 3, 1946, Serial No. 659,412
8 Claims. (Cl. 183—115)



5. A process for removing ferric chloride in the dry form from a gaseous mixture with titanium tetrachloride which comprises mechanically dispersing throughout said gaseous mixture and in the form of fine, minute droplets, sufficient cool liquid titanium tetrachloride to effect condensation of substantially all of the iron chloride present in said mixture with concurrent, substantially complete vaporization of the $TiCl_4$ employed in the condensation, and separating the ferric chloride condensate from the gases so treated.

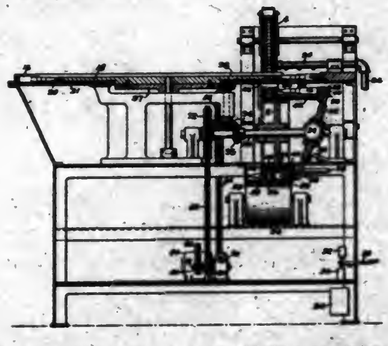
2,446,182

CORRECT MONEY CHANGER



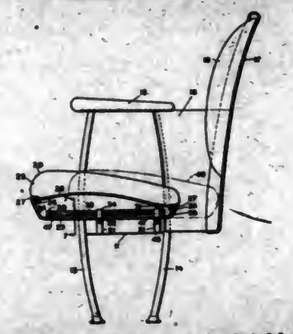
Harvey H. Lannom, Nashville, Tenn., assignor to Lannom Products Corporation, Nashville, Tenn., a corporation of Tennessee

Application November 16, 1945, Serial No. 629,043
4 Claims. (Cl. 133—4)



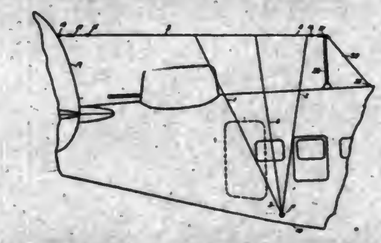
4. In a money changer the combination of a frame, a plurality of separate coin holders held by said frame, separate apertured coin delivering plates positioned under each of said coin holders, bottom members attached to said frame and positioned under said coin delivering plates in such a manner as to prevent coins from escaping through the bottom of each of said coin delivering plates except at times when said coin delivering plates are in coin delivering positions and means for engaging two or more of said coin delivering plates to cause simultaneous movement thereof, each of said bottom members having a coin passageway therein corresponding to each of said coin delivering plates, the walls of each of said passageways being positioned so that coins can pass between said walls when said plates are in coin delivering positions, said coin delivering plates being pivotally secured to one of said bottom members, said plates each having a spring attached thereto, said springs each being also attached to one of said bottom members, said means for engaging two or more of said plates including a plurality of levers, each of said levers being attached to one of said plates, and a plurality of arms, each of said arms having a section thereof extending through the outside of said frame and another section thereof extending inside of said frame, said arms having nibs attached to the inside section thereof for engaging said levers to move said plates into coin delivering relationship with the said coin apertures, some of said arms having a plurality of nibs thereon and said some of said arms being of such lengths that said nibs engage a plurality of said levers for releasing coins of differing types from said coin delivering machine by a movement of a single one of said arms, said arms having tabs on the outer ends thereof bearing indicia thereon for differentiating each of said arms and for indicating the total change which will result from a pushing of each of said arms.

2,446,183
SANDING DEVICE
George A. Larson, Rockford, Ill.
Application February 27, 1947, Serial No. 731,329
2 Claims. (Cl. 51—137)



1. An elongated sanding device in which is combined a flexible, resilient block of rubber-like material having a single normally closed slit extending lengthwise across its underface, together with an abrasive sheet medially folded for two-ply insertion into the slit and retention therein solely by frictional pressure of the block walls on opposite sides thereof, the sheet being reversely folded at the points of its emergence from the slit to extend oppositely upon the underface of the block substantially co-terminously therewith with opposite ends of the sheet free from attachment thereto, the block when manipulated to a curved shape acting to open the slit whereby to provide space for the entry of the folded sheet thereinto or its free release therefrom.

2,446,184
BELT LOADING MACHINE
Willard J. Mason, Greenwich, Conn.
Application March 29, 1943, Serial No. 481,037
2 Claims. (Cl. 86—48)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

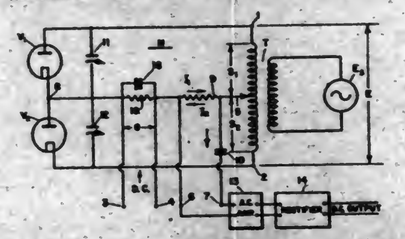


1. In a machine for assemblying machine gun ammunition belts comprising a series of links having interfitting rings pivoted together by cartridge casings, a frame, a shaft, journaled in said frame on a normally horizontal axis, a drum fixed on said shaft, said drum having its periphery formed to receive said links in interfitting relation and to hold the same against displacement in one direction parallel with the axis of said drum, a series of equally spaced rods extending from one end of said drum adjacent the periphery thereof parallel with said shaft, each two consecutive rods being positioned to support a cartridge therebetween, in alignment with a corresponding pair of interfitting link rings, pusher members carried by said drum, each pusher member being reciprocable parallel to the axis of said drum to engage and move in said one direction a cartridge supported on a corresponding pair of rods, a wheel universally mounted on said shaft adjacent said drum for rotation therewith, a plurality of equally spaced fingers projecting radially from said wheel, means constraining said wheel to rotation in a fixed plane at an angle to said drum whereby each finger engages and moves a respective pusher member parallel to the axis of said drum in said one direction, and means yieldingly urging each said pusher member in the opposite direction.

2,446,185
SLIDING SEAT SUPPORTING MEANS
Peter F. Masucci and Leonard Zola, Brooklyn, N. Y.
Application May 2, 1945, Serial No. 591,476
7 Claims. (Cl. 155—115)

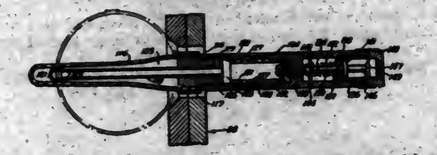
3. In a chair having a seat slidable back and forth in a substantially horizontal plane and supported between two standards, the combination of supporting brackets secured opposite each other to the inside surfaces of said standards, sleeve and rod means slidably engaging each other, one of said means being mounted on a part of said seat, the other one being mounted on said brackets, at least one of said means being angularly adjustable in the plane of movement of the seat so as to assure proper movement of said seat substantially parallel to said standards.

2,446,186
FAN ANTENNA WITH TAIL
Allen S. Meier, Xenia, Ohio, assignor to United States of America as represented by the Secretary of War
Application December 4, 1944, Serial No. 566,631
1 Claim. (Cl. 250—33)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



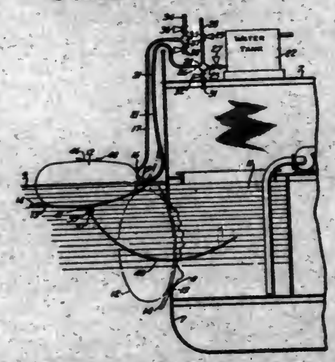
A broad band unsymmetrical wire antenna connected to an input means of predetermined impedance, comprising a base wire, a plurality of spaced side wires connected at their spaced ends to said base wire and converging away from their spaced connections with said base wire, a convergence point at which said side wires join each other, and are electrically connected to said input means, and a tail portion making said antenna unsymmetrical by extending from one end only of said base wire and said tail portion being of a predetermined lenth and imparting to said antenna an impedance value that substantially matches the characteristic impedance of said input means to which the antenna side wires may be connected at their convergence point.

2,446,187
LINED IGNITER-CHARGE TUBE
Leo T. Meister, Hillside, N. J.
Original application May 7, 1945, Serial No. 592,433. Divided and this application September 18, 1946, Serial No. 697,617
3 Claims. (Cl. 102—86.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A primer comprising a tube having an open and a closed end with the walls of said primer having a portion of the length thereof imperforate and the remainder of the length perforated, a thin-walled thimble of solder alloy in said tube having an open and a closed end adjacent corresponding ends of said tube, said thimble being secured to said tube at the imperforate portion thereof by said solder alloy and unattached to, but against, the perforated portions of said tube.

2,446,188
BRIDGE TYPE MODULATOR CIRCUIT
John M. Miller, Jr., Torrington, Conn.
Application March 11, 1946, Serial No. 653,695
7 Claims. (Cl. 179—171.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



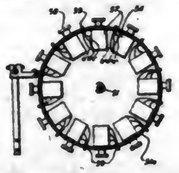
1. In a bridge circuit, a source of alternating current, a first pair of impedance arms connected across said source and conductive during the full cycle, a second pair of arms connected across said source comprising asymmetric conductors in series and poled to be concurrently conductive during only one half cycle of the source, a conductive connection extending from a point between said first pair of arms to a point between said second pair of arms, and an input element and an output element connected in series in said conductive connection.

2,446,189
FASTENING REPLACEMENT MEANS
Carl A. Oding, Alameda, Calif.
Application August 25, 1945, Serial No. 612,601
8 Claims. (Cl. 114—227)

8. In apparatus of the class described, a bobber comprising an elastic sac, a plug connected to and closing the open end of said sac, a tubular stem secured in said plug and extending into said sac through which air may be admitted to said sac to inflate the latter, a valve housing connected with and extending from said plug, said valve housing having therein a pair of separated chambers and charging ports opening into a first of said chambers, said first chamber being in communication with said tubular stem and the second chamber being in communication with the atmosphere, a check valve associated with said charging ports for limiting flow of air through said ports unidirectionally into said first chamber, means associated with said check valve having therein a passage providing communication between the first and second chambers, means for forcing air under pressure through said charging ports and a spring pressed valve in said second chamber for normally shutting off said second chamber from the atmosphere and for venting said second chamber to the atmosphere when the pressure therein exceeds a predetermined value.

2,446,190
INFLATABLE LEAK STOPPER
Carl A. Oding, Alameda, Calif.
Application October 29, 1945, Serial No. 625,215
8 Claims. (Cl. 114—227)

2. In apparatus for arresting relative communication between a first body of fluid, lying on one side of a bulkhead having an opening therein, and a second body of fluid lying on the



opposite side of said bulkhead, means sufficiently large to cover said opening and adapted to be introduced into one of said bodies of fluid comprising a flexible disk to cover said opening, a distendible envelope secured to said disk, means to introduce air under pressure into said envelope to render the latter buoyant, means to admit liquid into said envelope, and means to position said disk and envelope in substantial registry with said bulkhead opening.

2,446,191

SWITCHING MECHANISM FOR ELECTRICAL COMPUTERS

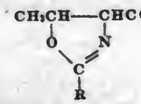
J C Pemberton, Pasadena, Calif., assignor to Consolidated Engineering Corporation, Pasadena, Calif., a corporation of California

Application March 16, 1946, Serial No. 655,003
9 Claims. (Cl. 201—48)

1. A switching mechanism comprising a rotatable cylinder, means for rotating the cylinder, a plurality of rows of potentiometers arranged at spaced intervals around the cylinder, each row extending substantially coaxial with the central axis of the cylinder, each potentiometer having an adjustable tap with a knob protruding through the cylinder for manual adjustment, switching means for connecting the terminals and the tap of each potentiometer in a row with circuit lines when the row is in operational position, whereby rotation of the cylinder successively places the several rows in operational position with the potentiometers of the row in switching contact with the switching means.

2,446,192

PREPARATION OF THREONINE AND DERIVATIVES THEREOF



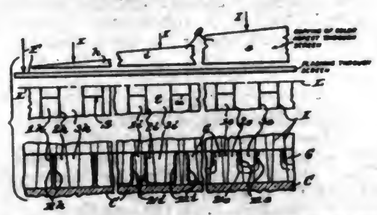
Karl Pfister, III, Summit, and Max Tishler, Rahway, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey

No Drawing. Application January 26, 1946, Serial No. 643,751
10 Claims. (Cl. 260—534)

1. The process of converting to threonine allothreonine derivatives of the formula

$$CH_3CHOHCHCOOR'$$
$$\quad\quad|$$
$$\quad\quad NHCOR$$

where R is a radical selected from the group which consists of alkyl, aryl and alkoxy radicals and R' is a lower alkyl group; which comprises reacting in an anhydrous medium said allothreonine derivative with a cyclizing and dehydrating agent selected from the group which consists of phosphorus pentachloride, phosphorus trichloride, phosphorus pentoxide and thionyl chloride to form an oxazoline having the general formula:



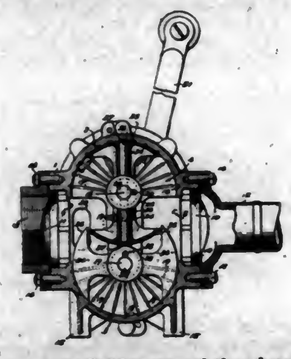
and heating said oxazoline with a hydrolyzing agent to form threonine.

2,446,193

METHOD FOR PRODUCING HALF-TONE RELIEF IMBIBITION MATRICES

Richard E. Rice, Waltham, Mass., assignor to I. B. Corporation, Cambridge, Mass., a corporation of Massachusetts

Application April 11, 1942, Serial No. 438,632
3 Claims. (Cl. 95—5.6)



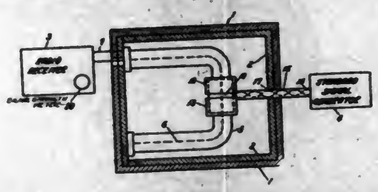
1. In the art of photographic reproduction the method of controlling the contrast characteristic of matrices for use in making prints by dye imbibition, which method consists essentially in exposing through a half tone screen a silver halide matrix emulsion to an object field, said screen and said field together defining light beams of varying intensity distributed in a pattern of elementary areas which pattern is determined by the screen whereas the varying intensity of the beams is determined by the object field, said emulsion having sufficient thickness so that the beams will expose the emulsion through its entire thickness in the regions of highest exposure and through only part of its thickness in the regions of lowest exposure; exposing said areas of said matrix emulsion through a half tone screen defining said pattern, to a substantially uniform object field to such an extent as to vary depth and area of said first exposure at least in the regions of lowest exposure; and etching said matrix emulsion by substantially removing in said areas said exposed emulsion portions, thereby to form interstitial depressions distributed in said screen pattern and having depth determined by said exposures of said matrix emulsion.

2,446,194

PUMP CONSTRUCTION

David Samiran, Osborn, Ohio

Application July 30, 1943, Serial No. 496,693
5 Claims. (Cl. 103—126)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



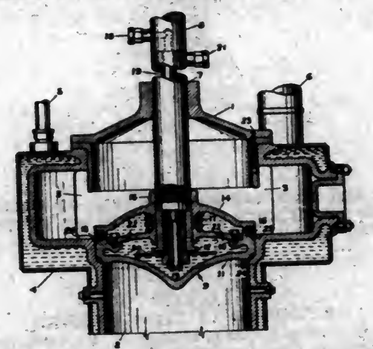
5. In a rotary fluid pump of the class described, a closed casing having parallel end walls and a pair of spaced semicylindrical side walls facing each other with substantially aligned inlet and outlet ports formed in the casing intermediate the adjacent ends of the curved surfaces of the semicylindrical walls, said semicylindrical walls having a plurality of substantially parallel capillary fluid collection liquid sealing grooves formed therein extending substantially longitudinally of the semicylindrical walls parallel to the semicylindrical walls to points spaced from and adjacent to the adjoining parallel end walls of the casing, said parallel end walls having a plurality of capillary fluid collection grooves formed therein and extending substantially radially outward from the axial center of the semicylindrical walls of the casing in planes passing through the capillary grooves formed in the inner semicylindrical surfaces of the casing, terminating adjacent to and radially inwardly of the semicylindrical side walls, and interengaging rotor impeller fluid pumping means journaled in the casing in said parallel end walls with their axes concentric to the radial centers of the semicylindrical walls of the casing and having spaced substantially similar arcuate surfaces arranged to move past the aforesaid substantially parallel capillary fluid collection liquid sealing grooves in closely spaced relation to the semicylindrical walls aforesaid, between the inlet and outlet ports in the casing, said interengaging rotary impeller fluid pumping means having parallel end surfaces adjoining the arcuate surfaces thereof and disposed to move past the substantially radially disposed capillary fluid collection grooves in the parallel end walls of the casing in closely spaced fluid sealing relation thereto, with the edges of the impellers at the juncture between the arcuate surfaces and the adjacent parallel end walls disposed to move in closely spaced relation past the adjacent ungrooved portions of the casing located between the adjacent ends of the parallel fluid collection liquid sealing grooves and the outer ends of the radially disposed capillary fluid collection grooves.

2,446,195

TESTER FOR ELECTRICAL SHIELDINGS

Scott L. Shive, Detroit, Mich., assignor to the United States of America as represented by the Secretary of War

Application March 14, 1945, Serial No. 582,781
1 Claim. (Cl. 175—183)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



A conduit testing device, comprising in combination a cabinet having an electrically conductive lining, and adapted to receive a U-shaped conduit of electrically conductive material with its ends in contact with the lining, a detector circuit, a signal generator, a conductor disposed coaxially relative to the positioned conduit and having one end in electrical engagement with the conductive lining of said cabinet and its opposite end in electrical connection with the input of said detector circuit, a shielded exciter coil disposed circumferentially outwardly of said conduit intermediate the ends thereof, and shielded leads connecting said generator with said coil for conducting electrical signal therebetween, the mentioned conductor being adapted to pick up energy from the exciter coil and feed it to the detector circuit.

2,446,196

DOUBLE SEAL VALVE

Massey Sitney, Berkeley, Calif.

Application March 20, 1945, Serial No. 583,830
2 Claims. (Cl. 251—159)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

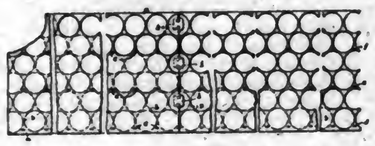
2. A valve comprising a body having an inlet in the base, a discharge in a side wall, an opening in the top, and upper and lower seats extending around the inner surface between the inlet and discharge, a hollow stem passing through the opening in the top of the body and vertically movable therein, a hollow valve disc engaged with the stem adjacent the lower end thereof, a second disc engaged with the stem above the valve disc, at least one of said discs being slidable on said stem, said stem having means adjacent the discs acting to transmit vertical movement of the stem to the discs and to limit sliding of the discs along the stem, said valve disc having a seat cooperable with the lower seat on the body and said second disc having a resilient gasket cooperable with the upper seat on the body to seal the valve when the stem is lowered, spring means between said valve disc and said second disc acting to separate the discs and maintain the gasket in spaced relation to the valve disc when the stem is raised, and means for circulating cooling liquid through the discs, comprising a tube extending longitudinally through a portion of the stem in spaced relation to the walls thereof and having an inlet above the body and a discharge into the lower portion of the valve disc, the upper wall of said valve disc having one or more discharge openings arranged in such manner that at least part of the cooling liquid may flow into the space between the discs when the stem is raised.

2,446,197

GUN-SLING

Francis P. Sloan, Wilton, Conn.

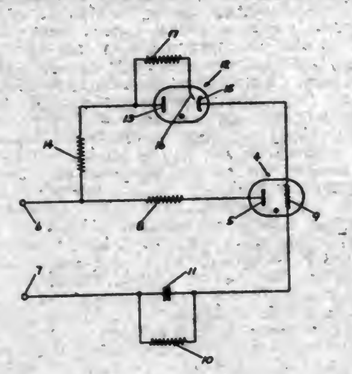
Application February 12, 1944, Serial No. 522,067
12 Claims. (Cl. 224—1)



3. For a shoulder gun a gun-sling comprising a fore loop and a separate butt loop, with an apertured link interconnecting the two loops in tandem, the fore loop being adapted to traverse a fore swivel on the gun and to slide freely through the link aperture and to act as a stay tensioned between the fore swivel and the shooter's upper

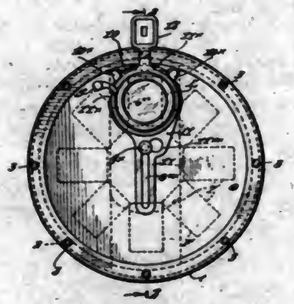
arm, and the butt loop being adapted to traverse a butt swivel on the gun and to be disengaged therefrom and spread into an arm-encircling

loop, and each loop having a take-up means or buckle for adjusting its effective length independently of the adjusting of the other loop.



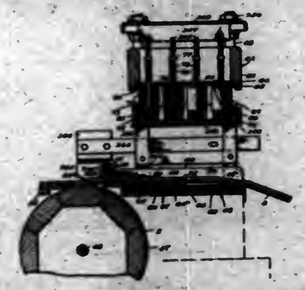
2,446,198
METHOD OF CUTTING BLANKS
John E. Socke, Pelham Manor, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application November 16, 1945, Serial No. 629,129
6 Claims. (Cl. 164—17)

1. The method of blanking can ends in which metallic strips are secured together for the blanking of the can ends and the like so that a continuous cutting pattern of the material is obtained each strip having potential blank spaces arranged in a cutting pattern and having a row of feeding perforations for the exact positioning of the strip for the blanking thereof, which comprises transversely cutting the tail end of one strip and the leading end of a second strip to produce alignment edges each edge so cut having a predetermined relation to the feeding perforations and to the potential blank spaces in the strip, aligning the transverse edges to provide an uninterrupted extension of the cutting pattern, and securing the strips together in connections which are fully within certain potential blank spaces so that removal of such spaces also insures removal of said connections without alteration of the regular cutting pattern.



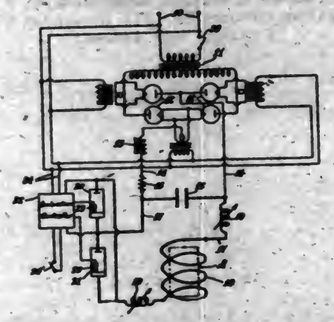
2,446,199
STARTING CIRCUIT FOR GASEOUS DISCHARGE DEVICES
Paul W. Stutsman, Needham, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application March 27, 1946, Serial No. 657,423
4 Claims. (Cl. 315—101)

1. A circuit for initiating an arc in a gas discharge device of the type including an anode and a heated cathode comprising a source of current connected across and adapted to supply operating potential to said device, a tube of the type having relatively low voltage starting characteristics, the anode of said tube being connected to the anode of said discharge device and to one



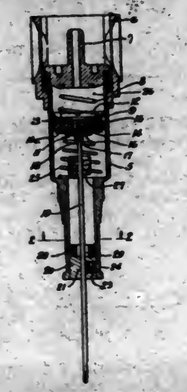
terminal of said source, and the cathode of said tube being connected through the heating circuit of the cathode of said discharge device to the opposite terminal of said source, a resistance load connected in the discharge circuit of said device, and a capacitor in shunt with said load.

2,446,200
COACTING SHUTTER AND LENS COMBINATION FOR CAMERA FILM HOLDERS
Wilfred E. Tait, Westport, and August W. Stellpflug, Weston, Conn., assignors to American Safety Razor Corporation, Brooklyn, N. Y.
Application October 25, 1946, Serial No. 705,502
4 Claims. (Cl. 95—37)



1. A camera consisting of a casing adapted to hold sensitized film, an overlying plate formed with an image aperture, a shutter for said image aperture, a lens mounting adapted to be held in register with said image aperture, and holding means for said lens mounting including an extension of the lens mounting formed with an elongated slot merging into a lateral aperture, and a stud carried by the shutter slide and adapted to be passed through said lateral aperture and thence to be moved in said elongated slot to carry the shutter slide to image opening position.

2,446,201
APPARATUS FOR WORKING, CONVEYING, AND CUTTING DOUGH
Charles Gainer Turner, Atlanta, Ga., assignor to Turner Manufacturing Company, Incorporated, a corporation of Georgia
Application October 25, 1941, Serial No. 416,573
29 Claims. (Cl. 107—6)

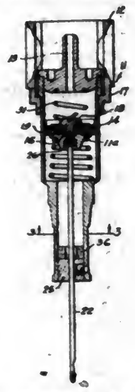


1. In a dough-working, conveying and cutting machine, the combination of a dough-rolling mechanism, means for feeding a sheet of dough to the rolling mechanism, a stationary cutting bed or table, a conveyor intermediate the rolling mechanism and cutting table, means for transferring the sheet of dough from the conveyor to the surface of the cutting table, a cutting head, and means for raising and lowering the head with respect to the cutting table.

2,446,202
INDUCTION HEAT-TREATMENT
Alfred Vang, Newark, N. J.
Application September 24, 1941, Serial No. 412,052
3 Claims. (Cl. 219—13)

1. Induction apparatus for the heat treatment of metals and metal articles subject to improvement upon hardening treatment and the like for surface-hardening metallic articles, comprising a condenser, means for charging the condenser, an induction element constructed and arranged to accommodate within its field an article to be treated, and a variable inductance element, said induction and inductance elements being connected in series to the condenser through a gaseous electronic discharge means capable of passing current in both directions to provide a single discharge in an oscillatory circuit of variable frequency for regulation of the depth to which heat treating is effective, the characteristics of the condenser circuit being such that the discharge takes place at a sufficiently high frequency to restrict the induced currents to the skin region of the article being heated, while the complete discharge occurs over so small a fraction of a second as to restrict effectively the amount of heat flowing from the skin region to the interior of the article, whereby upon cessation of said discharge a steep temperature gradient exists between the skin and interior regions and rapid self-quenching begins immediately upon the termination of the discharge.

2,446,203
PNEUMATICALLY OPERATED MENDING DEVICE
Marcel Vitoux, Paris, France, assignor to American Vitos Company, Inc., New York, N. Y., a corporation of New York
Application November 20, 1946, Serial No. 711,165
In France June 22, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires June 22, 1964
6 Claims. (Cl. 66—1.5)



1. In a pneumatically operated device for mending knitted goods, said device including a cylinder and a reciprocating piston in said cylinder, the said cylinder being adapted to contain liquid lubricant above the piston, a mending needle connected to the piston and depending therefrom downwardly and outwardly of the cylinder, and means carried by said needle below the piston for preventing any lubricant which may drop onto the needle from seeping therefrom outwardly of the cylinder to the article being mended.

2,446,204
PNEUMATICALLY OPERATED MENDING DEVICE
Marcel Vitoux, Paris, France, assignor to American Vitos Company, Inc., New York, N. Y., a corporation of New York
Application November 20, 1946, Serial No. 711,166
6 Claims. (Cl. 66—1.5)

1. In a pneumatically operated mending device, having a cylinder provided at one end thereof with a compressed air inlet nozzle, an oscillatable piston below said inlet nozzle slidably mounted in said cylinder, a guiding bushing at the opposite end of the cylinder, a needle carried by the piston and extending through said bushing outwardly of the cylinder, the said piston and needle being slid in one direction by the impingement of compressed air on said piston, a spring exerting a pressure against the piston to slide same in the opposite direction, and rotary means coaxial with the piston interposed

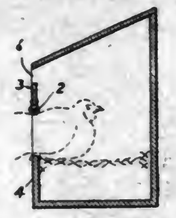
between the spring and piston for taking up any torsional stresses of the spring, so as to prevent any binding between the needle and bushing.

2,446,205
MULTIAXLE VEHICLE
Marshall E. Wickersham and William D. Allison, Detroit, Mich.
Application May 15, 1945, Serial No. 593,915
10 Claims. (Cl. 280—104.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A vehicle comprising a frame, three longitudinally spaced axles extending transversely of said frame, wheels on said axles, a walking beam, means pivotally connecting to said walking beam two of said axles for individual pivotal movement of the latter in a plane extending transversely of said frame, and a second walking beam having a pivotal connection with said frame, said pivotal connection being intermediate the ends of the beam and dividing the latter into two arms, one of said arms being pivotally connected to the third of said three axles for pivotal movement of the latter in a plane extending transversely of said frame, the other of said arms being pivotally connected to said first mentioned walking beam intermediate the ends of the latter to distribute part of the load of said vehicle to each of said three axles, the said walking beam acting to guide said axles for movement relative to said frame in substantially vertical respective planes only.

2,446,206
STRIKER PLATE FOR LOCKS
Emil J. Beckman, Rockford, Ill.
Application May 22, 1945, Serial No. 595,118
1 Claim. (Cl. 292—341.12)

A striker plate having a single, longitudinally extending opening adapted to receive both the latching bolt and the locking bolt of a door lock, and a pair of continuous flanges disposed one along each longitudinal edge of said opening and extending inwardly of said opening, said flanges being inclined relative to said plate with the portions thereof receiving said latching bolt inclined to a greater degree than the portions receiving said locking bolt to compensate for the

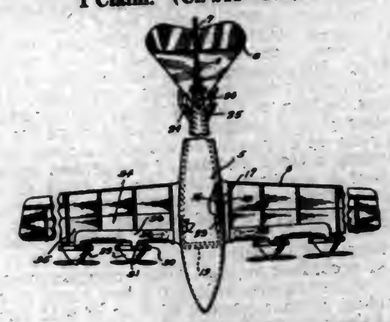


difference in the shape of the latching and locking bolts.

2,446,207
FROTH FLOTATION OF ORES EMPLOYING A WATER-SOLUBLE SALT OF A CYMENE SULFONIC ACID
William T. Bishop, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 11, 1945, Serial No. 587,833
7 Claims. (Cl. 209—166)

1. In the method of concentrating ores, the step which comprises subjecting an aqueous pulp of the ore to froth flotation in the presence of a collector and a water-soluble salt of a cymene sulfonic acid.

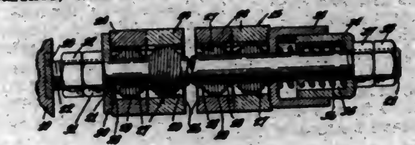
2,446,208
HEN MARKING NEST
Maurice E. Bowers, Somerville, N. J.
Application October 20, 1943, Serial No. 507,056
1 Claim. (Cl. 119—45)



A hen-marking nest of the character described comprising a coop closed on all sides thereof and having in its front wall a horizontally elongated entrance opening extending transversely across substantially the full width of said front wall, the upper and lower edges of said opening being disposed in straight-line parallel relation and spaced apart vertically a distance less than the body height of a hen that may enter the coop by way of said opening, and a pad of ink absorbent material secured to and embracing the upper edge of said opening, said pad extending along and directly in engagement with the full length of the portion of the front wall constituting said upper edge of the opening and being saturated with a slow-drying ink for marking the back of a hen entering the coop by way of said opening at any point in the transverse length thereof.

2,446,209
BLOUSE
Jennie Brown, Red Bay, Ala.
Application May 29, 1945, Serial No. 596,563
12 Claims. (Cl. 2—105)

1. A blouse, comprising a flat strip of cloth material for wrapping about the body at the blouse region so that the ends of the material meet at the back of the wearer and having rectangular cutout flap-like portions forming arm openings and shoulder portions, and drawstrings mounted along the top and the bottom edges of said strip for gathering the top and bottom portions of the blouse for adjusting the sizes of the neck and waist and for closing the rear meeting edges of the material at the top and bottom of the garment.



2,446,210
AIRPLANE DEICING AND ENGINE SILENCING CONSTRUCTION
Fred P. Chadsey, Fillmore, Calif.
Original application October 2, 1942, Serial No. 460,547, now Patent No. 2,396,684, dated March 19, 1946. Divided and this application December 29, 1945, Serial No. 638,252
1 Claim. (Cl. 244—134)

An airplane wing de-icing construction comprising a sectional flat hollow member, means detachably connecting the sections to the top of the wing with one section of the member arranged in advance of the other, said sections having communication adjacent the outer end of the wing, and a manifold supported on top of the member and connected to a power plant employed for driving the airplane, said manifold being connected to the front section and extending along the front edge thereof with one end communicating therewith at the inner end of the wing and the rear section having a discharge port at the inner end of the wing.

2,446,211
RING ROLL
Louis D. Clark, Rock Creek, Ohio
Application June 9, 1947, Serial No. 753,440
7 Claims. (Cl. 69—13)

1. A ring roll, comprising: a shaft; a ring section disposed about said shaft; and a coil spring interposed between said shaft and the interior surface of said ring section, said coil spring having coned ends fitting said shaft and an intermediate cylindrical portion fitting said interior surface, whereby said ring roll and said shaft

are urged to concentric relation, yet are permitted to move out of concentric relation.

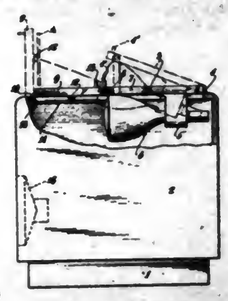
2,446,212
PIPE WRENCH HAVING A FIXED JAW AND A COOPERATING RECIPROCATING ROTARY JAW
Marion A. Clark, Tulare, Calif.
Application June 6, 1945, Serial No. 597,797
4 Claims. (Cl. 81—96)

1. A pipe wrench comprising an elongated body including spaced apart side plates, a fixed jaw projecting laterally from the body, gear racks formed along the outer edges of the side plates in spaced relation to said fixed jaw, a rotary jaw including a hub, spaced pinions on the hub engaging the racks, plates fixed to the side plates of the body and enclosing the hub, inturned flanges on the outer edges of the fixed plates enclosing the pinions to hold them in mesh with the racks, and manually operable means to move the hub and rotary jaw back and forth between the fixed plates while allowing rotation of such hub and rotary jaw.

2,446,213
PROCESS FOR MAKING BOWLING PINS
Ralph C. Clark, Ventura, and Ray E. Clark, Willowbrook, Calif.
Application October 8, 1946, Serial No. 702,046
4 Claims. (Cl. 18—59)

1. In a process of making a wooden bowling pin having a rubber base, the steps comprising forming said pin with a concave bottom having a plurality of radial grooves, inserting non-cured rub-

ber in said bottom end grooves, pre-heating said bottom to a temperature sufficient to convert the thus inserted rubber to a pliable state, forming a separate body of non-cured rubber in amount sufficient to form the base of said pin, placing said pre-heated bottom upon said molten body, and subjecting the thus-assembled bottom and molten body to an elevated temperature and pressure to form a cured rubber base attached to said concave bottom of the pin.



2,446,214

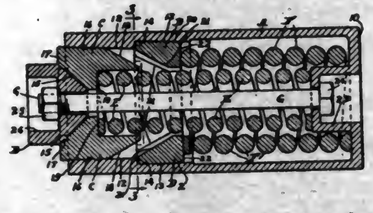
CABINET FOR TELEVISION RECEIVERS

Leonard Frederick Cramer, Wayne, N. J., assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware

Application August 21, 1945, Serial No. 611,707

5 Claims. (Cl. 178—7.5)

1. A cabinet for a television receiver having an opening at the upper end thereof, a cover hinged along an edge of said opening terminating short of the opposite edge of said opening and having a pivoted strap along an edge thereof, a support hinged at one edge thereof along the opposite edge of said opening and having a portion that operates as a stop when said support is turned to an upright position, said cover and support being adapted to close said opening, a television receiver supported upon the under side of said cover and a mirror adjustably supported upon the under side of said support.



2,446,215

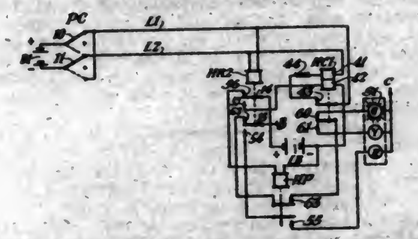
RAILWAY DRAFT GEAR FRICTION SHOCK ABSORBING MECHANISM

George E. Dath, Mokena, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware

Application February 10, 1945, Serial No. 577,294

19 Claims. (Cl. 213—34)

1. In a friction shock absorbing mechanism, the combination with a friction casing having interior, longitudinally extending friction surfaces; of front and rear sets of friction shoes having sliding frictional engagement with said friction surfaces, said front set of shoes having direct wedging engagement with said rear set of shoes; a pressure transmitting wedge block in wedging engagement with said front set of shoes; and spring means within the casing yieldingly opposing inward movement of all of said shoes.



2,446,216

ELECTRICAL CONTROL APPARATUS

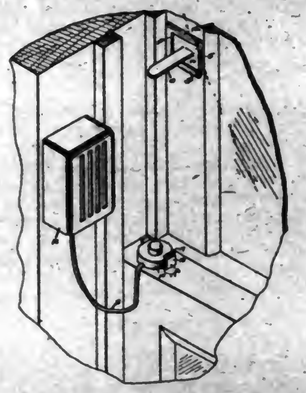
Arthur E. Dodd, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania

Original application July 16, 1945, Serial No. 605,400, now Patent No. 2,436,293, dated February 17, 1948. Divided and this application June 19, 1947, Serial No. 755,671

3 Claims. (Cl. 177—353)

1. In combination, a control circuit supplied with direct current of normal or reverse polarity according as a controller is set at a first or a second position, a first neutral relay connected to said control circuit to be energized by the control circuit current, a second neutral relay, a pick-up circuit including a current source independent of the first mentioned current source and a back contact of said first relay connected to a winding of said second relay to energize the second relay at a preselected polarity, a stick circuit including a front contact of the second relay to connect a winding of the second relay to said control circuit and disposed to energize the second relay at said preselected polarity only when the control circuit current is of normal polarity whereby said second relay is picked up or is released according as the control circuit current is of normal or reverse polarity, a first signal circuit including a front contact of each of said relays, and a second signal circuit including a front contact of said first relay and a back contact of said second relay.

2,446,217



BURGLAR ALARM

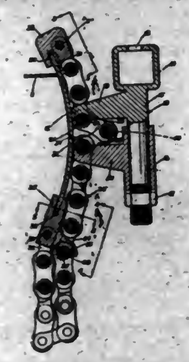
Herman H. Druffel, Chicago, Ill.

Application June 27, 1946, Serial No. 679,737

2 Claims. (Cl. 200—54)

2. In a switch mechanism the combination with a window frame; of two window sashes mounted in said frame, movable in parallel planes with respect to each other, and with respect to said frame; a bracket carried by one of said sashes, and clear of the other of said sashes when the latter is moved; a push-button switch, detachably carried by said bracket, having a push button yieldably presented in a direction substantially co-incident with the plane of movement of the sash upon which it is mounted, said push button having a conductor cable connected thereto and permitting limited movement of said push-button switch; a second bracket carried by the other of said sashes, normally clear of said first moving sash when the latter is moved; and actuating means, detachably carried by said second bracket, extending substantially at right angles to the plane of movement thereof overlying said push button, and adapted upon limited movement of either of said window sashes with respect to each other to push or to release said push button, de-

pending upon the direction of movement of said sashes; said push button switch and said actuating means being quickly detachable from their respective brackets to free said window sashes for full movement relatively to each other and relatively to said frame.



2,446,218

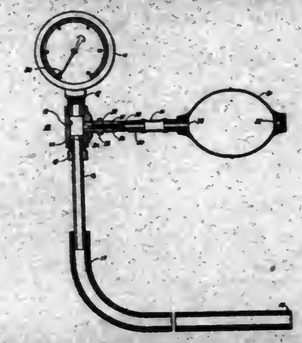
UNIVERSAL BUMPER CLAMP

Orville H. Dunlap, Vashon, Wash.

Application September 30, 1947, Serial No. 776,963

4 Claims. (Cl. 280—33.15)

1. A bumper clamp for a trailer hitch comprising a top lug adapted to engage the top edge of a bumper, a bottom lug adapted to engage the bottom edge of the bumper, a length of sprocket chain connecting said top and bottom lugs, a body member having an arm adapted to engage downwardly on a transverse pin of said chain, said body member having a depending rod portion, a sleeve member slidably mounted on said rod portion, an arm carried by said sleeve member adapted to engage upwardly against a second transverse pin of said chain, and a nut threaded on the lower end of said rod portion adapted to bear upwardly on said sleeve member to tense said chain.



2,446,219

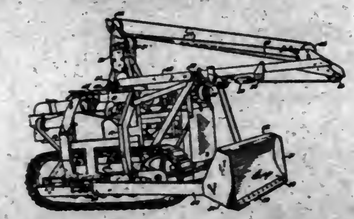
COOLING SYSTEM LEAK DETECTOR

Belden H. Eaton, Allison Park, Pa.

Application February 16, 1945, Serial No. 578,199

3 Claims. (Cl. 73—40)

1. In a leak detector for a closed and filled thermosyphon liquid cooling system for automobiles and the like the combination of a bulb pump having valved inlet and outlet openings, a pressure gauge connected to the outlet opening, and a flexible hose for connecting the outlet opening to a closed liquid cooling system for applying a static pressure on the liquid coolant in the system.



2,446,220

COMBINED CRANE AND MATERIAL-MOVING DEVICE

Nicholas M. Erdahl, Milwaukee, Wis., assignor to Trackson Company, Milwaukee, Wis., a corporation of Wisconsin

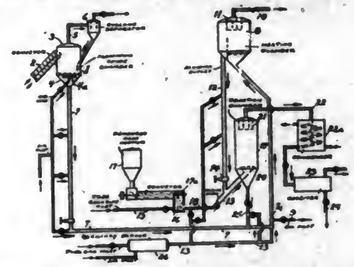
Application September 11, 1944, Serial No. 553,554

8 Claims. (Cl. 37—144)

1. In combination with a crane mounted on an automotive vehicle, the crane including a boom, a cable for raising and lowering a load, and means for raising and lowering the cable; a material-moving scoop pivotally mounted on the vehicle, sheaves rotatable on a common axle mounted on the boom, a cable guide mounted between the sheaves and on the axle therefor, the guide being movable to pass a bight of the cable, a sheave mounted on the scoop to receive the bight of the cable, and means anchoring one end of the cable to the boom.

2,446,221

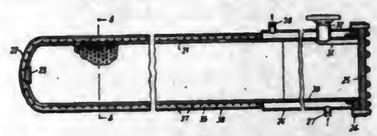
PRODUCING ALUMINUM HALIDES BY THE REACTION OF ALUMINA, CARBON, AND FREE HALOGEN



Robert P. Ferguson, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

Application March 6, 1943, Serial No. 478,311

13 Claims. (Cl. 23—94)



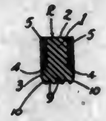
1. An improved process for producing volatile metal halides which comprises preparing a sus-

pension of finely divided solid metal oxide, in air and a combustible material, passing the same into a combustion zone wherein the combustible material is burned and the metal oxide is heated to a reactive temperature, withdrawing the products of combustion, separately withdrawing a stream of the suspended highly heated solid

metal oxide, adding said stream along with a stream of suspended finely divided carbon in a gaseous halogen to a reaction zone wherein the metal halide vapor is formed, withdrawing the vapor and recovering the metal halide therefrom, withdrawing a separate stream of the suspended solid metal oxide and returning the same to the combustion zone.

2,446,222
METALLIC STRUCTURE WITHIN HIGH-TEMPERATURE FURNACES
James Fletcher, Akron, Ohio, and Charles L. Norton, Jr., New York, N. Y., assignors to The Babcock & Wilcox Company, Jersey City, N. J., a corporation of New Jersey
Application July 10, 1942, Serial No. 450,472
3 Claims. (Cl. 266—19)

2. A furnace retort capable of use under corrosive conditions at metal temperatures above 2000° F. which comprises a shell of non-alloy ferrous metal subject to rapid corrosion when exposed to said service conditions, metallic projections welded to the outer surface of said shell, and a heat resistant protective covering for said shell including an inner layer of initially plastic chemically inert refractory material contacting with the outer surface of said shell and covering said projections, a layer of pervious metal on the outer surface of said refractory layer, and an outer layer of glaze-forming material covering said pervious metal layer and forming a self-sealing substantially gas-tight skin thereon.

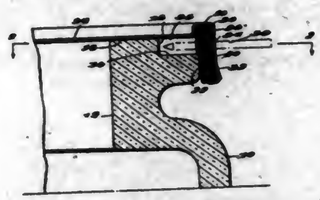


2,446,223
EXTENSIBLE AND RETRACTABLE DRAFT HITCH
Harold R. Forney, Surprise, Nebr.
Application July 13, 1945, Serial No. 604,760
1 Claim. (Cl. 280—33.14)

A device for coupling a trailer to a motor vehicle comprising an outer member, an inner member slidably mounted within said outer member, means at the outer ends of said members for detachably connecting one to a vehicle and the other to a trailer, said inner member having a slot through one side thereof, said slot extending longitudinally of said inner member and terminating short of the ends thereof, and a latch bolt mounted adjacent the inner end of said outer member on the side thereof overlying said slot in said inner member, said outer member having an opening to receive said bolt, said opening being in registry with said slot, said latch bolt extend-

ing through said opening and said slot into said inner member, said inner member having spaced openings, one adjacent each end thereof on the side of said member transversely opposite said slot to receive said latch bolt in the retracted and expanded position of said coupling, and said outer member having an opening positioned to register with said spaced openings at said positions.

2,446,224
HYDRAULIC CONTROL OIL RING
Frank D. Frisby and Melvin W. Marien, St. Louis, Mo., assignors to Ramsey Accessories Manufacturing Corporation, St. Louis, Mo., a corporation of Missouri
Application May 3, 1945, Serial No. 591,671
1 Claim. (Cl. 309—44)



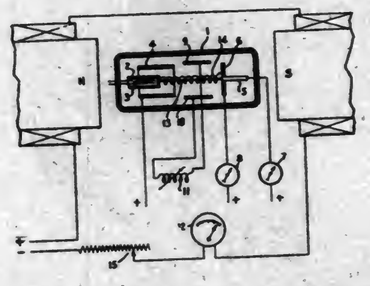
A piston ring comprising an endless annular component of rubber (or equivalent material) of T-shape cross section, a pair of annular spring elements disposed in intimate contact with the sides of the flange of the rubber component, and said rubber component having circumferential grooves on its inner cylindrical surface, and said spring elements being of the order of a helix to permit expansion and contraction without loss of circularity.

2,446,225
HOSIERY REKNITTING NEEDLE
Beatrice Georgi, Yonkers, N. Y.
Application June 17, 1944, Serial No. 540,805
6 Claims. (Cl. 66—117)

1. The improvement in a hosiery reknitting needle having a shank, a pointed latch pivoted to the shank, the shank having a hump adjacent the pivot for the latch and a hook having its free end adjacent to but spaced from the hump to admit a thread, the latch protruding beyond the hump and being swingable between an inner or lower position where a loop already knitted into the hosiery fabric may be passed from inside the hook over the hump and up beyond the end of the latch and be received on the shank; and an outer or lower position opposite the end of the hook so that the said loop may be discharged over the hook, which improvement comprises a guard carried by the shank terminating adjacent the point of the hook and laterally spaced from the point of the hook, from the hump, and from the latch and the portion of the shank receiving the loop from the latch, the guard having a lower edge aligned with the point of the hook for deflecting a ladder run towards the latch and a front face spaced beyond the path of the point of the latch and adapted to enter behind the next rung.

2,446,226
CONTAINER AND CLOSURE CAP TO BE USED THEREWITH
Gustave Glocker, Washington, D. C., assignor to Super-Seal Container Corporation, Washington, D. C.
Application September 22, 1944, Serial No. 555,349
3 Claims. (Cl. 215—40)

1. In combination, a container having a mouth and a closure therefor adapted to be hermetically sealed to the mouth of the container by atmospheric pressure upon rarefication of atmosphere in the container, an annular lip on said mouth, a downwawrdly extending surface adjacent said lip, an annular ledge generally parallel to said lip and located at the bottom of said downwardly extending surface, a peripheral sealing surface at the outer extremity of said ledge, the closure having a top portion adapted to overlie said lip and to extend radially toward the periphery of said ledge, a skirt depending from the periphery of said top and surrounding said peripheral sealing surface, an upstanding annular channel about the periphery of said top, an annular deformable sealing gasket seated at one edge in said channel, the outer surface of which engages the inner surface of said skirt and the inner surface of which engages said sealing surface thereby defining an annular chamber above said ledge, and a passage extending through the upper portion of said skirt at a point below the plane of said top portion and above said ledge so as to permit venting of said annular chamber upon insertion of a piercing tool through said passage and said sealing gasket.

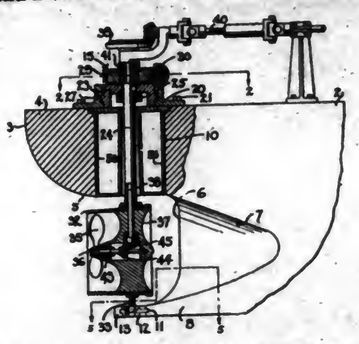


2,446,227
METHOD OF PERMANENT WAVING OF HAIR
Samuel Grant, Chicago, Ill., assignor, by mesne assignments, to Helene Curtis Industries, Inc., a corporation of Illinois
Application June 11, 1945, Serial No. 598,671
13 Claims. (Cl. 132—36)

4. The process of permanent waving hair on a human head which comprises separating the hair into a plurality of strands, securing a spacer around a hair strand closely adjacent to the scalp, applying a 1–5% thioglycolic acid solution having a pH of about 7 to 8.5 to said hair strand, winding said hair strand onto a curling rod, applying a heating pad to said wound strand and allowing said pad to remain for a period of from five (5) to eight (8) minutes, removing said pad, applying an absorbent element saturated with a neutralizing solution to said wound strand, applying said

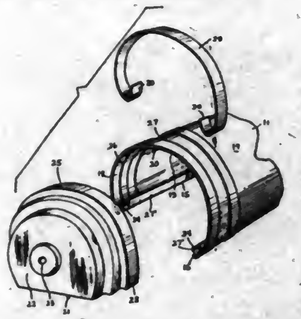
heating pad over said absorbent element and allowing the same to remain for a period of approximately five (5) minutes, and finally removing said pad, absorbent element and curling rod.

2,446,228
INSTRUMENT FOR MEASURING AND INDICATING ULTRA HIGH FREQUENCIES
James Hillier, Cranbury, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 22, 1946, Serial No. 678,560
4 Claims. (Cl. 315—10)



1. A cathode ray beam tube comprising a cathode, a target, an anode for accelerating the electrons from said cathode toward said target, means for producing a magnetic focusing field between said cathode and said target normally focusing the electrons on said target, means for intercepting radio waves to produce an electric field perpendicular to said magnetic field, a second target around the first target and means for varying the strength of said magnetic field to equalize the frequency of rotation of the electrons around the magnetic lines with the frequency of the intercepted radio waves.

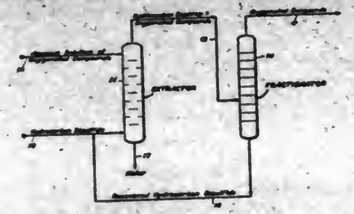
2,446,229
REMOVABLE STEERING AND PROPULSION UNIT FOR SHALLOW DRAFT VESSELS
William H. House, Houston, Tex.
Application November 8, 1944, Serial No. 562,223
5 Claims. (Cl. 115—35)



1. A combination driving and steering unit for shallow draft vessel having an opening through the deck and a skeg comprising an extension of the keel, a steering column having a frusto-conical rearwardly converging wheel tunnel connected thereto, an adjustable eccentric bearing in said skeg, a trunnion on said tunnel to fit therein,

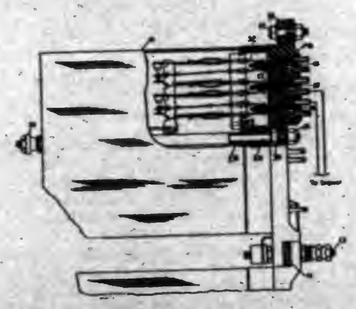
a drive shaft in said column, a wheel in said tunnel, and means to support said unit in the open-

ing whereby the unit may be inserted and removed.



2,446,230
LIGHTING FIXTURE
Paul H. Irmischer, Chicago, Ill.
Application July 24, 1946, Serial No. 685,991
1 Claim. (Cl. 240—110)

A lighting fixture comprising a shade formed from a sheet of material bent to provide a transversely curved shield having opposite longitudinal edges substantially spaced apart to provide a light slot and having said edge portions turned inwardly to provide oppositely disposed flanges, said shield having a retaining groove formed in each of its end portions, and end caps having peripheral portions insertable in the shield within said grooves and with the peripheral portions of said caps arranged between the flanges and the shield, said flanges being pressed upon said peripheral portions of said caps to retain the peripheral portions of the caps within the grooves.

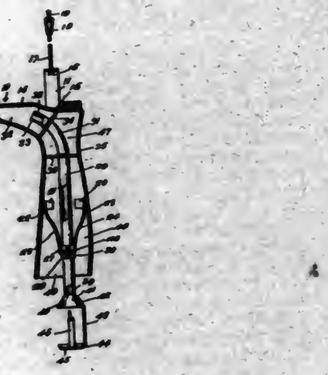


2,446,231
EXTRACTION OF OXYGENATED ORGANIC COMPOUNDS FROM AQUEOUS SOLUTIONS THEREOF
Carl E. Johnson, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application December 22, 1945, Serial No. 636,939
9 Claims. (Cl. 260—450)

1. The process of separating organic oxygenated compounds from dilute aqueous solutions containing same, comprising treating said mixture under conditions to form an extract phase and a raffinate phase with a solvent consisting essentially of hydrocarbon sulfides having the

general formula $R_1—S—S—R_2$ in which R_1 and R_2 are hydrocarbon radicals.

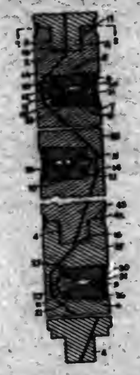
2,446,232
PLUG BOARD ARRANGEMENT
Emil L. Koenig, Brooklyn, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.
Application August 22, 1946, Serial No. 692,358
3 Claims. (Cl. 173—328)



1. In a plug coupler of the character described for detachably supporting an electro-responsive device providing quickly detachable electrical connections for a plurality of pairs of contact tips on the device, a plug board of insulating material having openings therein opposite said pairs of contact tips, a plug of insulating material secured within each of said openings, said plug having a tapered end protruding from the front of said plug board for spacing said contact tips of each pair, and said plug cooperating with said plug board to form slots extending through said plug board substantially opposite said contact tips, contact strips formed for the attachment of wires at one end thereof, said contact strips being insertable in the respective slots from the back of said plug board after the attachment of wires thereto to an extent that the other end of the strips makes electrical connection with the contact tips of said device, said contact strips being supported at the point of contact with said tips by the protruding portion of the plugs, and said contact strips having formed therein spring detents adapted to be compressible upon insertion of the contact strips in their respective slots from the back of the plug board, and adapted to lock said contact strips against backward movement when they are fully inserted from the back of the plug board, whereby the respective contact strips are individually insertable from the back of the plug board subsequent to the attachment of wires thereto and automatically locked in their inserted positions, irrespective of whether or not said device is coupled to the front of the plug board at the time of insertion.

2,446,233
PREPARATION OF ALKALI METAL SALTS AND ALKALI EARTH METAL SALTS OF HALOGENATED LOWER FATTY ACIDS
Bayard T. Lamborn, Matawan, N. J., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 20, 1946, Serial No. 711,209
19 Claims. (Cl. 260—539)

1. In the preparation of the alkali metal salts and the alkali earth metal salts of halogenated lower fatty acids the improvement which comprises mixing a crystalline halogenated lower fatty acid having from 2 to 4 carbon atoms in the molecule with a carbonate selected from the group consisting of alkali metal carbonates and alkali earth metal carbonates in a substantially dry state.



2,446,234
BOOT DRIER
Edward H. Lieber, Chicago, Ill.
Application October 9, 1945, Serial No. 621,288
3 Claims. (Cl. 34—104)

1. Apparatus for drying an inverted boot comprising a tube open at both ends extending from beneath said boot into the toe portion of said boot, and means cooperating with the inner surfaces of said boot to define linearly arranged communicating chambers within said boot, a source of heat at the lower end of said tube, whereby heated air led through said tube into said toe portion is successively restricted against escape from the boot, said means comprising spaced apertured flanges on said tube.

2,446,235
GUN PERFORATOR
Selwyn L. Markham, Houston, Tex., assignor to Tommy Yett, Houston, Tex.
Application March 19, 1945, Serial No. 583,509
9 Claims. (Cl. 164—0.5)

1. A gun perforator including a body, a firing chamber therein, a bullet barrel connected to said chamber and extending to the periphery of said body, means to ignite the charge in said chamber, said chamber having a concave base and a frusto-conical side surface merging into

said barrel whereby the force of the exploding powder charge is directed into said barrel.

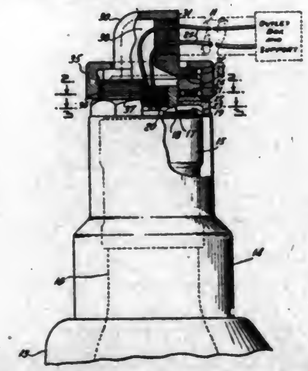
2,446,236
ELECTRIC HAIRBRUSH
Thelma S. Morris, Phoenix, Ariz.
Application September 3, 1946, Serial No. 694,619
2 Claims. (Cl. 219—21)

1. A hairbrush comprising a metal plate, tufts of metallic bristles held in said plate with their closed ends projecting therefrom, a metallic heat transmission plate applied against and in operative heat transmission contact with the said projecting closed ends of the metallic bristle tufts, an electric resistance wire heater, mica sheets on both sides thereof, one of said sheets being in direct contact with the metallic heat transmission plate, and means to supply said heater with electric current.

2,446,237
SELENIUM RECTIFIER
George F. Mueller, Highland Park, Ill., assignor to Fansteel Metallurgical Corporation, North Chicago, Ill., a corporation of New York
No Drawing. Application November 11, 1944, Serial No. 563,109
12 Claims. (Cl. 175—366)

1. The method of producing blocking layer devices which comprises providing a supporting electrode with a layer of gray, crystalline selenium, subjecting the surface of the selenium layer to the action of vapors formed by heating

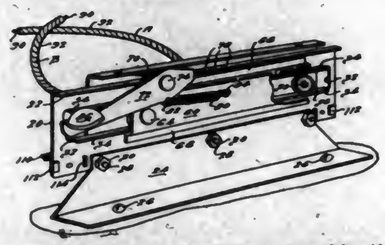
benzonitrile to its boiling point and applying a counter-electrode over the treated selenium surface.



2,446,238
SELENIUM RECTIFIER PLATE
George F. Mueller, Highland Park, Ill., assignor to Fansteel Metallurgical Corporation, North Chicago, Ill., a corporation of New York
No Drawing. Application November 11, 1944, Serial No. 563,110
9 Claims. (Cl. 175—366)

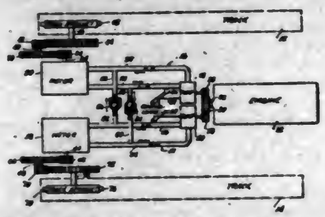
1. The method of producing blocking layer devices which comprises providing a supporting electrode with a layer of gray, crystalline selenium, subjecting the surface of the selenium layer for from about five seconds to about twenty seconds to the action of vapors formed by heating benzo-phenone to its boiling point and applying a counter-electrode over the treated selenium surface.

2,446,239
SELENIUM RECTIFIER DISK
George F. Mueller, Highland Park, Ill., assignor to Fansteel Metallurgical Corporation, North Chicago, Ill., a corporation of New York
No Drawing. Application November 11, 1944, Serial No. 563,111
9 Claims. (Cl. 175—366)



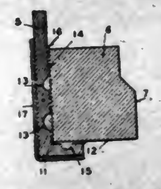
1. The method of producing blocking layer devices which comprises providing a supporting electrode with a layer of gray, crystalline selenium, subjecting the surface of the selenium layer for from about five seconds to about twenty seconds to the action of vapors formed by heating benzaldehyde to its boiling point and applying a counter-electrode over the treated selenium surface.

2,446,240
WIRING DEVICE
Shirley R. Naysmith, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a corporation of Connecticut
Application March 28, 1945, Serial No. 585,298
3 Claims. (Cl. 240—52)



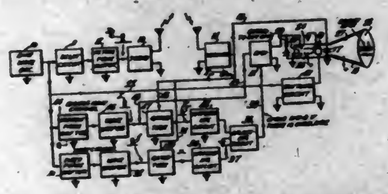
1. An outdoor lighting device comprising a horizontal conduit, a relatively fixed elbow fitting threaded on the conduit and having a downwardly opening wiring passage and a bottom flange with annular upper and lower bearing surfaces, an inwardly flanged locking ring loosely but non-removably carried on the upper surface of the flange and having an internally threaded skirt, and a detachable lighting fixture assembly comprising a reflector having a socket cover with an internally extending flange, a lamp socket, an upwardly extending, externally threaded fitting secured to the lamp socket, and an adapter ring threaded on the socket fitting and bearing against the socket cover flange and having external threads received in the threads of the skirt of the locking ring to secure the adapter ring on the skirt and against the lower surface of the flange on the elbow fitting.

2,446,241
SEAT SLIDE STRUCTURE
Harold E. Nofz, Detroit, Mich., assignor to National Stamping Company, Detroit, Mich., a corporation of Michigan
Application May 7, 1945, Serial No. 592,501
9 Claims. (Cl. 308—6)



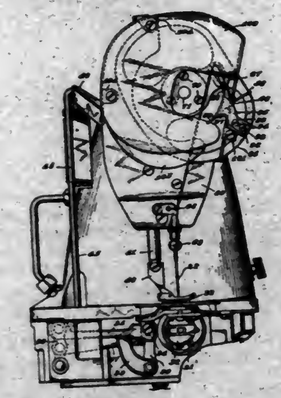
1. In a seat slide structure, in combination, a supporting unit comprising a rail member and a slide member, said members each comprising an elongated substantially flat sheet metal portion arranged with its plane of thickness vertical and said portions being arranged in slidable but substantially contacting relation with respect to each other, one of said members having longitudinally extending slot means formed therein, the metal of said member along the upper and lower edges of said slot means being bent out of the plane of said member whereby to provide a track means of greater width than the thickness of said member, the other of said members having pins fixed thereto and projecting perpendicularly therefrom, and rollers received on each of said pins within said slot means and in supported relation with respect to said track means, and outboard support means carried by the pins and engageable with said slotted member to hold said rollers aligned properly in the track means.

2,446,242
HYDRAULIC DRIVE CONTROL MECHANISM FOR VEHICLES
Elias Orshansky, Jr., Stamford, Conn., assignor to The Acrotorque Company, Stamford, Conn., a corporation of Connecticut
Application October 22, 1946, Serial No. 704,886
4 Claims. (Cl. 180—9.2)



2. In a vehicle having a pair of traction elements at opposite sides thereof adapted for moving and steering said vehicle, in combination, a hydraulic transmission for driving each of said traction elements; a prime mover coupled to both of said transmissions for imparting power thereto; each transmission comprising a pump connected to said prime mover, a motor connected to one of said elements, and a high pressure and a low pressure hydraulic line interconnecting said pump and motor; a pair of conduits connected from the high pressure and low pressure lines of one transmission respectively to the low pressure and high pressure lines of the other transmission; and means disposed in said conduits to permit one-way liquid flow therethrough for delivering operating pressure from the low-pressure line of one transmission to the high-pressure line of the other transmission when the motor of said first transmission is driven by its associated element as a pump.

2,446,243
SEAL CONSTRUCTION
Noel S. Reynolds, St. Louis, Mo.
Application April 3, 1943, Serial No. 481,723
5 Claims. (Cl. 286—11)

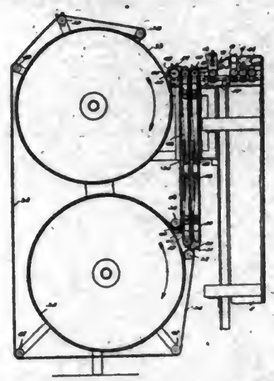


1. In a joint construction for attaching a member of relatively stable material to a member made of natural or synthetic rubber, said joint construction being associated with planular surfaces of said members and comprising a recess in the surface of the rubber member to which is to be attached an adjacent surface of the other member and thermo-setting bonding material filling the recess and being bonded to the surface thereof, the surface of the rubber surrounding the recess and to the adjacent surface of the other member, said recess being of such depth that a substantial body of the thermo-setting bonding material is interposed between the members.

2,446,244
PULSE-ECHO SYSTEM
Martin R. Richmond, Brooklyn, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application May 22, 1943, Serial No. 488,302
6 Claims. (Cl. 343—13)

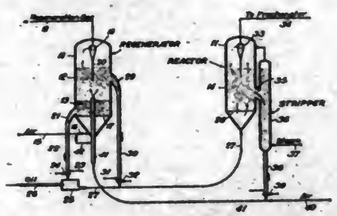
1. The method of improving signal-to-noise ratio which includes receiving desired signals plus undesired noise signals during one time interval, receiving undesired noise signals without said desired signals during a different discrete and non-overlapping time interval, comparing the energy corresponding to the received desired signals plus undesired noise signals received during said one time interval with the energy corresponding to the received undesired noise signals received during said different time interval, and indicating the desired signals as a function of said comparison.

2,446,245
SEWING MACHINE
Charles F. Rubel, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application March 10, 1945, Serial No. 581,980
8 Claims. (Cl. 112—248)



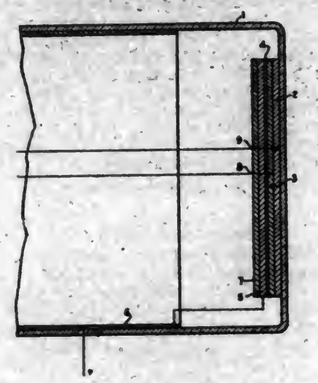
1. In a sewing machine, a reciprocatory needle bar having a thread carrying nnedle secured thereto, a rotary take-up for the needle thread comprising a rotary member, thread engaging means extending laterally from said member and movable in an orbital path upon rotation thereof, said means having a free end, a stationary member constructed and arranged to force outwardly beyond the free end of said means any thread that may become improperly engaged with the same due to breakage, and a stationary thread severing member associated wtih said last mentioned member in a manner to effect severance of thread so forced outwardly at a point beyond the free end of said means.

2,446,246
PHOTOCOPY MACHINE
Edward R. Sabel and Frank I. Galbrecht, Rochester, N. Y., assignors to The Haloid Company, Rochester, N. Y., a corporation of New York
Application September 3, 1946, Serial No. 694,620
8 Claims. (Cl. 34—70)



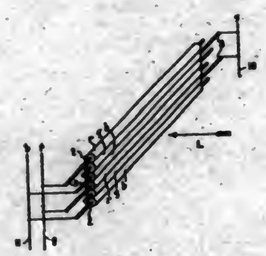
1. Print drying means including a plurality of superposed rotatable heated drums, an endless drum conveyor belt extending around substantially the entire peripheries of both said drums successively and between said drums in a vertical plane substantially tangential to the periphery of the lower drum, said belt acting to convey prints successively around the lower and upper drums, vertically arranged instrumentalities located above and adjacent to the outlet point between said drum conveyor belt and the lower drum and operating to move prints upwardly from the lower drum to the upper drum, stationary guiding means arranged adjacent to the drum conveyor belt at the outlet point of the lower drum acting to guide prints from the lower drum

to a point between the drum conveyor belt and said vertically arranged instrumentalities, and stationary guiding means arranged adjacent to the drum conveyor belt at the inlet point to said



upper drum and acting to guide prints from between the drum conveyor belt and said vertically arranged instrumentalities to a point between the drum conveyor belt and said upper drum.

2,446,247
EXOTHERMIC CATALYTIC REACTIONS
Fred W. Scheineman, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application November 22, 1946, Serial No. 711,756
11 Claims. (Cl. 196—52)



1. In the process of conducting chemical reactions wherein a vapor is contacted with a fluidized, solid, finely divided catalyst in an endothermic reaction zone in which the catalyst is maintained in dense fluid suspension by upflowing vapor and from which the catalyst is continuously conveyed to an exothermic regeneration zone wherein the catalyst is maintained at a higher temperature in dense fluid suspension by an upflowing stream of regeneration gas, after which the catalyst is returned to said reaction zone for the treatment of further quantities of said vapors, the improvement comprising circulating within said system in contact with said catalyst a subdivided heat-carrier material of sufficiently higher density and particle size than said catalyst, to effect segregation in a separate lower layer within said regeneration zone, separately withdrawing said heat carrier from said regeneration zone and mixing it with said vapor before the vapor contacts said catalyst, injecting the mixture of heat carrier and vapor into said reaction zone and recycling heat carrier with said catalyst from said reaction zone to said regeneration zone.

2,446,248
PHOSPHOR SCREEN
Ross E. Shrader, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 13, 1946, Serial No. 676,458
2 Claims. (Cl. 250—164)

1. A phosphor screen comprising a phosphor adapted to emit light of one color, a phosphor adapted to emit light of another color, a conducting layer on the last-mentioned phosphor connected to a positive potential electrode and a layer of poor secondary emitting property on said conducting layer adapted to control the depth of the electron penetration into said phosphors by the charge produced thereon by electron bombardment of the beam electrons.

2,446,249
PICKUP TUBE FOR COLOR TELEVISION
Alfred C. Schroeder, Feasterville, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application May 4, 1946, Serial No. 667,435
4 Claims. (Cl. 250—164)

1. A target for color television pick-up tubes comprising a plurality of color filter strips extending across the target, signal strips on one side of said color strips and a mosaic on the other side of said color strips, the signal strips of each color strip being connected together and insulated from the others.

2,446,250
STABILIZATION AND PURIFICATION OF ALKYL PHENOLS DERIVED FROM PETROLEUM
Royal L. Shuman, Newark, N. J., assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application March 4, 1944, Serial No. 525,103
12 Claims. (Cl. 260—621)

1. In the process for the stabilization and purification of alkyl phenols obtained from petroleum, the steps of reacting such alkyl phenols free from water with anhydrous aluminum chloride at an elevated temperature and subatmospheric pressure and then distilling the reaction mixture whereby stabilized and purified alkyl phenols are obtained as distillates.

2,446,251
JOINT FILLERS
Travie W. Stricklin, Gordon Heights, Del., assignor to the United States of America, as represented by the United States Atomic Energy Commission
No Drawing. Application July 13, 1945, Serial No. 604,968
1 Claim. (Cl. 106—287)

A permanently plastic pipe joint compound having lubricating properties which is highly resistant to attack by elemental fluorine and which is useful for application to threaded unions of pipes used for conveying gaseous fluorine which consists of a mixture of 3 parts by weight of finely powdered anhydrous calcium fluoride and 1 part by weight of a perfluorinated lubricant containing less than 0.07% of residual hydrogen and having an average carbon content of about 20 carbon atoms per molecule and a distillation range of 208° to 218° C. at 10 mm. Hg, said perfluorinated lubricant having been obtained by fluorinating a petroleum lubricating oil fraction which distills at temperatures between 200° C. and 300° C. at 10 mm. Hg.

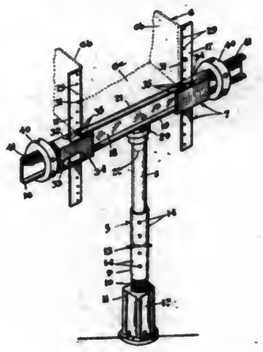
2,446,252
EARRING CLAMP
Joseph A. Stromelly, New York, N. Y.
Application March 20, 1947, Serial No. 735,847
5 Claims. (Cl. 63—14)

1. An earring of the screw-clamp type comprising a support having an arm with a screw-threaded opening therethrough, a screw-threaded shank engaging in said opening and having at one end an ear lobe engaging member and at its other end an enlarged finger-manipulating head normally spaced a substantial distance from the support arm, the manipulating head and the support arm being considered parts, one of which has a spring-tensioned detent means and the other a series of circumferentially spaced radial recesses, said detent means and recesses being adapted to be brought into cooperative interengagement as the manipulating head is axially advanced by rotation into proximity to the support arm to hold the screw-threaded shank against accidental rotation.

2,446,253
LINE HOLDER
Herbert Eva Tresidder, Royal Oak, Mich.
Application April 11, 1947, Serial No. 740,863
4 Claims. (Cl. 33—86)

2. A line holder for masonry work comprising a member having an opening therethrough to accommodate a line, a plug insertible in said opening and having a passage substantially from end to end thereof for receiving the line, and having an enlarged head exterior to said member, said head having a face confronting said member for clamping a portion of the line between the head and said member, whereby a stress applied to the line as it extends from said member tends to maintain the clamping relation of said head and member.

2,446,254
BLOCKING-LAYER CELL
Johannes Jacobus Asuerus Ploos van Amstel, Eindhoven, Netherlands, assignor to Hartford National Bank & Trust Co., Hartford, Conn., as trustee
Application September 20, 1945, Serial No. 617,578
In the Netherlands December 7, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires December 7, 1962
7 Claims. (Cl. 175—366)



1. A blocking-layer cell, comprising a carrier plate, a semi-conductive electrode, a blocking layer, a conductive electrode applied to said blocking layer, an intermediate layer of inert material deposited on at least a portion of the exposed surface of said conductive electrode, a metal contact layer applied to said intermediate layer, and a supply conductor secured to said metal contact layer.

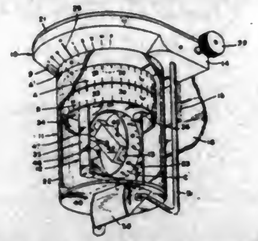
2,446,255
FORM CLAMPING SUPPORT
Domenico Vecisano, Montreal, Quebec, Canada
Application July 9, 1945, Serial No. 603,775
4 Claims. (Cl. 25—131.5)

1. A form-support of the character described including a channel beam arranged with its web extending vertically and its channel forming flanges extending horizontally so that the upper flange serves as a supporting seat for the form, slide members comprising top, side and bottom walls slidably mounted on said beam and provided with slots in the top and bottom walls; a pair of vertically disposed clamping bars slidably fitted in said slots for vertical and horizontal adjustment, said bars being adapted for clamping engagement with the side walls of the form sup-

ported on said beam and means for adjusting said slide members comprising travelling adjust-

ing nuts in screw threaded engagement with said beam.

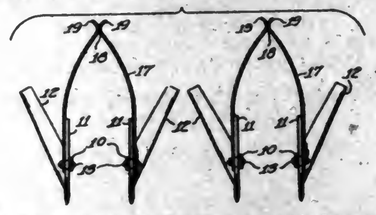
2,446,256
DOWNSPOUT STRAINER
John C. Young, Pittsburgh, Pa.
Application November 4, 1946, Serial No. 707,669
2 Claims. (Cl. 210—88)



1. The combination with a down drain conductor pipe having two sections supported in spaced relation, of a pipe section slidably fitting over the upper one of said sections for vertical adjustment thereon, and a strainer member having a body part of cup formation and of a diameter to fit within the upper part of the lowermost of said pipe sections, and said strainer having an outstanding flange to fit upon an upper end portion of said lowermost pipe section and having a collar projecting upwardly from said flange of a diameter to telescopically receive the lower end portion of the vertically adjustable pipe section, the lower end of the vertically adjustable section resting upon the outstanding flange of the strainer when said vertically adjustable section is in its lower position.

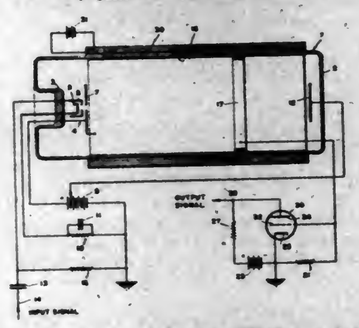
2,446,257
ESTER-ACETALS OF POLYPENTAERYTHRITOLS
Robert H. Barth, Ridgewood, N. J., assignor to Heyden Chemical Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application March 8, 1944, Serial No. 525,592
5 Claims. (Cl. 260—338)

1. A compound consisting of an ester-acetal of a polypentaerythritol in which at least two but not all of the original hydroxyl groups of the polypentaerythritol have been acetalized in pairs by an aldehyde selected from the group consisting of formaldehyde, acetaldehyde and butyraldehyde and at least one of the remaining hydroxyl groups has been esterified by an aliphatic carboxylic acid.



2,446,258
COMPASS
Robert C. Burt, Pasadena, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.
Application November 29, 1943, Serial No. 512,215
4 Claims. (Cl. 33—222)

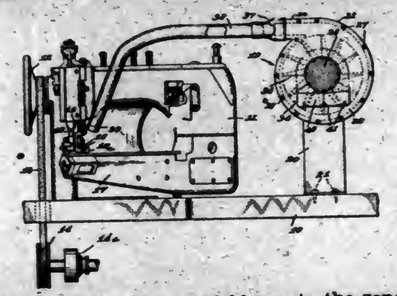
3. A navigational compass comprising a case, means suspending the case for rotation about a vertical axis, a course setting scale on the case, a frame supported in the case for rotation about said axis and having a magnetic azimuth scale for cooperating with the course setting scale, a magnetic needle mounted in the frame for rotation about a horizontal axis so as to remain parallel with the earth's magnetic flux, the needle being operable to turn the frame, a reference mark on the lower portion of the frame, a drum type scale movable with the needle about said horizontal axis and cooperable with the reference mark to indicate the magnetic dip, the case being constructed of transparent material so the azimuth scale, the reference mark and said drum type scale are visible from the exterior of the case, and a reflector supported below the case for reflecting the images of the reference mark and said drum type scale forwardly so that all of said scales and the reference mark may be viewed from a position in front of the case.



2,446,259
WEEDER ATTACHMENT FOR CULTIVATORS AND THE LIKE
Howard G. Bybee and Byrom G. Bybee, Ontario, Oreg.
Application April 24, 1945, Serial No. 589,980
1 Claim. (Cl. 97—207)

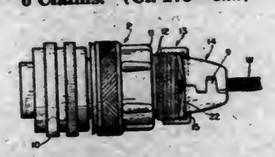
In a weeder attachment for cultivators, the combination with a pair of cultivator shoes, each arranged at the lower end of a shank, of an elongated reversely curved resilient sheet metal weeder arm pivotally attached at its forward terminal end to the lower end of each shank in proximity of the cultivator shoe and extending rearwardly therefrom throughout its length in a plane normally substantially parallel to the surface of the ground to be cultivated, the rear extremities of said weeder arms being bowed toward each other and normally forming a vertical line contact with each other forwardly of the rear terminal

ends thereof, and means for selectively varying the angular relation between said weeder arms and the ground including a brace bar pivotally attached at one end to the weeder arm rearwardly of its pivotal mounting and having an adjustable pin and slot connection at its other end with the shank carrying the cultivator shoe.



2,446,260
DIFFERENTIATING DISCHARGE TUBE
Madison Cawein, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application July 31, 1944, Serial No. 547,407
7 Claims. (Cl. 250—27)

6. The method of differentiating a transient input signal in an electron discharge tube including an electrode, said method comprising developing an electron beam and directing it so that it does not strike said electrode, collecting the electrons of said beam, controlling the intensity of said beam in accordance with said input signal, limiting the transit time of said electrons through said electrode, inducing a charge in said electrode in response to changes in intensity of said beam, said charge being representative of the derivative of said input signal, and deriving an output signal from said electrode representative of said induced charge.

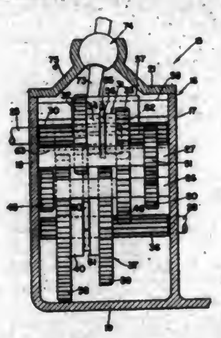


2,446,261
SEWING MACHINE
Norman V. Christensen, Chicago, George Sauer, Berwyn, and Clarence C. Smith, Chicago, Ill., assignors to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application May 18, 1946, Serial No. 670,762
8 Claims. (Cl. 112—218)

1. In combination, a support member, a sewing machine mounted thereon, said machine having stitch forming devices including a needle, means for intermittently driving said machine, means including a continuously operable blower having a normally unobstructed intake opening for maximum efficiency when the blower is active and a

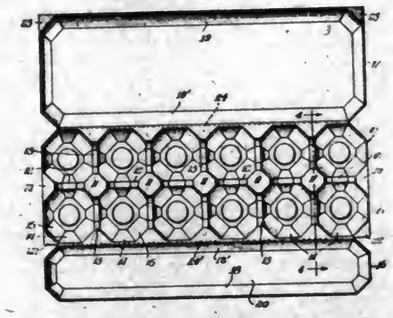
conduit leading from said blower to the zone of operation of said needle for delivering a stream of cooling air thereto, and means associated with said blower and readily accessible to the operator of said machine for rendering said blower ineffective while continuing to operate.

2,446,262
WIRE GRIP FOR ELECTRICAL FITTINGS
Floyd W. Clark, San Fernando, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.
Application May 30, 1945, Serial No. 596,757
6 Claims. (Cl. 173—322)



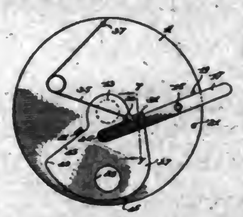
4. A device for use with a fitting presenting an end face and having a wire extending therefrom, the device comprising a pair of like jaws having opposing surfaces on their inner sides for gripping the wire, transversely extending teeth on the opposing inner sides of the jaws at opposite sides of said gripping surfaces, the teeth of the two jaws being in interfitting cooperation, flanges on the inner ends of the jaws opposing said face of the fitting and diverging therefrom to each have a limited area of fulcrum engagement with the face, an annular member threaded on the fitting, and an internal flange on the member extending around the jaws and having an end face for cooperating with said flanges of the jaws to urge them toward said face and thus pivot the jaws toward one another to grip the wire when the member is screwed inwardly along the fitting.

2,446,263
CHANGE GEAR TRANSMISSION
Frank T. Court, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Application January 9, 1945, Serial No. 571,973
14 Claims. (Cl. 74—342)



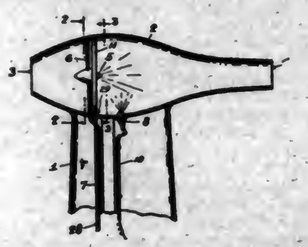
1. In power transmitting mechanism, a splined drive shaft, a splined driven shaft parallel thereto, a pair of compound gear members slidable axially on said shafts, respectively, each of said members comprising a pair of axially spaced, interconnected gear elements, a counter shaft disposed parallel to said splined shafts, a pair of axially spaced gear elements fixed on said coun-

tershaft and so positioned that the two gear elements of each gear member can be shifted into mesh with the two gear elements of said countershaft, respectively, providing four transmission ratios thereby, by shifting each of said gear members independently in either direction along its respective splined shaft, a third gear element



fixed on said countershaft outwardly of said pair of elements thereon, and a reverse gear disposed in mesh with said third gear element and positioned to mesh with one of said gear elements on one of said gear members when said member is shifted outwardly from a position in mesh with one of the pair of gear elements on said countershaft.

2,446,264
MOLDED PULP CARTON
John W. Cox, Chicago, Ill., assignor, by mesne assignments, to Shellmar Products Corporation, Chicago, Ill., a corporation of Delaware
Application September 20, 1943, Serial No. 503,028
9 Claims. (Cl. 229—28)

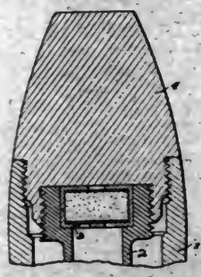


1. A cellular carton molded to provide a generally rectangular receptacle having side walls and end walls all connected by a bottom, the area within the receptacle being apportioned off into a plurality of collaterally disposed rows of compartments and including support members extending upwardly from the bottom between some of the compartments, a trough-like inner cover hinged along the upper margin of one of the side walls and of transverse width less than the overall receptacle width, said cover being swingable over the receptacle into covering relationship with a row of the compartments and having means engaging some of the support members between the receptacle side walls for support, and a trough-like outer cover of width substantially greater than the inner cover width hinged along the upper margin of the opposite side wall and swingable over the receptacle into covering relationship with the same and the closed inner cover.

2,446,265
PHOTOGRAPHIC SHUTTER
Chester W. Crumrine, Irondequoit, N. Y., assignor to Kryptar Corporation, a corporation of New York
Application July 22, 1946, Serial No. 685,407
9 Claims. (Cl. 95—59)

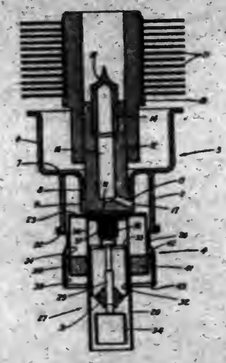
1. A photographic shutter comprising a member having an aperture therein, a lever pivotally mounted for oscillating movement near said member, a shutter blade pivotally mounted on said lever for bodily movement therewith and also for swinging movement relative to said lever, said blade having an opening spaced from the pivot of said blade which will be alined with said aperture when said blade swings while said lever is in one position, said blade being adapted to overlie and close said aperture when said lever is in substantially different positions, and means for swinging said blade in one direction about its pivot while said lever is in said one position and for swinging said blade in a reverse direction about its pivot while said lever is in a substantially different position.

2,446,266
JET PROPELLED HELICOPTER ROTOR
Thomas L. Cummings, Port Angeles, Wash.
Application February 23, 1946, Serial No. 649,621
4 Claims. (Cl. 170—135.5)



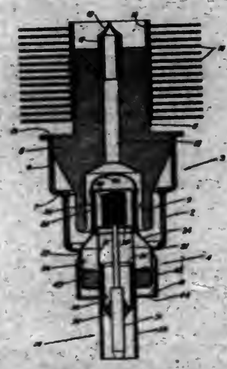
1. A device of the character described including a helicopter rotor airfoil, a jet motor at the end thereof having an air inlet port and a discharge port, a fuel spray jet in said motor, means for igniting said fuel, an adjustable blowback stop mechanism for sealing off the air entering said air inlet port including a channeled stationary ring, a plurality of overlapping segments pivotally supported in said ring adapted to seal off the air entering said air inlet port, an operating ring associated with said stationary ring, and means for rotating said operating ring for opening and closing said segments.

2,446,267
VIOLIN BRIDGE
George Dahn, Richmond, Va.
Application May 24, 1945, Serial No. 595,552
2 Claims. (Cl. 84—309)



1. A violin bridge of conventional rectangular form including a body having pair of supporting feet and having the usual curvate crown-edge for reception of regular notches to seat the usual strings, the crown portion of said body having a central slot terminating at its inner end at the median zone of the body having its outer end opening through said crown-edge, and being further provided, on opposite sides of said central slot with auxiliary slots, the latter converging toward said central slot and also opening at their outer ends through said crown-edge, and a pair of individual diagonal corner-slots, each opening at its outer end through a co-acting corner of the body, and additional and somewhat shorter body joining slots also opening through said crown-edge, said last-named slots being between the respective corner-slots and adjacent auxiliary slots, whereby to define four distinct sectors and each sector being individually responsive to vibrations and each sector being adapted to accommodate the customary string seat.

2,446,268
FUSE FOR PROJECTILES
Philip John Dawson, Beckenham, Kent, England, assignor to The Minister of Aircraft Production, London, England
Application August 17, 1942, Serial No. 455,022
In Great Britain December 7, 1940
1 Claim. (Cl. 102—73)



In an explosive percussion fuzed projectile of the type having no striker or arming mechanism, the combination of a hollow projectile body, a detonator casing located in said projectile body and containing tightly packed detonating composition, and a fuze body rigidly secured to said projectile body and positively locating said detonator casing in said projectile body, said fuze body comprising a solid nose plug forming a complete rigid closure for said projectile body and securing the detonator casing against access from the exterior of the projectile, the detonator casing having in its forwardly facing wall an aperture which is so constructed as to allow limited forward movement within said detonator casing of a portion of the detonating composition relative to the remainder thereof under shock due to impact of the projectile on its target.

2,446,269
ELECTRODE MOUNTING STRUCTURE FOR ELECTRON TUBES
Donald F. Drieschman, San Carlos, Calif., assignor to Eitel-McCullough, Inc., San Bruno, Calif., a corporation of California
Application May 8, 1945, Serial No. 592,542
6 Claims. (Cl. 250—27.5)

1. An electron tube comprising an envelope, a tubular metallic member forming part of the envelope, a metallic stem member projecting into the envelope through said tubular member, an electrode connected to the stem member, a metallic sleeve in the tubular member and secured thereto, a vitreous ring sealed between the stem member and said sleeve, a second metallic sleeve in the tubular member and secured thereto, and a second electrode in the envelope connected to said second sleeve, the second sleeve being seated against the first sleeve in said tubular member.

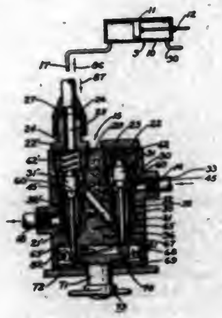
2,446,270
ELECTRON TUBE
William W. Eitel, Woodside, and Jack A. McCullough, Millbrae, Calif., assignors to Eitel-McCullough, Inc., San Bruno, Calif., a corporation of California
Application May 21, 1945, Serial No. 594,848
2 Claims. (Cl. 250—27.5)

1. An electron tube comprising an envelope having a recessed anode at the upper end and a cathode stem at the lower end, said stem comprising an outer tubular member and an inner prong member, a grid terminal ring interposed in the envelope wall between the outer stem

member and said anode and providing a cylindrical contact surface, the lower portions of the stem members projecting externally of the envelope and providing cylindrical contact surfaces coaxial with that of said grid terminal ring, the cylinders defined by said contact surfaces having different diameters of which the inner stem member is the smallest the outer stem member is next largest and the grid terminal ring is the largest, a cathode element extending into the anode recess and connected to one of the stem members, a heater for the cathode element connected to the stem members, and a grid disposed about the cathode element and connected to said grid terminal ring.

2,446,271
ELECTRON TUBE GRID STRUCTURE
William W. Eitel, Woodside, Calif., assignor to Eitel-McCullough, Inc., San Bruno, Calif., a corporation of California
Application January 23, 1946, Serial No. 642,944
6 Claims. (Cl. 250—27.5)

1. In an electron tube having parallel plane electrodes, a grid comprising a multiplicity of closely spaced parallel wires lying in a common plane presenting a flat grid surface spaced from an adjacent electrode, and a wire dsposed transversely across the mid-portions of the first mentioned wires and lying flat against said surface, said transverse wire having a diameter less than the spacing between the grid and adjacent electrode.



2,446,272
FIRE EXTINGUISHER FLUID
Michael O. Farris, Eagle Rock, and John M. O'Connor and Richard B. Gottschalk, Burbank, Calif., assignors to Lockheed Aircraft Corporation, Burbank, Calif.
No Drawing. Original application December 15, 1941, Serial No. 422,940. Divided and this application July 1, 1947, Serial No. 758,476
3 Claims. (Cl. 252—3)

1. A fire extinguishing fluid for extinguishing burning cuttings of magnesium, aluminum, and the like combustible metals and alloys, comprising as major effective constituents a mixture of an oil chosen from the class consisting of castor, palm, peanut and olive oils and mixtures thereof and dispersed carbon dioxide gas in sufficient quantity to form a fluent foam.

2,446,273
PURIFICATION OF SLUDGE ACID AND ACTIVATION OF CLAYS
Wright W. Gary, Los Angeles, Calif., assignor to Filtrol Corporation, Los Angeles, Calif., a corporation of Delaware
No Drawing. Application November 9, 1943, Serial No. 509,632
2 Claims. (Cl. 252—301)

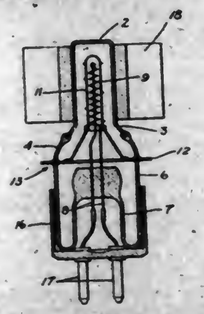
1. A process for producing acid activated clay and purified sludge acid, which comprises contacting a sub-bentonite clay with purified sludge acid to extract a material proportion of the alumina of said clay and to consume a substantial proportion of the acid in said activation and to produce an acid activated clay, separating said acid activated clay from the sludge acid, diluting with water an acid sludge produced by the treatment of hydrocarbons with sulfuric acid, separating a sludge acid from said diluted acid sludge, which sludge acid is contaminated by carbonaceous impurities, contacting said sludge acid with the above named acid activated clay for a time insufficient to cause any material consumption of said sludge acid, and separating the sludge acid substantially free of carbonaceous impurities from the acid activated clay containing said impurities and employing said sludge acid to extract additional sub-bentonite.

2,446,274
VALVE
John N. Gladden, Glendale, Calif., assignor to Gladden Products Division of Los Angeles Turf Club, Inc., Glendale, Calif., a corporation of California
Application August 23, 1943, Serial No. 499,617
9 Claims. (Cl. 251—167)

3. In a valve, the combination of: a seat structure including a valve seat member having a valve seat, and including a guide means, said valve seat member including a tubular portion having said valve seat on one side thereof and having a plurality of longitudinal porting arms extending from the other side thereof, the guide means comprising a plurality of longitudinal guide arms cooperating in defining a guide passage extending toward said valve seat member on the same side thereof as said seat, said guide arms being circumferentially spaced from each other to define a fluid-conducting space longitudinally through said guide means and radially therefrom; and a valve member having a cylindrical side wall dimensioned for longitudinal movement in said guide passage toward and away from said valve seat and in engagement with said arms, said valve member having a valve face adapted to engage said valve seat.

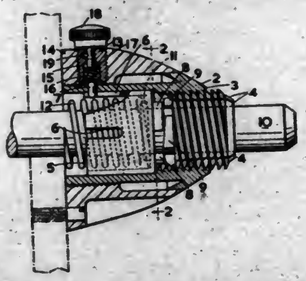
2,446,275
OSCILLATING TILT DROP ADJUSTING TABLE
John A. Glasin, Galveston, Tex.
Application June 7, 1946, Serial No. 675,010
2 Claims. (Cl. 128—33)

1. A device of the character described comprising, spaced supporting legs, a transverse rod supported by said legs, a table frame between the legs, bearing members secured to the sides of the frame and having longitudinal slots through which the rod extends, a crank shaft having bearings on the frame, pitmans having bearings, at one end, on



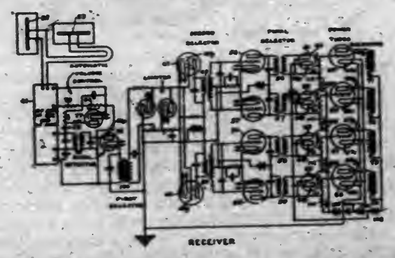
said rod and whose other ends have bearings on the wrist of the crank shaft.

2,446,276
AUTOMOBILE BRAKE SIGNAL
Francis R. Good, Long Beach, Calif.
Application June 7, 1947, Serial No. 753,209
1 Claim. (Cl. 177—311)



An emergency brake signal unit for an automobile, comprising a bracket having a pressure clamp and a thumb screw intermediate its ends for securing said bracket substantially parallel with and to the underside of the dash panel of the vehicle, said bracket provided at one end with a moveable bar, a wiping electrical contact adapted to be actuated by said bar and normally at rest on an insulating member, an extension on one end of said bar adapted to contact the emergency brake handle of the vehicle and to cause said electrical contact to actuate an electrical circuit when the emergency brake is operated, and an arm on the other end of said bracket extending upwardly substantially parallel with the front face of the dash panel and provided with a signal lamp operable upon actuation of said electrical circuit.

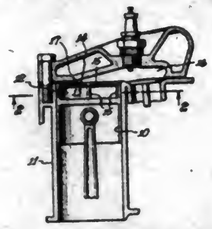
2,446,277
GLASS TO METAL SEAL IN ELECTRICAL DEVICES
Ronald Gordon, San Carlos, Calif., assignor to Eitel-McCullough, Inc., San Bruno, Calif., a corporation of California
Application September 24, 1945, Serial No. 618,349
5 Claims. (Cl. 250—27.5)



1. An electrical device comprising an envelope including a section of glass sealed to a metallic member, an electrode in the envelope electrically connected to the member, said member being composed mainly of a material having an expansion characteristic matching that of said glass, and a multi-layer coating on the member underlying the glass at the seal, said coating comprising an outer sealing layer of oxidized metal and an inner conductor layer of a different metal.

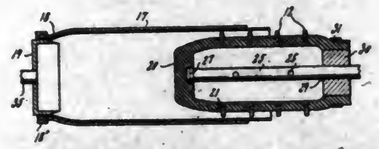
2,446,278
ARC LAMP OR THE LIKE
Charles Gordon Heys Hallett, London, England, assignor to Morgan Crucible Company Limited, London, England, a company of Great Britain
Application October 28, 1947, Serial No. 782,595
In Great Britain March 29, 1947
11 Claims. (Cl. 176—119)

1. The combination of an electrode, an electrode holder, and a plurality of complementary contact blocks surrounding the electrode and interposed between the electrode and the electrode holder, each contact block having a series of surfaces sloping towards the electrode which in the assembly of contact blocks produce a helical formation and the electrode holder having a helical thread matching said helical formation, and means for locking the contact blocks against rotation in the electrode holder.



2,446,279
AERIAL BOMB CONTROL SYSTEM
John Hays Hammond, Jr., Gloucester, Mass., assignor to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application September 19, 1942, Serial No. 458,938
4 Claims. (Cl. 250—2)

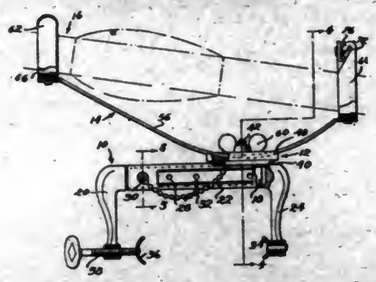
1. A radio receiving means responsive selectively to a plurality of different signals, comprising a radio receiver having a final detector connected to detect any of said signals and a volume control means connected to render the output of said detector substantially independent of signal strength, a first selector circuit broadly tuned to respond to all of said signals, a second selector fed by said first selector circuit and having a pair of tuned circuits each tuned to receive a different set of said signals, a final selector circuit including a plurality of circuits



tuned individually to the respective signals and each fed by the second selector circuit which is tuned to pass the respective signal, and a control circuit actuated in response to the signals from each of said final selector circuits.

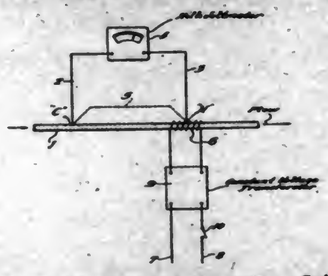
2,446,280
INTERNAL-COMBUSTION ENGINE
William T. Hancock, Long Beach, Calif.
Application April 16, 1945, Serial No. 588,524
6 Claims. (Cl. 123—193)

1. The combination comprising a combustion engine cylinder, means for supplying a preformed charge of mixed fuel and air to the cylinder, a piston in said cylinder containing a chamber adapted to receive through restricted passage means a compressed portion of the gaseous fuel charge from the cylinder chamber during the compression stroke of the piston, said portion of the fuel charge being released through said passage means from the piston chamber into the cylinder chamber during the power stroke of the piston.



2,446,281
CORRUGATED TUBE MANUFACTURE
Watson G. Harding, Ridgewood, N. J., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application May 11, 1944, Serial No. 535,112
8 Claims. (Cl. 18—19)

5. The method of making a corrugated tube comprising the steps of inflating a plastic vulcanizable rubber tube within and against the inner walls of a fabric tube under fluid pressure and stretching said rubber tube circumferentially, inserting rings within said stretched tube in spaced axial relation to one another and with their outside diameters in tight contact with the inner surface of said tube, releasing said pressure, forcing said rings towards each other along the axis of said tube so as to collapse the walls of said tubes inwardly between said rings, and vulcanizing said tubes so as to retain the corrugated condition of said tube.

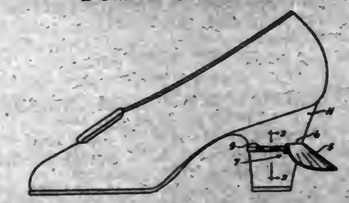


6. In an apparatus for making corrugated tubes, comprising means for diametrically expanding an elastic tube and subsequently permitting said tube to contract, a mandrel adapted to insert rigid rings in said expanded tube, said mandrel comprising means for retaining said rings in spaced relation thereon, and means cooperating with said mandrel for releasing said rings in contact with said contracted tube.

2,446,282
FISHING ROD HOLDER
Philip R. Hart, Alameda, Calif., assignor of one-half to Axel Nelson, Alameda, Calif.
Application July 8, 1946, Serial No. 681,978
4 Claims. (Cl. 248—42)

1. A fishing rod holder including a clamp, a swiveling joint secured to said clamp, a rod support secured to said joint, said rod support having an arcuate base axially adjustable upon said joint to vary the inclination of a rod supported thereby, said rod support having a yoke at each end thereof, one yoke supporting the butt of a rod and the other yoke having a quick detachable rod hold-down means, said hold-down means including a latch bar pivoted to one side of said other yoke and engageable with a keeper on the other side of said other yoke, said swiveling joint including a base plate detachably engaging said clamp, a top plate rotatably mounted on said base plate, cooperating depression and detent means between said plates for selectively retaining them in rotationally varied predetermined position, said detent means including a plurality of angularly spaced bores in said base plate and a projection depending from said top plate and selectively engageable with said bores.

2,446,283
FLOW MEASURING DEVICE
Herbert A. Hulsberg, Hinsdale, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application January 31, 1945, Serial No. 575,503
1 Claim. (Cl. 73—204)



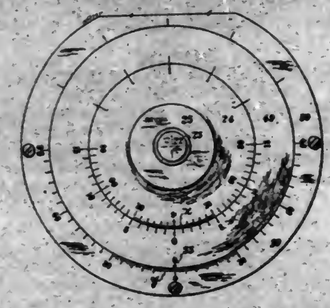
An apparatus for determining fluid flow through a small metallic conduit, said apparatus comprising a thermocouple circuit with said metallic conduit forming one element of the thermocouples and wires of a metal different from the conduit being attached to said conduit at spaced apart points to provide the other element of said thermocouples, a millivoltmeter in said thermocouple circuit, a heating coil placed around said conduit at one of the wire junction points with said conduit and said heating coil having a constant voltage supply.

2,446,284
ELECTRIC IRON
Murray Ireland, Elgin, Ill., assignor to McGraw Electric Company, Elgin, Ill., a corporation of Delaware
Application November 11, 1944, Serial No. 563,617
3 Claims. (Cl. 219—25)

1. In an electric sadiron, the combination with a sole plate, an electric heater therefor, a thermostatic switch mechanism for controlling the temperature of the sole plate, a handle, a hollow rear handle support and a cord projecting into the hollow handle support, of a block of heat-insulating material secured to said handle support at one side thereof, a bushing in said block surrounding said cord and means on said bushing extending upwardly above the surface of said block for engagement by the operator's hand for adjusting the switch mechanism.

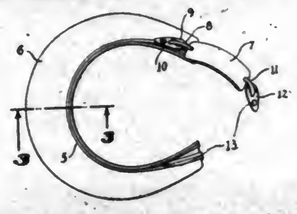
2,446,285
MUD SHIELD FOR SHOE HEELS
Charles G. Jacobsen, Chicago, Ill.
Application May 3, 1946, Serial No. 667,138
1 Claim. (Cl. 36—70)

A mud shield for shoe heels comprising a body in the form of a relatively stiff and flexible normally flat sheet of material having a concaved front edge extending completely from side to side of the body and generally conforming to the curvature of the rear portion of the heel and provided on said edge with a pair of spaced depending flange sections formed with openings adjacent their outer ends, said flange sections being joined throughout their lengths to the body, and a continuous elastic attaching band for the body adapted to snugly embrace the heel, said band being threaded rearwardly through said openings and extended across the rear surface of the flange sections between said openings, whereby to arch the body and to flex the flange sections into snug contact with the heel when the shield is applied to the latter.



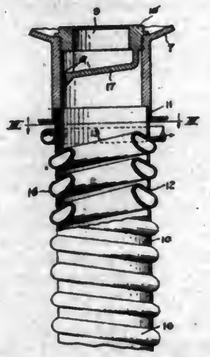
2,446,286
FORCE LASTED SHOE AND METHOD OF MAKING SAME
Jacob S. Kamberian, West Newton, Mass.
Application September 22, 1943, Serial No. 503,336
22 Claims. (Cl. 36—19.5)

13. A force-lasted shoe of the kind having a sock lining, a multi-ply upper comprising a lining and an outer element, and a middle sole, characterized in that the margin of the sock lining is permanently united by stitches to the lower edge of the lining only of the upper, that the upper margin of a wrapper is permanently united by stitches to the outer element of the upper, that



the middle sole is secured to the bottom surface of the sock lining over the united margin of the sock lining and the lower edge of the lining of the upper and that the wrapper is lasted-in over the edge of said sole upon the bottom surface thereof.

2,446,287
VERNIER FOR MECHANICALLY MEASURING ANGLES
Elmer W. Kelley, Denver, Colo.
Application March 5, 1945, Serial No. 580,982
3 Claims. (Cl. 116—124)

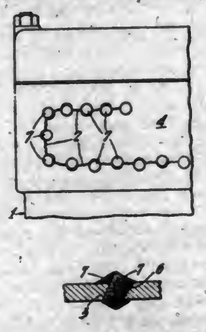


1. A vernier comprising, a nonrotatable protractor pivot operatively connected with a stationary base, a stationary vernier disk nonrotatably secured to the end of the pivot, the under surface of said disk having a gear concentric with the pivot, a vernier arm provided on one side with a tubular hub, rotatably mounted on the pivot, a gear train arm nonrotatably secured to the hub adjacent its upper end, a train of gears carried by the gear train arm, comprising a plurality of cooperating gear sets, each set having a shaft rotatable in bearings in the gear train arm and a gear at each end of the shaft, the shaft at the outer end of the gear train arm having a pinion in operative engagement with the gear on the stationary vernier disk, a second vernier disk having a tubular hub mounted for rotation on the first mentioned hub, a ring gear mounted on the last named tubular hub, the last gear in the gear train being operatively connected with the ring gear, whereby when the vernier arm and gear train arm are rotated about the pivot, the second mentioned vernier disk will be rotated relative to the stationary vernier disk, the last mentioned vernier disk being graduated in degrees, the rotatable vernier disk having a scale graduated in minutes, positioned adjacent the scale on the stationary vernier arm and a zero line adjacent the vernier arm, the latter having a graduated scale concentric with the pivot and in operative relation to the zero line on the rotatable vernier disk.

2,446,288
RAIN VISOR
Lester L. Lindley, San Francisco, Calif.
Application July 13, 1945, Serial No. 604,787
1 Claim. (Cl. 2—199)

A rain shield for caps comprising a band adapted to encircle the greater portion of the upstanding sides of a uniform cap, a panel having adjustable connecting members adapted to encircle the remainder of said cap and be detachably secured to one of the ends of said band and be pivotally secured to the other end, a flexible visor secured to said band at the lower edge thereof having an outer edge of such length as to cause it to assume an outwardly projecting and relatively slight downwardly sloping position relative to said band when the latter is secured in place on a cap.

2,446,289
PRECOOLER SYSTEM FOR REFRIGERATED DRINKING FOUNTAINS
Lee C. Love and C. Henry Slauter, Columbus, and Richard H. Orthoefer, Jr., Worthington, Ohio, assignors to The Ebco Manufacturing Company, Columbus, Ohio, a corporation of Ohio
Application January 8, 1948, Serial No. 1,108
4 Claims. (Cl. 257—179)



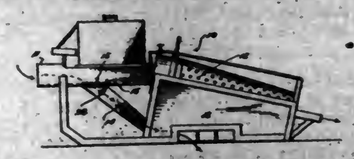
1. Heat transfer apparatus comprising a substantially vertically arranged straight liquid-receiving conduit having a liquid inlet at its upper end and a liquid outlet at its lower end, said conduit being formed with a continuous downwardly spiralled recess in the outer side walls thereof, the walls of said conduit which define said recesses being upwardly inclined toward the center line of said conduit and extending inwardly thereof, said walls forming a continuous downwardly spiralled and outwardly inclined shelf along the inner side walls of said conduit, means disposed at the inlet end of said conduit for directing incoming liquids against the inner side wall of said conduit, and a second fluid-receiving conduit disposed within the spiralled recess of said first conduit, said second conduit throughout its length having a portion of the outer surface thereof maintained in direct contact with the outer side walls of said first conduit defining said recess, whereby heat transfer may be had between fluids conducted by the respective conduits by conduction through the walls thereof.

2,446,290
TELEMETERING
Henry Joseph Lovegrove, Enfield, England, assignor to Sangamo Electric Company, Springfield, Ill., a corporation of Illinois
Application November 6, 1943, Serial No. 509,179
In Great Britain October 24, 1942
9 Claims. (Cl. 318—24)

1. In telemetering apparatus, the combination of two units adapted to operate as a transmitter and a receiver in a telemetering system, each of said units comprising a fixed exciting coil and a plurality of fixed synchronizing coils arranged in cooperative relation, said plurality of fixed synchronizing coils being all wound concentrically about a common axis, means for energizing the exciting coil of each unit with a periodically varying current, an inductor armature of magnetic material at each unit for establishing variable magnetic paths between the exciting coil and the synchronizing coils of its respective unit, and circuit connections between the synchronizing coils of one unit and the synchronizing coils of the other unit.

2,446,291
REPAIRING AND REPAIRED CRACKED METAL WALLS
Clarence E. McAfee, Hobart, Ind.
Application November 8, 1944, Serial No. 562,553
6 Claims. (Cl. 189—36)

1. A method of fluid-tightly sealing a fractured crack through a metal wall when the opposed crack faces have the irregularities common to fractured metal and are disposed in spaced relation distances less than the average height of these irregularities by sound wall metal beyond the crack, the method comprising forming at least one circular tapered screw-threaded hole in the wall with more than half the hole on one side of the crack and the remainder on the other side of the crack and with the hole axis inclined respecting the planes of the opposed crack faces, and screwing a tapered metal screw into this hole sufficiently tightly to laterally displace the wall portions bounding the crack to a degree fluid-tightly interwedging the irregularities of the crack faces.

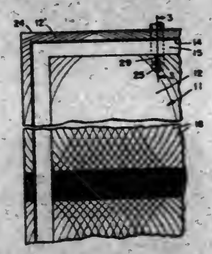


6. An article having a metal wall with a fractured crack through it and with the opposed crack faces having the irregularities common to fractured metal and disposed in spaced relation distances less than the average height of these irregularities by sound wall metal beyond the crack, the wall having at least one circular tapered hole formed therethrough with more than half the hole on one side of the crack and the remainder on the other side of the crack and with the hole axis inclined respecting the planes of the opposed crack faces, with a tapered metal screw screwed into this hole and laterally displacing the wall portions bounding the crack to a degree fluid-tightly interwedging the irregularities of the crack faces.

2,446,292
INSULATED ELECTRICAL CONDUCTOR
Edmond S. McConnell, Scarborough, N. Y., and Winfred K. Priestley, West Barrington, and Victor F. Volk, Bristol, R. I., assignors to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application June 8, 1945, Serial No. 598,310
2 Claims. (Cl. 174—120)

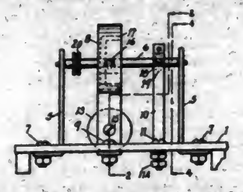
1. An insulated electrical conductor having excellent abrasion, flame and moisture resisting properties, comprising a metal conductor, a ribbon-like serving of fiber glass wound in short spirals about the conductor in direct contact therewith but not bonded thereto, a serving of fibrous textile material wound over the fibre glass so as to hold down stray glass fibres, an elastic jacket formed of a homogeneous plastic having good resistance to flame and moisture covering said textile serving, and a thin strong film of synthetic linear polyamide covering and snugly embracing said elastic jacket and having an outside diameter that is less than twice the diameter of the bare metal conductor, whereby a well covered highly flexible conductor of excellent insulating properties is provided and the insulation adjacent an end can be readily slid back to expose a short portion of the conductor.

2,446,293
BY-PASS FOR ROTARY MUD SCREENS
Ira T. Minyard, Odessa, Tex.
Application December 27, 1944, Serial No. 570,013
4 Claims. (Cl. 210—149)



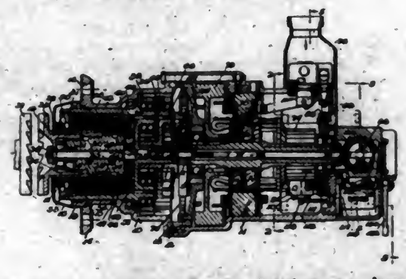
1. In an oil drilling system of the character disclosed, the combination of a rotary mud screen, a flow line for conducting or feeding drilling mud into the screen, a mud receptacle for normally receiving the mud which passes through the screen, a conduit connected to the flow line and receptacle and forming a by-pass for feeding the mud directly from the flow line to the receptacle, a two position valve means disposed within the flow line at the junction of the by-pass therewith and operative, when in the first position thereof, to close the entrance end of the by-pass to prevent flow of mud into the by-pass and operative, when in the second position thereof, to close the flow line, between the by-pass and screen, to prevent flow of mud from the flow line into the screen and to direct the mud into the by-pass, and means disposed exteriorly of the flow line and in operative connection with said valve means for moving the same between said first and second position at will.

2,446,294
HIGH-SPEED BELT
Lee W. Mitchell, Denver, Colo., assignor to Gates Rubber Company, Denver, Colo., a corporation of Colorado
Application January 16, 1945, Serial No. 573,083
2 Claims. (Cl. 74—232)



1. A high speed belt comprising a transversely flat central core of cords wound helically in the direction of the length of the belt and a layer of knitted, longitudinally extensible fabric forming an outer surface of the belt, the core and the fabric layer being adhesively interconnected.

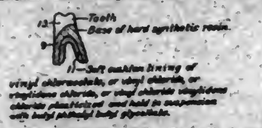
2,446,295
VACUUM WORK HOLDER
Clifford Morrison, Los Angeles, Calif., assignor to Western Equipment Company, a copartnership composed of Oliver H. Calhoun and Adela H. Calhoun
Application October 18, 1947, Serial No. 780,729
9 Claims. (Cl. 90—59)



1. A vacuum sheet stock holder comprising a body having a surface presenting a continuous marginal groove, that portion of the surface surrounded by the groove presenting a plurality of sheet-engaging lands separated by intervening depressions defining air passageways communicating with the groove, and a continuous flexible gasket mounted in the groove, said body having an air-exhausting port and a channel forming an extension of said port, the channel being of greater cross-sectional area than the individual passageways and intersecting and communicating directly with the groove at a point inwardly of the gasket whereby to exhaust air from the groove and from the passageways through the groove.

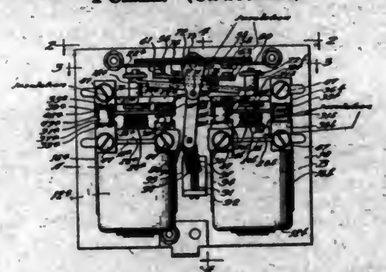
2,446,296
TOY MOTOR
Phillip Movitz, Grand Rapids, Mich.
Application June 20, 1946, Serial No. 678,009
8 Claims. (Cl. 172—36)

1. A toy motor comprising a base defining spaced slots and a pair of apertures therebetween, a pair of flanged shaft supports extending through said slots and secured to said base, a pair of flanged metal field pieces extending through one of said apertures and secured to said base in spaced relationship, a pair of flanged contact bars extending through the other of said apertures and secured to said base, a shaft rotatably mounted in said shaft supports and having a serrated portion between said contact bars, an iron core secured between said field pieces, a coil positioned around said core, an armature positioned on said shaft between said field pieces and a cam positioned on the serrated portion of said shaft.



2,446,297
STARTER
Romeo M. Nardone, Teaneck, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application March 7, 1944, Serial No. 525,417
16 Claims. (Cl. 290—38)

15. In an engine starter having an inertia member, an extensible jaw clutch member and an electric motor for rotating said inertia member, the combination of resilient means for urging the brushes of said motor into contact with the motor commutator, manually operable means for retracting said resilient means and extending said jaw clutch member, means for latching said resilient means in retracted positions, a solenoid, and means operated by said solenoid for separately releasing said latching means and extending said jaw clutch member.



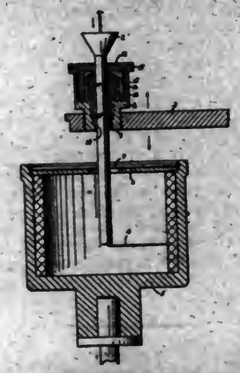
2,446,298
SOFT CUSHION LINING FOR ARTIFICIAL DENTURES AND PROCESS
Alex A. Nelson, Pleasant Ridge, Mich.
Application September 29, 1945, Serial No. 619,421
1 Claim. (Cl. 32—2)

An artificial denture having in combination, a base denture of hard methyl methacrylate, and a soft cushion lining of a vinyl chloracetate, plasticized and held in suspension with dioctyl-

phthalate, butylphthalylbutyl-glycollate and dibutylphthalate, adherent to said base denture.

2,446,299
INTERLOCKING RELAY
Marvin G. Nelsen, Skokie, Ill., assignor to Guardian Electric Manufacturing Co., Chicago, Ill., a corporation of Illinois
Application February 14, 1944, Serial No. 522,361
1 Claim. (Cl. 200—98)

In a control device for use with a motor, the combination of a pair of electromagnets each having a movable armature, contactor bars connected to each armature, separate, dual sets of motor contacts for each magnet controlled by the contactor bars of the respective magnets, one pair of contacts of each set being adapted to be closed by a contactor bar when the corresponding magnet is deenergized and the other pair of contacts of each set being adapted to be closed by said contactor bar, when the corresponding magnet is energized, a separate set of shunt contacts for each magnet connected respectively in circuit with said one pair of motor contacts, and means actuated in response to alternate energizations of said magnets for closing their respective pairs of shunt contacts, said means including a rockable member pivotally mounted adjacent the center of its length and having its opposite ends operably connected to said armatures, said member being rocked in opposite directions incident to alternate energization of said magnets, resiliently mounted contact elements carried on and in insulated relation to said member and positioned for cooperative engagement with the respective pairs of shunt contacts, whereby alternate energization of said magnets rocks said member in opposite directions for causing the contact elements to close alternately the corresponding pairs of shunt contacts, and a snap-action device connected to and operated by said means in response to alternate energization of said magnets for controlling the make and break of said pairs of shunt contacts.



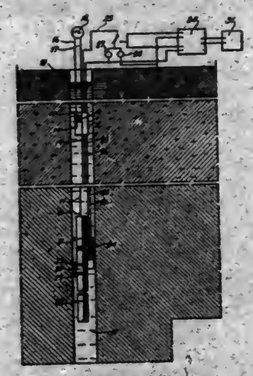
2,446,300
COUPLING MEANS FOR GROUND RODS
Rolland D. Nelson, Hales Corners, and Henry B. Behlmer, South Milwaukee, Wis., assignors to Line Material Company, Milwaukee, Wis., a corporation of Delaware
Application August 10, 1946, Serial No. 689,702
4 Claims. (Cl. 174—6)

1. In a ground rod construction, a pair of ground rods having adjacent ends and each having a metal central rod and a metal outer sheath, and a coupling electrically and mechanically joining said rods and comprising a sleeve extending over the adjacent ends of the ground rods and

having a pair of spaced inner annular grooves, and means arranged to strip the metal sheaths from said central rods and wedge said sheaths within said grooves without distorting the ends of said central rods.

2,446,301
SELF-CENTERING FUNNEL
Seddon C. Nelson, Front Royal, Va., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application September 7, 1945, Serial No. 615,017
5 Claims. (Cl. 57—76)

1. A self-centering mounting for a guide comprising a bracket, a socketed member in the bracket having a concave spherical bearing surface, an annular well in the socketed member adapted to receive a damping liquid, a floating bearing member adapted to receive and to be secured to the guide, said bearing member having a convex spherical bearing surface adapted to movably engage the concave spherical surface of the socketed member, the socketed member having a bore for receiving the guide, said bore having a diameter greater than the diameter of the guide, the floating bearing member having a depending skirt extending into the well and spaced apart from the walls thereof at all points, the center of gravity of the assembly of guide and floating bearing member fixed thereto being substantially at the center of curvature of the spherical surfaces.



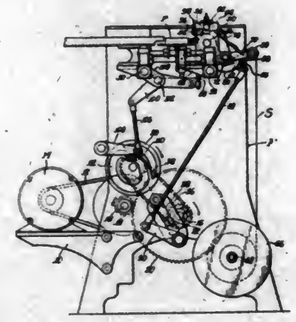
2,446,302
COLLAPSIBLE AND INFLATABLE BABY CARRIAGE
Meigs W. Newberry, South Windsor, Conn.
Application September 7, 1945, Serial No. 614,906
1 Claim. (Cl. 280—36)

An inflatable baby carriage structure comprising in combination, an outer bottom wall, connected together opposite side and end outer walls having lower edges thereof connected to opposite and adjacent edges of said outer bottom wall, an inner bottom wall, connected together opposite side and end inner walls having lower edges thereof connected to opposite and adjacent edges of said inner bottom wall, each of said walls being formed from stretchable material substantially impervious to air and the upper edges of said inner and outer side and end walls being connected together providing with said inner and outer bottom walls an air tight compartment, axles secured to said outer bottom wall in spaced relation and having wheels at opposite ends thereof, and valve mechanisms in one of said walls adapted for the passage of air into and out of the compartment, all adapted and arranged whereby air may be admitted into the compart-

ment to inflate the compartment so that said inner and outer side and end walls extend upwardly from said inner and outer bottom walls with said outer and inner walls being in spaced relation or whereby air may be discharged from the compartment to deflate the compartment so that said inner and outer side walls may be disposed inwardly over said inner and outer bottom walls and said inner and outer end walls may be disposed inwardly over said inner and outer bottom walls and side walls and so that all of said walls may then be rolled up with said axles to form a compact package.

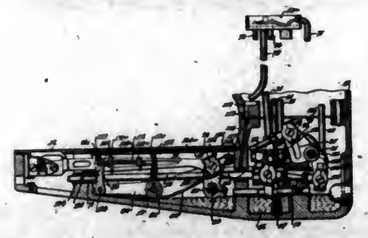
2,446,303
WELL LOGGING APPARATUS
John E. Owen, Tulsa, Okla., assignor to Geophysical Research Corporation, New York, N. Y., a corporation of New Jersey
Application November 27, 1943, Serial No. 511,943
6 Claims. (Cl. 175—182)

3. Apparatus for electrically logging a bore hole comprising an elongated electrode having two vertically spaced sections, an exploring electrode intermediate the sections of the elongated electrode and in fixed vertically spaced relation thereto, a grounded electrode, means for simultaneously setting up approximately equal potential drops between the first two electrodes and the grounded electrode, means for simultaneously



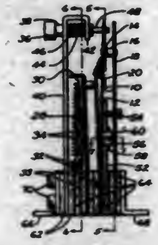
moving said electrodes in said fixed spaced relation along the bore hole and means for simultaneously measuring the electric current flowing between the exploring electrode and the grounded electrode.

2,446,304
COMPOSITE WOOD PRODUCT
Charles Roman, Miami, Fla.
Application February 23, 1944, Serial No. 523,610
3 Claims. (Cl. 260—17.3)



1. A wood product composed of a binder and a mass of comminuted wood resulting when hog fuel is subjected to the action of a hammer mill, to produce a multiplicity of relatively large flattened chips having their faces burnished by the rubbing action of a hammer mill togther with a mass of smaller wood particles including those from the bark and leaves of the hog fuel.

2,446,305
STRIP FEEDER FOR WRAPPING MACHINES
Oscar Sandberg, Defiance, Ohio, assignor to Lynch Package Machinery Corporation, Toledo, Ohio, a corporation of Ohio
Application June 27, 1944, Serial No. 542,336
4 Claims. (Cl. 164—42)

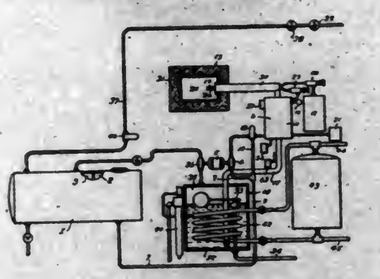


1. In a strip feeder for a wrapping machine having a horizontal, open-end pocket, a pair of strip feed rolls, and means for cutting a section from a strip fed by said strip feed rolls when said section is substantially centered in said pocket for deposit in and travel with the pocket, a reel on which the strip is stored, said reel being freely rotatable.

2,446,306
SEWING MACHINE
George Sauer, Berwyn, Ill., assignor to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application October 31, 1944, Serial No. 561,182
5 Claims. (Cl. 112—256)

1. In a sewing machine having a frame with a freely extending work arm of limited cross-section provide with a removable cover and stitch-forming mechanism positioned in said work arm, means for lubricating said stitch-forming mechanism, said lubricating means including a reservoir in the frame of said sewing machine which is supplied with lubricant, conduit means for conveying said lubricant to the top of said work arm, and means, including a thin, removable plate at the top of the work arm directly beneath said removable cover and retained in position by the securement thereof, said thin plate forming with said cover plate a shallow, wide, distributing reservoir and being provided with a plurality of yarn elements adapted to deliver lubricant by wick action, for conveying lubricant from the top of said work arm to a plurality of points on the moving parts requiring lubrication positioned in said work arm.

2,446,307
WARP SWITCH
Burton E. Shaw, Lawrence, Mass., assignor to Penn Electric Switch Co., Goshen, Ind., a corporation of Iowa
Application September 11, 1944, Serial No. 553,560
2 Claims. (Cl. 200—122)

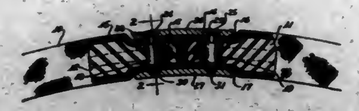


2. In a warp switch, a switch blade, a movable contact carried thereby, a stationary contact for coaction therewith, an actuating blade, a toggle spring connection between said actuating blade and said switch blade, a bimetal element, a heater therefor, supporting clips for said heater, said heater being supported by said bimetal element and said supporting clips, said bimetal element coacting with said actuating blade to actuate the same and thereby operate said switch blade through said toggle spring, said blades, said bimetal element and said supporting clips for said heater being supported in a stack of insulation spacers, and means for resetting said warp switch.

2,446,308
PACKAGE
Louis B. Smith, Chicago, Ill.
Application May 25, 1942, Serial No. 444,321
4 Claims. (Cl. 229—14)

1. A package comprising a flexible inner container having a spout thereon, an outer reinforcing carton having a plurality of sides, a closure for said package comprising a plurality of flaps hinged to the top edge of adjacent sides of said carton, at least one of said flaps having a reentrant portion therein through which said spout is adapted to protrude, another of said flaps comprising an extension of at least two of the side walls of said carton and forming an angular flap for supporting said spout, said angular flap having a diagonal crease therein extending from an edge thereof to an upper junction of two of said side walls, said diagonal crease being adapted to permit inward folding of said angular flap, said angular flap being adapted to compress said spout against one of said first mentioned flaps, thereby sealing said inner container.

2,446,309
GAS GENERATOR
John A. Starr, Riverdale, N. Y.
Application May 28, 1946, Serial No. 672,809
6 Claims. (Cl. 48—107)

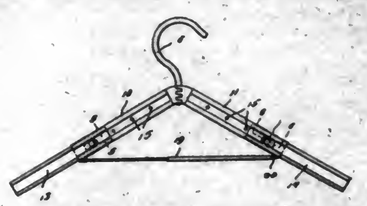


2. In a generator for producing a fixed combustible gas from liquid fuel, the combination of a liquid fuel reservoir, a coil, motor operated means operative to force liquid fuel from said reservoir through said coil, an electric heater disposed in heat interchanging relation to said coil, a reducing valve connected to the end of said coil, an expansion chamber beyond said valve in which the liquid fuel vaporizes, a retort connected by a conduit to said expansion chamber, an air inlet conduit into said retort, adjustable means in said conduits for regulating the flow therethrough, a gas reservoir in which fixed gas is stored under pressure, a discharge conduit through which fixed gas flows from said retort to said gas reservoir, and a pressure operated switch in the motor circuit arranged to be opened and closed by the variations in pressure of the gas in said gas reservoir and operative to start and stop the operation of said generator.

2,446,310
V-TYPE BELT
Theodore W. Steinke, Denver, Colo., assignor to Gates Rubber Company, Denver, Colo., a corporation of Colorado
Application January 16, 1945, Serial No. 573,033
2 Claims. (Cl. 74—233)

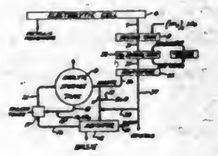
1. A belt of the V-type having two body portions spaced by a central assembly comprising a tension layer of stranded metal wires wound in the direction of the length of the belt; a covering of rubber-like material compounded to remain softer than the body portions, in direct contact with the wires and enveloping the same, a lamina of rubber composition compounded to remain softer than the body portions and mixed with textile fibers, positioned on opposite sides of the wire covering, the central assembly and the body portions being adhesively bonded to each other to form the completed belt body.

2,446,311
POWER-TRANSMISSION BELT
Eugene R. Traxler, Stow, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application August 1, 1945, Serial No. 608,166
4 Claims. (Cl. 74—231)



1. A side-driving belt comprising a flexible two-ended body including rubber-like material, a single flexible endless grommet of reinforcing material disposed in a single elongated loop with the two intermediate reaches of said loop disposed side by side between the side driving faces of said body and embedded therein and the two end portions of the loop disposed at the ends of said body, reinforcing spools of stiff material embedded entirely in the ends of said body within the loops of the grommet with the ends of said spools at the upper and lower faces of the rubber-like material, a covering overlying the ends of said spools and said body of rubber-like material, connector plates overlapping abutting ends of said body at the upper and lower faces of the belt, and clamping elements extending through the ends of the belt, said clamping elements extending through said spools and said covering and engaging said connector plates.

2,446,312
GARMENT HANGER
Francis B. Usina, Covington, La.
Application December 18, 1944, Serial No. 568,718
3 Claims. (Cl. 223—89)

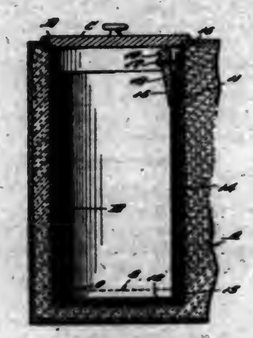


1. A garment hanger of the class described comprising a pair of inclined arms of channel shape in cross section pivotally connected at adjacent ends for movement from coplanar to parallel folded relation, extensions slidably mounted

in said arms, spring-biased detent means securing the extensions in longitudinally adjusted po-

sition in the arms, and an extensible cross-bar detachably connecting the outer ends of the arms.

2,446,312
PROCESS FOR PRODUCTION OF ELECTROLYTIC MANGANESE
Dmitri Vedensky, Berkeley, Calif.
Application August 18, 1945, Serial No. 611,424
5 Claims. (Cl. 204—105)

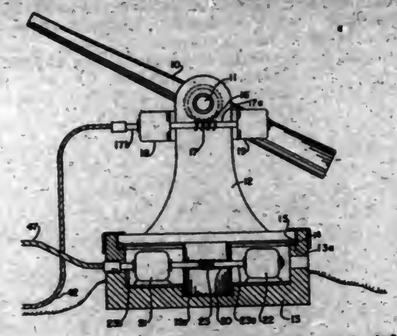


1. In a process for recovering manganese electrolytically from a solution containing manganese sulphate, the steps comprising bleeding off a portion of a stream of a manganese lean anolyte containing ammonium sulphate, manganese sulphate, sodium sulphate, potassium sulphate and magnesium sulphate, adding a material selected from the group consisting of a metallic oxide and a metallic hydroxide to the bleed-off stream to convert the ammonium sulphate therein to ammonium hydroxide and the corresponding metallic sulphate, heating the ammonium hydroxide to evolve gaseous ammonia and to leave behind as a residue the other constituents of the bleed-off stream and said metallic sulphate, adding sulphuric acid to at least a portion of the anolyte stream, and absorbing the evolved ammonia gas in the sulphuric acid containing anolyte stream to re-form ammonium sulphate therein.

2,446,314
PROCESS FOR THE PREPARATION OF SOLUBLE POLYMERS OF UNSATURATED ESTERS OF POLYCARBOXYLIC ACIDS
John K. Wagers, Berkeley, and Edward C. Shokal, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application May 15, 1944, Serial No. 535,739
5 Claims. (Cl. 260—78.4)

1. A process for obtaining a composition suitable for application as coating on surfaces of articles which comprises heating and further polymerizing at 50° C. to 100° C. in the presence of a peroxide polymerization catalyst a soluble polymer of a diallyl ester of a dicarboxylic acid in a solution consisting of 75 to 125 parts by weight of an inert volatile aromatic solvent per 100 parts of the polymer, said solution being substantially free of monomer of said ester; continuing said heating and further polymerizing while maintaining the proportion of solvent to polymer constant; interrupting the polymerization after appreciable further polymerization has occurred as evidenced by substantial increase in viscosity of said solution, but prior to formation of the gel polymer; and subsequently adding sufficient of said solvent to the solution of the further polymerized polymer to reduce the viscosity of the solution to approximately the viscosity which the solution had prior to the further polymerization treatment.

2,446,315
HOLDING MEANS FOR ICE-CREAM CANS AND CARTONS
John P. Williams, Nashville, Tenn.
Application July 19, 1945, Serial No. 605,972
3 Claims. (Cl. 248—361)



1. In a harness-type holder for ice cream cans and cartons of the class described, a vertically elongated flat metal strap constituting a leg, the lower end of said strap being bent at right angles to the longitudinal dimension of the body portion to provide a lateral foot for coaction with the can or carton, as the case may be, the extreme upper end of said leg being bifurcated, a wedge adapted to occupy a position in alignment and approximate parallelism with the bifurcated end of the leg, a bolt and nut mounted on and carried by said wedge, said bolt being adjustably connected with said furcations, and adjustable can clamping means detachably fastened to the lower portion of the leg in a position for coaction and association with said foot.

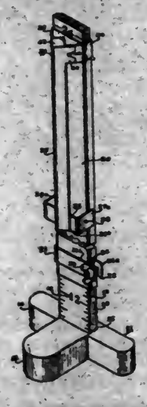
2,446,316
GUN SIGHTING AND TRAINING APPARATUS
Bernard D. Willis, deceased, late of Oak Park, Ill., by Wm. Walter Owen, executor, Elgin, Ill., assignor to Automatic Electric Laboratories, Inc., a corporation of Delaware
Application September 14, 1942, Serial No. 458,295
16 Claims. (Cl. 89—41)

1. In apparatus for sighting a gun, exploring means, a sighting piece adapted to be brought to bear on a target, means for moving said exploring means and said gun in unison until said gun is brought to a position wherein its line of sight is parallel to the line of sight of said sighting piece, and means controlled by the coincidence

of the line of sight of said sighting piece upon a part of said exploring means for arresting the

movement of said gun when its line of sight is brought into said parallel relationship.

2,446,317
PLUG FOR ELECTRIC CIRCUIT
Wilmer L. Wilshusen, Garden City, Kans.
Application March 27, 1945, Serial No. 585,147
1 Claim. (Cl. 173—361)

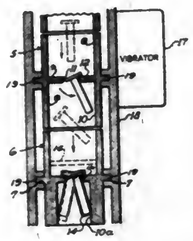


The combination with a supporting structure having an opening provided with a straight wall, of a connecting plug including a stem having a shoulder at one end and a flattened extension at its other end, an insulating sleeve on the stem, an insulating block fitted snugly on and held against rotation by the flattened extension, a shell fitted on the insulating sleeve having an enlarged end portion shaped to fit within and to be held against rotation by the walls of the opening in the supporting structure, a head integral with said enlarged end portion of the shell, having a recess constituting a seat for the block, thereby to hold the block in the head against relative rotation, said enlarged portion having screw threads, and a nut engaging the threaded enlarged portion and cooperating with the head to grip the supporting structure.

2,446,318
AIRCRAFT CABLE GUIDE PULLEY
Charles F. Young, Philadelphia, Pa.
Application April 23, 1945, Serial No. 589,814
1 Claim. (Cl. 254—195)

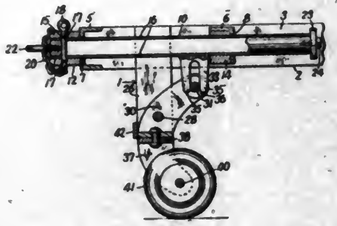
In a cable guide pulley, a saddle washer in the form of a flat plate having spaced, raised ribs extending transversely across its outer face and having a central aperture between said ribs, a frame deflected to form an inner cylindrical seat with the outer face of the seat portion riding on said ribs, a cylindrical bearing extending laterally through said seat, said seat having a slot extending around it with the ends of the slot terminating outwardly of said bearing, a threaded stud fixed to said bearing and extending through said slot and aperture, a nut for said stud, and a wheel mounted in said frame.

2,446,319
HEM MARKER
Sidney O. Orthwin, Dayton, Ohio
Application July 25, 1945, Serial No. 607,031
5 Claims. (Cl. 33—9)



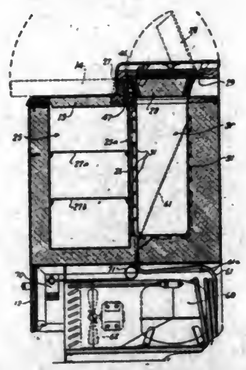
1. A hem marking device that includes in the combination, a vertical standard, and a marking device movable thereon which includes; an anvil member having sides, a movable head member cooperable with said anvil to receive a fabric material therebetween and having body portions thereof positionable at opposite sides of said anvil to produce a fold in the fabric material placed between said head and said anvil, one of said members having slot means in the fabric folding portion thereof positioned angularly to the fold of the fabric material placed between the said members, said slot means extending inwardly from opposite sides of said one member in longitudinal alignment and having a vertical dimension in the transverse cross section thereof substantially the same as a pin received therein and forming unobstructed passage means to receive a pin projected through the said slot means, and said other member having notches in the said body portions aligned longitudinally with said slot means at opposite sides of the said members and forming with said slot means a pin passageway having a horizontal dimension of substantially the same size as the said vertical dimension of said slot means when one member is moved toward the other member its maximum distance with fabric material between the said members, said slot means including a wall for guiding the point of the pin axially after it has entered said pin passageway.

2,446,320
RIVET SORTING MACHINE
Anatol N. Andrews, Los Angeles, Calif., assignor to North American Aviation, Inc.
Application May 24, 1946, Serial No. 537,038
2 Claims. (Cl. 209—98)



1. A device for sorting and segregating headed and shanked articles in accordance with the

configuration of the head portion of the article and the length and diameter of the shank thereof, comprising a receptacle open at the top and bottom and provided with a slotted floor intermediate the top and bottom, shank engaging means located below said floor and to one side of said slot, said slot being of less width than the diameter of said head portion and of such a predetermined width and spacing from said shank engaging means as to permit articles sized

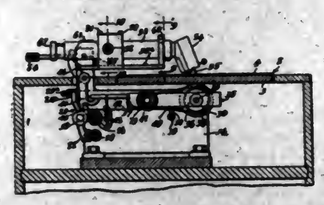


according to configuration of head and diameter and length of shank to be held at a given angle of tilting of the shank with respect to the vertical axis of the receptacle, said receptacle being provided with a slotted end wall for passage therethrough of such articles, articles not meeting such requirements being either passed through said slot or being retained in said receptacle, and means for agitating said articles.

2,446,321
VEHICLE SUPPORT
Warren Frederick Bartholomew, Michigan City, Ind., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application October 23, 1944, Serial No. 560,082
7 Claims. (Cl. 280—33.05)

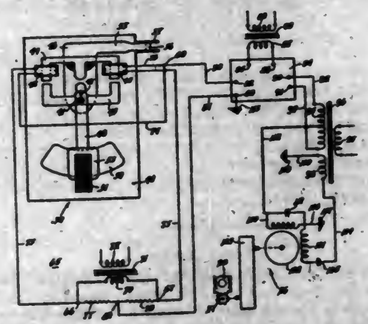
5. A support assembly for a trailer comprising, in combination, an elongated supporting member, means pivotally connecting said supporting member at a point between its ends to the trailer for swinging movement about an axis extending transversely of the trailer, a tow member supported by the trailer for movement relative thereto in a plane extending longitudinally thereof, and a member fixed to said tow member and having finger portions adapted to engage opposite surfaces at the upper end of said supporting member for swinging the latter about said pivotally connecting means during movement of said tow member in said plane.

2,446,322
TOP ACCESS REFRIGERATOR CABINET
John H. Benson, Salem, Ohio, assignor to Mullins Manufacturing Corporation, Salem, Ohio, a corporation of New York
Application March 16, 1945, Serial No. 583,065
5 Claims. (Cl. 62—89)



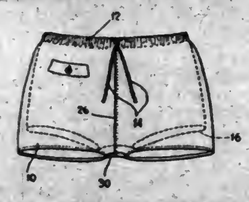
1. In a refrigerator cabinet, a long freezing chamber, a food storage chamber, one in front of the other, each insulated and independently accessible from the top, a wall separating the two chambers having less insulation than any of the other insulated walls of the two chambers, means to cool the freezing chamber to a relatively low freezing temperature, said separating wall serving to effect heat withdrawal from the other of said chambers to cool the same to normal food storage temperatures.

2,446,323
LOCK-JOINT PANEL CONSTRUCTION
Russell E. Davis and Theodore E. Weber, St. Louis, Mo., assignors to Hussmann Refrigerator Co., a corporation of Delaware
Application July 20, 1945, Serial No. 606,240
2 Claims. (Cl. 189—36)



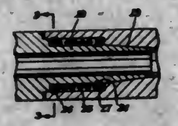
1. A lock-joint panel construction comprising a supporting channel with outstanding side marginal flanges at the edges of its side walls, panels seated against the outside faces of said flanges and having their adjacent marginal portions offset rearwardly and overlapped to form an outwardly opening groove, said overlapped marginal portions being disposed within said channel, fasteners securing said overlapped portions together and to the bottom of said channel and having heads seated in the bottom of said groove, and a member mounted in said groove for closing the same throughout the length thereof and for covering said heads of said fasteners, the side walls of said channel being disposed at inwardly converging angles so as to force said panels to slide toward one another when said overlapped marginal portions are drawn by said fasteners inwardly into said channel along the inwardly converging side walls thereof.

2,446,324
RECORDING AND REPRODUCING APPARATUS
Ulrich L. di Ghilini, Beverly Hills, Calif.; Alexander E. di Ghilini and Elsten di Ghilini, administrators of said Ulrich L. di Ghilini, deceased
Application May 26, 1943, Serial No. 488,515
1 Claim. (Cl. 274—13)



In an apparatus for recording and reproducing sound by the constant groove method, the combination with a carriage, a stylus arm supported by said carriage, and a motor-driven friction wheel mounted on said carriage for driving said turntable, of a feed screw driven by said turntable and having two separate oppositely pitched screw portions, and selective means for connecting said carriage selectively with the different portions of said feed screw including a separate half nut carrying arm engageable with each of said feed portions, said arms each being provided with spring means normally urging the same into the engaging position, and cam-actuated control means therefor simultaneously engaging both of said arms and operative in positions to maintain either or both of such arms in the released position.

2,446,325
LEVELING SUPPORT
Willis H. Gille, St. Paul, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application September 24, 1942, Serial No. 459,541
8 Claims. (Cl. 318—19)



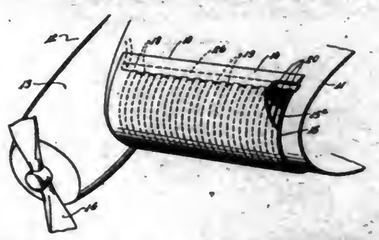
1. In a leveling system: a device to be maintained in a level attitude; a frame subject to change in attitude; gimbal means, rotatable about a vertical axis, supporting said device in said frame for rotation about two mutually perpendicular, normally level axes; a pair of substantially free pendulums supported by said frame for angular displacement with respect thereto on departure of said frame from said level attitude; means, each comprising first and second cooperatively movable portions, giving a response proportional in magnitude to the magnitude of the displacement between said portions; motor means for causing relative rotation, about each said normally level axis, between said device and said frame; means mounting each said first portion for angular movement, with respect to said frame, unitary with motor actuated movement of said device, and means mounting each said second portion, in cooperative relationship with its associated first portion, on one of said pendulums for unitary movement therewith, whereby relative movement may take place between said portions both due to the constantly vertical force of gravity and due to the operation of said motor means; and means operatively associating said responsive means with said motor means for energization thereof in accordance with the response of said responsive means.

2,446,326
MAN'S TRUNKS
Leo B. Guithues, Los Angeles, Calif., assignor to Catalina, Inc., a corporation of California
Application November 20, 1944, Serial No. 564,276
1 Claim. (Cl. 2—238)

A pair of men's trunks comprising a main body portion having front and rear parts, said parts joined together by stitching, an inner lining for the trunks, said inner lining comprising two rear parts and a front part, the front part comprising a panel co-extensive with the front part of the trunks but with a substantially semi-circular cut-away portion adjacent the lower middle thereof and the two rear parts being substantially alike and each comprising a half panel with an extension in the form of a quadrant, said parts joined by longitudinal stitching.

2,446,327
SWIVEL COUPLING FOR CONDUITS
August H. Heinrich, Cleveland, Ohio, assignor to Auto Diesel Piston Ring Company, Cleveland, Ohio, a corporation of Ohio
Application October 15, 1945, Serial No. 622,415
4 Claims. (Cl. 285—97.6)

2. A swivel joint comprising male and female members and a coil spring, said male and female members being provided with fluid passageways axially aligned therewith, said male member being provided with an externally tapered conical end section followed by a cylindrical section and an annular groove between said sections adapted to receive an external split ring, said female member being provided with a conical seat engaging the conical end section and a cylindrical end portion surrounding the cylindrical section and having an annular groove adjacent the free end of the cylindrical end portion and adapted to re-



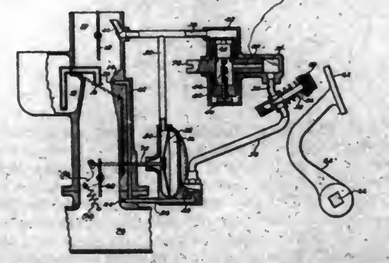
ceive an internal split ring, the said coil spring being interposed between the two split rings and adapted to maintain engagement of the conical end section and seat.

2,446,328

PROTECTIVE APPARATUS FOR PREVENTING THE ACCUMULATION OF ICE ON AIRFOILS

Eugene E. Heston, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

Application May 1, 1945, Serial No. 591,362
14 Claims. (Cl. 244—134)



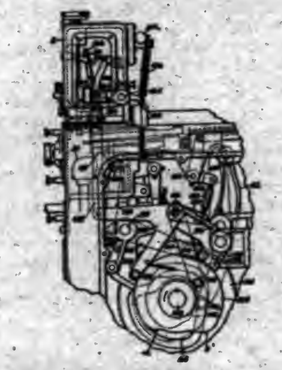
1. Apparatus for preventing the accumulation of ice on a surface, said apparatus comprising a covering of resilient rubber-like material for said surface having an inflatable passage therein, means for inflating said passage to distend the wall portion of the covering overlying said passage outwardly relative to an adjacent portion of the covering, and a distension-controlling element disposed across said wall portion from margin to margin of said passage and secured to said wall portion at said margins and intermediate the same, the disposition of said element in the deflated condition of said passage being circuitous between its attachments at said margins in a manner to compel said wall portion to shift in the direction along said margins under inflation of said passage and thereby exert a shearing action upon ice deposited upon both said wall portion and adjacent portion of the covering in addition to the outward distending action upon the ice overlying said wall portion under the inflation.

2,446,329

ENGINE THROTTLE CONTROL

Robert H. Hieger, Detroit, Mich., assignor to George M. Holley and Earl Holley

Application August 17, 1946, Serial No. 691,195
1 Claim. (Cl. 192—.01)



In combination an internal combustion engine, a clutch, a clutch release lever, a carburetor for said engine, a centrifugal governor driven by said engine, a throttle valve for said carburetor, throttle control means therefor, said throttle control means comprising a chamber having a moving wall, a connection from the moving wall to said throttle, a passage connecting the chamber with the engine side of said throttle, a pipe connecting said chamber to the atmosphere, a valve therein responsive to said centrifugal governor so as to close said pipe at high speed, a second valve in said pipe adapted to be closed by the clutch release lever when the clutch is released so that the engine runs at a slow speed when the clutch is released.

2,446,330

LASTING MACHINE

Eric A. Holmgren, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey

Application June 4, 1946, Serial No. 674,177
52 Claims. (Cl. 12—14)

1. In a lasting machine, wipers movable to wipe the marginal portion of an upper about the toe end of a last inwardly over an insole on the last, a device arranged to engage the insole and to serve as an abutment against which a portion of the lasting margin of the upper around the toe is pressed by the wipers in upstanding relation to the shoe bottom at a distance inwardly from the edge of the insole at the end of the wiping operation, the wipers being shaped to conform substantially to the contour of the portion of the upper pressed against said device, and other wiping means shaped to conform substantially to the contour of the upper opposite the edge face of the insole for wiping the upper about the toe end of the last heightwise of the last before said wipers wipe it inwardly over the insole and against said abutment device.

2,446,331

ELECTRODEPOSITION OF ALUMINUM

Frank H. Hurley, Portland, Oreg., assignor to The William Marsh Rice Institute for the Advancement of Literature, Science and Art, a corporation of Texas

No Drawing. Application February 14, 1944, Serial No. 522,375
2 Claims. (Cl. 204—14)

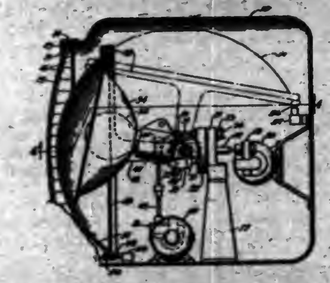
1. A process of electroplating that comprises electrodepositing aluminum as a bright, adherent deposit on a metal from the group consisting of iron, copper, brass, bronze, lead and tin from a cell containing a liquid nonaqueous electrolyte consisting essentially of a fused mixture of (1) about 2 mols of aluminum chloride and (2) 1 mol of ethyl pyridinium chloride.

2,446,332

DIAL HOLDING MEANS FOR WEIGHING SCALES

James G. Juhasz, Chicago, Ill., assignor to Borg-Erickson Corporation, Chicago, Ill., a corporation

Application January 13, 1945, Serial No. 572,632
5 Claims. (Cl. 265—68)



2. In combination with a scale having a housing and weight platform and a movable weight indicator, said weight indicator including a part, at least, of magnetic material, a magnet, a lever having said magnet mounted thereon, said lever being mounted on a fixed part of the scale, means on a movable part of said scale for engaging said lever and moving it in a direction to bring the magnet thereon into engagement with the magnetic material of the weight indicator when weight is applied to said platform whereby to provide a magnetic lock for the weight indicator and a trip member operable to separate the magnet from the magnetic material of the weight indicator.

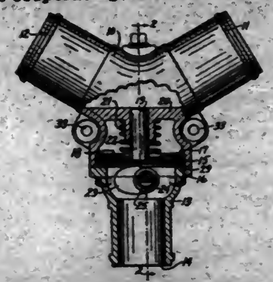
2,446,333

OSCILLATING WARNING LIGHT

Jeremiah D. Kennelly, Oak Park, Ill.

Application December 6, 1945, Serial No. 633,214
7 Claims. (Cl. 177—329)

1. In light signal apparatus, a casing provided with an opening, a lens mounted in the open end of said casing, a source of illumination mounted in said casing for movement, means for moving said source of illumination within said casing relative to said lens, a frame pivotally mounted in said casing for movement to positions in front of and away from said light source, a colored lens carried by said frame, and means for moving said frame to said positions.



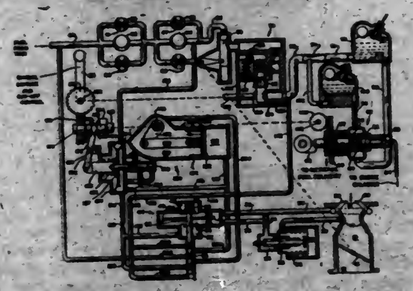
2,446,334

FLUID VALVE

Gustave J. Koehler, Oakwood, Ohio

Application February 3, 1944, Serial No. 520,884
2 Claims. (Cl. 251—132)

1. In a fluid valve of the class described, the combination of a main body portion; an auxiliary body portion removably connected to the main body portion, said auxiliary body portion having an outlet passage connecting with a passage in the main body portion; a valve seat unit mounted in a counterbore in the main body portion and retained in said counterbore by the auxiliary body portion, said seat unit removable when the auxiliary body portion is disconnected from the main body portion; a poppet type valve member comprising an enlarged head cooperating with the seat unit, and a stem portion secured to the head in concentric relationship thereto, said stem shiftably supported in a bore in the main body portion in axial alinement with said seat unit, said valve member removable when the seat unit is removed; yieldable means to urge the head of the valve member into engagement with the seat unit; a shaft journaled in the auxiliary body portion in offset relationship to the axis of the valve member and at right angles thereto, said shaft extending through the outlet passage; an operating cam secured on the shaft and within an enlarged upper portion of the outlet passage, said cam cooperating with the head of the valve

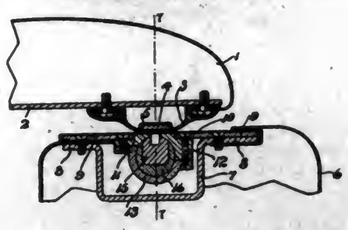


member to open and close said member, said cam being constructed and arranged to have a minimum of clearance from said head when the valve member is closed to insure complete closing of said valve member and to obtain maximum opening movement of said valve member; a finger piece secured on one end of the shaft for operating it; and stop means on the main body portion cooperating with the finger piece when it is turned in one direction to locate the cam at the position of its maximum opening movement with respect to the valve member, so as to retain said valve member in open position, said stop means also cooperating with said finger piece when it is turned in the opposite direction to locate said cam in a non-effective position in relation to the valve member to insure that said valve member is in closed position.

2,446,335

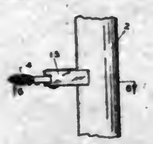
CONTROL APPARATUS FOR INTERNAL-COMBUSTION ENGINES

Leighton Lee, II, West Hartford, Conn., assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey



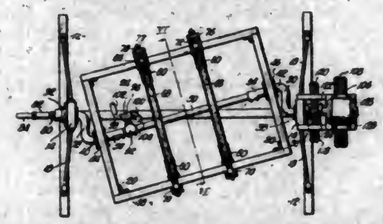
Application June 29, 1945, Serial No. 602,282
21 Claims. (Cl. 123—119)

1. A fuel supply system for an internal combustion engine, comprising injector pump mecha-



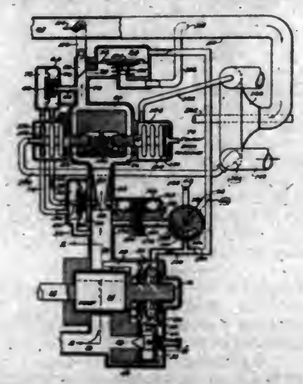
nism, means for controlling the delivery of said pump mechanism, motor means for operating said delivery controlling means, a manually movable control device, clutch means selectively movable between a first position wherein said manual control device is connected to said delivery controlling means and a second position wherein said device and said controlling means are independently movable, spring means for biasing said clutch means toward said first position, and means responsive to operation of said engine for moving said clutch means to said second position.

2,446,336
MAGNETIC REFRIGERATOR DOOR CLOSURE AND SEAL
Vennice E. Mark and Lloyd L. Anderson, Grand Rapids, Mich., assignors to Winters & Crampton Corporation, Grandville, Mich., a corporation of Michigan
Application July 27, 1944, Serial No. 546,887
6 Claims. (Cl. 20—69)



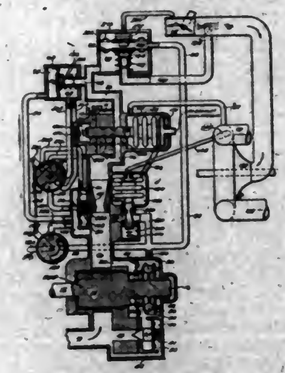
1. A door member, a door jamb member, means for movably mounting the door member whereby it may be brought into closing position with the door jamb member or moved away therefrom, a flexible compressible sealing gasket mounted on one of said members, the other of said members having a surface against which the gasket is adapted to bear, flexible magnetically attractable material carried by said gasket, a permanent magnet located upon the member to which the gasket is not attached having poles presentable to said magnetically attractable material to draw the gasket into sealing engagement against said surface, and means for moving said magnet between said position and a second position in which its attraction upon said gasket carried magnetically attractable means is released.

2,446,337
TURN SIGNAL CONTROL FOR VEHICLES
George F. McDougall, Portland, Oreg.
Application April 16, 1945, Serial No. 588,542
8 Claims. (Cl. 200—59)



1. Signal switch operating means for a column containing a shaft, comprising a pivoted switch lever biased to off position and selectively movable to opposite switch closing positions, said lever having a nose, a split expansible contracting ring mounted on the shaft and provided with a notch for engaging said nose to expand when the lever is in off position, the said ring contractable on the shaft when the lever is moved to close a switch, to grip the shaft and rotate with it when the shaft is moved in correspondence with movement of the lever and upon reversal of the shaft to reengage the nose and expand loose on the shaft.

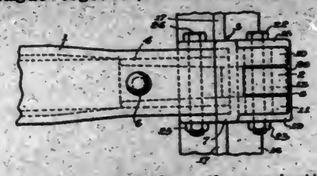
2,446,338
TANK CLEANING APPARATUS
Clarence C. Melton, Kansas City, Mo., assignor to Transcontinental & Western Air, Inc., Kansas City, Mo., a corporation of Delaware
Application July 7, 1943, Serial No. 493,739
3 Claims. (Cl. 134—150)



1. In tank cleaning apparatus, a pair of spaced supports; a shaft mounted for rotation in the supports, said shaft having a portion between the supports disposed at an angle to the remainder of the shaft; a rectangular frame fixed on said angularly disposed portion of the shaft; oppositely directed abutments on said frame adjacent opposite side edges thereof; means for clamping a tank onto each of two opposite sides of the frame and against said abutments; and means for rotating the shaft.

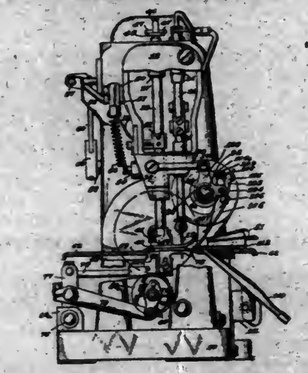
2,446,339
SPEED DENSITY CARBURETOR
Andrew William Orr, Jr., Detroit, Mich., assignor to George M. Holley and Earl Holley
Application February 9, 1946, Serial No. 646,559
5 Claims. (Cl. 123—119)

1. Fuel supply means for an internal combustion engine having an air entrance leading to an inlet manifold comprising a fuel pump, a fuel outlet therefrom, a variable pressure-relief valve for said outlet, engine speed responsive means to regulate said variable pressure whereby as the speed increases the pressure in said outlet increases, two parallel passages leading from said pump to a variable restriction in each of said parallel passages, means responsive to the manifold air pressure and to the pressure in the exhaust manifold connected to one of the restrictions to move said variable restriction into the open position as the exhaust pressure decreases and as the manifold air pressure increases, temperature responsive means connected to the other variable restriction to close said other restriction as the temperature rises.



2,446,340
SPEED DENSITY CARBURETOR
Andrew William Orr, Jr., Detroit, Mich., assignor to George M. Holley and Earl Holley
Application March 9, 1946, Serial No. 653,358
7 Claims. (Cl. 123—119)

1. A fuel supply means for an internal combustion engine having an inlet manifold and an air entrance leading thereto, comprising a fuel pump, a fuel outlet, a fuel return bypass connecting the fuel outlet with the fuel entrance, a variable pressure relief valve located in said return bypass, a moving wall connected to said valve so as to be responsive to the pressure drop at said valve, engine speed responsive means connected to said moving wall so as to regulate the said pressure drop so that as the engine speed increases the pressure drop increases and the pressure in said fuel pump outlet increases, a movable metering restriction in said fuel outlet, means responsive to the manifold air pressure connected to said movable metering restriction to open said metering restriction as said manifold air pressure increases, a second pressure regulating valve, said valve being located downstream from said movable restriction, a moving wall connected to said regulating valve, one side of said moving wall being subject to the fuel pressure downstream from said movable restriction, a chamber on the other side of said moving wall, a passage connecting said chamber to the downstream side of said pressure relief valve.

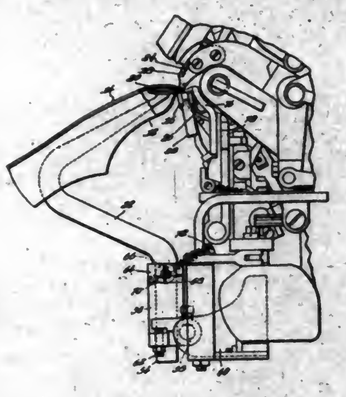


2,446,341
BRAKE BEAM
Oscar Otterson, Butler, Pa., assignor to Frederic Schaefer, Pittsburgh, Pa.
Application June 4, 1947, Serial No. 752,535
4 Claims. (Cl. 188—228)

1. A brake beam comprising a compression member, tongues rigidly connected to the opposite ends of said member and projecting therefrom, the outer ends of the tongues being provided with bifurcated portions forming slots disposed in the plane of the beam, a tension rod having its ends projecting into the slots, each end of the rod and the slot walls above and below it being provided with aligned holes, a sleeve extending through said holes to connect the rod and tongue together, a brake head having a

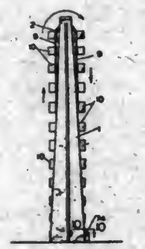
bifurcated body straddling the projecting portion of the tongue and the adjoining end of the compression member, and a bolt extending through said body and sleeve, whereby removal of the bolt will not release the tension rod from the compression member.

2,446,342
SEWING MACHINE
Albert C. Peterson, Park Ridge, and Robert A. Hayes, Chicago, Ill., assignors to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application June 28, 1946, Serial No. 680,146
7 Claims. (Cl. 112—203)



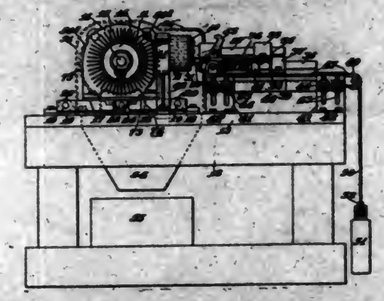
1. In a sewing machine having a stitching mechanism, a feeding mechanism comprising an eccentric means, a movable support adapted to engage said eccentric means and to be driven bodily thereby, means engaging said support at a point and enabling limited movement of said point but confining said movement to a predetermined path, a feeding member pivotally connected to said support for engaging and advancing the work toward said stitching mechanism, means urging said feeding member to rock about its pivot in such a direction that a portion thereof is pressed toward the work, stop means for limiting the rocking of said member, and means for actuating said eccentric means.

2,446,343
MACHINE FOR SECURING TOGETHER MARGINAL PORTIONS OF SHOES
Harold E. Reasor, Melrose, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application September 21, 1946, Serial No. 698,584
7 Claims. (Cl. 112—60)



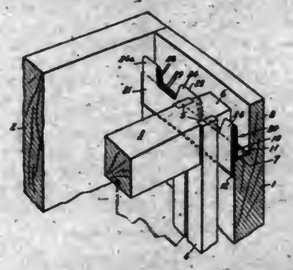
1. A machine for uniting the marginal portions of a shoe upper and sole while unsupported by a

last and for simultaneously securing a welt or strip to the outer face of the upper, having fastening devices, a work support, a welt or strip guide on the work support arranged to engage and direct the strip toward the operating point of the machine, and a pressure foot arranged to engage the outer marginal face of the sole and



to clamp the marginal portion of the sole against the other parts on the work support, in combination with a presser located for action inside the shoe to bend the sole along a portion bordering the edges away from the upper while leaving the sole free to be deflected by the clamping action of the presser foot.

2,446,344
STORAGE ELEVATOR SYSTEM FOR AUTOMOBILES
William G. Smith, Portland, Oreg.
Application December 12, 1945, Serial No. 634,522
4 Claims. (Cl. 214—16.1)

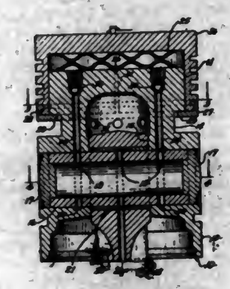


1. A pendulum type cage for a tower and conveyor type automobile storage device comprising an automobile platform, a superposed frame on said platform, a spaced pair of conveyor belts, a ladder bar spanning the distance between two belt members, characterized by the platform being suspended from the ladder bar by tension members pivotally connected to the platform and the ladder bar with means for displacing the top of the cage when needful to level the platform with its load.

2,446,345
MEANS FOR PREPARING FIBROUS MOLDING COMPOSITIONS
Howard Snow and Rudolph H. Hecutt, Charlotte, N. C., assignors to Southern Friction Materials Company, a corporation of North Carolina
Application July 27, 1942, Serial No. 496,356
6 Claims. (Cl. 19—65)

1. A machine for disintegrating a preformed solid into discrete, coated fibrous particles, such machine comprising a motor-driven disintegrator brush rotatable about its axis and movable longitudinally along its axis of rotation, a holder for the said solid preform, said holder being rotatable about an axis at right angles to the axis of said disintegrator brush and movable longitudinally along its own axis, means normally acting to move said holder towards said disintegrator brush and maintaining the carried solid preform in contact with the same, releasable means for retaining the preform holder temporarily in a retracted position away from the disintegrator brush, means for effecting back and forth longitudinal movement of said disintegrator brush, and said preform holder having provision for its rotation during the disintegrating action of the brush upon the preform.

2,446,346
HONEYCOMB FRAME SUPPORT AND SPACER
Irvin A. Steller, Latty, Ohio
Application February 14, 1944, Serial No. 522,286
1 Claim. (Cl. 6—2)



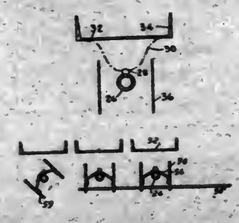
The combination with a honey super having an inner step and a narrow flange projecting upwardly from the horizontal surface of the step to space the overhanging end portions of a plurality of upper frame bars from said horizontal surface, of a spacer device having upwardly facing notches for engaging the sides of respective frame bars and downwardly extending generally parallel spring flanges adapted to slip over the upwardly projecting flange to hold the spacer device in position by frictional contact with said flange.

2,446,347
TRAILER BALL BOLT GUARD
Edward L. Walkowiak, Saginaw, Mich.
Application March 8, 1946, Serial No. 653,080
2 Claims. (Cl. 280—33.44)

1. A combination with a ball bolt, of an L-shaped bifurcated strap member, the bifurcated end being engaged by the ball bolt structure for clamping it rigidly in position, a guard associated with the ball bolt and hingedly connected to the lower end of the strap, and adapted in one position to form a shield that overlies and extends a distance above and below said ball bolt, and in another position to permit unobstructed access to said ball bolt to permit attachment of a hitch coupling thereto, and resilient U-shaped clasps secured to said guard at a point intermediate its length for resiliently embracing said ball bolt to releasably secure the guard in upright position.

2,446,348
PISTON
Philip S. Webster, North Muskegon, Mich.
Application March 21, 1946, Serial No. 655,944
5 Claims. (Cl. 123—176)

2. A piston having a trunk provided with piston pin bosses, a hollow piston pin mounted in said bosses, an oil passage extending from the interior of one of said bosses to the top of said trunk, a check valve in said passage positioned to open upwardly to permit liquid to pass from said boss and to said top end of said passageway, means for conveying oil from the interior of said pin to said passageway, a dome flexibly carried by said trunk and movable to extended position to provide a space below the top of said dome and above the top of said trunk into which a cooling lubricant may be delivered from said passage-way, and an outlet from said space normally closed when said dome is in fully extended position.



2,446,349
ELECTRODEPOSITION OF ALUMINUM
Thomas P. Wier, Jr., Berkeley, Calif., and Frank H. Hurley, Portland, Oreg., assignors to The William Marsh Rice Institute for the Advancement of Literature, Science and Art, a corporation of Texas
No Drawing. Application February 29, 1944, Serial No. 524,486
2 Claims. (Cl. 204—14)

1. A process of electroplating that comprises electrodepositing aluminum as a bright, adherent deposit on a metal from the group consisting of iron, copper, brass, bronze, lead, and nickel and tin from a cell containing a liquid nonaqueous electrolyte consisting essentially of a mixture of (1) about 2 mols of aluminum chloride, (2) about 1 mol of ethyl pyridinium chloride, and (3) a sufficient amount of toluene to saturate the mixture.

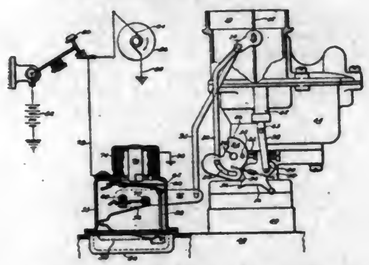
2,446,350
ELECTRODEPOSITION OF ALUMINUM
Thomas P. Wier, Jr., Berkeley, Calif., assignor to The William Marsh Rice Institute for the Advancement of Literature, Science and Art, a corporation of Texas
No Drawing. Application February 29, 1944, Serial No. 524,487
1 Claim. (Cl. 204—14)

In a process of electroplating with aluminum, the step of subjecting an article of a metal from the group consisting of brass, copper and iron, serving as a cathode, simultaneously to an alternating current and a direct current, passed between said cathode and an aluminum anode and through a fused, anhydrous bath consisting of (1) about two mols of aluminum chloride and (2) about one mol of ethyl pyridinium chloride, to plate aluminum onto said article; the root mean square value of the alternating current being about two to three times the value of the direct current.

2,446,351
MANUFACTURE OF CARBON BLACK
Ira Williams and Frank W. Seifridge, Borger, Tex., assignors to J. M. Huber Corporation, Borger, Tex., a corporation of Delaware
Application January 11, 1944, Serial No. 517,772
9 Claims. (Cl. 23—259.6)

1. Apparatus for producing carbon black by the impingement process which comprises a plurality of parallel elongated channel members, a burner pipe spaced below each channel member and extending parallel to the channel member, a series of longitudinally spaced slotted burner tips in the upper surface of each burner pipe so located as to emit a series of longitudinally spaced flat streams of burning gaseous fuel impinging upon the lower surface of the channel member and depositing carbon on such lower surface, air-guiding members open at the top and bottom and having only walls extending substantially

vertically and comprising two substantially vertical walls adjacent to, but out of contact with, opposite sides of each burner pipe extending parallel to the axis of the burner pipe for substantially the length of the channel member, said walls extending upwardly from below the burner pipe and terminating at a point between the top of the burner pipe and five-sixths of the distance from the burner pipe to the channel member and being spaced apart by a distance greater than the width of the burner pipe but less than the width of the channel member, the walls being spaced substantially equal distances from the sides of the burner pipe, partitions intermediate each two spaced burner tips and at each end of each pair of spaced walls, each partition lying in a plane at right angles to the axis of the burner pipe and extending from one vertical spaced wall to the other, the walls and partitions being out of contact with the streams of burning fuel with no portion of said walls or partitions converging toward the streams of burning fuel, and a common enclosure for said channel members, burner pipes and air-guiding members.



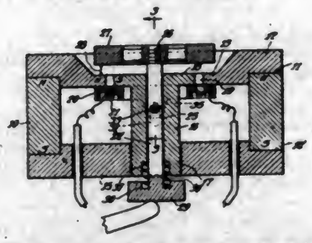
8. Apparatus for the production of carbon black which comprises a gas supply line, a plurality of burner tips connected to said supply line, a substantially rectangular imperforate shield extending around and substantially above and below each burner tip, said shield being so constructed as to prevent air being laterally directed into the flame and as to cause laminar flow in the flame zone, and between the flame and the walls of the shield, and having a permanently bright inner reflecting surface, and a member arranged at such height above the tips as to present a cooling surface against which the flame may impinge.

2,446,352

AUTOMATIC CHOKE

Arthur G. Winter, Pleasant Ridge, Mich., assignor to George M. Holley and Earl Holley

Application June 8, 1946, Serial No. 675,509
4 Claims. (Cl. 123—179)



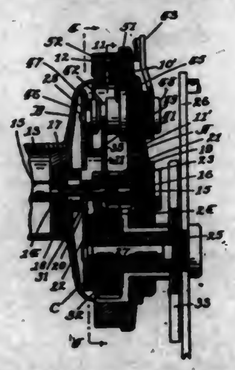
1. A mixture enrichening device for starting an internal combustion engine having an electric starting switch in said circuit, a source of electricity connected to said circuit, a second circuit also connected to said source and also controlled by said starting switch, an electromagnet in said second circuit, an armature adapted to be attracted by said electromagnet whenever the starting switch is closed, a first thermostat connected to said armature, a second thermostat, said thermostat having a U-shape and being pivotedly mounted on the engine having one free end, the other end of the U resting on the engine, a link connecting this other end of the second thermostat with the free end of the first thermostat so that the free end of the U-shape of the second thermostat receives additional motion from the motion of the said armature and the extent of said motion is reduced as the temperature of the first thermostat is increased, a carburetor, an air entrance therein, a choke valve therein, a choke valve lever therefor, linkage connecting this choke valve lever to the free end of the U-shaped second thermostat.

2,446,353

TEMPERATURE RESPONSIVE CONTROL DEVICE

Robert A. Wittmann, Chicago, Ill., assignor to E. B. Mathewson Co., Chicago, Ill., a corporation of Illinois

Application February 19, 1945, Serial No. 578,689
7 Claims. (Cl. 175—336)



1. A re-set type heat responsive actuator for indicating or control means capable of operation in gas or liquid environment and positive in its operation, comprising a magnet, a highly permeable circuit therefor comprising two ferromagnetic concentric members constituting opposite poles for said magnet and separated from each other by a narrow circular gap, two armatures, one on each side of said gap and fixed to each other, means mounting said armatures for movement axially with respect to the gap whereby either of said armatures may be brought into close juxtaposition to the members and become a magnetic shunt across the gap, one of said armatures having a Curie point much lower than the other, and re-set means for moving the last named armature to engagement with said members.

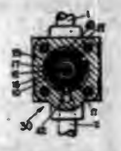
2,446,354

FISHING REEL

Benjamin M. Wolfe, Monterey Park, Calif.

Application December 2, 1944, Serial No. 566,315
1 Claim. (Cl. 242—84.7)

In a fishing reel having a supporting head, a freely revoluble spool provided with a two part



clutch, one part of which is permanently connected with said spool and the other slidably supported within said head, and an operating stud journaled freely in said supporting head having a manually operable crank arm on its outer end portion and an annular groove in its inner end portion; an actuator for said slidably supported clutch member comprising a yoke having opposite compensating arms and its body portion operatively engaged with said slidable clutch member, guides in said supporting head for the outer end portions of said arms, compression springs on said guides for compensating and tilting the actuator to engage the sliding clutch member with the driven clutch member, and an actuating arm portion extending laterally from the body portion of said yoke having its outer end portion freely fulcrumed and rotatively engaged between the walls of the groove in said stud, and a crank arm extending laterally from the inner end portion of said stud and having a cam surface impressed against the median portion of said actuating arm between said fulcrum and clutch elements to effect the release of said sliding clutch member by the rotation of said stud.

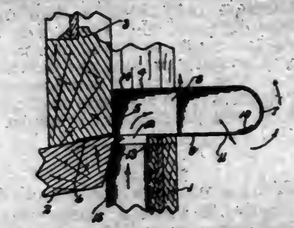
2,446,355

DETENT MECHANISM FOR PRESSURE REGULATORS

Fred J. Wright, Upper Arlington, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company, a corporation of Ohio

Application July 20, 1944, Serial No. 545,836
2 Claims. (Cl. 74—527)

1. A detent including a body having a cylindrical bore, a shiftable piston in said bore, a groove in said body, a pair of grooves in said piston selectively positionable opposite said body groove as said piston is shifted in said bore, a coil spring in said body groove having two ends contacting the bottom thereof and having a longitudinal axis which is normally substantially straight when said spring is released but which is curved by the action of said piston contacting it, said coil spring having direct contact at its inner center portion with said piston while being held in said body groove, said body groove having sufficient depth to permit said piston to deflect said spring while moving between its adjacent positions.



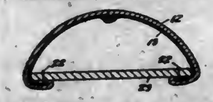
2,446,356

WINDOW STOOL AIR OUTLET

Jerold H. Van Alsburg, Holland, Mich., assignor to Hart & Cooley Manufacturing Company, Holland, Mich., a corporation of Delaware

Application August 12, 1946, Serial No. 689,993
4 Claims. (Cl. 98—90)

1. In a structure as described, an elongated housing having a substantially horizontal top of sheet metal, a vertical side section extending from said horizontal top at its outer edge for a distance and an outwardly extending flange extending from said section, said top at its opposite longitudinal edge being curved downwardly and back upon itself to provide an opposite side for the housing, vertical ends, a substantially horizontal bottom having an air entrance opening and downwardly extending walls surrounding said opening, said bottom at both ends thereof having forwardly extending fingers secured to said curved side of the housing with an



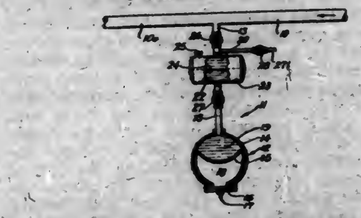
air outlet opening between the adjacent edges of said bottom and side members and disposed between said fingers, said wall around the air inlet opening being adapted to have connection with a vertically disposed air carrying flue.

2,446,357

TURN SHOE AND METHOD OF MANUFACTURE

Anthony Vigorith, Cincinnati, Ohio

Application October 17, 1945, Serial No. 622,875
9 Claims. (Cl. 36—19)

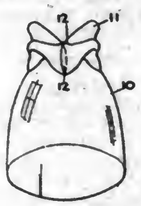


9. A turn shoe structure comprising in combination, a plain and flat unmutilated insole having a toe portion, a shank portion, and a ball portion, a heel shank piece, a shoe upper with a lining therein, the upper including a heel portion with a depending flange lasted to the heel shank piece, a toe portion having a depending flange lasted to the toe portion of the insole, and an intermediate portion including lower edges located between the depending flanges of the toe and heel portions of the upper, an evaginated connection securing the intermediate portion of the upper to the insole marginally at the ball portion of the latter, a plain flat unmutilated outsole overlying the insole, the lower edges of the shoe upper, and the lasted-in toe and heel flanges, and means concurrently securing the outsole to the upper and the insole.

2,446,358

LIQUID SEAL PULSATION DAMPENER

Cecil F. Yates, North Hollywood, and Claude B. Nolte, Altadena, Calif., assignors to The Fluor Corporation, Ltd., Los Angeles, Calif., a corporation of California

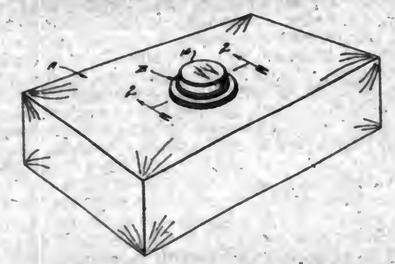


Application August 3, 1946, Serial No. 688,242
5 Claims. (Cl. 138—30)

1. Apparatus for eliminating pulsations in a fluid stream flowing through a line, compris-

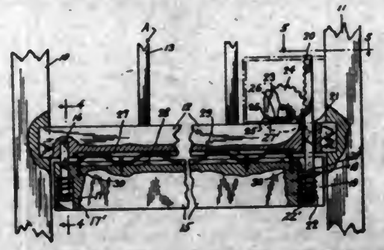
ing a vessel, a flexible diaphragm within and having one side exposed to gas in said vessel, a pressure transmitting connection between said line and the vessel at one side of the diaphragm, said connection containing a diaphragm protective fluid different from the stream fluid and contacting the diaphragm, and means for maintaining the pressure of said gas against the diaphragm so that the gas is compressed and expanded respectively in response to increases and decreases of said fluid stream pressure.

2,446,359
METHOD OF PRODUCING GLASSWARE
Charles W. Carlson, Tiffin, Ohio
Application February 5, 1947, Serial No. 726,519
7 Claims. (Cl. 49—79)



1. A method of producing glassware comprising depositing a gob of glass in a plastic state against the bottom of a pre-formed glass bowl, scoring said gob along radial lines to cause said gob to adhere to said bowl along such lines, and lifting the marginal portions of said gob between said lines from said bowl to produce a plurality of foot formations.

2,446,360
LINE DRAWING ATTACHMENT FOR TYPEWRITERS
Bradley L. Clark, Rockville, Md.
Application July 2, 1946, Serial No. 681,022
2 Claims. (Cl. 197—113)



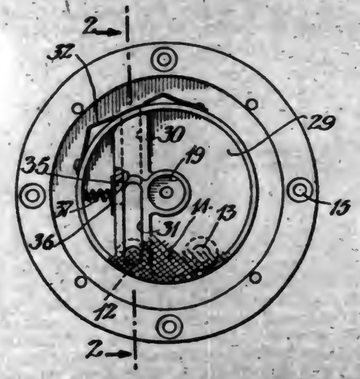
1. Line drawing attachment for typewriters adapted to be spring retained on the type end of any type bar of a typewriter comprising means forming a resilient socket including a base plate having integral opposite convergent resilient side wings extending substantially to the lower end thereof, a top strap extending above said side wings from the upper end of said base plate integral therewith and perpendicular thereto, a resilient tongue integral with said top strap extending downwardly from the rear end thereof parallel to said base plate, and rolling styluses mounted in upper and lower case positions on the front of said base plate.

2,446,361
MOISTURE VAPOR INDICATOR FOR PACKAGED GOODS
Herbert B. Clibbon, Detroit, Mich.
Application July 9, 1945, Serial No. 603,968
5 Claims. (Cl. 312—31.1)

1. A covering for packaged goods comprising an envelope of flexible wrapping material formed with an opening; a transparent container disposed in said opening and communicating with the interior of the envelope; moisture absorbent and indicator means in the container; a rigid coupling carried by the container clamped to the material around the opening; and sealing means between the coupling and said material.

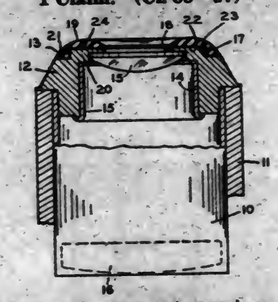
2,446,362
BED COVER HOLDER
Wilbur R. Curtis, Fresno, Calif.
Application March 31, 1944, Serial No. 528,965
2 Claims. (Cl. 5—320)

1. The combination with a bed having stationary side rails, clamping bars, means yieldingly pivoting one end of each bar to a corresponding side rail, toothed rack members, means securing one of the toothed rack members to the other end of each of the clamping bars, a toothed gear, means pivotally mounting the toothed gear on each side rail and meshing with each rack member, and locking means mounted on each side rail and engaging the toothed gear thereon for locking the gear against rotation thereof.



2,446,363
COMBINATION POSITIVE CLUTCH AND TORQUE RESPONSIVE FRICTION COUPLING
Edwin W. Daum, Louisville, Ky., assignor to James Clark Jr., Electric Company, Louisville, Ky., a corporation of Kentucky
Application March 23, 1945, Serial No. 584,461
2 Claims. (Cl. 192—48)

1. A power-driven tool of the "ride-over" type, comprising: a rotatable power shaft; a rotatable spindle; a main clutch for connecting the spindle to and disconnecting it from the shaft, said clutch having a rotatable driving member connected to the shaft, a rotatable driven member connected to the spindle; means yieldably urging the driven member axially toward the clutch disconnecting position, the driven member being moved bodily to the connecting position when the tool is pressed into operative engagement with the work; a "ride-over" clutch having frictionally-engaging rotatable driving and driven elements pressing against each other and being interposed in the connection between and connected respectively to the power shaft and the driving member of the main clutch, said driving elements being arranged, when a predetermined breakdown load is imposed on the driven elements, to "ride-over" the

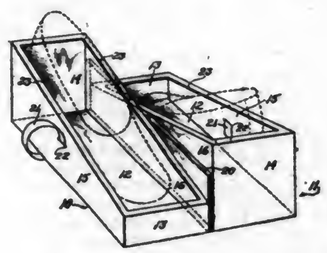


driven elements while maintaining continuous and uniform frictional engagement therewith; and means for adjusting the breakdown point of the "ride-over" clutch to cause it to "ride-over" at any load within a predetermined range of breakdown loads including an adjusting nut threaded to said driving member between the main clutch and the "ride-over" clutch and a spring encircling said driving member between the adjusting nut and the "ride-over" clutch, said spring being arranged to increase and decrease the pressure between the elements of the "ride-over" clutch as the nut is screwed on the driving member toward and away from the "ride-over" clutch.

2,446,364
FILTERING DEVICE
Daniel Douglas Demarest, Little Neck, N. Y.
Application October 11, 1945, Serial No. 621,815
6 Claims. (Cl. 210—167)

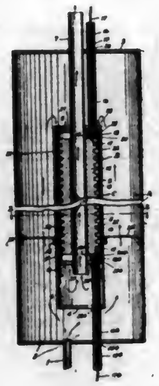
1. A fluid filtering device comprising an inlet chamber and an outlet chamber in adjoining relationship and including a filtering element separating said chambers, said filtering element having on its inlet side, substantially all of its active filtering area at all times exposed to and in direct flow communication with said inlet chamber, an inlet, an outlet for said outlet chamber, a main passageway for conducting the major portion of the fluid from said inlet to said inlet chamber, the fluid delivered to said inlet chamber being adapted to flow to the inlet side of said filtering element, through said filtering element in one direction and into said outlet chamber for discharge through said outlet, a secondary passageway for diverting a minor portion of the fluid from said inlet directly to a portion of the outlet side of said filtering element for flow through said filtering element in an opposite direction and into said inlet chamber, whereby the sediment collected on said filtering element on its inlet side is loosened by the flow of fluid through said filtering element from said portion of the outlet side, said secondary passageway on its discharge end being located against a section of said filtering element directly opposite said inlet chamber and having a cross-section of minor area with respect to the total active filtering area of said filtering element, means for automatically maintaining the pressure at the discharge end of said secondary passageway substantially higher than the pressure in said inlet chamber, to permit the sediment loosening fluid to flow from the discharge end of said secondary passageway through said filtering element and into said inlet chamber, and means for moving said filtering element with respect to the discharge end of said secondary passageway to present different sections of said filtering element to the cleaning action of the fluid in said secondary passageway.

2,446,365
EYEPIECE WITH NONABRASIVE CAP MEMBER
Harold J. Enter, Webster, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application March 5, 1947, Serial No. 732,508
1 Claim. (Cl. 88—57)



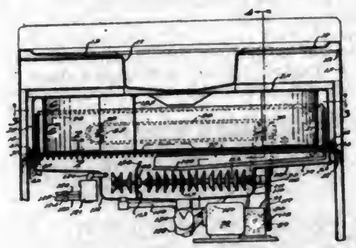
In an optical instrument eyepiece, the combination of an eyepiece tube closed at its outer end by a lens mounting member having a central opening, a boss projecting above the surface of the member around the opening, a shoulder on said boss forming a reentrant portion, and an annular cap member overlying the surface of the mounting member, said cap member having an annular recess with a peripheral reentrant portion, said portions cooperating to hold the cap member on the mounting member, said cap member being formed of a relatively soft material which will not scratch the surface of a spectacle lens upon contact therewith.

2,446,366
DISPLAY BOX
Thomas Byrd Epps, Boston, Mass.
Application May 29, 1944, Serial No. 537,851
1 Claim. (Cl. 206—45.11)



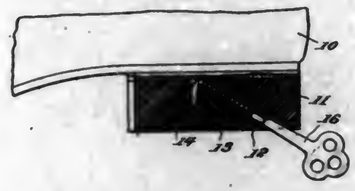
An elongated rectangular box comprising upper and lower sections hingedly connected together with their meeting edges in the closed position lying in a longitudinal diagonal plane, each of said sections being of the same size and shape and each having approximately the external shape of a truncated right prism, the hinge connecting the sections extending longitudinally of

the box and medially along one vertical side of the box, and said sections when hinged to open position having their bottoms in a common plane, each section also in the open position comprising a flat rectangular bottom wall, two perpendicular oppositely disposed end walls of different



heights, and two perpendicular oppositely disposed side walls whose tops are straight and slant downwardly from the top of the higher end wall to the top of the lower end wall, the higher end wall of each section being disposed alongside of the lower end wall of the other section in open position.

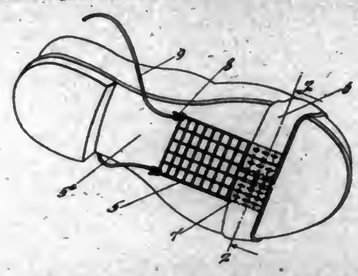
2,446,367
ELECTRIC WATER HEATER
Frederick Graves, St. Louis, Mo.
Application August 3, 1945, Serial No. 608,776
10 Claims. (Cl. 219—39)



1. An electric water heater comprising a reservoir having an inlet at the end thereof, a tubular casing located in said reservoir and spaced from the side and both ends thereof, said tubular casing being closed at its lower end and open at its upper end, an electric heating unit located in said tubular casing and spaced therefrom to form a chamber at the closed lower end thereof and a passageway leading from said chamber and opening into said reservoir at said open upper end of said casing, and a central outlet tube passing through said electric heating unit and opening at its lower end into said chamber and extending exteriorly of said reservoir at the upper end thereof.

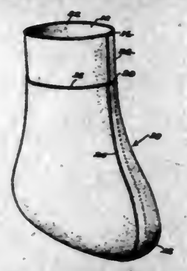
2,446,368
CONVEYER TYPE DISHWASHER
Alfred H. Haberstump, Detroit, Mich., assignor to The Murray Corporation of America, Detroit, Mich., a corporation of Delaware
Application January 7, 1942, Serial No. 425,817
7 Claims. (Cl. 134—78)

1. A machine for washing articles comprising a compartment, a conveyor for moving articles through the machine comprising a series of spaced supporting rods in the compartment disposed crosswise of the path of movement of the conveyor for supporting the articles to be washed, means for relatively moving alternating rods so that at one interval an article is supported by certain rods and at another interval by other rods so as to complete the exposure of the entire supported surface of the article, and means for throwing a cleaning fluid in sheets parallel to said rods for passing therebetween against the articles as they are advanced thereby.



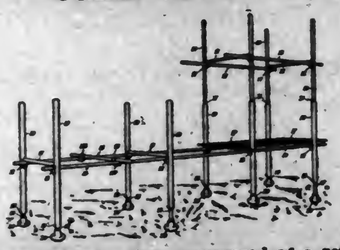
2,446,369
FLEXIBLE HEEL ADJUSTER
Donovan H. Hardy, Los Angeles, Calif.
Application September 30, 1947, Serial No. 776,880
3 Claims. (Cl. 36—36)

2. An adjustable heel saver comprising a sleeve having internal threads, a screw having a bent portion serving to anchor the screw in the heel material whereby to prevent the turning of the screw when the sleeve is adjusted thereon, said bent portion extending to one side of the axis of the screw, said bent portion being flattened whereby to provide a large contact area of the screw with the heel material.



2,446,370
SAFETY ATTACHMENT FOR SHOES
Wesley Blake Henderson, Lewistown, Ill.
Application November 14, 1946, Serial No. 709,807
1 Claim. (Cl. 36—7.7)

A safety attachment for shoes comprising a flat relatively inflexible mesh wire pad, an elastic toe encircling band carried by the forward portion of said pad, said toe encircling band being positionally and dimensionally adapted for resiliently holding said pad against the bottom of a shoe sole, and a pair of strings each terminally secured



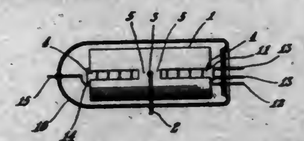
to a rear outside edge of the pad, the other ends of the strings being releasably tied over the instep.

2,446,371
DOG BOOT
Margaret McNeill Jones, Kingsville, Tex.
Application August 19, 1946, Serial No. 691,469
1 Claim. (Cl. 36—2.5)

A device of the character described, comprising a flexible sheet of material bent to conform to the shape of a dog's foot, fastening means securing meeting edges of the flexible sheet in bent shape, a second sheet of material secured to the first sheet and bent to conform to the shape of said first sheet fastening means securing its meeting edges together, and a heavy sole portion secured to said second sheet at the ground engaging portion thereof.

2,446,372
METAL TUBULAR SCAFFOLDING
William Clifford Jones, London, and Leonard Sydney Richards, Solihull, near Birmingham, England, assignors to Scaffolding (Great Britain) Limited, Saunderton, England
Application September 18, 1945, Serial No. 616,982
In Great Britain October 10, 1944
4 Claims. (Cl. 304—2)

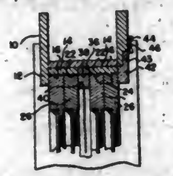
1. A scaffold structure composed of a series of prefabricated H-frames arranged in alignment



in spaced parallel planes, each H-frame constituting a pair of vertical columns of tubular metal tied by a single cross-member permanently connected therebetween, a pair of brackets incorporated in each H-frame, and ledger members connecting adjacent H-frames and resting on and secured to said brackets, the arrangement being such that the structure may be extended upwardly to form successive upper stages by erecting additional prefabricated H-frames with their uprights mounted on the upper extremities of the lower stage of H-frames.

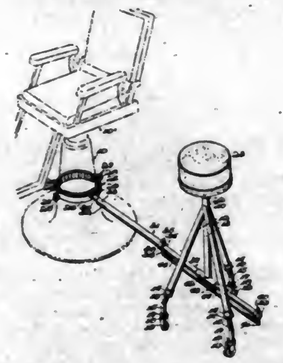
2,446,373
SLURRY FEEDING APPARATUS
William B. Klein, Chicago, Ill.
Application September 1, 1944, Serial No. 552,361
10 Claims. (Cl. 259—43)

1. In slurry feeding apparatus, the combination of a tank adapted to hold a deposit of filtering material in the form of a relatively thick slurry with a superposed volume of liquid, the tank being provided with an aperture in its bottom, a feeder valve casing communicating with the aperture in the tank bottom and a valve for regulating the discharge of slurry through said aperture, the valve casing being provided with communicating inflow and outflow channels and an inner passageway adapted to receive slurry admitted by the valve, an inner mixing tube within the outflow channel apertured at the inner end portion and communicating with said inner passageway and adapted to receive liquid diverted from the outflow channel to the interior of the tube to mix with and increase the liquification of the slurry within the mixing tube prior to its discharge into the stream flowing through the outflow channel.



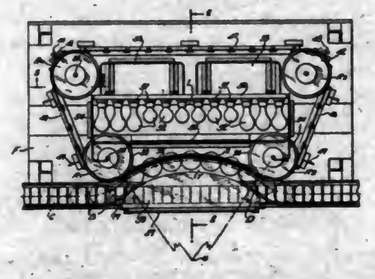
2,446,374
VERY HIGH FREQUENCY ELECTRIC DISCHARGE TUBE
Kornelis Swier Knol and Johannes Marinus van Hofweegen, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 22, 1946, Serial No. 663,838
In the Netherlands December 4, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires December 4, 1962
4 Claims. (Cl. 250—27.5)

1. An electric discharge tube particularly adapted for operation at frequencies above 300 megacycles comprising, a cathode, a tubular anode surrounding said cathode, and a supply lead attached to said anode on the surface thereof remote from said cathode, said supply lead being attached to said anode at a point approxi-



mately midway between the ends of the anode and said anode being provided with a slit portion extending from opposite ends of the anode to a point adjacent to the point of attachment of said supply lead to said anode, and a shielding member secured to said anode and positioned over and spaced from said slit portion to prevent the passage of electrons from said cathode into space beyond said anode, thereby to shorten the surface conducting path from the supply lead to the surface of said anode.

2,446,375
AIR-LOCKED WINDOW
Joseph B. Liberty, Royal Oak, Mich.
Application January 14, 1946, Serial No. 641,041
3 Claims. (Cl. 160—101)



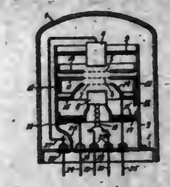
1. A device of the character described comprising a window frame, removable inserts in said frame, sashes mounted in said inserts, spacing means between said inserts forming with adjacent sashes in the inserts channels for slidably mounting a window screen therein.

2,446,376
HORIZONTALLY SWINGING BRACKET SUPPORTED AUXILIARY CHAIR
Robert J. Littlejohn, Greenville, S. C.
Application April 25, 1946, Serial No. 664,807
4 Claims. (Cl. 155—81)

4. An auxiliary chair or stool for use in connection with a barber chair having a pedestal, comprising a frame including a substantially vertical tube and a plurality of downwardly diverging legs secured to the upper end of the tube and forming a group surrounding the tube, the legs extending downwardly below the tube and the tube being arranged centrally of the group and having its lower end terminating near the floor, casters secured to the lower ends of the legs, an elongated generally radial horizontal guide member, means to pivotally mount one end of the guide member upon the pedestal so that the guide member is free to swing substantially horizontally in opposite directions, an element secured to the lower end of the vertical tube and slidably engaging the elongated guide member and permanently free to be shifted longitudinally of the guide member within limits, means to positively limit the outward movement of the element with relation to the elongated guide member so that the element and guide member cannot be separated, a retractile coil spring arranged exteriorly of the guide member and beneath and in substantial vertical alignment with the guide member to be covered thereby and having one end attached to the slidable element and its opposite end attached to the guide member, a seat, and a rod carrying the seat and adjustably mounted in the upper end of the vertical tube so that the seat may be raised and lowered.

2,446,377
APPARATUS FOR INSPECTING MOVING TRANSPARENT OBJECTS
Henry Hall Marshall, Garden City, N. Y., assignor, by mesne assignments to Pabst Brewing Company, Chicago, Ill., a corporation of Delaware
Application August 29, 1944, Serial No. 551,759
8 Claims. (Cl. 88—14)

1. Inspection device for light transmitting articles, comprising in combination, a source of light, a conveyor for feeding the articles in linear succession in contact with each other in a path adjacent said light source, a shield of light resisting material having apertures shaped to receive said articles, whereby light from said source is transmitted through said articles, and glare from said light source outside of said articles is obstructed, means for supporting said shield for lateral movement, means directing articles from said conveyor into the apertures in said shield, whereby said shield is moved by the articles being fed by said conveyor and entering said apertures, and guiding means cooperating with said shield and conveyor for moving the articles along an arcuate path having a center of curvature lying on the opposite side of the arcuate path from the light source.

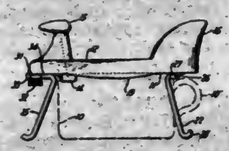


2,446,378
AUTOMATIC SALIVA KEY FOR TROMBONES
William H. Maxwell, Elberton, Ga.
Application February 16, 1946, Serial No. 648,137
8 Claims. (Cl. 84—397)

1. In a trombone, a standard type slide embodying inner and outer telescoping slides, the outer slide being a customary U-slide, said U-slide being provided in its bend with a moisture drain hole, an exteriorly arranged spring closed valve coacting with and normally closing said hole, and coacting means between the inner slide drain hole and valve for opening the valve, under predetermined circumstances and at a predetermined stage of relative movement of said slides, where-

by to automatically drain moisture by way of said drain hole.

2,446,379
ELECTRON TUBE STRUCTURE
Elmer D. McArthur, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application December 29, 1944, Serial No. 570,258
10 Claims. (Cl. 250—27.5)

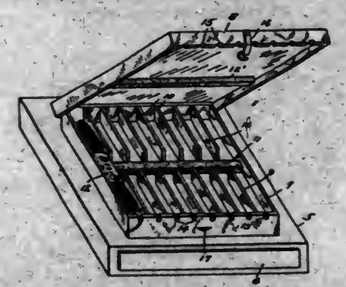


1. An electron discharge device comprising an envelope member, a hollow metallic member supported within said envelope member, a cathode, a control grid, a screen grid, a suppressor grid, and an anode supported within said hollow metallic member, said electrodes having planar active electrode surfaces mounted in the order named, conductive means connected respectively with said suppressor grid and said screen grid and supported in spaced insulated relation to provide a capacitive coupling between said suppressor grid and said screen grid, and externally accessible conductive means connected to said hollow metallic member.

2,446,380
FLUID SEAL
George L. Meyers, Willoughby, and John C. Shutt, Wickliffe, Ohio, assignors to The Ohio Rubber Company, Willoughby, Ohio, a corporation of Ohio
Application April 12, 1945, Serial No. 587,908
2 Claims. (Cl. 288—2)

1. A shaft seal comprising an annular mounting section and an annular shaft engaging section formed of one piece of yieldable rubber-like material with a relatively thin connecting portion between the sections to permit radial movement of one section relative to the other, said shaft contacting section having an internal surface provided with a V-shaped helical thread, the apex of which is adapted to contact the shaft, and also having an annular shaft engaging sealing surface of appreciable width adapted to maintain the apex of the thread in contact with the shaft and prevent distortion of the thread by excessive contact pressure.

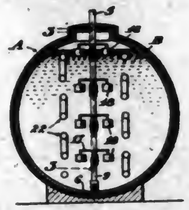
2,446,381
NURSERY TOILET SEAT
Hixon K. Middleton, San Jose, Calif.
Application July 12, 1947, Serial No. 760,535
4 Claims. (Cl. 4—239)



2. A nursery toilet seat for use with a flanged pot comprising, a seat member having a central opening, a pair of legs rigidly attached to the rear of the seat and so disposed thereon that they abut the pot when the latter is in registry with the central opening in the seat, a leg slidably connected at the front of the seat and so disposed thereon that when in its innermost position it abuts the pot when the latter is in registry with the central opening in the seat, and means carried by the seat for clamping the slidable leg in its innermost position.

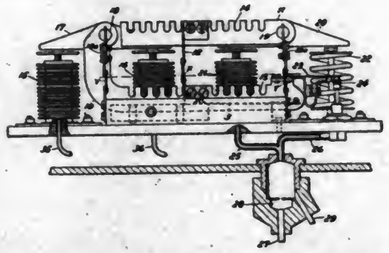
2,446,382
2-FLUORO-1,3-DIENE POLYMERS
Walter E. Mochel, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 20, 1944, Serial No. 536,613
2 Claims. (Cl. 260—92.7)

1. A synthetic rubber-like material of the class consisting of homopolymers of a polymerizable 2-fluoro-1,3-diene and copolymers of the same with unsaturated compounds containing the terminal grouping $CH_2{=}C<$ which are polymerizable therewith in aqueous emulsions and from monomer mixtures containing at least 50% of the 2-fluoro-1,3-diene, which polymers have been obtained by emulsion polymerization of the monomers in the presence of from 0.5% to 5.0% of 2,2-difluorobutene-3, based on the weight of the polymerizable monomers.



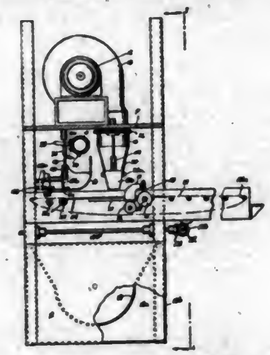
2,446,383
EMBROIDERY FLOSS HOLDER AND DISPENSER
Dorace E. Motz, Van Nuys, Calif.
Application April 12, 1946, Serial No. 661,466
2 Claims. (Cl. 223—107)

1. An embroidery floss cabinet, comprising a main portion, partitions disposed within the main



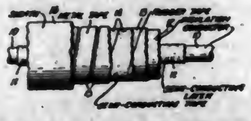
portion and extending inwardly from the front wall thereof, partitions extending forwardly from the rear wall of the cabinet, the adjacent inner ends of the partitions being spaced apart, said partitions providing compartments for the reception of skeins of embroidery floss, a clamping member supported within the space between the adjacent ends of the partitions, a hinged cover for the cabinet, a clamping member carried by the hinged cover and cooperating with the clamping member within the main portion for clamping skeins of embroidery floss within the compartments and said cabinet having openings through which the embroidery floss is pulled for use.

2,446,384
ASPHALT PUMP INTAKE
Wayne V. Murdock, Los Angeles, Calif.
Application November 26, 1943, Serial No. 511,879
2 Claims. (Cl. 137—21)



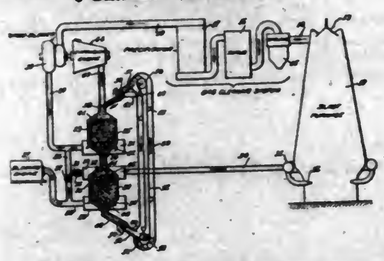
1. In a float valve controlled conduit structure, an upstanding conduit having when mounted in a filled tank a series of open inlets communicating with the conduit at different points along its length and arranged so that the contents of the tank may be pumped out through said conduit in an upward direction, a float controlled valve for each of said inlets supported by said conduit and arranged successively to close the inlets of said series in a direction opposite to the flow of the contents through said conduit in time to prevent air from entering said conduit as said inlets are successively exposed to the air by a lowering of the liquid level in the tank, the lower end of said conduit being constructed to rest on the bottom of the tank and having a laterally opening intake which is open at all times.

2,446,385
ADJUSTING ARRANGEMENT FOR PNEUMATIC RELAYS OF THE FORCE-BALANCE TYPE
Floyd B. Newell, Rochester, N. Y., assignor, by mesne assignments, to the United States of America, as represented by the United States Atomic Energy Commission
Application May 8, 1946, Serial No. 668,304
5 Claims. (Cl. 74—470)



1. In a relay device, a pair of shafts mounted in spaced parallel relation to each other, a pair of flexible supports for the respective ends of each shaft, a lever secured to each shaft, said levers extending from their respective shafts in superimposed parallel relation with each other, an edge of each lever having notches therein, and a member provided with a flexible portion and serving to connect said levers, said member being provided at each end thereof with means to engage a pair of superimposed notches in each of the respective levers whereby the effect of movement of one of said levers on the other can be adjusted at will.

2,446,386
RAPPING MECHANISM FOR CONFECTION COATING MACHINES
George Simpson Perkins, Kew Gardens, Long Island, N. Y., assignor to National Equipment Co., New York, N. Y., a copartnership composed of Joseph Greenberg, Herman Greenberg, Samuel Greenberg, and Sidney Greenberg
Application June 10, 1944, Serial No. 539,681
4 Claims. (Cl. 91—3)

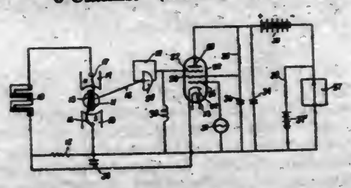


1. In a candy coating machine of the class which has a fixed frame and a rapping frame which is mounted to oscillate up-and-down relative to said fixed frame around a selected horizontal axis, and driven toothed means for oscillating said rapping frame, said rapping frame having pawl means which are located to intermesh with said toothed means so that the actuation of said toothed means oscillates said rapping frame, the improvement which consists of adjusting mechanism which is adjustably fixed to said fixed frame, said adjusting mechanism being constructed and operative to regulate the extent of intermeshing of said pawl means with said toothed means in order to adjust the amplitude of oscillation of said rapping frame, said adjusting mechanism being fixed to said fixed frame during said oscillation of said rapping frame.

2,446,387
SHIELDED CABLE
Thomas F. Peterson, Shaker Heights, Ohio
Application May 19, 1943, Serial No. 487,577
10 Claims. (Cl. 174—105)

10. Cable suitable for X-ray voltages comprising in combination a core including an insulated conductor, a jacket comprising a carrier of insulating character selected from the group consisting of paints and lacquers and conductive particles in the carrier to impart semi-conductivity, and a non-insulated wire enclosed within and contacting the jacket along its length; insulation enclosing the core and intimately contacting the jacket; a semi-conductive film on the outer surface of the insulation; a conductor in contact with the film along the length of the cable; and an enclosing sheath.

2,446,388
PREHEATING FURNACE BLAST
Charles F. Ramseyer, Old Greenwich, Conn., and Cornelius M. Cosman, New York, N. Y., assignors to H. A. Brassert & Company, New York, N. Y., a corporation of Illinois
Application October 20, 1943, Serial No. 506,942
6 Claims. (Cl. 263—19)

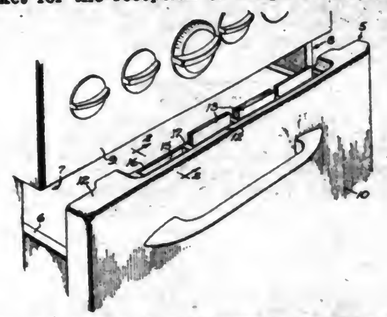


1. The continuous method of preheating air blast for furnaces by heat-exchange contact with recycled ball-like heated elements, which comprises heating the ball-like elements in a heating zone with hot gaseous products of combustion, feeding the heated elements from the heating zone through a heat-exchange zone by gravity, flowing the air to be preheated in heat exchanging relation countercurrently to said elements in the heat-exchange zone to heat the air and cool the elements, maintaining said zones under superatmospheric pressure, and maintaining the pressure in said heat-exchange zone at least substantially equal to the pressure in said heating zone to preclude flow of combustion gases into said heat-exchange zone, returning the cool elements from said heat-exchange zone to the heating zone to repeat the cycle, supplying the preheated blast air from said heat-exchange zone to the furnace, and supplying blast furnace gas from said furnace to said heating zone to provide said hot gaseous products of combustion therein.

2,446,389
CLASP
Richard L. Rank, St. Louis, Mo.
Application June 27, 1945, Serial No. 601,848
5 Claims. (Cl. 24—248)

5. A clasp comprising two opposed jaw members, one of said jaw members having side flanges with inwardly extending bosses at one end thereof and transversely bowed portions forming recesses in the inner side faces thereof, the corresponding end of the other of said jaw members having an extension that is doubled back along the inner face thereof and passes around said pivot bosses, said extension having free transversely curved spring locking tongues projecting from its side edges adapted to snap into said recesses when the clasp is closed, said other jaw member and the doubled-back extension thereof having longitudinal ribs on the opposing faces thereof that are normally spaced apart but are brought into pressure transmitting contact during the snap-action engagement of said tongues with said recesses.

2,446,390
POTENTIOMETRIC AMPLIFIER
Karl Rath, New York, N. Y., assignor to Radio Patents Corporation, New York, N. Y., a corporation of New York
Application September 28, 1943, Serial No. 504,107
8 Claims. (Cl. 171—95)

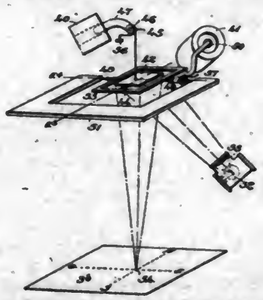


1. An electrical system comprising an input device supplying a relatively weak direct current input voltage; a frequency converter comprising a resonant impedance means, a source of auxiliary high frequency voltage having a frequency normally relatively equal to the resonant frequency of said impedance means, coupling means between said resonant impedance means and said source to develop a secondary high frequency voltage by said impedance means having a phase normally at 90° with respect to the phase of said source voltage and varying in sense and magnitude in proportion to the relative frequency departure between said source and the resonant frequency of said impedance means, and further means for combining said secondary high frequency voltage with said source voltage to produce a direct output current having an amplitude varying in sense and magnitude in proportion to said frequency departure; a current responsive device connected to said input device and means operatively associated therewith to effect a relative frequency departure between said source and the resonant frequency of said impedance means; a resistance traversed by said direct output current and connected in series with said input device and said current responsive device to produce a potential drop substantially counterbalancing said input voltage, whereby to restore the frequency balance between said source and the resonant frequency of said impedance means and to maintain a condition of electrical equilibrium between said direct current input voltage and said output current; and translating means responsive to said output current.

2,446,391
COMBINED CLOSURE AND RECEPTACLE FOR GAS RANGES
Herbert M. Reeves, Kankakee, Ill., assignor to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application March 31, 1945, Serial No. 585,897
2 Claims. (Cl. 312—173)

1. In a cookstove having a utility compartment opening at the front of the stove and a front

panel extending over and defining the upper edge of the compartment opening, an upright closure for the compartment opening supported for movement from an open position to a closed position below and substantially flush with said front panel, said closure comprising a sheet metal panel having a rearwardly turned flange along its upper edge, a portion of said flange being offset downwardly at its rear edge, a receptacle defining a pocket for the reception of recipe cards or the



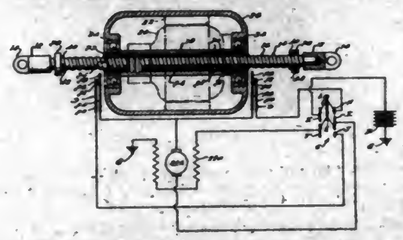
like, means on said receptacle engageable with said downwardly offset portion of the flange to suspend the receptacle from the flange, said downwardly offset portion of the flange providing a clearance space between the lower edge of the front panel and the upper end of the receptacle when the closure is moved into closed position beneath the front panel, said space being closed at the front of the stove by the upper edge of the closure in its said closed position to conceal the receptacle.

2,446,392

LUMINOUS TELETRACING SYSTEM

Secundino Rey, Ramos Mejia, Argentina

Application May 5, 1945, Serial No. 592,240
In Argentina November 9, 1944
3 Claims. (Cl. 178—19)



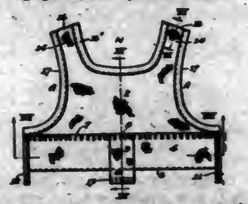
1. In a telescriber system, a transmitting station comprising a stylus, Cardan universal mounting means for displaceably mounting said stylus and comprising two nested frames having connecting pivot shafts respectively lying in two mutually perpendicular co-planar axes, a pair of variable electrical impedance elements respectively mounted for adjustment by movements of said shafts, a pair of oscillators of different frequency ranges respectively comprising said impedance elements and adapted to have their output frequencies respectively varied by said impedance elements, time division duplex transmitting means adapted during alternate brief intervals to transmit the so varied outputs of said oscillators respectively, a receiving station comprising a light source and an electro-optical system having a mirror positioned to reflect a beam from said light source and further having Cardan universal mounting means for displaceably mounting said mirror, said last mentioned mounting means comprising two nested frames having connecting pivot pins respectively lying in two mutually perpendicular co-planar axes, individual electrical means for displacing each said frame, individual input paths for each of said electrical means comprising frequency selective units respectively adapted to transmit the two different frequency ranges of said oscillators, and signal translating means interconnecting said transmitting station and said receiving station and adapted to transmit the output of said time division multiplex transmitting means to said input paths of said receiving station.

2,446,393

SCREW-THREADED MECHANICAL MOVEMENT

Robert C. Russell, Cleveland Heights, Ohio, assignor to Eaton Manufacturing Company, Detroit, Mich., a corporation of Ohio

Application June 14, 1945, Serial No. 599,417
10 Claims. (Cl. 192—.02)



1. A mechanical movement comprising, in combination, a screw member having a concentric helical groove in the peripheral surface thereof, a nut member having a bore therein in which said screw member is received, said nut member having a concentric circumferentially continuous annular groove in the bore thereof, a ball simultaneously received in both of said grooves and serving to operatively interconnect said screw member and said nut member, and a pair of means carried by said screw member spaced axially of said screw member from each other by a distance materially in excess of the diameter of said ball and operative to limit the movement of said ball in said groove of said screw member beyond predetermined positions axially of said screw member, said ball being always free to move about the axis of said nut member in said groove in said nut member.

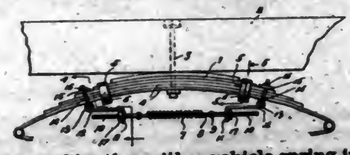
2,446,394

CHILD'S GARMENT

Marguerite H. Sunseri, Pittsburgh, Pa.

Application June 6, 1946, Serial No. 674,830
3 Claims. (Cl. 2—112)

1. A child's undergarment comprising a front section and back section both connected at the



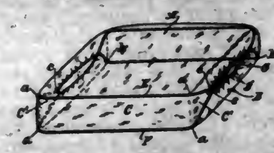
transverse waist portion and with pairs of upwardly extending shoulder strap sections, said waist portion being doubled upon itself to provide an upper edge, means connecting the waist portion at one side, means connecting the shoulder strap sections, and a plurality of freely depending attaching tapes connected with the upper edge of the outer layer of the waist portion.

2,446,395

VEHICLE SPRING SUPPORTER

Columbus C. Wallace, Fort Henry, Tenn.

Application May 14, 1945, Serial No. 593,648
2 Claims. (Cl. 267—28)



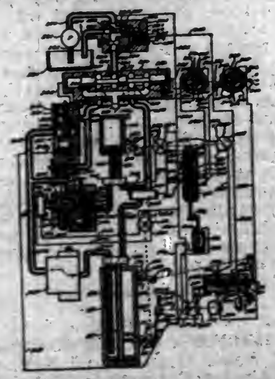
1. In combination with a vehicle spring including a plurality of longitudinally bowed leaves and clips binding the leaves to each other, a reinforcement for the vehicle spring comprising a helical spring extending longitudinally of the vehicle spring in a straight line and in spaced relation to the concaved surface of the vehicle spring, and having hooks at its ends, eye bolts carried by the hooks of the helical spring and extending from opposite ends of the helical spring longitudinally thereof, brackets formed of stiff metal strips and each having its inner end portions bent to form a tongue having an opening therein and its outer end rolled to form a sleeve, said eye bolts passing through the openings of the tongues and carrying nuts for engaging the tongues and applying desired tension to the helical spring when tightened, U-shaped clamps having bridge portions loosely passing through said sleeves and their arms extending along opposite sides of the vehicle spring extending across the vehicle spring and having clamping plates projecting from opposite sides thereof and formed with openings through which the arms of said clamps pass, and nuts carried by the arms of the clamps for engaging the plates and tightly holding the clamps to the vehicle spring outwardly of said clips.

2,446,396

CUSHION COVER

Theodore Waranch, Baltimore, Md., assignor to The Comfy Manufacturing Company, Baltimore, Md., a corporation of Maryland

Application February 28, 1945, Serial No. 580,127
2 Claims. (Cl. 155—182)

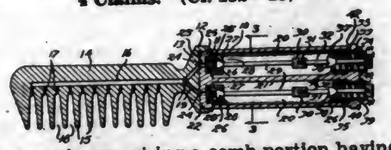


1. A cushion cover comprising a casing having a closed front end forming a pocket for the front end portion of a cushion and adapted to be drawn over and to cover such front end portion, said casing including a cover panel for each of the upper and lower faces of a cushion, each of said cover panels being of a size to extend over and cover a substantial portion of the sides of a cushion and to cover the rear end of a cushion in overlapped relation, a front panel secured along its longitudinal edges to the front edges of said cover panels and having end extensions connected to the side edges of said cover panels to secure the latter in fixed relation to each other, said end extensions being substantially shorter than the side edges of said cover panels and being of substantially triangular form with their apexes directed toward the rear end of the casing so as to maintain such connected side edge portions of the cover panels drawn over the sides of a cushion, the edges of said cover panels rearwardly of the apexes of said extensions being mutually free from each other, and stretchable means mounted on the free edges of said cover panels and extending thereon from the apex of one extension to the apex of the other extension, said stretchable means being mounted on said free edges to form at the rear ends of said cover panels pockets for embracing the rear end of a cushion, to interlock said rear ends in overlapping relation on the cushion, and to secure the free edges of said cover panels against the inserted cushion.

2,446,397

HYDRAULIC CIRCUIT FOR EFFECTING SEQUENTIAL OPERATION OF A PLURALITY OF POSITIVE DISPLACEMENT HYDRAULIC MOTORS OF DIFFERENT SIZES

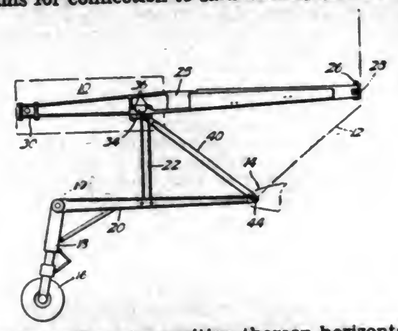
Benedict Welte, Lake Orion Township, Oakland County, Mich., assignor to Colonial Broach Company, Detroit, Mich., a corporation of Delaware



Original application July 23, 1943, Serial No. 495,856, now Patent No. 2,395,702, dated February 26, 1946. Divided and this application September 25, 1944, Serial No. 555,617
2 Claims. (Cl. 60—52)

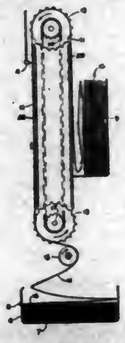
1. In a hydraulic machine, a pair of hydraulically operated motors of different liquid flow requirements, a constant displacement pump, a reservoir connected to the intake of said pump, means including a liquid passageway connecting the pump discharge to said motors for automatically operating them successively through a cycle of operations, said passageway having a restriction therein, a by-pass valve for returning to the reservoir a portion of the liquid delivered by the pump, said by-pass valve being connected to said passageway between the pump and said restriction and having a cylinder, a piston in the cylinder, a valve plunger connected to the piston for controlling the by-pass, said piston being subject at one side to the pressure in the passageway between the pump and the restriction acting in a direction to open the valve,

means including a conduit connecting the liquid at the opposite side of said piston with the passageway on the opposite side of the passageway restriction for maintaining the piston and valve plunger in such a position that a constant pressure drop is maintained across said passageway restriction, said pressure drop being that induced by a flow of liquid sufficient to operate the motor having the largest liquid flow requirement at the desired speed, a small bleed restriction in said conduit, a pair of pressure relief valves connected in parallel between the liquid in the valve cylinder at said opposite side of the piston and the reservoir, one of said pressure relief valves being set to open when the pressure exceeds a predetermined maximum and the other being set to open at a lower pressure, said relief valves and their connections being less restricted when the relief valves are open than said conduit restriction, and means to block flow through said other relief valve when the motor having the largest liquid flow requirement is operating.



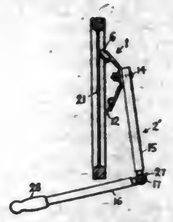
2,446,398
HANDY COMB
Charley S. Wilson, Pindall, Ark.
Application September 21, 1946, Serial No. 698,516
4 Claims. (Cl. 132—13)

1. A comb comprising a comb portion having a longitudinal passage in the back thereof with lateral passages communicating with the spaces between the teeth of the comb, said comb having an enlargement at its inner end, a cylinder coupled in said enlargement and communicating with the passage interiorly, valve seats at the inner and outer ends of the handle, valves detachably connected and cooperating with said seats to simultaneously seat and unseat, and inwardly movable means connected to the valves and normally held outwardly at the outer end of the handle, to normally seat said valves and permit the same to be pressed inwardly for unseating the same to supply air to the interior of the handle and permit liquid therein to flow to the passage and spaces between the teeth of the comb.



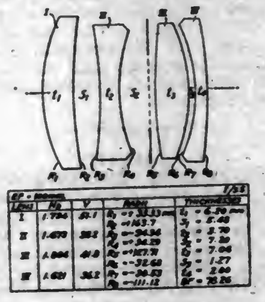
2,446,399
AIRCRAFT ENGINE SUPPORT
Robert J. Woods, Grand Island, N. Y., assignor to Bell Aircraft Corporation, Buffalo, N. Y.
Application January 10, 1947, Serial No. 721,381
5 Claims. (Cl. 244—54)

1. A mounting for supporting an aircraft engine and landing gear relative to an airframe, said landing gear comprising a horizontally extending beam structure connected at one end to the airframe, said engine having a substantially rigid crankcase, said mounting including a pair of beams extending substantially horizontally and parallel from spaced connections to said airframe, said beams being disposed at their extending end portions to lie alongside said crankcase at opposite sides thereof, means connecting said beams to the sides of said crankcase so as to become structurally integral therewith, obliquely lateral and vertical brace means connected to said airframe and extending therefrom obliquely towards said beams and into connection with said beams at positions remote from the connections of said beams to said airframe, and vertical truss means extending from said beams for connection to said landing gear struc-



ture extending at a position thereon horizontally displaced from said airframe for stabilizing said landing gear structure vertically and laterally and torsionally.

2,446,400
CHART SUPPORTING AND FEEDING MEANS FOR RECORDING INSTRUMENTS
Rew E. Woolley, Cleveland Heights, Ohio, assignor to Bailey Meter Company, a corporation of Delaware
Application November 10, 1944, Serial No. 562,868
2 Claims. (Cl. 346—22)



1. In a recording instrument having a casing with a removable access panel, a device enclosed within the casing behind said panel for continuously feeding a strip chart past a recording pen, said device being mounted in said casing for forward tilting of its upper end about a horizontal axis and including a front face defining portion adjacent said panel, and a strip chart supporting means within said casing rearwardly of said device, the combination of a drawer with an outer end panel separate from and positioned below said device and constructed and arranged to receive the chart as it is fed from said device, the access panel having an opening shaped and arranged to be filled by the outer end panel of said drawer when said drawer is in closed position and through which said drawer may be removed outwardly of the casing and relative to the feeding device without interrupting the recording operation, and means for slidably supporting said drawer within said casing in a position for receiving said chart and for movement through said opening.

2,446,401
WINDOW CLEANER
Samuel Ziskind, New York, N. Y., assignor to Safeway Specialty Corporation, New York, N. Y., a corporation of New York
Application May 10, 1946, Serial No. 668,885
3 Claims. (Cl. 15—121)

2. A window cleaning device comprising a holder of a generally rectangular shape, formed with an intermediate portion and inclined sides extending therefrom with longitudinally extending slots in the two opposite free edges of said sides for carrying cleaning elements in the form of strips, said intermediate portion having an opening therethrough; an arm having a handle at one end and a transverse opening adjacent the other end thereof for registry with said opening through the intermediate portion, whereby said intermediate portion and a longitudinal portion of the arm adjacent the other end are adapted to be connected in parallel relationship, one of said sides forming an acute angle with said longitudinal portion; and means to rotatably and adjustably attach the holder to the other end of the arm, the arm consisting of two bars pivotally connected together, and the bars having interlocking serrations at their pivotal connection.

2,446,402
CAMERA LENS
George H. Aklin, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application September 21, 1946, Serial No. 698,552
4 Claims. (Cl. 88—57)

1. A photographic objective consisting of four lens elements, of which the last two are the closest together, in which the refractive indices N, the dispersive indices V, the focal length f of the lens elements and the radii of curvature R of the front and rear surfaces of the respective lens elements, each numbered by subscripts in order from front to rear, are within the limits specified in the following algebraic relationships:

$1.65<(N_2+.05)<N_1<1.95$

$1.68<N_3<1.95$

$0.14<(N_3-N_4)<0.35$

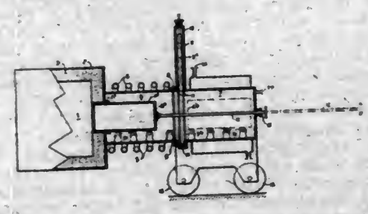
$0.56V_1<V_2<0.72V_1$

$0.75V_2<V_4<0.95V_3$

$4.5<F\left(\frac{1}{f_1}+\frac{1}{f_2}\right)<4.9$

$3.9<-F\left(\frac{1}{f_3}+\frac{1}{f_4}\right)<4.3$

$1.25F<+R_2<\infty$



$0.28F<+R_4<0.50F$

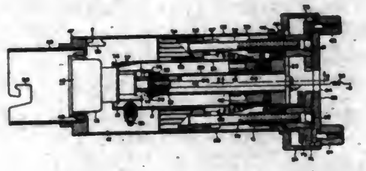
$0.28F<-R_6<0.50F$

$0.28F<-R_7<0.50F$

where F is the focal length of the objective and the + and − values of radii indicate surfaces respectively convex and concave toward the front.

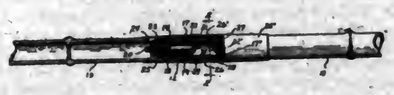
2,446,403
PROCESS AND APPARATUS FOR THE VACUUM PRODUCTION OF MAGNESIUM
Georges Bassereau, Paris, France, assignor to Societe D'Etude Pour L'Industrie Du Magnesium, Paris, France
Application June 18, 1945, Serial No. 600,031
In France May 5, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires May 5, 1964
4 Claims. (Cl. 75—67)

1. Apparatus for the manufacture of magnesium or the like that includes three chambers of which the second is constructed to be conjoined and sealed to the first and moved into the third, evacuating means to evacuate the three chambers, heating means to maintain the first chambers at a temperature at which the metal is vaporized, cooling means to maintain the second and third chambers at a temperature at which the metal is condensed, transport means to move the second chamber within the third, and a closure to seal the second within the third.



2. A method of producing magnesium that includes vaporizing magnesium in one of two conjoined zones free of reactive oxygen, condensing the vapors of magnesium under vacuum in the second of the two conjoined zones until it is charged with condensed magnesium, establishing vacuum and a cooling temperature in a third zone conjoined in sealed relation to the first and communicating with the second, and then moving and sealing the second zone within the third zone and cooling it there until it may be exposed to the air.

2,446,404
MOLD FORM
Arthur Basescu, Brooklyn, N. Y.
Application September 23, 1943, Serial No. 503,493
7 Claims. (Cl. 18—45)



1. A destructible form comprising a relatively thick layer of shredded balsa wood and a plaster binding composition, and a relatively thin coating thereover of gypsum and dextrine.

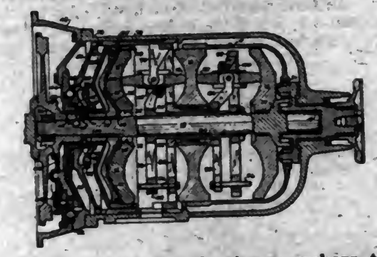
2,446,405
TUNABLE ULTRA HIGH FREQUENCY RESONATOR SYSTEM
Basil A. Bels, Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application October 31, 1945, Serial No. 625,895
10 Claims. (Cl. 178—44)

1. A tunable electrical system comprising, a pair of tunable circuit devices each of which includes an adjustable element supported for longitudinal displacement with respect to a common reference axis to tune each of said devices over a range of operating wave lengths, two pairs of rotatable drive shafts supported in parallel relationship with said reference axis and mechanically coupled to said tuning elements to effect only longitudinal displacements thereof, a pair of identical gears fixedly secured to corresponding portions of one of said pairs of shafts, a pair of identical gears fixedly secured to corresponding portions of the other of said pairs of shafts, a gear freely rotatable on one shaft of said one pair in meshing engagement with said fixed gears secured to said other pair, and means including a gear adjustably fixed on one shaft of said other pair in meshing engagement with said fixed gears secured to said one pair for selectively effecting simultaneous or independent rotational displacement of said two pairs of shafts.

2,446,406
COUPLING
Robert C. Beyerle, Granger, Ind.
Application September 4, 1947, Serial No. 772,141
8 Claims. (Cl. 287—2)

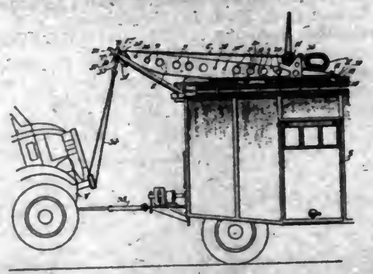
1. A coupling for pipe members, said coupling comprising compressible plugs adapted to fit into the ends of adjacent pipe portions to be joined, said plugs having enlarged plug portions beyond the free end of each pipe portion, connector sleeves, there being two connector sleeves for a complete joint, each connector sleeve fitting over the enlarged plug portion and extending over the end pipe portion, means for maintaining the plug portions for said pipe portions in longitudinal compression to increase the transverse dimensions of said plugs and cause the same to grip the cooperating pipe portions and connector sleeves interiorly thereof and means for readily coupling and uncoupling said connector portions.

2,446,407
CONDIMENT HOLDER
Harry Brenner, Hackensack, N. J., assignor to Streamline Plastics Company, New York, N. Y.
Application May 15, 1946, Serial No. 669,783
1 Claim. (Cl. 65—45)



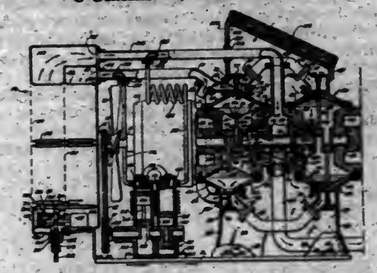
A condiment holder comprising a substantially hollow, semi-spherical base having an elongated, tapering, hollow tubular member in communication with the interior of said base, said tubular member extending substantially vertically from said base, a circumferential shoulder formed on said base and positioned substantially co-axial with respect to said tubular member, an annular member having a depending flange surrounding the opening thereof, said flange engaging against said shoulder and adhesively held in engagement therewith to releasably secure said annular member on said base, a vertically extending and upwardly projecting flange formed on said annular member, said last named flange being internally threaded, an elongated vial having an externally threaded open end for engagement with said internal threads whereby said vial is releasably secured on said annular member and surrounds said tubular member.

2,446,408
PREPARATION OF ANHYDROUS ETHER
William K. Buchanan, Edinburgh, Scotland, and William Simpson, Manchester, England, assignors, by mesne assignments, to General Electric Company, a corporation of New York
No Drawing. Application August 21, 1946, Serial No. 692,148. In Great Britain February 25, 1946
6 Claims. (Cl. 260—616)



1. The method of removing water from a low-boiling lower alkyl ether containing the said water therein which comprises adding to the water-containing ether a silicon tetrahalide in an amount at least equal to that required to combine with all the water present in the ether to form orthosilicic acid.

2,446,409
TORQUE RESPONSIVE TRANSMISSION MEANS
Roland Chilton, Ridgewood, N. J., assignor to Allan Chilton and William E. Valk, doing business as joint adventurers, Ridgewood, N. J.
Application January 8, 1945, Serial No. 571,884
10 Claims. (Cl. 74—200)



1. In a transmission having members to be loaded into driving engagement, said members being subject to elastic deflections under load, hydraulic cell means for hydraulically loading said members, said cell means increasing in volume in response to elastic deflection of said members under load, means for controlling the magnitude of the hydraulic pressure within said cell means in proportion to the driving torque of said members, said means comprising a hydraulic chamber communicating with said cell means, and a member exposed to the hydraulic pressure within said chamber and movable thereagainst in response to increase in the driving load to control said pressure, said member being movable to displace sufficient liquid into said cell means from said chamber to make up for the increase in volume of said cell under shock loads.

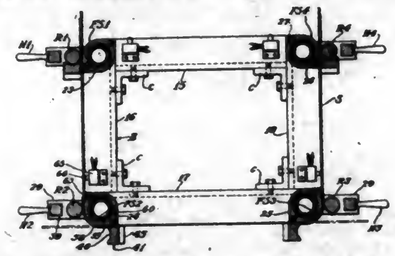
2,446,410
COMBINATION FRY-AND-BOOM STRUCTURE
Kibbey W. Couse, Newark, N. J.
Application November 27, 1943, Serial No. 511,921
3 Claims. (Cl. 7—12)

3. A structure comprising a pair of elongated sheet-metal side plates, top and bottom longitudinal and transverse spacing members for said plates, all being welded together, one end of the above defined structure being tapered and also having a hook adapted to be fastened thereto to serve as the anchoring end of the structure, the opposite end of the structure being also tapered and having fittings thereon to cooperate with a hoist and/or grip chain, the top longitudinal member being a channel iron positioned with the channel open so it may act as a guide and support for the chain member and said transverse members consisting of short sections of pipe.

2,446,411
AIR-CONDITIONING UNIT
Henry Currey Dearborn, Norman, Okla.
Application August 20, 1945, Serial No. 611,625
8 Claims. (Cl. 62—137)

1. A space air conditioning apparatus comprising in combination an air pump, air cooling means, means interconnecting said pump with said cooling means including a delivery conduit and a return conduit, said pump including a diaphragm for withdrawing air from the space, compressing the same and delivering the air to said cooling means, said withdrawal, compression and delivery being effected on one face of said diaphragm, said return conduit being adapted to deliver the partially cooled air to the other face of said diaphragm to impart energy to said diaphragm, and means for delivering the spent, thoroughly cooled air to the space.

2,446,412
STEAM TIE SHAPER
Joseph Emmanuel, New York, N. Y.
Application February 23, 1946, Serial No. 649,642
3 Claims. (Cl. 223—82)

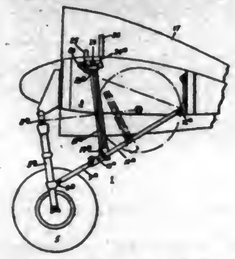


1. A combination necktie stretcher and heater therefor comprising a flexible elongated tapered frame adapted to fit within the end of a necktie, end members extending from the wider end of the frame and joined together through a spring loop whereby the end of the frame is urged to expand against a necktie positioned thereabout, and finger grip members located on the frame member adjacent to the wider end thereof, and a heater member mounted within said frame and adapted to heat the necktie in the stretched condition, said heater comprising a thermally conducting metallic strip shaped to fit within the frame and having a small heater element at one end thereof.

2,446,413
APPARATUS FOR BENDING HARD GRAINLESS FIBER SHEETS
Per H. Esbjornson, Wright, Minn., assignor to The Coolerator Company, Duluth, Minn., a corporation of Minnesota
Application December 2, 1942, Serial No. 467,617
14 Claims. (Cl. 18—19)

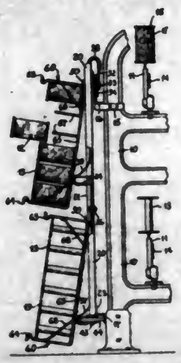
11. In a machine for shaping a single sheet of ligno-cellulose or like material to form a four-sided wall assembly having the walls thereof joined by integral rounded corners, a base, a plu-

rality of elongated posts extended upwardly from said base at points located at the corners of a rectangle, said posts having rounded outer corners affording formed surfaces conforming to the desired form of the inner surfaces of the rounded corners to be formed, an elongated carrier structure allocated to each post, each carrier structure including an elongated clamp bar, a pair of arms pivoted on a common axis on the clamp bar adjacent opposite ends of the bar, and a pressure roller mounted between the pair of arms, means pivoting the lower end of each clamp bar on said base for movement of the carrier structure from



a substantially horizontal out-of-the-way position to an active clamping position wherein said bar is parallel to the post to which it is allocated, the pivotal axis of the pivoted arms being concentric with the axis of the formed surface of the related post when the clamp bar is in its active clamping position, means for securing said clamp bars in said active clamping positions, individual means for heating said posts to normally maintain the same within a predetermined temperature range, and individual means associated with each post for rendering the heating means of the respective posts inoperative when a sheet has been bent around the formed surface of a post.

2,446,414
METHOD OF APPLYING HEAT-SEALABLE LABELS
Robert A. Farrell and Charley L. Wagner, Menasha, Wis., assignors to Marathon Corporation, Rothschild, Wis., a corporation of Wisconsin
Application September 30, 1944, Serial No. 556,620
5 Claims. (216—62)



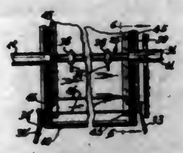
1. A method of labeling which comprises providing a label comprising in adhered relation a base sheet material and a relatively porous sheet material adhered to said base sheet by an intermediate thermoplastic adhesive, said adhesive being confined to the inner surface of said porous sheet and the outer exposed surface of said porous sheet being substantially unchanged from its original characteristics, positioning said label on a supporting surface with said porous sheet in face contact with said supporting surface, applying heat and pressure to the exposed surface of said base sheet for activating said adhesive to migrate differentially through said porous sheet rather than through said base sheet material and in amount to generate an adhesive sealing film on the outer surface of said porous sheet to affix the label to a supporting surface.

2,446,415
RETRACTABLE UNDERCARRIAGE FOR AIRCRAFT
Cedric Harold Flurscheim, Bowdon, and William Gerald Cooke Vance, Sale, England, assignors, by mesne assignments, to General Electric Company, a corporation of New York
Application May 30, 1945, Serial No. 596,736
In Great Britain October 16, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires October 16, 1961
7 Claims. (Cl. 244—102)

1. A retractable under-carriage for aircraft having in combination a landing wheel having a pivoted supporting leg for carrying said landing wheel between a retracted position and an extended position, means including a toggle joint strut having a straightened position for bracing said leg in said extended position, operating means including a reversible winch having a link chain operated thereby and connected to pull said strut laterally for breaking said toggle joint and pulling said wheel to said retracted position upon operation of said winch in one direction, and guide means for maintaining said links of said chain in alignment to push said strut laterally into said straightened position and thereby return said wheel to said extended position upon operation of said winch in the opposite direction.

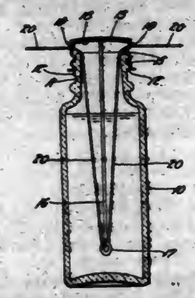
2,446,416
DOFFING AND DONNING APPARATUS
Conrad Walter Geier, Robbins, N. C., assignor to Robert E. L. Holt, Jr., Greensboro, N. C.
Application January 2, 1946, Serial No. 638,616
6 Claims. (Cl. 57—52)

1. In a twisting frame, spinning frame, and the like, upper and lower rails secured to the side of the twisting frame, spinning frame, and the like and extending from one end of the frame to the other, a vertically disposed carriage having upper and lower wheels mounted on the rails,



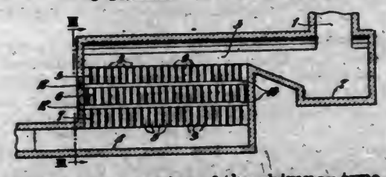
means on the carriage for detachably suspending upper and lower yarn package carriers so that empty bobbins can be removed from the spindles of the machine and deposited in one package carrier and filled bobbins can be removed from another package carrier and deposited onto the spindles from whence the empty bobbins were removed, and outwardly projecting portions extending from the outer face of the carriage and against which the lower portions of the yarn package carriers may rest to hold the package carriers in inclined position.

2,446,417
RHEOSTAT
Donald Francis Hastings, Fair Lawn, N. J., assignor to Hardwick, Hindle, Inc., Newark, N. J.
Application February 1, 1946, Serial No. 644,877
7 Claims. (Cl. 201—56)



1. In a rheostat having a circularly formed resistance unit with a brush track and mounted on a support of suitable insulating material, the support non-rotatably carrying a bearing for an operating shaft which extends through the bearing and support; means for carrying a contact member on one end of said shaft, said means including a sleeve of suitable insulating material fitting over the shaft at the brush track end, the sleeve having an external polygonally shaped surface, a cap fastened to the extremity of the shaft and having a shape to drivingly fit around the external surface of the sleeve, a cup slidably fitting over said sleeve back of the cap and having an internal diameter to receive the cap, a spring carried within the cup between its bottom and the cap, a spring contact member having a part slidably fitting the external surface of the sleeve and another part free of the sleeve and the cup and extending into contact with the brush track, a stop carried by the shaft for engaging a cooperative part of said support, a stationary contact member positioned around said sleeve out of driving engagement therewith but adapted to rest on said support and means cooperative between the shaft and its bearing to hold the shaft so the contact members are in continuous operative position.

2,446,418
ELECTROLYTIC APPARATUS FOR USING BAGASSE TO MAKE PAPER PULP
Harry L. Horn, New York, N. Y.
Application July 13, 1944, Serial No. 544,806
2 Claims. (Cl. 204—213)

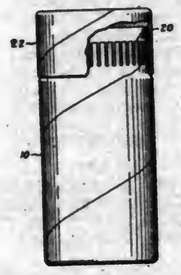


1. In an apparatus for carrying out a method for using bagasse to make paper pulp, a rotative electrically insulated container for electrolyte and for the bagasse to be treated, tracks on the inner sides of the ends of said container for loosely supporting rods, rods of electrically conductive material for beating said bagasse extended horizontally between the ends of said container and mounted on said tracks, rigid electric conductors extending longitudinally within and mounted on one of the ends of said container, collector rings connected respectively with one of said tracks and with said conductors, an electric circuit for supplying electric current to said current collector rings, and electrodes adjustably mounted on said rigid conductors, each of said rigid conductors comprising an outer tube having a longitudinal opening along one of its sides, and an internal turnable rod having a flattened side and disposed in said tube, and collars mounted upon said rigid conductors and having internal projections slidable through said open sides and engageable by said rods, said electrodes being mounted on said collars.

2,446,419
CORD TREATING DEVICE
Carl D. Hallinger, Northport, N. Y., assignor, by mesne assignments, to Darworth, Inc., Simsbury, Conn., a corporation of Connecticut
Application March 15, 1945, Serial No. 582,975
2 Claims. (Cl. 21—61)

1. A container having an open top and adapted to contain a fluid, a detachable closure cap having sides adapted to be screwed on to said top, a rod attached to said cap and extending into the interior of said container when said cap is in its container-closing position, and having an eye upon its lower end through which a cord may be passed.

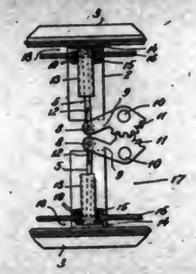
2,446,420
CHIMNEY TYPE HEAT REGENERATOR
William J. Irwin, Wilkinsburg, Pa.
Application October 17, 1942, Serial No. 462,397
6 Claims. (Cl. 263—19)



1. A heat regenerator of the chimney type comprising vertically spaced tiers of chimney gas passages which are substantially straight and vertical, each of said passages being of substantially uniform transverse section for the greatest part of its length, said passages being arranged in approximately parallel rows, longitudinal vertical walls between said rows, said vertical walls in each tier being in the same vertical plane as the vertical walls in the adjacent tiers, the chimney

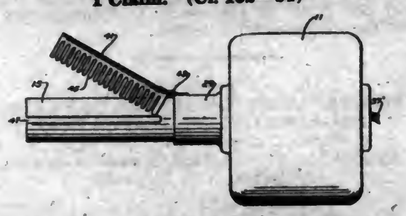
gas passages of at least one tier being staggered with respect to those of an adjacent tier, at least one of said staggered tiers having chimney gas passages which are relatively high with respect to their transverse width as measured in the direction of said staggering.

2,446,421
MANUFACTURE OF ARYLBIGUANIDE HYDROCHLORIDES
Barbara Rosamund Jacobs, London, and Zvi Enrico Jolles, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application November 15, 1945, Serial No. 628,979. In Great Britain November 3, 1944
4 Claims. (Cl. 260—565)



1. The process of manufacturing an arylbiguanide hydrochloride which comprises heating at a temperature of 100° to 150° C. a substantially anhydrous mixture composed essentially of a primary arylamine of the group consisting of aniline, meta-nitroaniline, meta-phenylenediamine, para-phenylenediamine and benzidine together with dicyandiamide, a solvent and hydrogen chloride, until the arylbiguanide hydrochloride corresponding to said arylamine is formed; said solvent being one of the group consisting of pyridine and dimethylaniline; and said hydrogen chloride being present in the form of the hydrochloride of an amine of the group consisting of pyridine, dimethylaniline, triethanolamine and said primary arylamines.

2,446,422
CONTAINER
Paul J. Jensen, Long Island City, N. Y., assignor to Niemand Bros. Inc., Long Island City, N. Y., a corporation of New York
Application April 2, 1946, Serial No. 658,970
1 Claim. (Cl. 229—5.5)

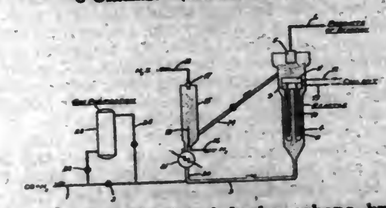


A container comprising a tubular body member having a closure at the bottom thereof, a neck adjacent the top thereof having longitudinal corrugations terminating in spaced relationship with respect to the top and bottom of said neck to form smooth bands at the top and bottom of said neck, the tops of said corrugations extending outwardly beyond the surface of said smooth bands, said neck being of reduced diameter to form a shoulder at the bottom thereof, and a cap having a depending skirt the lower peripheral edge of which is adapted to be seated on said shoulder, said skirt being provided on the portion of its inner peripheral wall in registration with said corrugations only with a coating of a water-sensitive adhesive, said cap being so proportioned that said adhesive coating contacts with the respective tops of said corrugations to adhesively secure said cap to said neck at spaced intervals around its periphery to form a sealed package wherein, upon relative rotation of said cap the adhesive bond will be broken and the cap can be removed, the lower edge of said cap forming a temporary seal with said shoulder when the cap is replaced.

2,446,423
COUPLING DEVICE FOR OPPOSED PISTONS IN FREE-PISTON ENGINES
Walter Kilchenmann, Winterthur, Switzerland, assignor to Suber Freres, Societe Anonyme, Winterthur, Switzerland.
Application November 30, 1945, Serial No. 632,044
In Switzerland October 9, 1945
10 Claims. (Cl. 123—46)

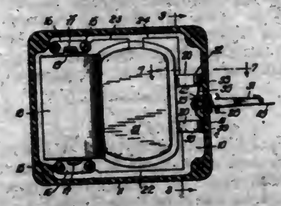
1. In a free piston engine, the combination including an internal combustion cylinder, two power pistons in said combustion cylinder working opposed to each other, a compressor cylinder arranged at each end of said combustion cylinder, a compressor piston in each of said compressor cylinders attached to the adjacent power piston, a connecting rod pivotally connected to each of said compressor pistons, and gear means linking and pivotally connected to said connecting rods arranged to insure the opposed motion of said pistons with only a small angle of deviation of said connecting rods.

2,446,424
HAIR DRESSING DEVICE
Elizabeth L. Kline, Memphis, Tenn.
Application November 7, 1946, Serial No. 708,287
1 Claim. (Cl. 132—34)



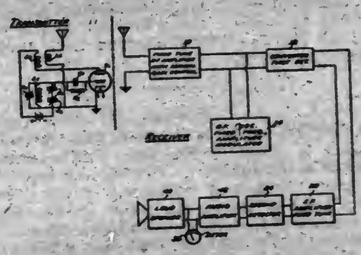
A device for use in dressing locks of hair, comprising a casing, a fixed post rigidly secured within said casing and projecting therebeyond, a hollow post rotatably mounted on said fixed post and extending from within said casing along said fixed post a minor distance external said casing, means for rotating said hollow post about said fixed post, and a semi-circular comb section, hingedly secured to said hollow post for rotation therewith about said fixed post, said section being normally spaced from said fixed post and being provided with a plurality of comb teeth projecting therefrom along the opposite sides thereof, said teeth adapted to combingly contact a said lock of hair to smoothly wind it about said fixed post, said rotating means being reversible to selectively vary the direction of said winding.

2,446,425
FLUORESCENT LIGHTING FIXTURE
Michael H. Kruger, Malden, Mass., assignor to A. L. Smith Iron Company, Chelsea, Mass., a corporation of Massachusetts
Application September 14, 1945, Serial No. 616,328
6 Claims. (Cl. 240—51.11)



1. A fluorescent lighting fixture comprising two substantially identical U-shaped members, the forwardly extending ends thereof having sockets therein for holding fluorescent tubes, rearwardly turned top and bottom flanges on said members, the two members with their flanges, when arranged back to back in opposed relation, forming a housing for containing operating parts of the fixture, and means for holding the members in opposed relation.

2,446,426
SYNTHESIS OF HYDROCARBONS WITH SULFUR CONTAINING CATALYST
Edwin T. Layng, New York, N. Y., assignor to Hydrocarbon Research, Inc., New York, N. Y., a corporation of New Jersey
Application March 1, 1946, Serial No. 651,291
8 Claims. (Cl. 260—449.6)

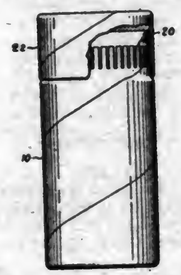


7. In the synthesis of hydrocarbons by the catalytic reduction of carbon monoxide with hydrogen in the presence of an iron catalyst in a reaction zone wherein a synthesis gas comprising hydrogen and carbon monoxide is passed in contact with said iron catalyst at a predetermined elevated temperature and an elevated pressure at which desired hydrocarbons are produced together with substantial quantities of undesired by-product carbon dioxide, the method of suppressing carbon dioxide formation which comprises passing into contact with said iron catalyst at said elevated temperature a synthesis gas containing a proportion of sulfur effective to progressively increase the sulfur content of said catalyst, continuing passage of said sulfur-containing synthesis gas in contact with said catalyst until the catalyst assumes a sulfur content within the range above that minimum value at which the inhibition of carbon dioxide formation becomes noticeable but below the maximum value at which said iron catalyst is poisoned with respect to the synthesis of hydrocarbons, thereafter continuing passage of said sulfur-containing synthesis gas in contact with the catalyst under said reaction conditions, continuously withdrawing catalyst from the reaction zone, removing sulfur from the withdrawn catalyst, recycling resulting desulfurized catalyst to the reaction zone and effecting said catalyst desulfurization at a rate approximating that at which sulfur is added to the catalyst from the synthesis gas.

2,446,427
FISHING SIGNALING DEVICE
Antoni Linder, Chicago, Ill.
Application October 16, 1944, Serial No. 558,790
1 Claim. (Cl. 43—17)

A fish signalling device comprising a housing having a fixed base and a removable cover including a top and side walls, a signal device within the housing and electrical mechanism for operating said signal device, said electrical mechanism having a switch with contacts upstanding in side-by-side relation on a wall of the cover, one of said contacts being substantially rigid and fixed to said wall, the other of said contacts being fixed at one end to said wall and having the other end thereof offset in position to be moved into and out of contacting relation with said rigid contact, said contacts extending downwardly on the wall substantially to the lower end thereof and each having contact means connected therewith at the lower end of said wall, the electrical mechanism including contact means on the fixed base in position to be engaged by the first-mentioned contact means when the cover is in place on the base, said wall of the cover having opening therein, a rod extending through one of the said openings and being rigidly secured at one end to the movable contact and having a line holding means formed on the opposite end thereof, and an adjusting screw mounted in another of said openings in position to engage the movable contact whereby said movable contact may be adjustably spaced at the contacting portion thereof from the rigid contact.

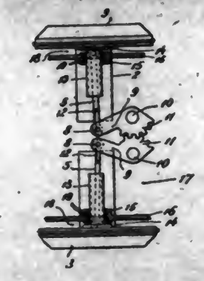
2,446,428
APPARATUS FOR PRODUCING INDICATIONS OF MOVEMENT OF AN ELEMENT
Frederic D. Merrill, Jr., Orange, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 3, 1944, Serial No. 561,670
5 Claims. (Cl. 177—351)



1. In a signalling system in combination with an element at one point movable in either of two

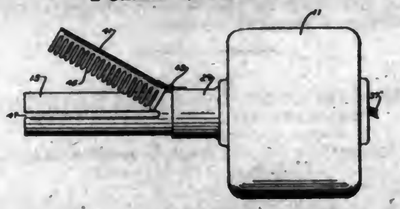
gas passages of at least one tier being staggered with respect to those of an adjacent tier, at least one of said staggered tiers having chimney gas passages which are relatively high with respect to their transverse width as measured in the direction of said staggering.

2,446,421
MANUFACTURE OF ARYLBIGUANIDE HYDROCHLORIDES
Barbara Rosamund Jacobs, London, and Zvi Enrico Jolles, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application November 15, 1945, Serial No. 628,979. In Great Britain November 3, 1944
4 Claims. (Cl. 260—565)



1. The process of manufacturing an arylbiguanide hydrochloride which comprises heating at a temperature of 100° to 150° C. a substantially anhydrous mixture composed essentially of a primary arylamine of the group consisting of aniline, meta-nitroaniline, meta-phenylenediamine, para-phenylenediamine and benzidine together with dicyandiamide, a solvent and hydrogen chloride, until the arylbiguanide hydrochloride corresponding to said arylamine is formed; said solvent being one of the group consisting of pyridine and dimethylaniline; and said hydrogen chloride being present in the form of the hydrochloride of an amine of the group consisting of pyridine, dimethylaniline, triethanolamine and said primary arylamines.

2,446,422
CONTAINER
Paul J. Jensen, Long Island City, N. Y., assignor to Niemand Bros. Inc., Long Island City, N. Y., a corporation of New York
Application April 2, 1946, Serial No. 658,970
1 Claim. (Cl. 229—5.5)



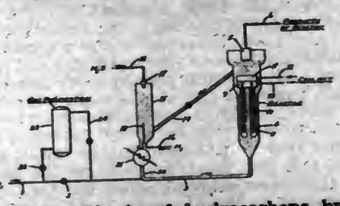
A container comprising a tubular body member having a closure at the bottom thereof, a neck adjacent the top thereof having longitudinal corrugations terminating in spaced relationship with respect to the top and bottom of said neck to form smooth bands at the top and bottom of said neck, the tops of said corrugations extending outwardly beyond the surface of said smooth bands, said neck being of reduced diameter to form a shoulder at the bottom thereof, and a cap having a depending skirt the lower peripheral edge of which is adapted to be seated on said shoulder, said skirt being provided on the portion of its inner peripheral wall in registration with said corrugations only with a coating of a water-sensitive adhesive, said cap being so proportioned that said adhesive coating contacts with the respective tops of said corrugations to adhesively secure said cap to said neck at spaced intervals around its periphery to form a sealed package wherein, upon relative rotation of said cap the adhesive bond will be broken and the cap can be removed, the lower edge of said cap forming a temporary seal with said shoulder when the cap is replaced.

2,446,423
COUPLING DEVICE FOR OPPOSED PISTONS IN FREE-PISTON ENGINES
Walter Kilchenmann, Winterthur, Switzerland, assignor to Sulzer Freres, Societe Anonyme, Winterthur, Switzerland
Application November 30, 1945, Serial No. 632,044
In Switzerland October 9, 1945
10 Claims. (Cl. 123—46)

1. In a free piston engine, the combination including an internal combustion cylinder, two power pistons in said combustion cylinder working opposed to each other, a compressor cylinder arranged at each end of said combustion cylinder, a compressor piston in each of said compressor cylinders attached to the adjacent power piston, a connecting rod pivotally connected to each of said compressor pistons, and gear means linking and pivotally connected to said connecting rods arranged to insure the opposed motion of said pistons with only a small angle of deviation of said connecting rods.

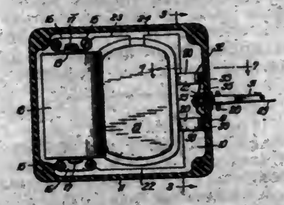
2,446,424
HAIR DRESSING DEVICE
Elizabeth L. Kline, Memphis, Tenn.
Application November 7, 1946, Serial No. 708,287
1 Claim. (Cl. 132—34)

A device for use in dressing locks of hair, comprising a casing, a fixed post rigidly secured within said casing and projecting therebeyond, a hollow post rotatably mounted on said fixed post and extending from within said casing along said fixed post a minor distance external said casing, means for rotating said hollow post about said fixed post, and a semi-circular comb section, hingedly secured to said hollow post for rotation therewith about said fixed post, said section being normally spaced from said fixed post and being provided with a plurality of comb teeth project-



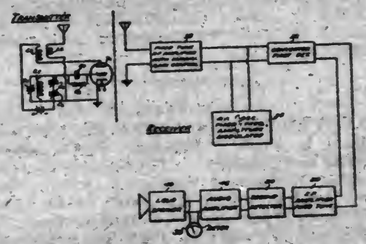
ing therefrom along the opposite sides thereof, said teeth adapted to combingly contact a said lock of hair to smoothly wind it about said fixed post, said rotating means being reversible to selectively vary the direction of said winding.

2,446,425
FLUORESCENT LIGHTING FIXTURE
Michael H. Kruger, Malden, Mass., assignor to A. L. Smith Iron Company, Chelsea, Mass., a corporation of Massachusetts
Application September 14, 1945, Serial No. 616,328
6 Claims. (Cl. 240—51.11)



1. A fluorescent lighting fixture comprising two substantially identical U-shaped members, the forwardly extending ends thereof having sockets therein for holding fluorescent tubes, rearwardly turned top and bottom flanges on said members, the two members with their flanges, when arranged back to back in opposed relation, forming a housing for containing operating parts of the fixture, and means for holding the members in opposed relation.

2,446,426
SYNTHESIS OF HYDROCARBONS WITH SULFUR CONTAINING CATALYST
Edwin T. Layng, New York, N. Y., assignor to Hydrocarbon Research, Inc., New York, N. Y., a corporation of New Jersey
Application March 1, 1946, Serial No. 651,291
8 Claims. (Cl. 260—449.6)



7. In the synthesis of hydrocarbons by the catalytic reduction of carbon monoxide with hydrogen in the presence of an iron catalyst in a reaction zone wherein a synthesis gas comprising hydrogen and carbon monoxide is passed in contact with said iron catalyst at a predetermined elevated temperature and an elevated pressure at which desired hydrocarbons are produced together with substantial quantities of undesired by-product carbon dioxide, the method of suppressing carbon dioxide formation which comprises passing into contact with said iron catalyst at said elevated temperature a synthesis gas containing a proportion of sulfur effective to progressively increase the sulfur content of said catalyst, continuing passage of said sulfur-containing synthesis gas in contact with said catalyst until the catalyst assumes a sulfur content within the range above that minimum value at which the inhibition of carbon dioxide formation becomes noticeable but below the maximum value at which said iron catalyst is poisoned with respect to the synthesis of hydrocarbons, thereafter continuing passage of said sulfur-containing synthesis gas in contact with the catalyst under said reaction conditions, continuously withdrawing catalyst from the reaction zone, removing sulfur from the withdrawn catalyst, recycling resulting desulfurized catalyst to the reaction zone and effecting said catalyst desulfurization at a rate approximating that at which sulfur is added to the catalyst from the synthesis gas.

2,446,427
FISHING SIGNALING DEVICE
Antoni Linder, Chicago, Ill.
Application October 16, 1944, Serial No. 558,790
1 Claim. (Cl. 43—17)

A fish signalling device comprising a housing having a fixed base and a removable cover including a top and side walls, a signal device within the housing and electrical mechanism for operating said signal device, said electrical mechanism having a switch with contacts upstanding in side-by-side relation on a wall of the cover, one of said contacts being substantially rigid and fixed to said wall, the other of said contacts being fixed at one end to said wall and having the other end thereof offset in position to be moved into and out of contacting relation with said rigid contact, said contacts extending downwardly on the wall substantially to the lower end thereof and each having contact means connected therewith at the lower end of said wall, the electrical mechanism including contact means on the fixed base in position to be engaged by the first-mentioned contact means when the cover is in place on the base, said wall of the cover having opening therein, a rod extending through one of the said openings and being rigidly secured at one end to the movable contact and having a line holding means formed on the opposite end thereof, and an adjusting screw mounted in another of said openings in position to engage the movable contact whereby said movable contact may be adjustably spaced at the contacting portion thereof from the rigid contact.

2,446,428
APPARATUS FOR PRODUCING INDICATIONS OF MOVEMENT OF AN ELEMENT
Frederic D. Merrill, Jr., Orange, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 3, 1944, Serial No. 561,670
5 Claims. (Cl. 177—351)

1. In a signalling system in combination with an element at one point movable in either of two

directions, a reactance associated with said movable element to be varied to change in value in like sense on movement of the element in either direction, wave energy producing means arranged to operate at a first frequency and to change in frequency of operation on movement of said element in either direction, and means for producing indications of said movement at a second point including a receiver tuned to pass wave energy of a fixed frequency slightly different than said first frequency, means in said receiver for modulating current passed thereby in accordance with alternating current of tone frequency, a detector coupled to said last named means, and indicating means excited by the detected current of modulation frequency.

2,446,429

CELLULAR PHENOLIC RESIN

John D. Nelson and Paul V. Steenstrup, Pittsfield, Mass., assignors to General Electric Company, a corporation of New York

No Drawing. Application October 20, 1944, Serial No. 559,661
16 Claims. (Cl. 260—59)

1. The method of preparing a cellular phenolic resin which comprises allowing to expand a foam-forming, heat-generating, acidified, flowable composition containing (1) an aqueous mass of acid-curing, thermosetting, liquid product of partial reacton of ingredients comprising a phenol and an aldehyde, said aqueous mass containing at least about 75 per cent, by weight, of the aforesaid phenol-aldehyde reaction product as solids, (2) a water-soluble salt of carbonic acid in an amount corresponding to from about 0.3 to 1.5 per cent, by weight, of said aqueous mass of (1), and (3) a water-soluble sulfonic acid, the amount thereof being slightly in excess of the molecular equivalent required for complete reaction with the salt of (2).

2,446,430

CHLORINATION OF HYDROCARBONS

James A. Norton, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application November 11, 1942, Serial No. 509,920
5 Claims. (Cl. 204—163)

1. The process of preparing xylylene chlorides photochemically which comprises passing chlorine into xylene diluted with a diluent not readily attacked by chlorine, said reaction mixture being heated to reflux temperature and irradiated with a light source, adding phosphorus pentoxide to the reaction mixture in sufficient amount to convert any iron, aluminum, and compounds thereof present as impurities in the reaction mixture to iron and aluminum phosphates, whereby to reduce condensation of the desired xylylene chlorides to undesired high molecular weight compounds.

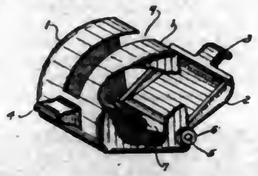
2,446,431

ELECTRICAL MEASURING INSTRUMENT

William E. Pfeffer, Perkasie, Pa., assignor, by mesne assignments, to Paul Mood, Lester Void, Luther Mood, and William E. Pfeffer, copartners trading under the name of The Electro-Mechanical Instrument Company, Perkasie, Pa.

Application January 29, 1945, Serial No. 574,990
6 Claims. (Cl. 171—95)

5. In an electric measuring instrument of the character described, an open coil for connection in an electric circuit which is to be metered; an arbor arranged adjacent one end of the coil with its axis intersecting that of the coil at right angles; a magnet fixed on the arbor transversely with a portion thereof extending into the hollow



of the coil; a stationary dial; an indicating pointer on the arbor for coordination with the dial; and a stationary restoring magnet arranged externally of the coil with its poles respectively positioned adjacent to and adjustable toward and away from the opposite poles of the arbor magnet.

2,446,432

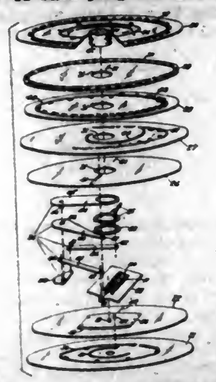
JUICE EXTRACTOR

William L. Plaxco, Russellville, Ala.

Application December 22, 1945, Serial No. 636,784
2 Claims. (Cl. 100—41)

1. A lemon juice extractor of the class described comprising; a main body with a flat bottom and a curved top, and having the front end open, a thumb handle integral with the rear lower portion of the body, a trough integral with the inner bottom of the body and converging toward the front lower open end of the body and sloping downward and becoming narrow, a slot in the top of the body; a front curved cover adapted to fit within the open end of the main body, a handle and guide combined and integral with the top end of the curved cover, the guide portion adapted to fit and travel in the slot in the top of the main body, and pin hinges for holding the main body and cover swingably attached together, the cover adapted to fit into the main body and by manual operation compress a soft substance placed within the main body such substance being a piece of lemon.

2,446,433



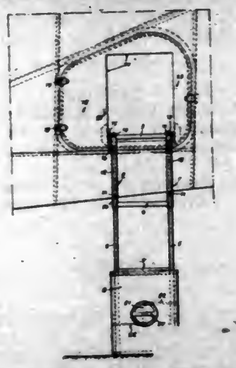
GEOMETRICAL NAVIGATION INSTRUMENT

John P. Putnam, Boston, Mass., assignor to The Reece Corporation, a corporation of Maine

Application December 8, 1944, Serial No. 567,138
3 Claims. (Cl. 33—1)

1. A navigation instrument, comprising a straight graduated speed scale having an integral pivot at the zero point of the graduation, a transparent compass dial at one side of, and parallel to, said scale and having a central transparent cylindrical plug extending toward said scale, transparent elements journalled on said plug and relatively turnable for moving said pivot parallel to said dial into any position within certain limits, a radial pointer journalled on said plug and cooperating with said dial, a linkage so drivingly connecting said scale and pointer that they are parallel in any position, and so arranged that said linkage remains outside the confines of said plug in any position of said scale, a second pivot slidable on said scale, and means at the other side of

said scale for moving said second pivot parallel to said dial into any position within certain limits, the diameter of said plug being such that said



second pivot and the scale graduations nearest thereto are visible therethrough in any position of said scale.

2,446,434

APPLIANCE FOR THE ACCESS INTO STREAMLINE-SHAPED VEHICLES

Eugène Rechain, Neuilly-sur-Seine, France, assignor to Société Nationale de Constructions Aéronautiques du Nord, Paris, France

Application August 17, 1945, Serial No. 611,028
In France September 17, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires September 17, 1962
3 Claims. (Cl. 228—45)

1. A door and ladder unit for streamline-shaped vehicles, which comprises in combination a foldable ladder hingedly connected with said door, a recess in said door for accommodating said ladder in the folded up position thereof, and a foldable panel section hinged to said ladder at the end opposite to said door and adapted to form a cover for said recess, merging with outer walls of said door.

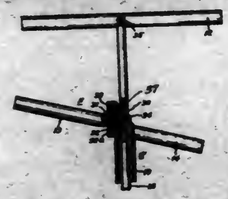
2,446,435

OFFSET AXES MULTIPLE FRAMES OF HANDBAGS

Jacob Ritter, New York, N. Y., assignor to Minnie Ritter, New York, N. Y.

Application June 13, 1946, Serial No. 676,501
1 Claim. (Cl. 150—29)

In offset axes multiple frames of handbags, having a larger pair of bagframes with fastening means and a smaller pair of bagframes with fastening means, and a pintle for each pair of bagframes, the combination of outward extensions on the pintles of the smaller bagframes, inward extensions on the pintles of the larger bagframes, and link bars each having one end pivotally connected with the inward extensions, and the other end connected with the outward extensions, said link bars spacing the pintles of



the smaller frames from the pintles of the larger frames a radius distance of a circle of which the pintles of the larger frames are the centers, whereby the pintles of the smaller bagframes are movable in orbits of 360° with the pintles of the larger bagframes as axes to said orbits, and the smaller bagframes may be moved within the larger bagframes to any position upward or downward or laterally of the larger bagframes by a rotative movement of the link bars.

2,446,436

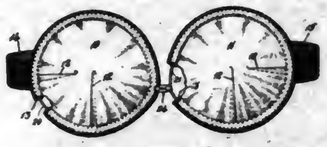
BEAM ANTENNA SYSTEM

Charles L. Rouault, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application April 19, 1943, Serial No. 483,555
6 Claims. (Cl. 250—33)

1. In an antenna assembly comprising a dipole having a pair of substantially axially aligned arms and a coaxial transmission line having inner and outer concentrically disposed conductors for energizing said dipole, one of said arms being secured to the outer conductor of said line at the end thereof, means for securing the other of said arms to the inner conductor of said line near said end, means for rotating said transmission line at high speed, and supporting means for securing said other arm in fixed position with respect to said outer conductor, thereby to support said inner conductor in substantially coaxial alignment with said outer conductor against the effects of centrifugal force during said rotation at high speed.

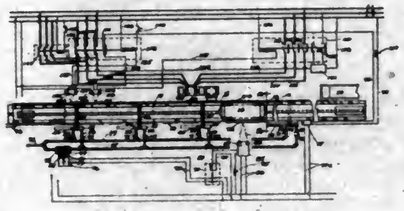
2,446,437



BRASSIÈRE

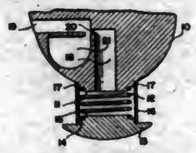
Henry Schoebel, West Hempstead, Long Island, N. Y., assignor to Elvira C. McKeefrey Associates, New York, N. Y.

Application August 1, 1946, Serial No. 687,594
1 Claim. (Cl. 2—42)



A garment adapted to encircle the body of the wearer in the bust region, comprising two bust supporting sections of pliable material, a single length of relatively stiff wire completely encompassing each of said bust sections and having bent ends, said wire element having a substan-

tially V-shaped open loop in the center thereof between the bust sections and means for permanently and rigidly clamping the free ends of said wire element to said looped central portion to constitute complete and rigid wire frames for said bust sections and a body encircling band, extending from each bust section, having fastening means for securing the garment about the



body of the wearer, said garment including a clamp structure for the wire constituted of a flat member, a pair of flanges for receiving the bottom section of the loop and the bent ends of the wire, and tabs foldable upon said flanges to secure said bent ends of the wire in place, said tabs being bent downwardly to clamp the ends of the wire constituting the bust encircling sections adjacent their bent ends.

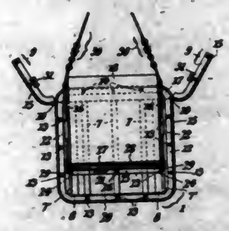
2,446,438
DRAWBENCH
Donald V. Strock, Youngstown, Ohio, assignor to The Aetna-Standard Engineering Company, Youngstown, Ohio, a corporation of Ohio
Application February 23, 1945, Serial No. 579,337
15 Claims. (Cl. 205—3)

7. In a drawbench having a bed, a die stand, a carriage operable on the bed, means for moving the carriage along the bed in drawing direction and means for returning the carriage to the die stand after a drawing operation has been completed; a series of discharge arms spaced longitudinally along the bed and movable into and out of discharging position transversely across the bed, means for moving said arms into discharging position, photoelectric means activated by the position of said carriage on said bed for controlling said arm moving means to move said arms into discharging position across the bench only after said carriage has passed said arms in its movement away from the die stand, and photoelectric means including a light source at one end of the bed projecting a beam along the bed which is in a position to be obstructed by any one of said arms when in discharging position but which is unobstructed when all said arms are out of the path of movement of said carriage and a photoelectric cell at the other end of the bed, for preventing the operation of said carriage return means as long as any of said discharge arms is across the bed.

2,446,439
BOUNCING WHISTLING TOY
Mathew A. Strumor, Brooklyn, N. Y.
Application May 2, 1946, Serial No. 666,601
2 Claims. (Cl. 46—117)

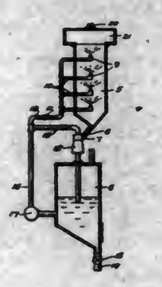
1. A toy adapted to be dropped to fall freely to the ground comprising a body having a boss extending from one end thereof, a bellows envelope having one rim thereof secured to and around the circumferential wall of said boss, an appendage comprising a weighted base having the conformation of a section of a sphere less than a hemisphere the lower surface of said base being therefore rounded and the upper surface thereof being flat, said upper surface having an axial boss extending therefrom and of the same diameter as said body boss, the other rim of said bellows envelope being secured to and around the circumferential wall of said base boss and thereby enclosing a compartment between said base and said body, said body having an opening through the side thereof, said body being solid and having a vertical axial passage extending upward from said compartment to said opening, resilient means normally urging said body and base apart, said base being so disproportionately heavier than said body that the toy strikes the ground in upright position when permitted to fall freely, and a whistle associated with said opening adapted to be sounded by expulsion of air through said passage and said opening from said compartment by impact of said base with the ground.

2,446,440
COLOR TELEVISION TUBE
Lloyd E. Swedlund, Lancaster, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application January 28, 1947, Serial No. 724,873
2 Claims. (Cl. 250—164)



1. A cathode ray tube for color television having a screen comprising a plurality of strips transparent to light, different color producing phosphors on said strips positioned in sequence with respect to color and conducting films on said phosphors transparent to beam electrons above a predetermined velocity, said metal films being spaced from each other, the metal films over the phosphors that produce the same color being electrically connected.

2,446,441
CARGO AIRPLANE
Alanson O. Taylor, Lansdowne, Pa.
Application November 7, 1944, Serial No. 562,284
10 Claims. (Cl. 244—137)



1. A cargo airplane including a fuselage with a cargo space having an opening in the top for passage thereinto or removal therefrom of a capacity load or plane load container, guide means below the opening defining the effective width

and length of the cargo space and accurately engaging the sides and ends of the container whereby when lowered into said space it is stabilized laterally and longitudinally, cover means closing

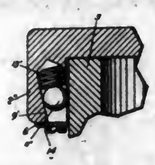
the fuselage opening, and movement-restraining devices dependent from said cover means effective to restrain the container against vertical displacement.

2,446,442
ABSORPTION OF AMMONIA IN SODA ASH PRODUCTION
John Ross Taylor, Westmount, Quebec, Canada
Application June 17, 1944, Serial No. 540,786
In Canada June 24, 1943
5 Claims. (Cl. 23—65)

1. A method of absorbing ammonia in brine liquor which comprises forming a body of brine liquor, continuously adding a fresh supply of liquor to said body, continuously withdrawing a portion of said body and dividing the withdrawn portion into two streams, forming a substantially confined body of ammonia-containing gas above the body of liquor and continuously supplying fresh ammonia-containing gas to the confined body, delivering one of said streams of liquor in the form of a spray into the confined body of ammonia-containing gas thus providing a body of mixed gas and liquor above the body of liquor, delivering under pressure the other of said streams of liquor from a point above the body of liquor into the body of liquor at a point below the level thereof, placing the body of mixed gas and liquor in contact with the pressure flowing second stream of liquor at a point above the body of liquor, entraining a stream of mixed gas and liquor from the body thereof as a result of said contact therewith of the pressure flowing second stream of liquor for concurrent flow with the second stream, and continuously withdrawing ammoniated brine from the body of brine liquor.

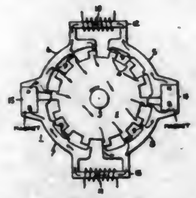
2,446,443
METHOD AND APPARATUS FOR SHAPING CRYSTAL BODIES
Raymond W. Tibbetts, Camden, Maine, assignor to Tibbetts Laboratories, Inc., Camden, Maine, a corporation of Maine
Application December 2, 1946, Serial No. 713,497
10 Claims. (Cl. 171—327)

1. In the art of piezo-electric crystals and other fragile bodies of soluble material, the method of shaping or selectively removing portions of the body in a localized area which comprises continuously directing against such a body a stream of solvent for the material at a predetermined rate and continuously drawing the solvent away from the body at approximately the same rate to prevent it from spreading beyond said area.



4. Apparatus for forming a hole of predetermined cross-sectional area in a piezo-electric crystal or other fragile body of soluble material comprising delivery means for directing against such a body a stream of solvent for the material, an exhaust conduit for the solvent adjacent the delivery end of the delivery means, and suction means associated with said exhaust conduit for concomitantly drawing the solvent away from the body before it is spread beyond the predetermined area.

2,446,444
PULL-OFF AND CLAMP FOR THREAD CUTTERS
Richard G. Turner, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application March 6, 1946, Serial No. 652,405
1 Claim. (Cl. 139—264)



An auxiliary thread clamp for a loom thread cutting and clamping mechanism having a carrier formed with a supporting head provided with a plate mounted on a pivot stud and a pin spaced therefrom, said carrier having mounted thereon a spring tending to flex toward the head, said clamp having a pivot hole therethrough fitting the stud and an operating arm extending forwardly from said hole, a rearwardly extending clamping finger having an upwardly facing edge terminating at a distance from the pivot hole less than the distance between said stud and pin, and said clamp having a portion between said finger and hole to engage said spring.

2,446,445
SHOCK RESISTING RETAINER
Frederick J. Van Dusen, Jackson Heights, N. Y.
Application February 27, 1945, Serial No. 580,052
8 Claims. (Cl. 188—67)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

7. A shock-resisting detachable mounting for seat-supported devices including a support having an annular upstanding flange, and a supported member having an annular depending flange, a plurality of spaced bores about the depending flange, said bores being inclined upwardly and away from the upstanding flange, a ball bearing in each of the bores adapted to provide bearing members for easy rotation of the supported member, means for urging the ball bearings against the upstanding flange to act as brake members, a rapid upward movement of the supported member causing increased pressure downward and against the upstanding support flange whereby separation of the supported member from the support is prevented, and a slow upward rotary movement of the supported member preventing an increase of pressure of the ball bearings against the upstanding support flange whereby the supported member may be withdrawn from the support.

2,446,446
BREAKERLESS MAGNETO
Edward F. Wargin, San Anselmo, Calif., and Joseph R. Harkness, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application April 29, 1947, Serial No. 744,688
5 Claims. (Cl. 171—209)

1. A breakerless magneto comprising a rotor having salient teeth, a plurality of spaced arcuate stator pole pieces disposed around said rotor, each of said stator members having a plurality of relatively narrow spaced teeth, core members and permanent magnets alternately arranged between adjacent pole pieces, and output coils wound around said core members.

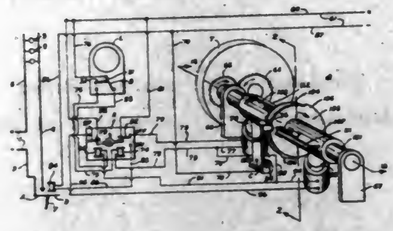
2,446,447
SPINNING TOP
Fred Wartell, Bronx, N. Y.
Application November 30, 1946, Serial No. 713,214
5 Claims. (Cl. 46—71)

1. A top of substantially conical shape having a circular recess in the upper portion thereof, and a rotatable thumb unit fitted within the recess, said thumb unit comprising a thumb portion with

a depression therein to receive the thumb, ball bearings within the recess and below the thumb portion.

2,446,448
ARTICLE OF FOOTWEAR AND CORRECTIVE SOLE THEREFOR
Hyman L. Whitman, East Bridgewater, Mass., assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application October 18, 1946, Serial No. 703,951
12 Claims. (Cl. 36—71)

4. A combination corrective sole and outer supporting element, said corrective sole comprising a raised heel element on the upper face thereof having the highest portion of the said heel element at the inner border of said sole and sloping downwardly towards the outer border of said sole, the forward edge of said heel element being reversely curved inwardly from the inner border of said sole towards the outer border thereof, said corrective sole further comprising an arch support member having the rear edge thereof coincidently abutting the reversely curved edge of said heel element and being of different height and resiliency than said heel element, said arch support member comprising a raised portion along the inner border of said sole tapering downwardly towards the outer border thereof to converge with the normal thickness of said sole, said supporting element being disposed in the outer marginal region of said sole laterally to said arch support member and comprising a resilient raised portion presenting a raised generally planar surface substantially parallel to the sole face supporting the base of the fifth metatarsal and sloping downwardly along the inner edge thereof to converge with said sole.

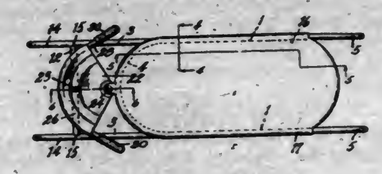


2,446,449
ARCH SUPPORT MEMBER
Hyman L. Whitman, East Bridgewater, Mass., assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application October 18, 1946, Serial No. 703,952
8 Claims. (Cl. 36—71)

1. A combination sole and arch support member, said sole having a portion of the upper face thereof inclined downwardly from the inner border of said sole toward the outer border thereof,

said arch support member being of greater resiliency than said sole and comprising a member positioned on said inclined portion and being of maximum vertical thickness at the outer edge of said member.

2,446,450
SYSTEM FOR CONTROLLING LIGHTING CIRCUITS
Edward F. Ziegler, Reading, Mass.
Application November 30, 1946, Serial No. 713,246
15 Claims. (Cl. 315—159)



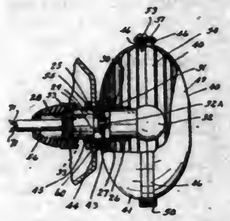
1. A circuit control apparatus including a light sensitive device, a first switch in said circuit actuated by the light sensitive device according to variations in natural light intensity, a second switch in said circuit, timing mechanism for actuating said second switch including means for automatically establishing the time of day after which responses of the light sensitive device control the circuit.

2,446,451
NURSING UNIT WITH RETRACTABLE CONTAINER THEREFOR
Adda M. Allen, Arlington, Va., assignor to Disposable Bottle Corporation, Washington, D. C., a corporation of Delaware
Application October 27, 1944, Serial No. 560,610
3 Claims. (Cl. 215—11)

1. A nursing unit comprising a pliable, disposable container bag closed at its rearward end and open at its forward end and a reusable end closure for said container bag comprising a relatively narrow collar of rigid material and a nursing nipple attached thereto, said collar having a dimension axially of the unit which is a small fraction of the length of said bag, said collar having a relatively short, rearwardly extending skirt formed to enter the open end of the container bag and further comprising a clamping ring adapted to encircle the open end of the container bag to clamp the same in sealing relation against said skirt, said collar having means for connecting the nipple with its nursing portion extending centrally and forwardly therefrom, the nursing portion of said nipple being of diameter substantially less than and being spaced a substantial distance inwardly from the outer edge of said collar, the outer forward face of said end closure being formed to taper steeply inwardly to the nursing portion of said nipple, whereby the exterior of said collar comprises a narrow circular rim adapted to rest on a surface while permitting the nursing portion of the nipple to tilt inwardly at a steep angle toward the infant's mouth, said container bag being thin enough to have its shape altered by the presence of liquid therein, and to be retractible toward and into said collar as the infant withdraws liquid therefrom, the diameter of said collar being great enough to permit substantially all of the material of said container to enter the collar without obstructing flow of liquid from the nursing portion of said nipple.

2,446,452
HAND SLED
Merle K. Benson, Benton Harbor, Mich., assignor to T-M-K Corporation, Davenport, Iowa, a corporation of Iowa
Application October 3, 1946, Serial No. 701,916
10 Claims. (Cl. 280—22)

10. A sled comprising raves and runners and strut members between the raves and runners, the raves being connected at their front ends by an integral rave cross piece, the rear ends of the raves being curved downwardly and merging with the rear ends of the runners, the front ends of the runners being upturned and merging with the strut members which are secured to the runners centrally thereof and to the raves adjacent their rear ends, a cross bar connected to the front ends of the runners, a steering member pivotally mounted on said cross bar and pivotally connected to said rave cross piece, a handle bar, and a deck fixedly connected to said raves.

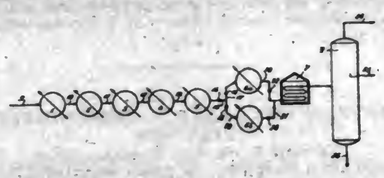


2,446,453
PROCESS OF PREPARING ACETONE-CHLOROFORM
Ernst Bergmann, London, England, assignor, by mesne assignments, to Polymerisable Products Limited, London, England, a British company
No Drawing. Application November 17, 1943, Serial No. 510,700
6 Claims. (Cl. 260—633)

6. A process of making an addition product of acetone and a body of the formula CHX_3 in which X is a halogen element selected from the group consisting of chlorine and bromine, which process comprises first forming a fluent mixture capable of being stirred, from solid potassium hydroxide and phenyl ethylene glycol dialkyl ether, the latter being in excess over 1 mole per mole of KOH, to form a suspension of a complex of KOH with said dialkyl ether, suspended in an excess of said dialkyl ether, and maintaining said suspension at a temperature below 5° C., while adding the acetone and the CHX_3 to said suspension, continuing the stirring after the completion of the addition of the mixture of acetone and the CHX_3 to allow sufficient completion of the reaction, then mixing the reaction product with water at about ice temperature, to decompose the potassium derivative of the alcohol produced.

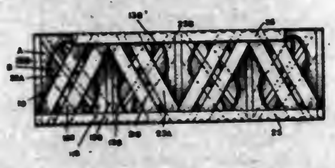
2,446,454
PRODUCTION OF SECONDARY AND TERTIARY HALOGENATED ALCOHOLS
Ernst Bergmann and Max Sulzbacher, London, England, assignors to Polymerisable Products Limited, London, England, a British company
No Drawing. Application February 3, 1945, Serial No. 576,150. In Great Britain March 13, 1944
11 Claims. (Cl. 260—618)

1. In making a tri-halogenated alcohol, the process which comprises reacting together at about ice temperature, about 0.9 mol. of a trihalogen methane with about 1 mol. of an aldehyde containing at least four carbon atoms to the molecule, in the presence of about 0.9 mol. of caustic potash in the form of a solid complex with a substance selected from the group consisting of acetals and dialkyl ethers of glycols and a substantial excess of such latter substance which substance contains in its molecule two and only two ether-forming oxygen atoms which are separated from each other by at least one and not more than two carbon atoms, and stopping the reaction, when sufficiently completed by adding an excess of a substantially ice-cold aqueous substance which is inert to the metal-free organic substances present.



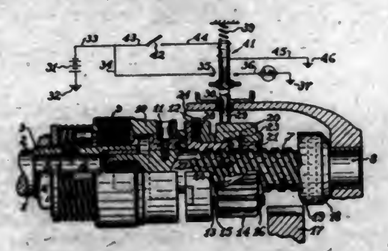
2,446,455
LAMP CONSTRUCTION
Ervin D. L. Bowman, Fairview Village, Ohio
Application March 9, 1945, Serial No. 581,770
2 Claims. (Cl. 240—8.3)

1. In a lamp, a lamp socket, a lamp mounted in the socket, a pair of complementary concave plastic lamp enclosure shells, one of said shells being clear and transparent and the other being colored and translucent, the clear shell having a central opening arranged to receive said lamp socket, means to secure said shell to said socket, both of said shells having integrally formed beads at their periphery, an annular metallic band channel-shaped in cross section embracing said beads to retain them in engagement with each other, said band having its ends in an overlapping relation, and a screw extending through the overlapping portions and into one of said bead formations.



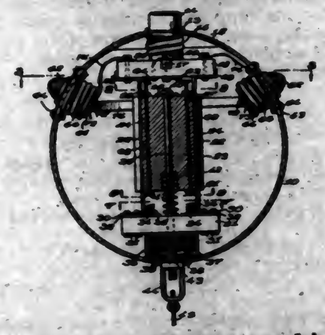
2,446,456
SALT DEPOSITION
Otis L. Branson, Beaumont, Tex., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application April 3, 1947, Serial No. 739,173
2 Claims. (Cl. 252—346)

1. A method for de-salting water- and salt-bearing oils which comprises heating a water- and salt-bearing oil at a pressure of about 350 p. s. i. g. to about 700 p. s. i. g., to a temperature of at least 370° F. but not equal to that temperature at which water vaporizes at the existing pressure, reducing the pressure on said oil to about 200 p. s. i. g. and raising the temperature



of said oil to a temperature at which water vaporizes at said pressure and salt is deposited.

2,446,457
BEAM
Alfred Braun and Frederick W. Braun, Detroit, Mich.
Application June 22, 1944, Serial No. 541,590
8 Claims. (Cl. 189—37)



1. A structural member comprising a pair of sheets each bent into a series of triangular webs extending in different diagonal planes, an edge of each successive web of one sheet meeting a corresponding edge of each successive web of the other sheet along a diagonal line, with said edge of one sheet parallel to said edge of the other sheet, but with successive pairs of said edges at right angles to each other, and longitudinally extending members secured to said webs.

2,446,458
ENGINE STARTER
James E. Buxton, Elmira, N. Y., assignor to Bendix Aviation Corporation, Elmira Heights, N. Y., a corporation of Delaware
Application October 29, 1945, Serial No. 625,325
3 Claims. (Cl. 74—7)

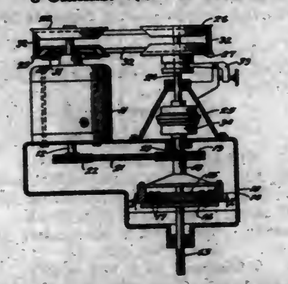
1. In an engine starter a power shaft, a screw shaft, a driving connection therebetween, a control nut threaded on the screw shaft, a pinion slidably journalled on the control nut, means movably mounted in the control nut for restricting the longitudinal movement of the pinion on the control nut, spring means forming a light frictional coupling between the control nut and pinion, said coupling means being arranged to press the restricting means into frictional engagement with the screw shaft to normally retain the control nut and pinion in idle position, an overrunning clutch connection between the control nut and pinion, and an abutment on the screw shaft defining the operative position of the pinion.

2,446,459
DEVICE FOR NIGHT FISHING
Ed M. Digmon, Birmingham, Ala.
Application September 16, 1946, Serial No. 697,336
6 Claims. (Cl. 43—17)

1. In a device for night fishing, a globular float having an opening in top thereof, a cover for said opening conforming to the float, a pilot light in the cover, a plurality of signal lights around the float outwardly of the pilot light, a source of electric current within the float, stationary contacts connected to the respective pilot light and signal lights, a movable member having contacts for alternately engaging the contacts of the pilot and signal lights, and means for actuating the movable contacts upon a pull on a fishing line.

2,446,460
TOP CAP FOR ELECTRON TUBES
Edwin F. Dillaby, Beverly, Mass., assignor to Bruce A. Coffin, Peabody, Mass.
Application April 7, 1944, Serial No. 529,915
4 Claims. (Cl. 250—27.5)

1. In an electron discharge device, a glass envelope, a pair of top caps, each comprising an inverted metallic cup having a top wall and a flaring flange at the free edge of its side wall terminating concentric with the axis of the cup, and a low loss material molded about said flange and along the inner surface of the side wall.

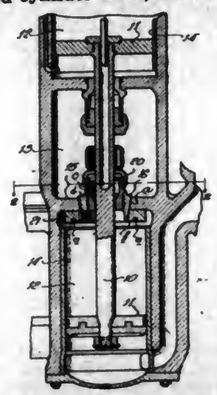


2,446,461
HOLDER FOR TUBULAR LAMPS
James D. Diver, Detroit, Mich.
Application November 18, 1946, Serial No. 710,722
5 Claims. (Cl. 173—328)

1. Means for holding a fluorescent lamp from accidental disengagement from its fixture comprising a spring wire clip having a loop movable over and adapted to embrace a socket of the fixture and be clamped to the socket by the inherent resiliency of the wire, integral parts extending transversely of the socket from the ends of said loop and integral arms extending from the ends of said transverse parts transversely of said loop and parts, said arms having curved parts concave with respect to each other to embrace the lamp and having their free ends located to be at the side of the lamp opposite said

transverse parts and spaced from each other a distance less than the transverse dimension of the part of the lamp for engagement by the holder and terminal parts extending from said free ends and diverging with respect to each other, said terminal parts and free ends serving to guide the lamp to align the contacts at one end thereof with the entrance channel of the socket.

2,446,462
TRANSMISSION
Adiel Y. Dodge, Rockford, Ill.
Application July 28, 1945, Serial No. 607,607
8 Claims. (Cl. 74—286)



1. A transmission comprising a differential gear set including three relatively rotatable elements, driving means connected to one of the elements to drive it, means to be driven connected to another of the elements, and means including a variable torque transmission device and an overload release coupling connecting the third of the elements to said one of the elements, the gear set and transmission device being so constructed and arranged that the third element tends to drive said one of the elements in the same direction in which it is driven by the driving means.

2,446,463
STUFFING BOX MOUNTING FOR PUMPS
Victor C. Ehrig, Marshall, Tex.
Application March 25, 1946, Serial No. 656,997
5 Claims. (Cl. 103—202)

1. In a water pump, a cylinder head, a stuffing box mounting comprising a body having a central bore, the upper portion of said body being tapered and threaded for reception by a threaded opening in said cylinder head, the lower portion of said body being straight walled and threaded,

an erosion shielding ring mounted on the lower portion of said body and bearing against the underside of said cylinder head, a stuffing box em-

bracing the central bore of said body and means for holding said shielding ring against rotative displacement on said body.

2,446,464

BETA,GAMMA-ALKENYL ETHERS OF GLYCEROL, AND ESTERS THEREOF

Theodore W. Evans, Oakland, and Donald S. Melstrom, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application October 30, 1944, Serial No. 561,148

7 Claims. (Cl. 260—488)

1. Glycerol alpha-allyl gamma-(2,4,5-trichlorophenyl) ether.

2,446,465

SELENIUM RECTIFIER

Stanley S. Fry, North Chicago, Ill., assignor to Fansteel Metallurgical Corporation, North Chicago, Ill., a corporation of New York

No Drawing. Application November 11, 1944, Serial No. 563,100

7 Claims. (Cl. 175—366)

1. The method of producing blocking layer devices which comprises providing a supporting electrode with a layer of selenium in its gray, crystalline form, subjecting the surface of the selenium layer to the action of vapors formed by heating α-benzildioxime to its decomposition temperature and applying a counter-electrode over the treated selenium surface.

2,446,466

BLOCKING LAYER RECTIFIER

Stanley S. Fry, North Chicago, Ill., assignor to Fansteel Metallurgical Corporation, North Chicago, Ill., a corporation of New York

No Drawing. Application November 11, 1944, Serial No. 563,104

12 Claims. (Cl. 175—366)

1. The method of producing blocking layer devices which comprises providing a supporting electrode with a layer of gray, crystalline selenium, subjecting the surface of the selenium layer to the action of vapors produced by heating α-nitroso β-naphthol to a temperature at which vapors are evolved and applying a counter-electrode over the treated selenium surface.

2,446,467

DRY PLATE RECTIFIER

Stanley S. Fry, North Chicago, Ill., assignor to Fansteel Metallurgical Corporation, North Chicago, Ill., a corporation of New York

No Drawing. Application November 11, 1944, Serial No. 563,108

11 Claims. (Cl. 175—366)

1. The method of producing blocking layer devices which comprises adding a small amount of methylene iodide to selenium, providing a supporting electrode wtih a layer of gray, crystalline selenium containing the methylene iodide, forming a blocking layer on the surface of the selenium layer and applying a counter-electrode over the treated selenium surface.

2,446,468

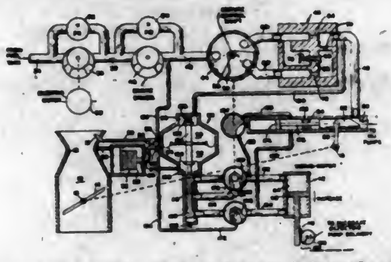
SELENIUM RECTIFIERS

Stanley S. Fry, North Chicago, Ill., assignor to Fansteel Metallurgical Corporation, North Chicago, Ill., a corporation of New York

No Drawing. Application June 14, 1945, Serial No. 599,518

13 Claims. (Cl. 175—366)

1. A blocking layer device comprising a carrier electrode, a layer of gray, crystalline selenium and a counter-electrode consisting essentially of bismuth, tin, lead, cadmium and a small amount of magnesium, the counter-electrode having a melting point not exceeding 180° C.



2,446,469

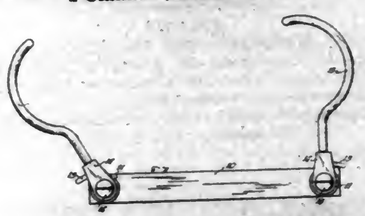
CONTROL APPARATUS FOR INTERNAL-COMBUSTION ENGINES

Stanley W. Gilbert, Middletown, Conn., assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey

Application May 12, 1945, Serial No. 593,415

17 Claims. (Cl. 123—119)

1. A fuel supply system for an internal combustion engine, comprising a passage including a venturi for air flowing to said engine for combustion purposes, a throttle for controlling the flow of air thru the passage, injector pump mechanism with changeable capacity for supplying fuel to said engine, fuel supply conduits leading to the pump mechanism, a mixture control valve in the fuel supply conduits movable to and from a cutoff position wherein it prevents the passage of fuel to the pump mechanism, a fluid motor for changing the capacity of said pump mechanism, means controlled by variations in air pressure differential at the venturi for supplying fluid to the fluid motor and for thereby changing the pump capacity, and means operable independently of the pressure controlled means and in unison with movement of the mixture control valve to cutoff position for supplying fluid to actuate the fluid motor to reduce the capacity of the pump mechanism to its minimum.



2,446,470

ADJUSTABLE CLAMP

Roger H. Godwin, Dallas, Tex.

Application March 15, 1946, Serial No. 654,763

1 Claim. (Cl. 128—303)

In an arm and leg clamp, the combination comprising a mounting bar, a substantially circular plate affixed to each end of said mounting bar having spaced teeth in a segment of its periphery and further provided with a centrally disposed, internally threaded boss, an arcuated clamping arm, a clamping arm supporting member oscillatably mounted on said boss and into one end of which an end of said clamping arm is threaded, a detent pivotally connected to said supporting member, a gravity controlled locking arm integral with said detent to hold the latter normally in engagement with the teeth of said circular plate to hold said clamping arm against movement in one direction and means entering the internal threads of said boss to hold said clamping arm supporting member against displacement thereon.

2,446,471

CHECK PROTECTOR

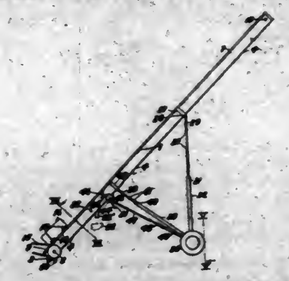
Alphonse M. Golke, Milwaukee, Wis.

Application November 24, 1945, Serial No. 630,646

1 Claim. (Cl. 164—119)

A check book having a thin backing cover grooved at its upper portion to form a foldable hinge, a thin strip of burred material carried for the same above the groove therein, and a thin pliable matrix strip carried by the cover below the groove hinged portion whereby, when the wing is folded over upon a check between the burred plate and matrix, it is mutilated.

2,446,472



ADAPTABLE CONVEYER

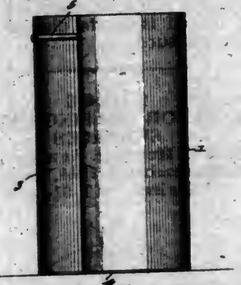
Lloyd A. Graf, Wauseon, Ohio

Application March 5, 1945, Serial No. 580,970

1 Claim. (Cl. 209—241)

A conveyor comprising an endless belt device having two reaches, a support for the device having a trough lengthwise thereof for one of the reaches and parallel to the trough a way for the other reach, mounting means for directing the support to incline upwardly, said device having flights coacting with the trough for conveying material to be discharged from the trough upper end, and a screen bottom section for the trough in communication with the way spaced from the trough upper discharge end for delivering material from the trough to the way, discharge means

in said way bottom spaced from said screen bottom and disposed farther from the trough upper discharge end than said screen bottom, said device flights in moving downwardly along the way adapted to convey material delivered to the way through the screen bottom downwardly along the way to said way discharge.



2,446,473

COMBUSTION CHAMBER STRUCTURE WITH SPIRAL AIR INLET

Milton Edmund Hanns, Albuquerque, N. Mex.

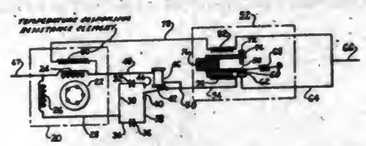
Application October 27, 1944, Serial No. 560,595

3 Claims. (Cl. 110—72)

1. A device without grates for the combustion of fuels comprising a spirally rolled sheet of non-combustible material, a closure member secured to one extremity of the rolled sheet, said closure member serving as a base from which the sheet extends vertically, the inner end of the spiral passageway constituting a combustion chamber, and the remainder of the spiral passageway constituting an inlet duct for admitting combustion air tangentially to the combustion chamber and throughout the height of the combustion chamber, said spiral passageway throughout its entire length being open, and also being open at the top.

2,446,474

MOTOR PROTECTIVE SWITCHING SYSTEM



Marshall C. Harrold, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware

Application April 18, 1945, Serial No. 588,957

3 Claims. (Cl. 175—294)

1. An electric motor and control system adapted for connection to a power supply com-

prising a motor having an enclosure and a rotor and windings within the enclosure, a motor protector having contacts for disconnecting the motor from the power supply upon an overload, a shunt circuit shunting the motor protector contacts, said shunt circuit including a temperature

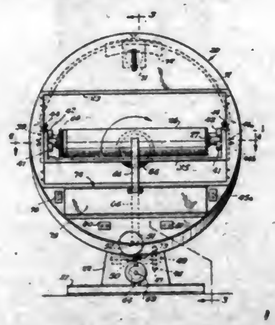
responsive resistance located in heat exchange relation with said windings, said shunt circuit also including reset regulating means responsive to the current flow in the circuit for regulating the resetting time of said overload protector according to the motor winding temperatures.

2,446,475

REARRANGEMENT PROCESS

George W. Hearne, Berkeley, and Donald S. La France, Richmond, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application August 31, 1942, Serial No. 456,832
12 Claims. (Cl. 260—654)



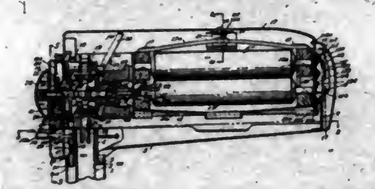
9. A process for effecting the rearrangement of a dichlorobutene of the group consisting of 1,4-dichlorobutene-2 and 1,2-dichlorobutene-3 to the other member of the group which comprises heat treating the dichlorobutene at about the boiling temperature in the presence of copper metal and a copper compound, and separating the produced isomeric dichlorobutene from the resulting mixture.

2,446,476

APPARATUS FOR COATING CYLINDRICAL SURFACES

William C. Huebner, New York, N. Y.

Application December 9, 1944, Serial No. 567,381
7 Claims. (Cl. 91—42)



1. An apparatus for coating cylinders, comprising a support for a cylinder to be coated mounted for rotation in a substantially upright plane which is inclined somewhat upwardly and rearwardly from the vertical, means for mounting said cylinder to rotate about its axis on said support with the axis of the cylinder parallel with said inclined plane, drive mechanism for rotating said support in said inclined plane and simultaneously rotating said cylinder about its axis on said support, and means for directing the pouring of the coating material in liquid condition on the front middle portion of the surface of the cylinder while it rotates about its axis and in said inclined plane.

2,446,477

WRINGER AND THE LIKE

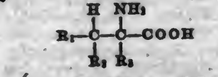
Walter L. Kauffman, II, Erie, Pa., assignor to Lovell Manufacturing Company, Erie, Pa., a corporation of Pennsylvania

Application May 1, 1942, Serial No. 441,331
20 Claims. (Cl. 68—253)

1. In a wringer or the like, the combination with a frame, of rolls mounted in the frame, and a driving means for a roll, a reversing mechanism for the driving means comprising a clutch in the driving means, a rotatively mounted control member operatively connected with the clutch, latch members swinging with the control member and engaging opposite sides of one end of the control member, spring means acting to close the latch members on the control member, and a locking member adapted to lock one or the other of the latch members, and actuated by a yielding of the clutch to unlock the latch member.

7. In a wringer or the like, the combination with a frame, rolls mounted in the frame, driving means for a roll, and a pressure release device for the roll, of a driving connection for the driving means tending through the torque resistance of the rolls to release the connection, means for releasing the connection responsive to an overload, and devices actuated as the pressure release device is operated to release the torque releasable connection.

8. In a wringer or the like, the combination with a frame, rolls mounted in the frame, driving means for a roll, a supporting arm for the frame extending lengthwise of the frame, of a pair of supporting links at each end of the frame supporting the frame from the arm, and a pressure release device responsive to a link movement of an end of the frame.



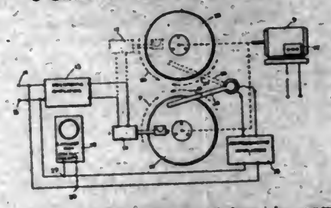
2,446,478

IMITATION MAPLE FLAVOR

Roland E. Kremers, Summit, N. J., assignor to General Foods Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application October 6, 1944, Serial No. 557,553
16 Claims. (Cl. 99—140)

1. The process of producing a maple flavor which comprises reacting, at a temperature in the approximate range of 100° C. to 170° C., a reducing saccharide with an amino acid of the general formula



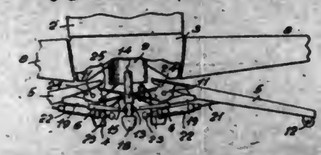
wherein R_1 is H, OH, CH_3, or COOH, R_2 is H or CH_3, and R_3 is H or CH_3, the reaction mixture being in a substantially anhydrous molten state at least at the end of the reaction and the duration of the reaction varying inversely with the temperature and being limited at a given temperature to avoid caramelization masking the maple flavor of the reaction product.

2,446,479

METHOD AND APPARATUS FOR CORRECTING PHASE SHIFT DISTORTION IN SOUND RECORDING SYSTEMS

Semi Joseph Begun, Cleveland Heights, Ohio, assignor to The Brush Development Company, Cleveland, Ohio, a corporation of Ohio

Application September 17, 1942, Serial No. 458,673
8 Claims. (Cl. 179—100.1)



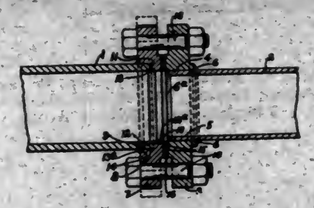
1. A dubbing system comprising, in combination, a first record medium, means for driving said record medium in a forward direction, means for recording a signal on said record medium during forward movement thereof, means for reversing the direction of movement of the record medium, reproducing means for reproducing the recorded signal during reverse movement thereof, a second record medium, means for driving said second record medium, means for recording during forward movement of the record medium a signal substantially corresponding to the signal reproduced from the first record medium, means for reversing the direction of movement of the second record medium, and means for reproducing the recorded signal during reverse movement of the said second record medium, said means for recording on said two record mediums having substantially the same phase shift qualities and said means for reproducing from said two record mediums having substantially the same phase shift qualities.

2,446,480

AIRCRAFT LANDING GEAR

Lloyd H. Leonard, Long Island City, N. Y.

Original application January 25, 1941, Serial No. 375,991. Divided and this application June 27, 1945, Serial No. 601,859
6 Claims. (Cl. 244—102)



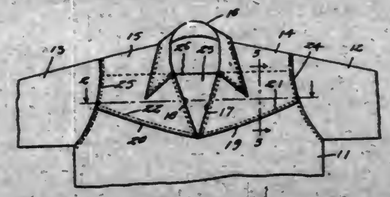
1. An aircraft comprising an elongated fuselage constructed to rise and descend vertically endwise, and landing gear at one end of said fuselage, said landing gear comprising a plurality of longitudinally extending, laterally expansible members, normally grouped to form a streamlined continuation of the outer surface of said fuselage, and means operated by contact with the ground, when landing endwise, for automatically expanding said members to form a broad polygonal base for supporting said fuselage in upright position.

2,446,481

REDUCING FLANGE

Louis Letterman, Winthrop, Mass.

Application February 5, 1945, Serial No. 576,220
1 Claim. (Cl. 285—183)

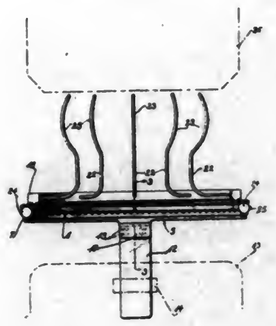


The combination with two pipes of different sizes to be connected together, of a steel flange provided with bolt holes, said flange being standard as to size and diameter of bolt hole circle for the smaller pipe and having a central opening of a size to fit said smaller pipe and in which the end of said pipe is received, said flange being welded to said pipe, and a companion flange having the same diameter as the first-named flange, which companion flange is also standard as to size and diameter of bolt hole circle for the smaller pipe and has a two diameter opening therethrough with an interior shoulder between the portions of the opening of different diameter, the portion of the opening of smaller diameter being of the same size as the opening in the first-named flange, thereby providing both flanges with the same gasket area, and the portion of the opening of larger diameter being of a size to receive and receiving the end of the larger pipe, the end face of said larger pipe being beveled inwardly and backwardly and said shoulder having a complemental beveled surface which, with the beveled surface of the pipe, forms a wide-angle annular welding groove, said pipe of larger diameter and said companion flange being welded together by a weld which fills said groove and further being welded together at the point where the pipe of larger diameter enters the companion flange, a gasket between the equal gasket areas of said flanges and bolts extending through holes in said flanges and bolting them together.

2,446,482

GARMENT

Ruth Hudson MacCloskey, Corvallis, Oreg.

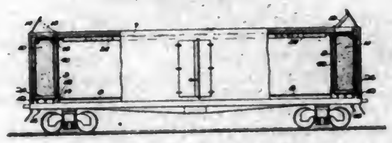


Application June 1, 1945, Serial No. 597,081
1 Claim. (Cl. 2—122)

A garment of the kind described, comprising front and rear panels, a yoke carried by the upper end of said rear panel and extending between the upper ends of said panels, said yoke formed with a V-shaped cut-out in the front portion thereof, a tucker on the upper end of said front panel, the lower end of said yoke overlying said tucker, stitching securing the lower edge of said yoke to said front panel and said tucker, stitching securing said tucker and said yoke along

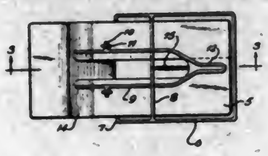
their overlying side edges, said tucker having a free straight upper edge between the side edges thereof and extending across said cut-out, whereby the neck opening formed between said tucker and said yoke may be expanded and contracted.

2,446,483
HEADREST
Frank G. Martin, Huntington, W. Va.
Application July 31, 1946, Serial No. 687,357
3 Claims. (Cl. 155—173)



1. A head rest for supporting the head of a person during hair drying comprising a base member provided with means for attachment to a chair and having a track which defines an arc, a slide member secured to said track for movement therealong, said slide member being provided with a plurality of fingers having head contacting portions for supporting the head of a person seated in the chair, said slide member being arranged to move along said arcuate track during normal turning of the person's head without relative movement between the head contacting portions of said fingers and the head.

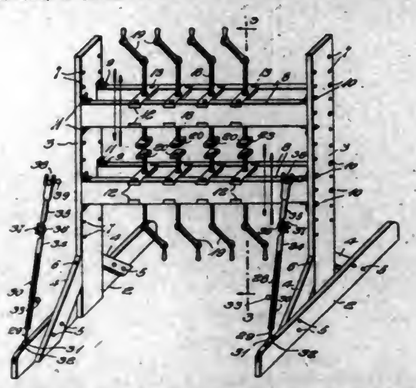
2,446,484
METHOD OF CONVERTING NORMAL AMMONIUM FLUORIDE TO AMMONIUM BIFLUORIDE
Francis M. McClenahan, Monmouth, Ill.
Application December 30, 1943, Serial No. 516,152
5 Claims. (Cl. 23—88)



1. The method of transforming normal ammonium fluoride solution to ammonium bifluoride which comprises preheating a pool of aqueous solution of normal ammonium fluoride, supplying additional aqueous ammonium fluoride to the pool to cause it to overflow, passing the heated overflowing material by gravity through a restricted enclosed elongated heating zone, supplying heat to the material in such zone to generate water vapor and ammonia, whereupon the generated vapors pass countercurrent to the material flowing through the zone, collecting material from the heating zone into a liquid pool substantially of ammonium bifluoride, retaining the material therein until it is substantially free from normal ammonium fluoride, and maintaining an atmosphere of ammonia above the liquid pool of ammonium bifluoride to inhibit appreciable sublimation of said bifluoride.

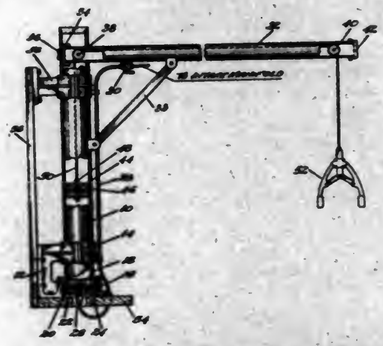
2,446,485
END ICE BUNKER CAR HAVING AN ADJUSTABLE ICE RACK
Floyd J. McMichael, Orlando, Fla.
Application February 8, 1945, Serial No. 576,739
10 Claims. (Cl. 62—19)

1. A refrigerating unit including a body having an ice bunker therein, a rack movable up and down in the bunker and adapted to support ice thereon, and graduated counterbalancing means connected with the rack and operable in response to variation in the weight of a load of ice on the rack to counterbalance the rack at a corresponding level in said bunker and maintain the upper surface of said load near a predetermined normal level at the upper portion of the bunker.



2,446,486
ANIMAL TRAP
John E. Nickell, McFarland, Calif., assignor of forty per cent to James M. Yarbor, Delano, Calif.
Application March 21, 1945, Serial No. 583,864
1 Claim. (Cl. 43—81)

An animal trap comprising a base, a substantially U-shaped jaw having ends pivotally mounted in the sides of the base and swingable forwardly and rearwardly of the base into its closed and open positions, said jaw having an intermediate cross bar, spring means connected to the cross bar and operable to hold the jaw in its open position and to swing the jaw into its closed position, and an elongated trip member pivoted intermediate its ends on the base, one end of the trip member being engaged under the cross bar and adapted to release the jaw through the medium of an animal exerting a predetermined force on the other end of the member.

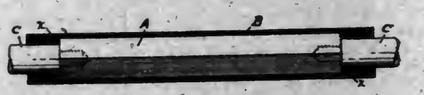


2,446,487
HOOD AND FENDER JIG
John Franklin O'Kelley, Dallas, Tex.
Application March 16, 1945, Serial No. 583,075
2 Claims. (Cl. 153—51)

1. An apparatus of the class described comprising a pair of spaced parallel base pieces, a pair of columns each secured at its lower end by diagonal braces to one of the base pieces and having near either of two longitudinal opposite edges a series of spaced holes, two vertically spaced sets of beams bridging the space between the columns and having secured to either end a pair of apertured angle irons, bolts, each passing through an angle iron aperture and a selected hole in a column, a plurality of cross bars each countersunk in the upper and lower surface of each set of beams, a flanged bushing interiorly and exteriorly threaded, carried by each cross bar, a lock nut for each bushing, a jack depending from each upper cross bar of the upper set of beams through said bushing and guided by the bushing of a lower cross bar of that set, a jack rising from a flanged bushing

carried by the upper cross bar of the other set and guided by a bushing in a lower cross bar of that set, each jack having a work engaging member in confronting relation to another member of the other set, and means adjustably connected to each base piece and adjustable as to length and angularity for clamping and holding the work operated on.

2,446,488
HOISTING DEVICE
Cecil Eugene Pierce, West Southport, Maine
Application May 11, 1945, Serial No. 593,267
4 Claims. (Cl. 212—30)

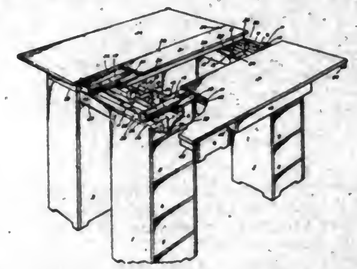


1. A hoisting device for automotive trucks, comprising a vertical pipe serving both as a mast and a fluid-pressure cylinder and having an opening in its wall near its upper end, a socket secured to the inner wall of the vertical pipe opposite said opening, a horizontal pipe passing inwardly through said opening, having a hole communicating with the vertical pipe and being supported in said socket, a piston movable in direct contact with the walls of the vertical pipe, and a cable connected to the piston and leading therefrom longitudinally through the horizontal pipe.

2,446,489
PROCESS FOR REGENERATING SPENT INTERNAL-COMBUSTION ENGINE LUBRICATING OILS
Albert Schaafsma, Amsterdam, Netherlands, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application March 11, 1946, Serial No. 653,700. In the Netherlands March 21, 1945
5 Claims. (Cl. 196—16)

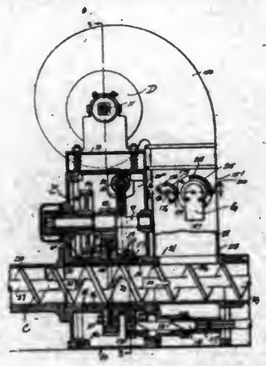
1. The process for regenerating spent internal combustion engine lubricating oil comprising the step of percolating said oil through a bed consisting of activated bauxite of at least one meter thickness at a temperature of about 260° C.

2,446,490
METHOD OF PRODUCING CONNECTOR BARS
Wayne R. Scherer, Trooper, Pa., assignor to Taylor Fibre Company, Norristown, Pa., a corporation of Pennsylvania
Application June 1, 1944, Serial No. 538,222
3 Claims. (Cl. 154—117)



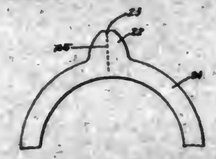
1. The method of producing a contact connector bar having an insulating covering over its entire length and having portions in contact with the ends of the bar forming abutments for the end faces of the bar, comprising assembling a rod with each end of the bar of a diameter such that no portion of the peripheries of the rods at the end portions thereof will extend beyond any portion of the periphery of the bar at the end faces of the bar, but portions of the end faces of the bar will extend beyond the peripheries of the rods, wrapping insulating material over the bar and beyond the ends thereof and over portions of the rods extending from the bar, then subjecting the wrapped assembly to pressure to conform the insulating material to the entire length of the periphery of the bar and to the wrapped portions of the rods and into contact with the end faces of the bar extending from the peripheries of the rods to the periphery of the bar, and then removing the rods from the bar so that an opening of the diameter of the rod is formed in each portion of the insulating material extending from the end faces of the bar to the ends of the insulating material.

2,446,491
CONVERTIBLE TABLE
Norval P. Schreiner, Springfield, Mo.
Application April 27, 1944, Serial No. 533,045
6 Claims. (Cl. 311—3)



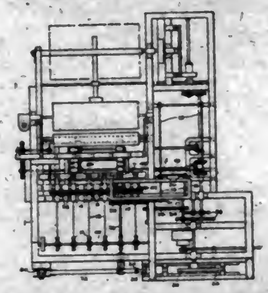
1. A convertible table comprising a main table top having front and rear top sections; a folding top section hinged to the rear of said rear top section and adapted to be folded in superposed relation to said main sections or disposed in coplanar relation therewith; rear longitudinal slide guide means carried by said rear top section; front longitudinal slide guide means carried by said front top section; supporting means for said table top sections comprising two pairs of pedestals, each pair of said pedestals comprising a front and rear pedestal; each pair of pedestals having interconnecting slide means adapting the front and rear pedestals thereof to be optionally

disposed in juxtaposed or spaced relation; rear transverse slide guides carried by the rear pedestals of each of said pair of pedestals; rear transverse slides movably supported by said rear transverse guides and adapted to move transversely of the table; front transverse slide guides carried by the front pedestals of each pair of said pedestals; front transverse slides movably supported by said



front transverse guides and adapted to move transversely of the table; rear longitudinal slides carried by said rear transverse slides and adapted to move longitudinally of said rear longitudinal slide guide means and front longitudinal slides carried by said front transverse slides and adapted to move longitudinally of said front longitudinal slide guide means.

2,446,492
UNDERFEED DOMESTIC STOKER
John C. Scott, Beckley, W. Va., assignor to The New River Company, Mount Hope, W. Va., a corporation
Application April 22, 1941, Serial No. 389,803
15 Claims. (Cl. 110—45)



6. As an article of manufacture, a conveyor screw for stokers and the like comprising a coreless screw section, end axle stubs attached at the ends of the coreless screw portion, and a ring-shaped attaching disc disposed in a plane normal to the axis of the coreless screw section said ring having a passageway therethru of the same diameter as the overall diameter of the coreless screw section at the location of said ring, and the peripheral portion of the coreless screw section at the location where it extends thru the said ring being fixed with respect to the ring in the passageway of the ring.

2,446,493
JAR RING
Cyril L. Silvia, Rockland, and Austin Smith, Peabody, Mass., assignors to Boston Woven Hose and Rubber Company, Cambridge, Mass., a corporation of Massachusetts
Application December 7, 1945, Serial No. 633,276
4 Claims. (Cl. 288—20)

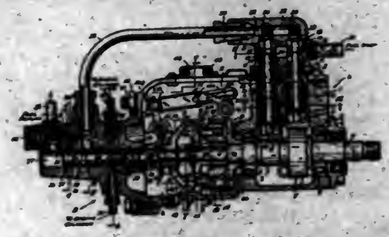
1. A jar ring comprising a flat rubber annulus having an outwardly protruding lip integral therewith and weakened along a line extending through the lip and inwardly of the ring from a point on the outer periphery of the lip, the rubber comprising the ring being bonded into a unit throughout said annulus and across said weakened line.

2,446,494
SNOW FENCE MACHINE
Joseph D. Smith, Toronto, Ontario, Canada
Application March 8, 1945, Serial No. 581,673
6 Claims. (Cl. 140—30)

1. In a machine for making snow fences, the combination with a frame, a plurality of rotatable parallel wire twisting members mounted on said frame and geared to rotate in unison, means for feeding paired wires to each of said twisters, of a flanged bushing rotatably mounted on one of said wire twisting members, means for imparting rotative movement to said flanged bushing, a flanged member slidably and non-rotatably mounted on said wire twisting member adapted to engage the flange of the aforesaid bushing to drive the wire twisting member, and means for periodically operating said slidable clutch member to engage and disengage the flanged bushing.

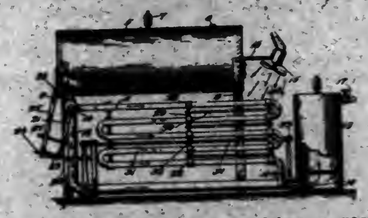
2,446,495
RAIL ANCHORING MEANS
Clifford B. Smithers, Chillicothe, Ill., assignor of twenty-five per cent to Ernest Staub, Peoria, Ill.
Substituted for application Serial No. 725,619, January 31, 1947. This application December 18, 1947, Serial No. 792,497
2 Claims. (Cl. 238—349)

1. An anchoring plate for fixing rails on ties, comprising a groove slightly wider than the base of said rails, spike holes along the edges of said groove, offset tongues punched upwardly along the sides of said plate to form clamp hooks, resilient means for holding down said rails over their lower flanges and formed to fit under said clamp hooks, said tongues so shaped and offset as to cause their free ends to clear the ends of their corresponding slot ends sufficiently to permit



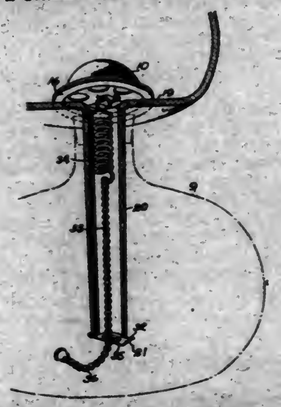
a spike to be driven through said slot, with its lip turned toward the tongue so as to overlap it and draw it firmly down over said resilient hold-down means to strengthen the clamping effect.

2,446,496
METHOD OF MAKING GAS COCKS
Herbert E. Tantz, Denver, Colo., assignor to Heckethorn Mfg. & Supply Co., Littleton, Colo., a corporation of Colorado
Application May 5, 1947, Serial No. 746,007
3 Claims. (Cl. 29—157)



1. A method of manufacturing a gas valve having a spherical body and a hexagonal wrench-engaging portion, said spherical body having a larger diameter than the hexagonal wrench-engaging portion including: turning said spherical body from a hexagonal bar of the size and contour of said wrench-engaging portion, the diameter of the sphere exceeding the distance between opposite faces on said bar so that said faces will form six flat facets on said sphere; turning a male thread receiving portion at one side of said sphere; then cutting said sphere from said bar at a point spaced from said sphere so that a portion of the hexagonal bar will remain attached to said sphere to form a wrench-engaging portion thereon.

2,446,497
FUEL INJECTION APPARATUS
Alden P. Thomas, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
Application August 28, 1943, Serial No. 500,329
5 Claims. (Cl. 123—140)



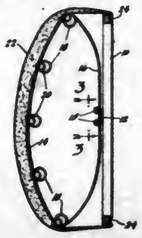
1. In a fuel injection apparatus for a multi-cylinder internal combustion engine, a fuel distributor adapted to communicate with the respective engine cylinders, a pump operable by said engine for supplying fuel to said fuel distributor, a rotary valve for successively placing said distributor in communication with the engine cylinders, said valve being shiftable axially to vary the quantity of fuel supplied to said fuel discharge passageway, a shaft operating in timed relation to the engine, and a driving connection between said shaft and valve comprising means responsive to the speed of said shaft for axially shifting said valve and means responsive to the speed of the shaft for changing the phase relationship between said shaft and valve.

2,446,498
LIQUID AIR BOILER
George T. Underwood, Chehalis, Wash.
Application July 27, 1945, Serial No. 607,349
6 Claims. (Cl. 62—1)

1. A liquid air boiler comprising a reservoir adapted to contain liquid air, a compressed air tank, a pipe connecting the reservoir to the tank, a coil connected at each end to the pipe, and exposed to atmospheric temperature to evaporate liquid air contained therein, a two-way valve regulating flow of liquid air through the pipe and coil, and a pressure operated piston in the coil for operating the valve.

2,446,499
COFFEE FILTER
Donald E. Van Denberg, Rockford, Ill.
Application May 18, 1945, Serial No. 594,458
1 Claim. (Cl. 210—162)

A strainer for a vacuum type coffee brewer having an infusion tube comprising in combination a strainer adapted to seat in the entrance end of said tube, a flexible connection longer than said tube attached at one end to the underside of said strainer for holding the strainer seated in said entrance end, said connection including a resiliently extensible portion adjacent the strainer and a lower end portion having a multiplicity of enlargements interconnected with each other and spaced longitudinally along the flexible connec-



tion and a cross-bar longer than the diameter of said tube and apertured intermediate its ends to provide a recess permitting the passage of said enlargements therethrough, and an adjoining slot narrower than the diameter of said enlargements but loosely receiving any part of said connection intervening between said enlargements whereby to permit tilting of the cross-bar to a position alongside said connection and thereby allow withdrawal of the connection endwise through said tube.

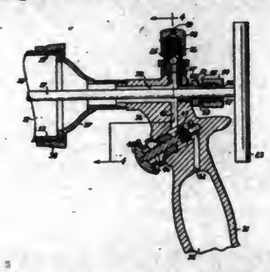
2,446,500

UPHOLSTERY SPRING STRUCTURE

Desire H. Van Hove, Northville, Mich., assignor to Falls Spring & Wire Company, Detroit, Mich., a corporation of Michigan, and Great Lakes Spring Corporation, Chicago, Ill., a corporation of Illinois

Application January 28, 1944, Serial No. 520,019
6 Claims. (Cl. 155—179)

1. In a spring cushion, a substantially rectangular base frame having sides and ends defining the bottom boundary of the cushion and including a spring supporting frame element extending between and secured to the ends of the frame and spaced from the sides thereof, a plurality of elliptic springs the bottom leaves of which are secured to the spring supporting frame element between the vertices of the springs positioning said springs in substantially parallel spaced apart relationship, two pairs of helical cross springs respectively extending between and securing together the correspondingly adjacent vertices of the elliptic springs, one pair being along one side margin of the cushion, the other pair being along the other side margin, the two helical springs in each pair being interwoven together and interwoven with and across the elliptic springs maintaining them in yieldingly spaced apart relationship, said two pairs of helical coil springs and the top leaves of the two elliptic springs at the ends of the cushion defining the top boundary of the cushion and upholstery material extended over said springs and secured to the supporting base.



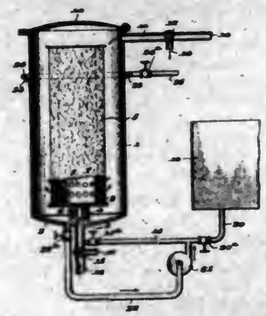
2,446,501

DISPENSING DEVICE FOR VISCOUS MATERIALS

William J. Weber, Lyndhurst, Ohio, assignor to Samuel Crewe, Cleveland, Ohio

Application December 6, 1944, Serial No. 566,879
1 Claim. (Cl. 222—389)

In a dispenser of the gun type, a barrel having a discharge opening at its forward end and an open rear end, a piston slidable in said barrel, a piston rod having its forward end connected to said piston and having its rear end extending through said open rear end of the barrel, a unitary rear end handle structure for closing the open rear end of the barrel about said piston rod and having an elongated passage alined with and communicating with said barrel through which said rear end of the piston rod extends, said elongated passage being of substantially greater diameter than the piston rod, a nipple disposed over the rearwardly extending end of the piston rod and having its forward end detachably secured



to the rear end handle structure and having a passage alined with said first-named elongated passage, a packing member secured to the rear end of the nipple about said piston rod inwardly of the rearwardly extending end of the latter, and a handle secured to the free rear end of the piston rod.

2,446,502

STEAM PROCESS FOR FIXING COLORING MATERIAL IN TEXTILE GOODS

Jean Wehrli, Weinfelden, Switzerland

Application March 9, 1944, Serial No. 525,694
In Switzerland January 22, 1943
12 Claims. (Cl. 8—149.3)

1. A process for fixing coloring materials in textile goods comprising passing steam through the textile goods carrying the unfixed coloring materials until the air is entirely removed from said goods, shutting off the steam supply, evacuating the textile goods, passing wet steam through the textile goods, and varying the steam pressure alternately several times between higher and lower ranges.

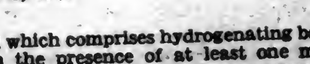
2,446,503

PROCESS FOR MAKING 5-MONOALKYL-BARBITURIC ACIDS

Wilhelm Wenner, Montclair, N. J., assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey

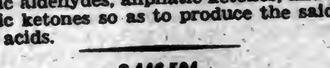
No Drawing. Application September 29, 1945, Serial No. 619,414
15 Claims. (Cl. 260—257)

1. The process of making barbituric acids substituted in the 5-position by a single hydrocarbon radical which comprises hydrogenating barbituric acid in the presence of at least one molecular quantity of a member of the group consisting of aliphatic aldehydes, aliphatic ketones, and cycloaliphatic ketones so as to produce the said barbituric acids.



2,446,504

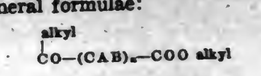
CARBOXYLATED MONOSUBSTITUTED BARBITURIC ACID



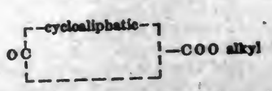
Wilhelm Wenner, Montclair, N. J., assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey

No Drawing. Application January 18, 1946, Serial No. 642,110
18 Claims. (Cl. 260—257)

1. Compounds of the group consisting of those corresponding to the general formulae:



and



in which A, B, and X are members selected from the group consisting of hydrogen and alkyl and in which n is a member of the group consisting of zero and an integer.

10. The process of making 5-mono-substituted-barbituric acid, which comprises hydrogenating barbituric acid in the presence of at least one molecular equivalent of a keto-acid ester selected from the group consisting of those corresponding to the general formulae:

and

in which A and B are members selected from the group consisting of hydrogen and alkyl, and n is a member of the group consisting of zero and an integer so as to produce the said 5-mono-substituted barbituric acid.

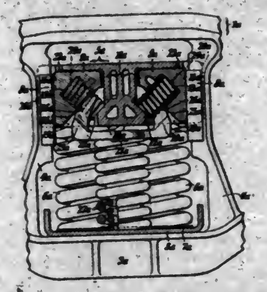
2,446,505

METHOD OF INHIBITING THE GROWTH OF MOLD

Simon Weil Arenson, Baltimore, Md., assignor to Doughnut Corporation of America, New York, N. Y., a corporation of New York

No Drawing. Application April 12, 1946, Serial No. 661,866
7 Claims. (Cl. 167—22)

1. The method of inhibiting the growth of mold which comprises applying to the locus of infection an esterification product of a member selected from the group consisting of propylene glycol and dipropylene glycol with the straight chain, saturated, monocarboxylic acid of the group from 2 to 10 carbon atoms.



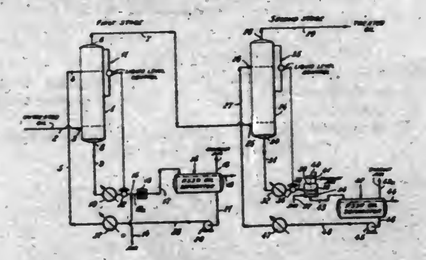
2,446,506

SNUBBED BOLSTER CAR TRUCK

Charles D. Barrett and Charles R. Whitehead, Altoona, Pa.

Application August 8, 1946, Serial No. 689,163
15 Claims. (Cl. 105—197)

1. In a car truck, a side frame, a bolster resiliently supported on said side frame, a shoe carried in the bolster and frictionally engaging a surface of the side frame, spring means urging said friction shoe against said surface comprising a spring maintaining a constant force on the friction shoe regardless of the weight on the bolster, and a spring maintaining a variable force

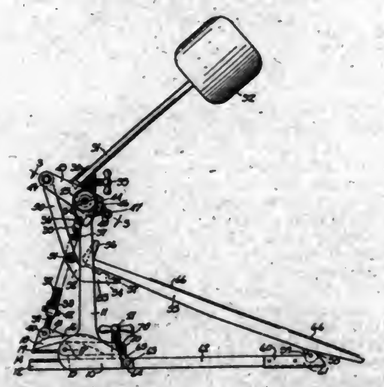


on the friction shoe increasing directly with the load on the bolster, the total force between the friction shoe and said surface of the side frame being at all times the sum of the independent forces exerted separately by the constant force spring and the variable force spring.

2,446,507

METHOD OF REMOVING MERCAPTANS FROM A LIQUID MIXTURE OF HYDROCARBONS CONTAINING LOW-BOILING AND HIGH-BOILING MERCAPTANS

Stephen P. Cauley, Garden City, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

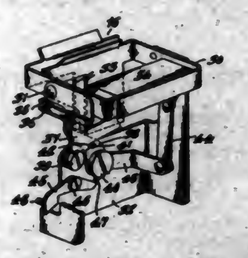


Application January 26, 1945, Serial No. 574,759
3 Claims. (Cl. 196—30)

1. The method of removing mercaptans from a liquid mixture of hydrocarbons containing low boiling and high boiling mercaptans which comprises contacting in the absence of substantial amounts of gas containing free oxygen a liquid mixture of hydrocarbons containing low boiling and high boiling mercaptans with a first aqueous solution of alkali metal hydroxide substantially devoid of solutizer to extract low boiling mercaptans from said mixture of hydrocarbons and to produce a first "fat" aqueous alkaline solution containing low boiling mercaptans and a treated liquid mixture of hydrocarbons of substantially reduced content of low boiling mercaptans and containing high boiling mercaptans, contacting said treated liquid mixture of hydrocarbons in the absence of substantial amounts of gas containing free oxygen with a second aqueous solution of alkali metal hydroxide containing an amount of solutizer effective to increase the solu-

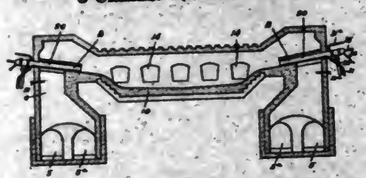
bility of high boiling mercaptans in said second aqueous solution of alkali metal hydroxide to extract high boiling mercaptans from said treated mixture of hydrocarbons and to produce a second "fat" aqueous alkaline solution containing high boiling mercaptans and a treated liquid mixture of hydrocarbons of substantially reduced content of low and high boiling mercaptans, passing a gas containing free oxygen through said first "fat" alkaline solution in the presence of a phenolic oxidation promoter, itself capable of inactivation by oxygen, to oxidize a portion of said low boiling mercaptans to disulfides and to leave unoxidized about 0.3 weight per cent mercaptan-sulfur in the form of mercaptides of low boiling mercaptans, separating said disulfides from said first aqueous alkaline solution to obtain a "lean" first aqueous solution of alkali metal hydroxide containing said about 0.3 weight per cent mercaptan-sulfur, passing gas containing free oxygen through said second "fat" aqueous alkaline solution in the presence of a phenolic oxidation promoter, itself capable of inactivation by oxygen, to oxidize a portion of said high boiling mercaptans to disulfides and to leave unoxidized about 0.1 to about 0.2 weight per cent mercaptan-sulfur in the form of mercaptides of high boiling mercaptans, separating said disulfides from said second aqueous alkaline solution to obtain a second "lean" aqueous solution of alkali metal hydroxide containing said solutizer and about 0.1 to about 0.2 weight per cent mercaptan-sulfur in the form of mercaptides of high boiling mercaptans, and contacting a further amount of a liquid mixture of hydrocarbons containing low and high boiling mercaptans successively with said first "lean" aqueous solution of alkali metal hydroxide containing said about 0.3 weight per cent mercaptan-sulfur as mercaptides of low boiling mercaptans and with said second "lean" aqueous solution of alkali metal hydroxide containing said solutizer and said about 0.1 to about 0.2 weight per cent mercaptan-sulfur.

2,446,508
DRUM PEDAL
Milton E. Crowell, Oak Park, Ill., assignor to H. & A. Selmer, Inc., Elkhart, Ind., a corporation of Indiana
Application May 17, 1945, Serial No. 594,306
9 Claims. (Cl. 84—422)



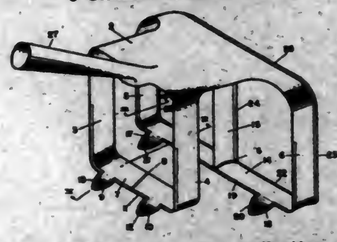
8. A drum pedal comprising a standard, a cross bar journaled in said standard, a beater carrier mounted centrally on said bar, a rigid U-shaped lever straddling said carrier and having a cross piece and a pair of spaced arms journaled on said bar adjacent said cross piece eccentric means adjustable on said carrier and engaging said cross piece to control the angular relation of said carrier and lever, a pair of links pivoted to the free ends of said lever arms, foot operated actuating means connected to said links and including a pivoted foot board, and a tension spring connecting said standard and said carrier and extending freely between said links, said foot board having an upturned toe flange.

2,446,509
PLANT COVER
Albert C. Fischer, Chicago, Ill.
Application September 17, 1943, Serial No. 502,804
6 Claims. (Cl. 47—29)



1. A covering for a plant comprising an enclosure formed of a sheet of light-permeable material adapted to define, around at least part of the plant, an atmospheric environment that is isolated from the atmosphere surrounding said enclosure, said enclosure bearing on the interior surface thereof an aromatic treating ingredient which permeates the isolated environment, and said sheet of light-permeable material consisting of a water permeable fabric incorporating in addition water soluble soil treating ingredients.

2,446,510
COIN DEVICE
Otto A. Hokanson, Snyder, N. Y., assignor to The Rudolph Wurlitzer Company, North Tonawanda, N. Y., a corporation of Ohio
Application January 12, 1944, Serial No. 517,962
14 Claims. (Cl. 194—97)

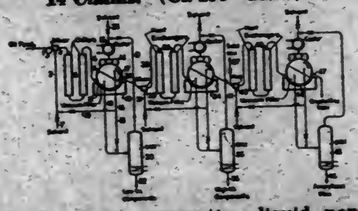


1. In a coin device, a housing having coin chutes disposed laterally side by side for the travel of different denomination coins and being open at their upper ends to receive such coins, common laterally-displaceable coin-introducing means pendantly suspended from the housing in correlation with the open upper ends of said chutes for selective registration therewith and for receiving and automatically directing coins of predetermined denominations to one or the other of said chutes, and coin-governed means operatively connected to said coin introducing means for releasably latching it in one of its positions.

2,446,511
OPEN-HEARTH STEELMAKING
Frank George Kerry, Montreal, Quebec, and Edward Thomas Walter Bailey, Hamilton, Ontario, Canada; said Kerry assignor to L'Air Liquide Societe Anonyme pour l'Etude et l'Exploitation des Procedes Georges Claude, Paris, France, a body corporate
Application August 21, 1947, Serial No. 769,964
In Canada August 21, 1946
5 Claims. (Cl. 75—43)

1. A process of making steel in an open hearth furnace which comprises melting down a charge in an open hearth with a flame formed by feeding fuel into the furnace during the melting-down with oxygen containing gas containing not less than about 60% oxygen; intimately bringing together said oxygen containing gas and fuel as they enter the furnace, thereby to accelerate the primary reaction of combustion; the amount of oxygen so fed being at least about 15% of the total oxygen required for substantially complete combustion in the furnace of the fuel so fed, and being at least about .55 pound per pound of fuel so fed; introducing into the furnace oxygen in dilute form to provide the remainder of the oxygen necessary for substantially complete combustion in the furnace of the fuel so fed; the amount of fuel fed being between an amount which is about 15% greater than the amount of fuel which would be completely combusted in the furnace in the presence of the oxygen so fed and produce the same volume of flue gas as would be produced when the maximum amount of fuel is completely combusted in the furnace in air alone and an amount to provide substantially the maximum amount of flue gases that can concurrently be removed from the furnace; and impinging the flame so formed directly upon the charge to effect its melting down thereby accelerating the melting down of the charge whereby the melt-down time is substantially less than possible with a fuel-air flame.

2,446,512
HAND CULTIVATING AND WEEDING TOOL
Levi B. Miller, Lancaster Township, Lancaster County, Pa.
Application July 21, 1945, Serial No. 606,376
5 Claims. (Cl. 97—61)



1. In a cultivator which is effective for soil cultivation when pushed or pulled, a pair of substantially horizontally disposed soil working blades, one disposed in spaced relationship to the rear of the other, a leading cutting edge on each of said blades, a downwardly inclined surface of each of said blades terminating in the leading cutting edge of each, said inclined surfaces being opposed with one being inclined forwardly and the other inclined rearwardly of the cultivator, whereby when said cultivator is either pushed or pulled, the leading edge of one blade will effect a digging action and the spaced opposed surface of the other blade will retard and control the digging action.

2,446,513
PULPSTONE JOINT MATERIAL
Yngve H. Nordstrom, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application September 30, 1947, Serial No. 776,931
4 Claims. (Cl. 51—206.4)

3. A pulpstone comprising a plurality of blocks of vitrified bonded abrasive material arranged to form an outer surface of revolution, a concrete center inside of and in contact with said blocks, said blocks being secured to said concrete center, and joint fillers between adjacent faces of said blocks each consisting of a sandwich having outer layers of butadiene-acrylic nitrile copolymer vulcanized to a condition at least as hard as is obtained by vulcanizing at 146° C. for 15 hours with 25% on the polymer per se of sulphur, and an inner layer of natural rubber vulcanized to a hardness no harder than is obtained by vulcanizing at 146° C. for 15 hours with 30% on the rubber per se of sulphur and no softer than is obtained by vulcanizing at 146° C. for 15 hours with 12% on the rubber per se of sulphur, said outer layers having a thickness of from .025" to .100" and said inner layer having a thickness of from .025" to .200", said inner layer having a porosity produced by the generation of gas during the vulcanization.

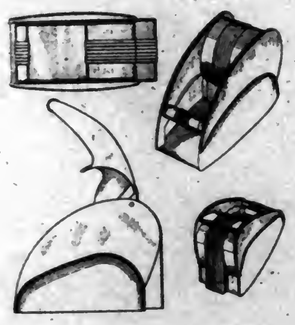
2,446,514
SEPARATION OF HYDROCARBON MIXTURES
Hall Stewart, Oakland, and August A. Schaerer, El Cerrito, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application September 16, 1944, Serial No. 554,486
14 Claims. (Cl. 196—14.48)

1. A process for separating liquid non-aromatic hydrocarbons from liquid aromatic hydrocarbons in a mixture thereof having an initial boiling point of above about 200° C. and containing dissolved between about 5% and 25% by volume of normally solid wax, comprising treating said mixture with at least about an equal volume

of a first polar solvent having a preferential solubility for aromatic hydrocarbons, cooling the resulting mixture to a temperature below about —50° C. to produce a solid phase comprising at least a major portion of the non-aromatic hydrocarbons and a liquid phase comprising said first solvent and said aromatic hydrocarbons, separating said phases, treating said separated solid phase with a second polar solvent at a temperature higher than that in the first cooling stage but below about 0° C. to produce a second solid wax phase and a second liquid phase comprising said liquid non-aromatic hydrocarbons and said second polar solvent, and separating said second solid wax phase from said second liquid phase.

2,446,515
METHOD OF FORMING BEARING STRUCTURES
Richard I. N. Weingart, Glen Head, N. Y.
Continuation of application Serial No. 549,238, August 12, 1944, which is a division of application Serial No. 475,692, February 12, 1943. This application March 24, 1945, Serial No. 584,719
5 Claims. (Cl. 29—149.5)

1. The method of mounting a shouldered shaft in spaced frame members provided with aligned bearing apertures, and a bearing bushing in at least one of such apertures, in order to secure a predetermined amount of end play in the shaft, which method consists in forming, on the outer periphery of the bearing bushing adjacent to the inner thrust-bearing surface, a plurality of outwardly-disposed, offset portions which are adapted to cut keyways in the frame aperture as the bushing is moved outwardly therein, force-fitting

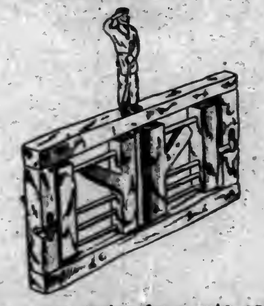


such bushing into the aperture from the inner end of such aperture, assembling the frame with the inner surface of the bushing in relatively firm contact with the adjacent shoulder of the shaft, then, while supporting the frame member, causing the adjacent shaft shoulder to move against the inner surface of the bushing, moving the same outwardly in its supporting aperture a sufficient distance to secure the desired amount of end play for the shaft.

DESIGNS

AUGUST 3, 1948

150,392
DESIGN FOR A SQUEEZER FOR FRUIT AND THE LIKE
Walter R. Amstutz, Chicago, Ill., assignor to Butler Brothers, Chicago, Ill., a corporation of Illinois
Application March 1, 1947, Serial No. 137,254
Term of patent 14 years
(Cl. D89—1)

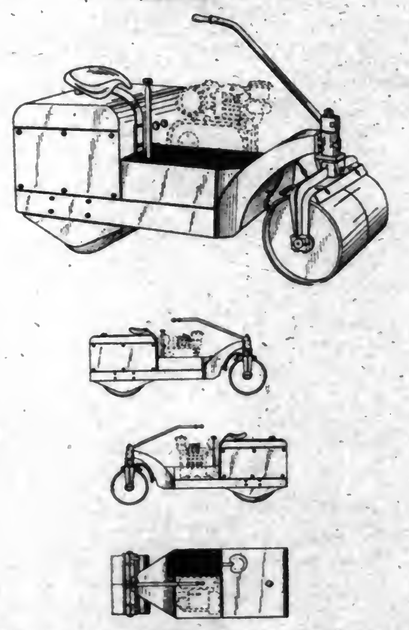


The ornamental design for a squeezer for fruit and the like, substantially as shown and described.

150,393
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Claude Arpels, New York, N. Y.
Application December 8, 1947, Serial No. 143,029
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,394
DESIGN FOR A GATE
Cristobal Baca, Albuquerque, N. Mex., assignor of fifty per cent to Aurora C. Padilla, Albuquerque, N. Mex.
Application February 20, 1947, Serial No. 137,049
Term of patent 14 years
(Cl. D28—1)

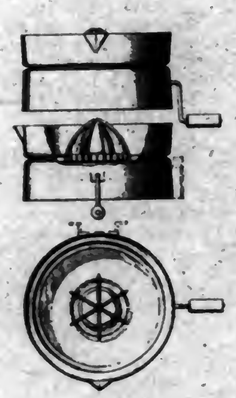


The ornamental design for a gate, as shown.

150,395
DESIGN FOR A MEAT TENDERIZING MACHINE
Sidney Bakewell, Detroit, Mich.
Application June 10, 1946, Serial No. 130,598
Term of patent 14 years
(Cl. D11—1)

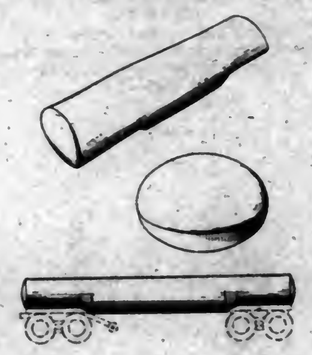
The ornamental design for a meat tenderizing machine, substantially as shown.

150,396
DESIGN FOR A TANDEM ROAD ROLLER
Ola L. Berby, Duluth, Minn., assignor to Clyde Iron Works, Inc., Duluth, Minn., a corporation of Minnesota
Application April 13, 1946, Serial No. 128,562
Term of patent 7 years
(Cl. D14—3)



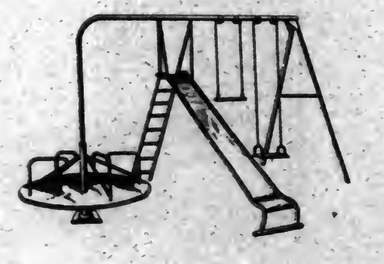
The ornamental design for a tandem road roller, as shown and described.

150,397
DESIGN FOR A WATER CLOSET
Louis B. Berz, Chicago, Ill., assignor to Verson Allsteel Press Company, Chicago, Ill., a corporation of Delaware
Application April 10, 1947, Serial No. 138,287
Term of patent 14 years
(Cl. D4—5)



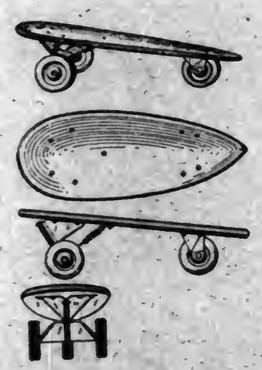
The ornamental design for a water closet, substantially as shown and described.

150,398
DESIGN FOR A FRUIT JUICER
Drake Bergen and David Cohl, Chicago, Ill.
Application January 6, 1947, Serial No. 135,970
Term of patent 3½ years
(Cl. D32—1)



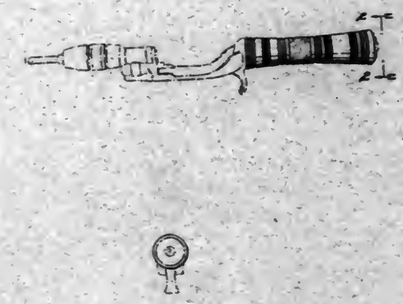
The ornamental design for a fruit juicer, as shown.

150,399
DESIGN FOR A TRANSPORT TANK OR SIMILAR ARTICLE
Robert Bernstein, Omaha, Nebr.
Application July 22, 1946, Serial No. 131,869
Term of patent 14 years
(Cl. D14—3)



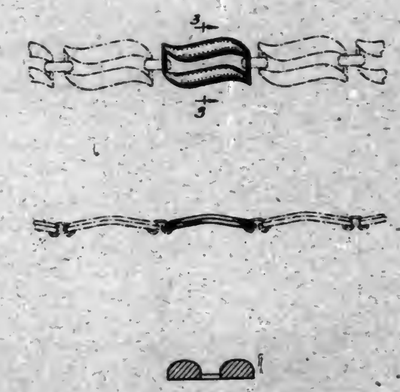
The ornamental design for a transport tank or similar article, substantially as shown and described.

150,400
DESIGN FOR PLAY YARD EQUIPMENT
Ralph T. Bowden and George B. Roberts, Brunswick, Ga.
Application February 13, 1947, Serial No. 136,880
Term of patent 3½ years
(Cl. D34—5)



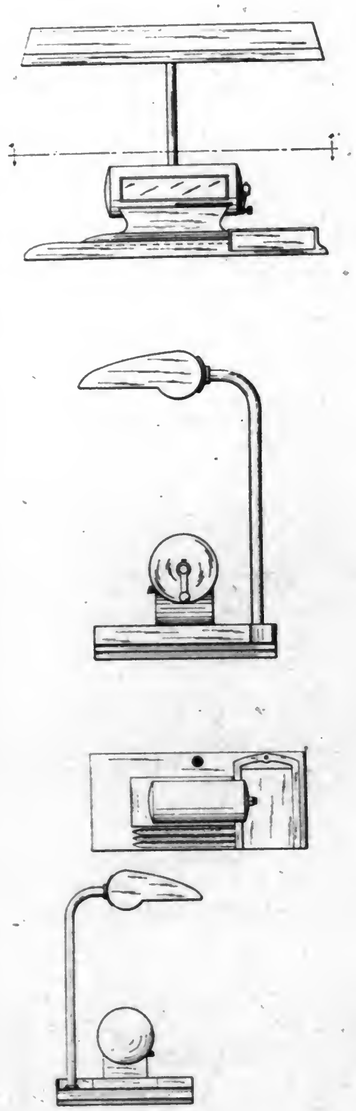
The ornamental design for play yard equipment, as shown.

150,401
DESIGN FOR A COASTER CAR
Thomas B. Brickson, Minneapolis, Minn.
Application August 31, 1946, Serial No. 133,014
Term of patent 3½ years
(Cl. D34—15)



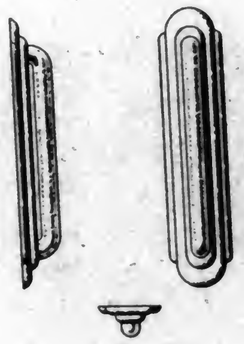
The ornamental design for a coaster car, substantially as shown.

150,402
DESIGN FOR A FISHING ROD
Joseph Carlson, Grosse Pointe Farms, Mich., assignor, by court order, to Maris E. H. W. Carlson
Application September 9, 1946, Serial No. 133,185
Term of patent 14 years
(Cl. D31—4)



The ornamental design for a fishing rod, substantially as shown and described.

150,403
DESIGN FOR A LINK CHAIN FOR A BRACELET OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application April 5, 1948, Serial No. 145,544
Term of patent 7 years
(Cl. D45—16)

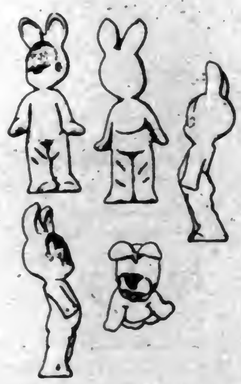


The ornamental design for a link chain for a bracelet or similar article substantially as shown and described.

150,404
DESIGN FOR A COMBINED LAMP AND DESK UNIT
Jesse L. Coen, Washington, D. C.
Application December 16, 1946, Serial No. 135,536
Term of patent 7 years
(Cl. D48—20)

The ornamental design for a combined lamp and desk unit, as shown.

150,405
DESIGN FOR A LIGHTING FIXTURE
Louis J. Conegtio, Cleveland, Ohio
Application December 6, 1946, Serial No. 135,307
Term of patent 7 years
(Cl. D48—4)

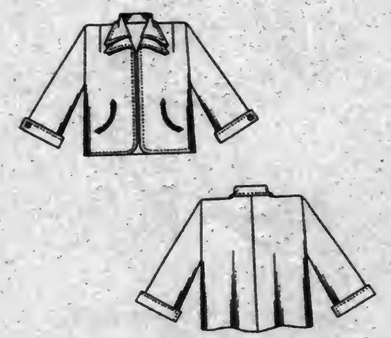


The ornamental design for a lighting fixture, substantially as shown.

150,406
DESIGN FOR A PERFUME BOTTLE
Leonid de Lescinskis, New York, N. Y.
Application December 26, 1946, Serial No. 135,764
Term of patent 3½ years
(Cl. D58—9)

The ornamental design for a perfume bottle, as shown.

150,407
DESIGN FOR A CANDLE
Ann Donahue, New York, N. Y., assignor to The W. & F. Manufacturing Co., Inc., Buffalo, N. Y.
Application February 21, 1947, Serial No. 137,083
Term of patent 7 years
(Cl. D73—1)

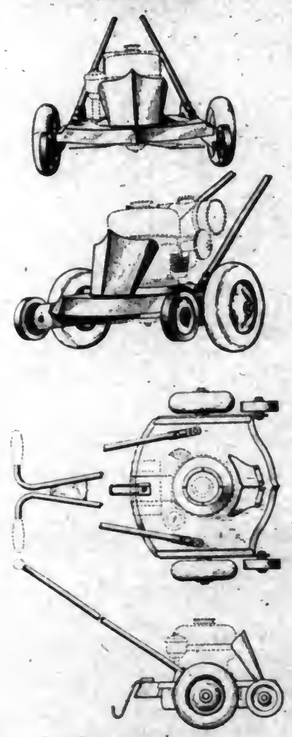


The ornamental design for a candle, substantially as shown.

150,408
DESIGN FOR A COCKTAIL TABLE
Walter Dziewit, Detroit, Mich.
Application February 8, 1947, Serial No. 136,773
Term of patent 3½ years
(Cl. D33—14)

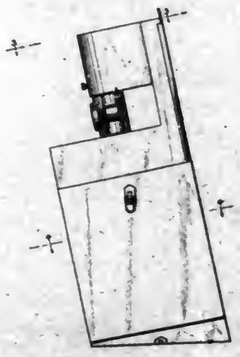
The ornamental design for a cocktail table, substantially as shown.

150,409
DESIGN FOR A JACKET
Jules Freedman, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application October 30, 1947, Serial No. 142,210
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a jacket, substantially as shown.

150,410
DESIGN FOR A CONNECTOR PLUG
Aurelia Giammatteo, New York, N. Y., assignor to Foster & Davies, Inc., Cleveland, Ohio, a corporation of Ohio
Application August 20, 1947, Serial No. 140,965
Term of patent 7 years
(Cl. D26—1)



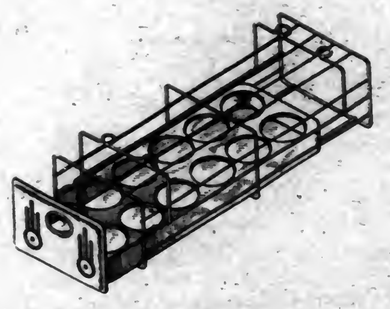
The ornamental design for a connector plug, substantially as shown.

150,411
DESIGN FOR A POWER MOWING MACHINE
Leonard B. Goodall, Warrensburg, Mo.
Application September 13, 1946, Serial No. 133,283
Term of patent 7 years
(Cl. D40—1)

The ornamental design for a power mowing machine, as shown and described.

150,412
DESIGN FOR A MICROFILM VIEWER
Herman L. Gordon, Silver Spring, Md.
Application January 27, 1947, Serial No. 136,456
Term of patent 14 years
(Cl. D61—1)

150,412—Continued

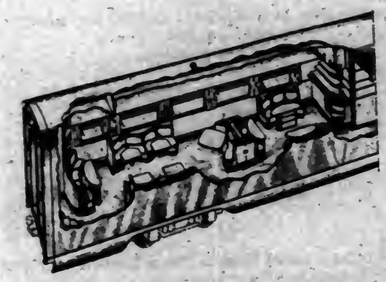


The ornamental design for a microfilm viewer, as shown.

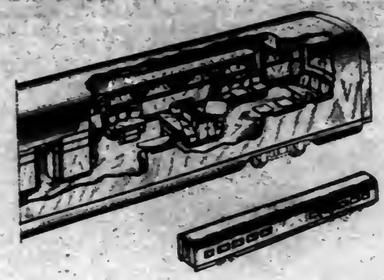
150,413
DESIGN FOR A LACE OR THE LIKE
Abraham Gottlieb, New York, N. Y.
Application December 20, 1946, Serial No. 135,651
Term of patent 3½ years
(Cl. D47—6)

The ornamental design for a lace, or the like, substantially as shown and described.

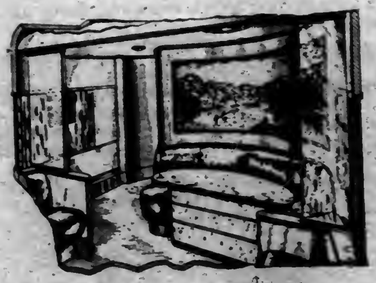
150,414
DESIGN FOR AN EGG TRAY OR THE LIKE
Hollie C. Gulley, Los Angeles, Calif.
Application February 15, 1947, Serial No. 136,929
Term of patent 3½ years
(Cl. D44—10)



The ornamental design for an egg tray or the like, substantially as shown.

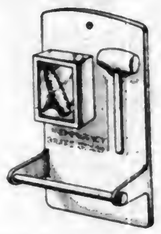


150,415
DESIGN FOR A RAILWAY VEHICLE
Ralph W. Haman, Flossmoor, and Stanley W. Kay, Chicago, Ill., assignors to Pullman-Standard Car Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application June 28, 1946, Serial No. 131,124
Term of patent 14 years
(Cl. D66—1)



150,415—Continued

The ornamental design for a railway vehicle, substantially as shown and described.



150,416
DESIGN FOR A TIRE
William Edward Hardeman, Solihull, and Samuel Charles Parker, Erdington, England, assignors to Dunlop Tire and Rubber Corporation, Buffalo, N. Y., a corporation of New York
Application December 21, 1946, Serial No. 135,682
In Great Britain July 26, 1946
Term of patent 14 years
(Cl. D90—20)

The ornamental design for a tire, as shown.

150,417
DESIGN FOR A ROLL TISSUE HOLDER
Russel E. James, Guthrie, Okla.
Application November 25, 1946, Serial No. 135,056
Term of patent 14 years
(Cl. D4—3)

The ornamental design for a roll tissue holder, as shown.

150,418
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1947, Serial No. 140,295
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,419
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1947, Serial No. 140,296
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,420
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1947, Serial No. 140,297
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,421
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1947, Serial No. 140,299
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,422
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1947, Serial No. 140,300
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,423
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1947, Serial No. 141,140
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,424
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1947, Serial No. 141,141
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,425
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1947, Serial No. 141,144
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,426
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1947, Serial No. 141,145
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantialy as shown.

150,427
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1947, Serial No. 141,146
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

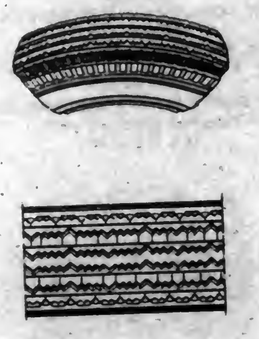
150,428
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1947, Serial No. 141,149
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,429
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1947, Serial No. 141,151
Term of patent 7 years
(Cl. D45—19)

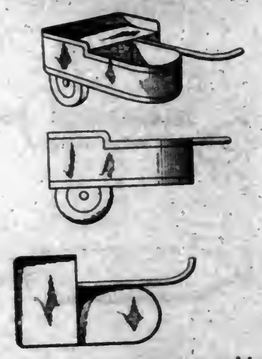
The ornamental design for a brooch or similar article, substantially as shown.

150,430
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 20, 1947, Serial No. 141,521
Term of patent 7 years
(Cl. D45—9)



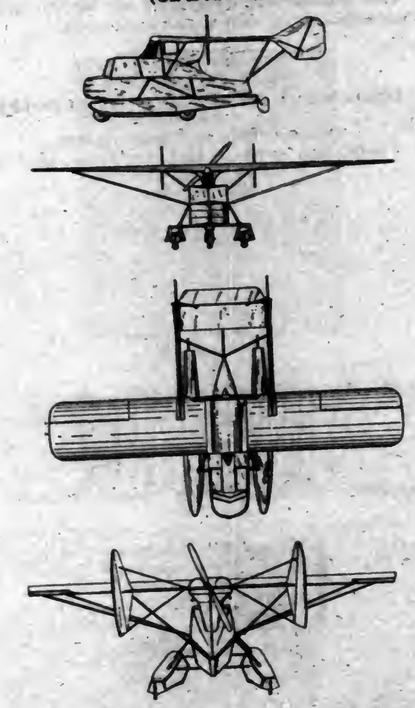
The ornamental design for an earring or similar article, substantially as shown.

150,431
DESIGN FOR A FISH LURE
John S. Kusilch, St. Paul, Minn.
Application October 4, 1946, Serial No. 133,743
Term of patent 7 years
(Cl. D31—4)



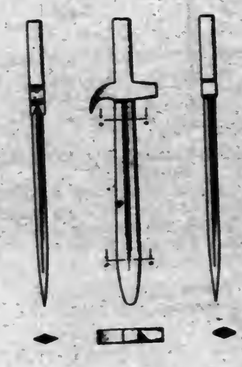
The ornamental design for a fish lure, as shown and described.

150,432
DESIGN FOR A TIRE
Leonard John Lambourn, Erdington, Birmingham, and Frank Bernard Jones, Castle Bromwich, England, assignors to Dunlop Tire and Rubber Corporation, Buffalo, N. Y., a corporation of New York
Application January 28, 1947, Serial No. 136,483
In Great Britain August 29, 1946
Term of patent 14 years
(Cl. D90—20)



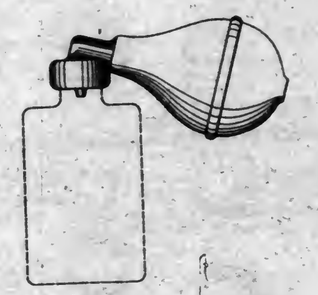
The ornamental design for a tire, as shown.

150,433
DESIGN FOR A BICYCLE SIDECAR
Herbert H. Lockman, Muskegon, Mich.
Application April 21, 1947, Serial No. 138,503
Term of patent 7 years
(Cl. D90—1)



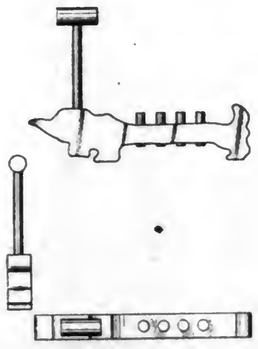
The ornamental design for a bicycle sidecar, substantially as shown.

150,434
DESIGN FOR AN AIRPLANE
Kenneth F. Lovejoy, Pittsburgh, and David Barr Peat, Dravosburg, Pa.
Application February 15, 1946, Serial No. 126,583
Term of patent 14 years
(Cl. D71—1)



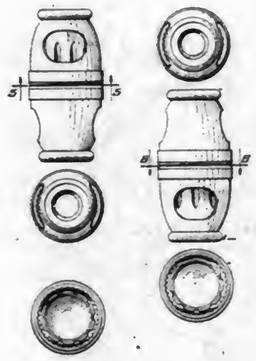
The ornamental design for an airplane, as shown.

150,435
DESIGN FOR A COMBINATION TOOL
William F. McDowell, Pueblo, Colo.
Application May 17, 1946, Serial No. 129,814
Term of patent 14 years
(Cl. D93—4)



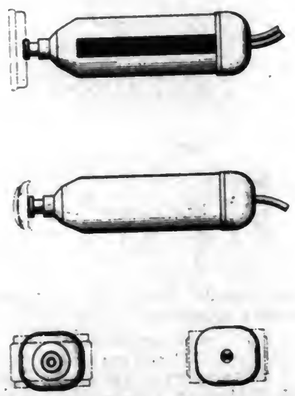
The ornamental design for a combination tool, as shown.

150,436
DESIGN FOR AN ATOMIZER
Kenneth K. Miller, Kalamazoo, Mich.
Application October 4, 1946, Serial No. 133,762
Term of patent 7 years
(Cl. D82—1)



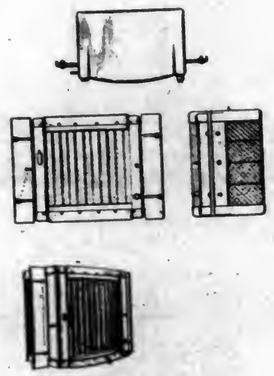
The ornamental design for an atomizer, substantially as shown and described.

150,437
DESIGN FOR A COMBINED HAMMER AND POUNDING TOY
Paul Miller, Muncie, Ind.
Application February 4, 1947, Serial No. 136,664
Term of patent 14 years
(Cl. D34—15)



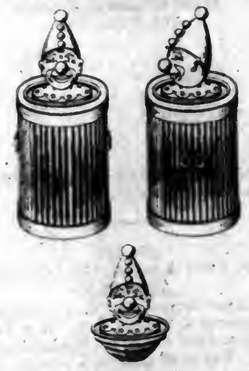
The ornamental design for a combined hammer and pounding toy, as shown.

150,438
DESIGN FOR AN EGG OPENER AND DIVIDER OR SIMILAR ARTICLE
Victor E. Murray, Cincinnati, Ohio, assignor of three-fifths to W. O. Mashburn, Jr., and one-fifth to Robert Adair Black, both of Cincinnati, Ohio
Application February 15, 1947, Serial No. 136,924
Term of patent 14 years
(Cl. D44—29)



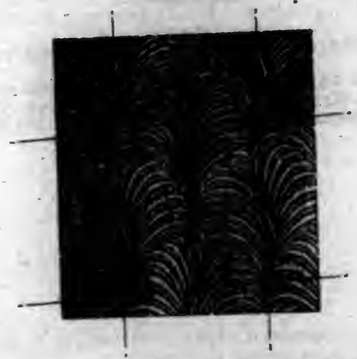
The ornamental design for an egg opener and divider or similar article, as shown.

150,439
DESIGN FOR AN ELECTRIC RAZOR
Peter C. Neilsen, Chicago, Ill.
Application September 26, 1946, Serial No. 133,572
Term of patent 14 years
(Cl. D22—3)



The ornamental design for an electric razor, substantially as shown and described.

150,440
DESIGN FOR AN EVAPORATIVE COOLER CASING
Oscar C. Palmer, Phoenix, Ariz.
Application April 22, 1947, Serial No. 138,532
Term of patent 14 years
(Cl. D62—4)

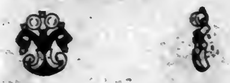


The ornamental design for an evaporative cooler casing, substantially as shown.

150,441
DESIGN FOR A POP TOY
Frank Passio, Philadelphia, Pa.
Application November 19, 1946, Serial No. 134,906
Term of patent 3½ years
(Cl. D34—15)

The ornamental design for a pop toy, substantially as shown.

150,442
DESIGN FOR A TEXTILE FABRIC
Edmund M. Patterson, New York, N. Y.
Application October 23, 1947, Serial No. 142,107
Term of patent 7 years
(Cl. D92—1)



The ornamental design for a textile fabric, substantially as shown and described.

150,443
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 26, 1947, Serial No. 140,522
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

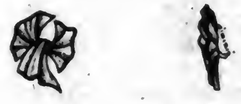
150,444
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 26, 1947, Serial No. 140,523
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,445
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 26, 1947, Serial No. 140,524
Term of patent 7 years
(Cl. D45—9)

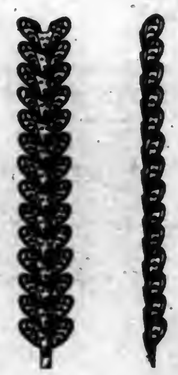
The ornamental design for an earring or similar article, substantially as shown.

150,446
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 26, 1947, Serial No. 140,526
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

150,447
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 26, 1947, Serial No. 140,527
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

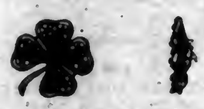
150,448
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 29, 1947, Serial No. 140,590
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,449
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 29, 1947, Serial No. 140,594
Term of patent 7 years
(Cl. D45—4)

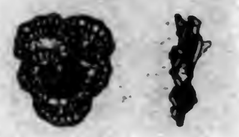
The ornamental design for a bracelet or similar article, substantially as shown.

150,450
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 29, 1947, Serial No. 140,595
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

150,451
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 29, 1947, Serial No. 140,596
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

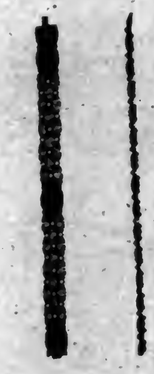
150,452
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 29, 1947, Serial No. 140,597
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,453
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 29, 1947, Serial No. 140,598
Term of patent 7 years
(Cl. D45—19)

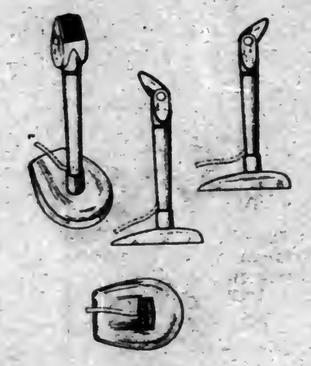
The ornamental design for a brooch or similar article, substantially as shown.

150,454
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 29, 1947, Serial No. 140,599
Term of patent 7 years
(Cl. D45—19)



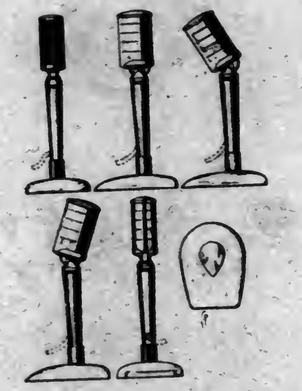
The ornamental design for a brooch or similar article, substantially as shown.

150,455
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 6, 1947, Serial No. 140,721
Term of patent 7 years
(Cl. D45—19)



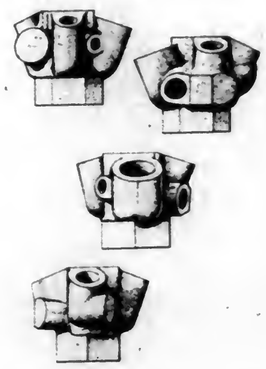
The ornamental design for a brooch or similar article, substantially as shown.

150,456
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application November 13, 1947, Serial No. 142,507
Term of patent 7 years
(Cl. D45—16)

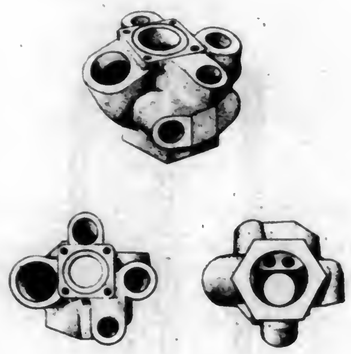


The ornamental design for a necklace or similar article, substantially as shown and described.

150,457
DESIGN FOR A MICROPHONE UNIT OR THE LIKE AND PEDESTAL THEREFOR
Stewart W. Pike, Audubon, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 6, 1946, Serial No. 134,554
Term of patent 7 years
(Cl. D26—14)

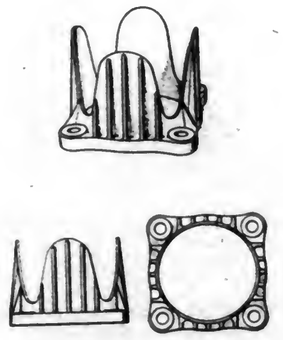


The ornamental design for a microphone unit or the like and pedestal therefor, substantially as shown.

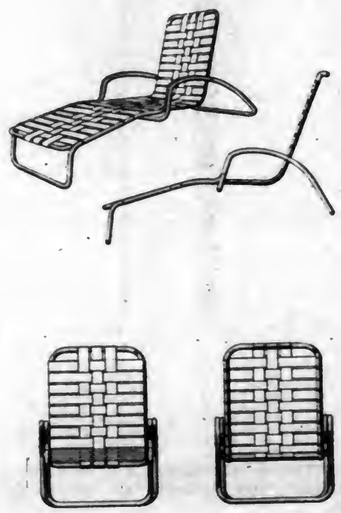


150,458
DESIGN FOR A MICROPHONE UNIT OR THE LIKE AND PEDESTAL THEREFOR
Stewart W. Pike, Audubon, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 6, 1946, Serial No. 134,555
Term of patent 7 years
(Cl. D26—14)

The ornamental design for a microphone unit or the like and pedestal therefor, substantially as shown.

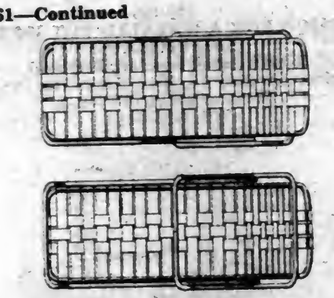


150,459
DESIGN FOR A DISPENSING HEAD FOR A BUTANE SYSTEM
Starr L. Pitzer, Dallas, Tex., assignor to Continental L-P Products Company, Dallas, Tex., a partnership consisting of Starr L. Pitzer and Kemp Eldon
Application August 29, 1946, Serial No. 132,947
Term of patent 7 years
(Cl. D91—1)



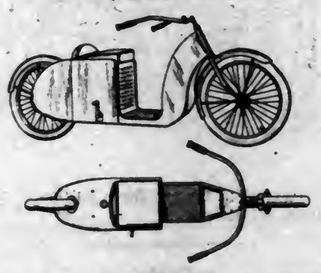
The ornamental design for a dispensing head, for a butane system, as shown.

150,460
DESIGN FOR A PORT LEG FLANGE
Edmund T. Price, San Diego, Calif., assignor to Solar Aircraft Company, San Diego, Calif., a corporation of California
Application September 21, 1946, Serial No. 133,480
Term of patent 14 years
(Cl. D54—7)



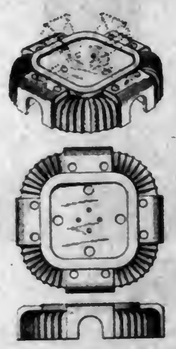
The ornamental design for a port leg flange, as shown.

150,461
DESIGN FOR A CHAISE LONGUE
Alice Roth, Troy, Ohio, assignor to The Troy Sunshade Company, Troy, Ohio, a corporation of Ohio
Application December 26, 1946, Serial No. 135,776
Term of patent 7 years
(Cl. D15—11)



The ornamental design for a chaise longue, substantially as shown.

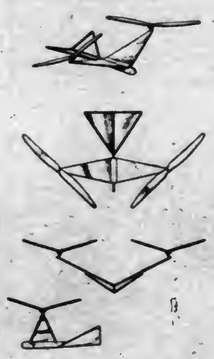
150,461—Continued



150,462
DESIGN FOR A MOTORCYCLE
Alfred Raymond Russell, Detroit, Mich., assignor to Safticycle, Inc., La Crosse, Wis.
Application November 18, 1946, Serial No. 134,849
Term of patent 3½ years
(Cl. D90—8)

The ornamental design for a motorcycle, as shown and described.

150,463
DESIGN FOR AN ANIMAL TRAP
George Sakier, Frenchtown, N. J., assignor to Animal Trap Company of America, Lititz, Pa., a corporation of Pennsylvania
Application June 12, 1946, Serial No. 130,658
Term of patent 14 years
(Cl. D31—4)

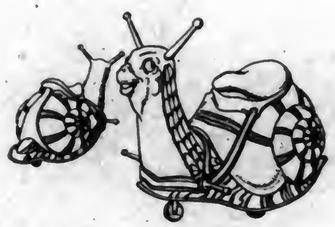


The ornamental design for an animal trap, as shown.

150,464
DESIGN FOR A SPECTACLE FRAME
Vincent Sallarno, Belleville, N. J.
Application July 21, 1947, Serial No. 140,428
Term of patent 14 years
(Cl. D57—1)

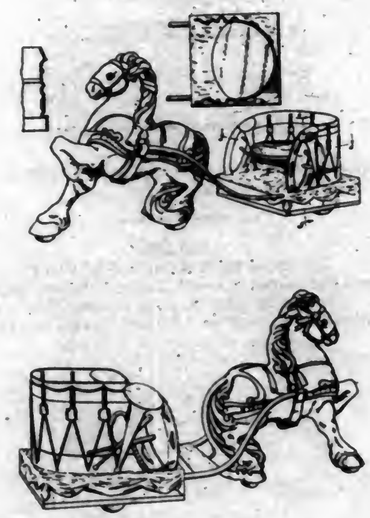
The ornamental design for a spectacle frame, as shown.

150,465
DESIGN FOR A TOY AUTOGIRO
Howard F. Schmidt, San Diego, Calif.
Application July 5, 1946, Serial No. 131,331
Term of patent 7 years
(Cl. D34—15)



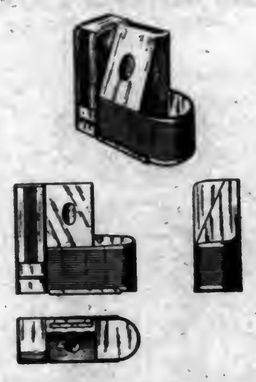
The ornamental design for a toy Autogiro, substantially as shown.

150,466
DESIGN FOR A PRICE TAG MOLDING AND TRIM
Fred G. Schuler, Youngstown, Ohio, assignor to Youngstown Manufacturing Inc., Youngstown, Ohio, a corporation of Ohio
Application May 16, 1946, Serial No. 130,027
Term of patent 3½ years
(Cl. D13—16)



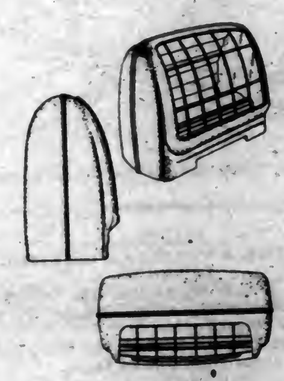
The ornamental design for a price tag molding and trim, as shown.

150,467
DESIGN FOR A WHEELED TOY SNAIL
Harry Sebel, London, England
Application May 16, 1946, Serial No. 129,757
Term of patent 14 years
(Cl. D34—15)



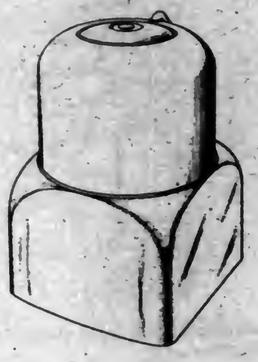
The ornamental design for a wheeled toy snail, as shown.

150,468
DESIGN FOR A WHEELED TOY HORSE AND CHARIOT
Harry Sebel, London, England
Application May 16, 1946, Serial No. 129,758
Term of patent 14 years
(Cl. D34—15)



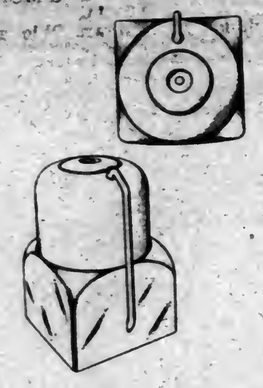
The ornamental design for a wheeled toy horse and chariot, as shown.

150,469
DESIGN FOR A RAZOR RACK
Benjamin Seidel, Cleveland, Ohio, assignor of one-third to Benjamin F. Fried, Cleveland, Ohio, and one-third to Arthur P. Baumoel, Cleveland, Ohio
Application March 11, 1947, Serial No. 137,506
Term of patent 7 years
(Cl. D4—3)



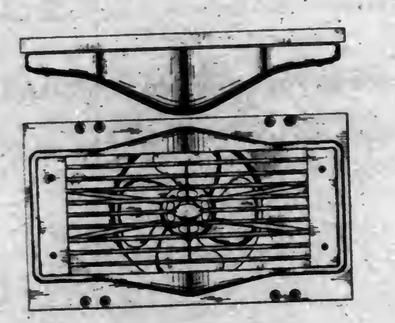
The ornamental design for a razor rack, substantially as shown.

150,470
DESIGN FOR AN ELECTRIC HEATER
William M. Seymour, Detroit, Mich., assignor to Samuel Stamping & Enameling Company, North Chattanooga, Tenn., a corporation of Tennessee
Application June 13, 1946, Serial No. 130,678
Term of patent 14 years
(Cl. D61—10)



The ornamental design for an electric heater, substantially as shown.

150,471
DESIGN FOR A WASHING MACHINE OR SIMILAR ARTICLE
Thomas R. Smith, Newton, Iowa, assignor to The Maytag Company, Newton, Iowa, a corporation of Delaware
Application August 22, 1947, Serial No. 141,011
Term of patent 14 years
(Cl. D49—1)



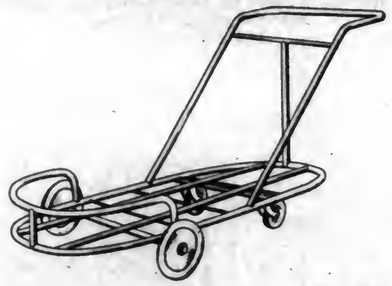
150,471—Continued

The ornamental design for a washing machine or similar article, substantially as shown.

150,472
DESIGN FOR A WINDOW VENTILATOR
Verner E. Sprouse, Columbus, Ind.
Application June 19, 1947, Serial No. 139,826
Term of patent 14 years
(Cl. D62—4)

The ornamental design for a window ventilator, substantially as shown.

150,473
DESIGN FOR A LEGGING
Hilma D. Stalie, Lawndale, Calif.
Application November 24, 1947, Serial No. 142,757
Term of patent 7 years
(Cl. D7—7)

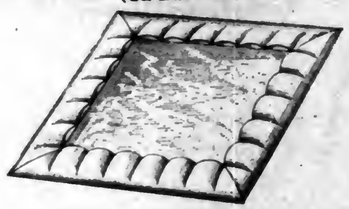


The ornamental design for a legging, as shown.

150,474
DESIGN FOR COMBINED SUNGLASSES AND SCARF
George Stangl, New York, N. Y.
Application May 15, 1948, Serial No. 146,390
Term of patent 3½ years
(Cl. D57—1)

The ornamental design for combined sunglasses and scarf, substantially as shown.

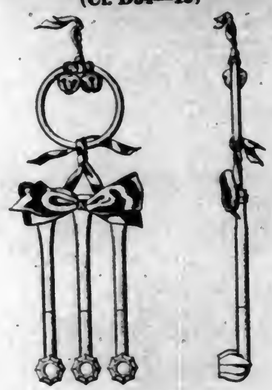
150,475
DESIGN FOR A MILK CART
Ray J. Swenson, Anoka, Minn.
Application June 11, 1947, Serial No. 139,579
Term of patent 7 years
(Cl. D14—3)



The ornamental design for a milk cart, as shown.

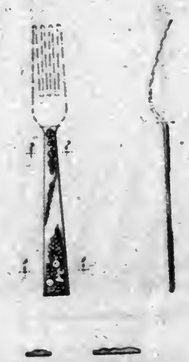
150,476
DESIGN FOR A STROLLER OR SIMILAR ARTICLE
Vincent R. Trabucco, Steger, Ill., assignor to Steger Products Mfg. Corp., Steger, Ill., a corporation of Illinois
Application May 22, 1947, Serial No. 139,213
Term of patent 14 years
(Cl. D14—14)

The ornamental design for a stroller or similar article, as shown.



150,477
DESIGN FOR A PICTURE FRAME
Angelo Tumminello, Chicago, Ill.
Application October 28, 1946, Serial No. 134,333
Term of patent 3½ years
(Cl. D29—20)

The ornamental design for a picture frame, as shown.



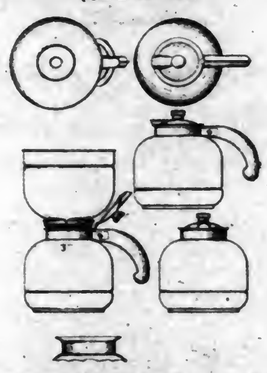
150,478
DESIGN FOR A BABY RATTLE OR THE LIKE
Herman Wapnick, Brooklyn, N. Y.
Application August 1, 1946, Serial No. 132,171
Term of patent 3½ years
(Cl. D34—15)

The ornamental design for a baby rattle or the like, as shown.

150,479
DESIGN FOR A FORK OR SIMILAR ARTICLE OF FLATWARE
Marion Weeber, New York, N. Y., assignor to National Silver Company, New York, N. Y., a corporation of New York
Application October 3, 1947, Serial No. 141,733
Term of patent 14 years
(Cl. D54—12)

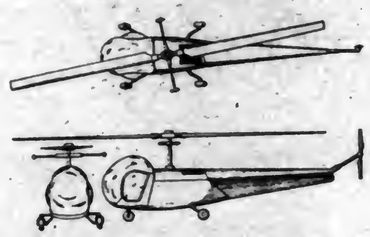
The ornamental design for a fork or similar article of flatware, as shown and described.

150,480
DESIGN FOR A SPOON OR SIMILAR ARTICLE OF FLATWARE
Marion Weeber, New York, N. Y., assignor to National Silver Company, New York, N. Y., a corporation of New York
Application March 11, 1948, Serial No. 145,025
Term of patent 14 years
(Cl. D54—12)



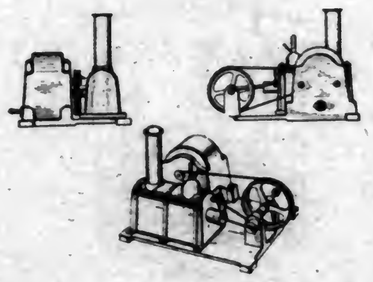
The ornamental design for a spoon or similar article of flatware, as shown and described.

150,481
DESIGN FOR A SPOON OR SIMILAR ARTICLE OF FLATWARE
Marion Weeber, New York, N. Y., assignor to National Silver Company, New York, N. Y., a corporation of New York
Application March 11, 1948, Serial No. 145,026
Term of patent 14 years
(Cl. D54—12)



The ornamental design for a spoon or similar article of flatware, as shown and described.

150,482
DESIGN FOR A VACUUM COFFEE MAKER
Harry Wohl, Chicago, Ill., assignor to Nicro Steel Products, Inc., Cook County, Ill., a corporation of Illinois
Application February 28, 1947, Serial No. 137,234
Term of patent 14 years
(Cl. D44—26)



The ornamental design for a vacuum coffee maker, substantially as shown.

150,483
DESIGN FOR A HELICOPTER
Arthur M. Young and Mancer H. Gleason, Buffalo, N. Y., assignors to Bell Aircraft Corporation, Wheatfield, N. Y.
Application November 15, 1946, Serial No. 134,812
Term of patent 14 years
(Cl. D71—1)

The ornamental design for a helicopter, as shown.

150,484
DESIGN FOR A TOY STATIONARY ENGINE
Raymond R. Zimmer, Chicago, and Harold L. Snavely, Oak Lawn, Ill.; said Zimmer assignor to said Snavely
Application December 14, 1946, Serial No. 135,508
Term of patent 3½ years
(Cl. D34—15)

The ornamental design for a toy stationary engine, as shown.

Total	849	

Patents expiring: Patent Numbers 1,817,903 to 1,818,966, inclusive, issued August 11, 1931, expire August 11, 1948

Condition of Applications Under Examination at Close of Business July 23, 1948

Total number of patent applications awaiting action, 156,155. Date of oldest new application, June 21, 1946; date of oldest amended application, April 13, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	†Jan. 30	Nov. 13	2,886
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	Oct. 19	July 11	3,139
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	†Oct. 2	†Sept. 5	1,493
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	Dec. 23	Dec. 26	3,872
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	Oct. 22	June 18	1,941
6. SURLE, H., Carbon Chemistry (part)	†Sept. 3	†July 9	1,778
7. HANLIN, GEORGE, Optics; Photographic Apparatus	†Aug. 20	†June 13	1,791
8. COBLE, A. S., (Acting), Furniture; Racks and Cabinets	Sept. 21	July 3	4,328
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	†Apr. 26	Aug. 2	2,235
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	†Oct. 21	†Oct. 1	1,788
11. BENHAM, E. V., Boots, Shoes, and Leggings, Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	†Aug. 22	†Nov. 17	749
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	†Sept. 17	Aug. 5	2,131
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	Sept. 19	Aug. 17	2,536
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	†Oct. 24	†July 19	1,325
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	†Apr. 2	Oct. 7	2,115
16. LOVEWELL, N. N., Television; Telephony	†Sept. 11	†June 5	1,574
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	†Jan. 13	Aug. 23	2,105
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	†Apr. 26	Aug. 2	1,942
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	†June 18	Oct. 29	1,836
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	†Feb. 8	Nov. 1	1,974
21. MADER, R. C., Textiles	†Aug. 8	†July 9	1,203
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	†Aug. 7	Oct. 21	1,719
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	†Jan. 11	July 24	1,312
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	†Aug. 4	†July 16	2,552
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	†Aug. 29	Oct. 7	1,771
26. YOUNG, R. R., Electricity—Generation and Motive Power	†Oct. 6	†Nov. 6	1,301
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	†May 2	Nov. 18	3,300
28. SOLYOM, H. L., Heating; Internal-Combustion Engines (part); Cylinders; Pistons	†June 12	†June 9	1,112
29. SKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	†Jan. 21	Sept. 14	3,180
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating Systems; Ammunition and Explosive Devices.	†Oct. 24	†May 2	1,429
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	†Oct. 30	†Oct. 30	2,148
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	†Jan. 10	Sept. 13	3,179
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	Oct. 1	June 26	3,800
34. SAPERSTEIN, S., Electricity—Transmission to Vehicles; Railways; Track Sanders; Signals and Indicators	Nov. 9	July 19	1,800
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	†Apr. 17	Sept. 30	3,197
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	Oct. 12	July 18	2,009
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	†Oct. 17	†Jan. 25	1,458
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	†May 10	†Mar. 17	2,001
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	†Jan. 16	July 13	2,987
40. DRUMMOND, E. J., Receptacles (part); Packages	†July 23	Sept. 24	3,248
41. HERTZ, M., Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	July 9	July 1	2,403
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	†Oct. 31	†Aug. 25	1,229
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	†Oct. 1	†Aug. 20	1,433
44. HARVEY, L. P., Refrigeration; Preserving	June 21	July 22	1,146
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires, Axles and Wheel Substitutes; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Land Vehicles (part); Spring, Weight and Horsepower Motors.	†Jan. 4	Aug. 1	2,956
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	†Jan. 13	July 19	1,945

NOTE.—The dates given are 1946 except where † indicates 1947 and * indicates 1948.

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 156,155. Date of oldest new application, June 21, 1946; date of oldest amended application, April 13, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action: New	Amended	Applications awaiting action
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	†Oct. 6	†Apr. 14	2,123
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	†Oct. 24	†Jan. 29	1,544
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	†July 5	†May 10	1,575
50. LEVIN, SAMUEL, Synthetic Resins	†Oct. 23	†Apr. 12	2,279
51. FRIEDMAN, M. H., Radiant Energy (part, e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	†Oct. 28	†Mar. 24	1,787
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits.	†Oct. 6	Dec. 3	3,904
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter, Stationery; Paper Files and Binders; Cutlery; Closures, Partitions and Panels, Flexible and Portable.	†Jan. 24	July 12	3,774
54. STRACHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structure, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications.	†Oct. 24	†Apr. 17	1,799
55. BOWEN, S. T., Artificial Body Members; Dentistry; Surgery; Toilet	†June 5	†Feb. 10	1,974
56. COCKERILL, S., Electrical and Wave Energy Chemistry; Paper Making; Heating and Illuminating Gas	†Sept. 20	†Sept. 11	1,126
57. MILLER, A. B. (Acting), Toys; Amusement and Exercising Devices; Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Jewelry; Nut and Bolt Locks.	†Mar. 3	July 1	3,947
58. DOWELL, E. F., Abrading; Food Apparatus; Bottles and Jars; Stone Working; Making Metal Tools and Implements.	Dec. 4	Oct. 24	2,066
59. SHEPARD, P. W., Chemistry; Fertilizers; Gas, Heating and Illuminating; Heterocyclic Compounds (part)	†June 11	†Jan. 2	2,068
60. GLASS, R. L., Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	†Oct. 11	†Mar. 22	1,436
61. LANNAN, J., Winding and Reeling; Pushing and Pulling; Horology; Time-Controlling Apparatus; Railway Mail Delivery; Boats, Buoys, Ships and Marine Propulsion.	Oct. 25	June 7	3,595
62. PUGH, E. C., Games; Tables; Mechanical Guns and Projectors	†July 25	Nov. 12	1,641
63. WINKELSTEIN, A. H., Fermentation; Foods and Beverages; Heterocyclic Compounds (part); Oils and Fats.	†July 17	†June 27	1,510
64. NASH, P. M., Compositions—Coating or Plastic (part); Fuel and Miscellaneous	†Dec. 23	†Dec. 10	1,647
65. McDERMOTT, F. P., Batteries; Electrical Conductors, Conduits, Insulators and Connectors; Illumination	†Oct. 22	†Apr. 17	1,958
66. LISANN, I., Geometrical Instruments	Dec. 18	Apr. 13	2,136
67. KRAFFT, C. F., Laminated Fabrics; Photographic Processes and Products; Ornamentation	†Apr. 12	†Mar. 10	2,104
68. BERMAN, H., Brakes, Boring and Drilling; Clutches and Power Stop Control	†Oct. 29	†May 9	1,556
69. GALVIN, D. J., Electricity—Wave Transmission, Repeaters and Relays (e. g., Amplifiers), Galvanometers and Meters; Acoustics, Sound Recording; Recorders.	†June 11	Oct. 11	1,678
DESIGNS: BREHM, G. L.	Dec. 2	*Jan. 2	8,013

Total number of trade-mark applications awaiting action (including renewals and republications), 40,670. Date of oldest new application, Aug. 5, 1947; date of oldest amended application, Feb. 3, 1948.

TRADE-MARK EXAMINING DIVISIONS, EXAMINERS AND TRADE-MARK CLASSES UNDER EXAMINATION	Oldest new application and oldest action by applicant awaiting Office action: New	Amended	Applications awaiting action
1. BARBOUR, H. E., Classes 1, 4, 5, 6 (part), 12, 31, 44	†Oct. 27	*Feb. 27	2,707
2. KASCHUB, H. E., Classes 2, 15, 30, 33, 36, 46, 50	†Sept. 2	*Mar. 1	5,033
3. SUMMERS, G. S., Classes 13, 21, 23, 26	†Aug. 5	*Mar. 12	4,200
4. BARR, E., Classes 3, 7, 30, 40, 41, 42, 43	†Sept. 10	*Feb. 4	4,136
5. RACKNOR, M., Classes 8, 17, 20, 24, 25, 32, 37, 38, 45, 47, 48, 49	†Sept. 26	*Feb. 3	3,076
6. STERBA, J. R., Classes 6 (part), 9, 10, 11, 14, 22, 27, 28, 29, 34, 35	†Nov. 7	*Mar. 17	2,961
7. KEYS, O. M., Classes 16, 19, 55	†Aug. 8	*Mar. 6	2,180
8. GEDIMAN, H. W. Renewals	*June 1	*June 28	115
8. GEDIMAN, H. W. Republications — All Classes	†Sept. 17	*July 16	16,262

NOTE.—The dates given are 1946 except where † indicates 1947 and * indicates 1948

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

Ace Fastener Corporation, Chicago, Ill. Hand-operated stapling machine. Serial No. 528,978, Aug. 10. Class 37.

Acme Glove Corporation, Gloversville, N. Y. Leather gloves. Serial No. 544,630, Aug. 10. Class 39.

Ades-Lexington Dry Goods Co., Lexington, Ky. Hosiery and cotton knitted underwear. Serial No. 543,047, Aug. 10. Class 39.

Advance Glove Manufacturing Company, Detroit, Mich. Cloth work gloves. Serial No. 532,087, Aug. 10. Class 39.

Albany Billiard Ball Company, Albany, N. Y. Cue balls. Serial No. 539,014, Aug. 10. Class 22.

American Chemical Paint Company, Ambler, Pa. Solid or liquid chemical admixtures. Serial No. 535,115, Aug. 10. Class 6.

American Engineering Steel & Tool Co.: *See*—
Karlsen, Eugene S.

American Pearl Company, Providence, R. I. Ornamental jewelry. Serial No. 512,478, Aug. 10. Class 28.

American Zinc Institute Incorporated, New York, N. Y. Zinc coated ferrous sheets. Serial No. 528,148, Aug. 10. Class 14.

Amity Manufacturing Corp., Perth Amboy, N. J. Portable hand fire extinguishers. Serial No. 516,522, Aug. 10. Class 23.

Ariel Luggage Co.: *See*—
Bohn, Beatrice P.

Arrow-Hart & Hegeman Electric Company, The, Hartford, Conn. Memorandum books. Serial No. 542,809, Aug. 10. Class 37.

Arto Manufacturing Co., Philadelphia, Pa. Paint enamel finish, lacquer, and varnish. Serial No. 515,063, Aug. 10. Class 16.

Atlantic Products Corporation, Trenton, N. J. Hand-bags. Serial No. 534,733, Aug. 10. Class 3.

Baird, William M., Chicago, Ill. Refrigerated locker units. Serial No. 528,245, Aug. 10. Class 31.

Bamberger, L., & Co., Newark, N. J. Sheets and pillow cases. Serial No. 545,685, Aug. 10. Class 42.

Bartmann & Bixer Co. Inc., New York, N. Y. Shower and window curtains. Serial No. 538,087, Aug. 10. Class 42.

Bathasweet Corporation, New York, N. Y. Water softener, talcum powder, cologne and bath oil. Serial No. 549,046, Aug. 10. Class 6.

Bear Hybrids Corn Co., Decatur, Ill. Hybrid seed. Serial No. 493,424, Aug. 10. Class 1.

Belding Heminway Company, assignor to Belding Heminway Company, Inc., New York, N. Y. Pure and artificial silk threads. Serial No. 535,120, Aug. 10. Class 43.

Belding Heminway Company, assignor to Belding Heminway Company, Inc., New York, N. Y. Silk threads and artificial silk threads. Serial No. 535,462, Aug. 10. Class 43.

Belding Heminway Company, assignor to Belding Heminway Company, Inc., New York, N. Y. Silk and artificial silk threads. Serial No. 535,463, Aug. 10. Class 43.

Belding Heminway Company, Inc.: *See*—
Belding Heminway Company.

Bendix Aviation Corporation, doing business as Eclipse-Pioneer Division, Teterboro, N. J. House organ publication. Serial No. 481,771, Aug. 10. Class 38.

Benson & Hedges, New York, N. Y. Cigars. Serial No. 511,061, Aug. 10. Class 17.

Blossom Products Corporation, Allentown, Pa. Towels. Serial No. 538,092, Aug. 10. Class 42.

Boatwright Paint & Varnish Works, Inc., Atlanta, Ga. Flat wall paint. Serial No. 530,714, Aug. 10. Class 16.

Boatwright Paint & Varnish Works, Inc., Atlanta, Ga. Paste outside paint. Serial No. 530,715, Aug. 10. Class 16.

Bohn, Beatrice P., Manasquan, N. J., doing business as Ariel Luggage Co. Traveling bags. Serial No. 540,245, Aug. 10. Class 3.

Bolgiano, F. W., & Co., Inc., Washington, D. C. Grass seeds. Serial No. 514,101, Aug. 10. Class 1.

Botany Mills, Inc., Passaic, N. J. Woolen fabrics in the piece. Serial Nos. 545,688–90, Aug. 10. Class 42.

Botany Mills, Inc., Passaic, N. J. Woolen fabrics in the piece. Serial No. 545,693, Aug. 10. Class 42.

Botany Mills, Inc., Passaic, N. J. Woolen fabrics in the piece. Serial Nos. 545,695–7, Aug. 10. Class 42.

Boyd-Richardson Company, St. Louis, Mo. Leather shoes. Serial No. 492,358, Aug. 10. Class 39.

Bragg, Paul C., doing business as Live Food Products Co., Burbank, Calif. Vitamin products and a bulk laxative preparation. Serial No. 536,871, Aug. 10. Class 6.

Brenner Fabrics, Inc., New York, N. Y. Rayon filament fabric in the piece. Serial No. 543,878, Aug. 10. Class 42.

Bright Light Reflector Co., Inc., Bridgeport, Conn. Electric lighting equipment. Serial No. 538,093, Aug. 10. Class 21.

Brightwater Paper Company, Dover, Del., and Adams, Mass. Writing paper (bond, vellum and ledger). Serial No. 542,204, Aug. 10. Class 37.

Buhai Publishing Co., Inc., Chicago, Ill. Magazine containing reading matter of general interest. Serial No. 518,587, Aug. 10. Class 38.

Burpee, W. Atlee, Company: *See*—
Maule, Wm. Henry, Co.

Caldwell-Gray, Inc., San Francisco, Calif. Dresses. Serial No. 536,231, Aug. 10. Class 39.

Calotabs Company, Atlanta, Ga. Laxative. Serial No. 548,926, Aug. 10. Class 6.

Campbell-Hausfeld Co., The, Harrison, Ohio. Air compressors and parts thereof. Serial No. 511,136, Aug. 10. Class 23.

Chebra, Inc., New York, N. Y. Lip sticks. Serial No. 522,622, Aug. 10. Class 6.

Chemical Research Products, Inc., East Rutherford, N. J. Insect repellent and preparation to be applied to skin. Serial No. 512,640, Aug. 10. Class 6.

Chittendon Press: *See*—
McBride, Helen E.

Clean Sweep Co., The, Lansing, Mich. Chemical compound. Serial No. 497,845, Aug. 10. Class 6.

Cleveland Heater Company, The, Cleveland, Ohio. Metallic fittings and alloys. Serial No. 502,946, Aug. 10. Class 14.

Clover Shoe Mfg. Co., Inc., Burlington, N. J. Shoes. Serial No. 511,316, Aug. 10. Class 39.

Cohen, Goldman & Co., Inc., New York, N. Y. Men's, boys', and children's outer garments. Serial No. 508,892, Aug. 10. Class 39.

Compania Industrial Tabacalera, S. A., Havana, Cuba. Serial No. 489,205, Aug. 10. Class 17.

Continental Undergarment Co., Inc., Brooklyn, N. Y. Ladies', misses' and children's underwear. Serial No. 541,919, Aug. 10. Class 39.

Coal. Carnegie Dock and Fuel Company. 411,229, Jan. 9, 1945. Republished Aug. 10.
Coal. Essex Coal Co. 241,448, renewed May 1, 1948. O. G. Aug. 10.
Composition of resinous plastic material. Eronel Industries. 440,048, Aug. 10; Serial No. 492,907, published May 4, 1948.
Gums and resins, Natural and synthetic. A. J. Wittenberg Corp. 501,484, Aug. 10; Serial No. 530,140, published May 4, 1948.
Leather. Superb Glove Company. 417,003, Oct. 9, 1945. Republished Aug. 10.
Pitch, Hardwood. Rubber Service Laboratories Company. 175,004, Oct. 30, 1923. Republished Aug. 10.
Plastic compositions, Natural and synthetic. A. C. Fischer. 425,485, Nov. 26, 1946. Republished Aug. 10.
Plastic material, Resinous. Bishopric Products Co., Inc. 382,799, Nov. 12, 1940. Republished Aug. 10.
Plastic material, Resinous. Eronel Industries. 440,047, Aug. 10; Serial No. 492,996, published May 4, 1948.
Plastic material, Resinous. Eronel Industries. 440,050, Aug. 10; Serial No. 493,001, published May 4, 1948.
Plastic materials and synthetic resins. Joseph Davis Plastics Company. 501,444, Aug. 10; Serial No. 510,161, published May 4, 1948.
Sand. Ottawa Silica Company. 501,480, Aug. 10; Serial No. 529,684, published May 4, 1948.
Seeds, Flower, field and garden. Southern States Cooperative, Inc. 347,013, June 15, 1937. Republished Aug. 10.
Soil, Flower potting. Green Touch Soils Company. 501,483, Aug. 10; Serial No. 530,079, published May 4, 1948.
Thermoplastic composition, Resinous. Eronel Industries. 440,049, Aug. 10; Serial No. 493,000, published May 4, 1948.

CLASS 2

Bags, Paper. Union Bag & Paper Corporation. 243,021–2, renewed June 12, 1948. O. G. Aug. 10.
Bags, Paper. Union Bag & Paper Corporation. 243,588, renewed June 26, 1948. O. G. Aug. 10.
Containers or bags of transparent paper or cellulose film. United States Envelope Company. 299,904, Dec. 27, 1932. Republished Aug. 10.
Cups, Paper. United States Envelope Company. 265,048, Dec. 10, 1929. Republished Aug. 10.
Cups, Paper. United States Envelope Company. 342,179, Jan. 5, 1937. Republished Aug. 10.
Cups, Paper drinking. United States Envelope Company. 403,048, Aug. 31, 1943. Republished Aug. 10.
Envelopes and paper drinking-cups, Merchandise. United States Envelope Company. 213,338, May 25, 1946. Republished Aug. 10.
Paper items. B. A. Railton Co. 220,882, Nov. 16, 1926. Republished Aug. 10.

CLASS 3

Bags, hand bags, trunks, etc., Traveling. I. Miller & Sons, Inc. 248,721, renewed Oct. 30, 1948. O. G. Aug. 10.
Bags, Traveling. Prime Manufacturing Company. 432,568, Sept. 9, 1947. Canceled June 18, 1948. O. G. Aug. 10.
Wallets and wallet folds. J. De Dois. 440,134, Aug. 10; Serial No. 499,699.

CLASS 4

Abrasive articles and compounds, Certain. Carborundum Company. 245,860, renewed Aug. 21, 1948. O. G. Aug. 10.
Cleaner, cleanser and detergent, Sudsing. Hewitt Soap Company, Inc. 501,461, Aug. 10; Serial No. 527,678, published Apr. 20, 1948.
Cleaning preparation, General. S. L. Roberts. 501,521, Aug. 10; Serial No. 535,076, published May 4, 1948.
Compounds in powdered form for all scouring and cleansing purposes. Houghton & Co. 236,682, renewed Dec. 20, 1947. O. G. Aug. 10.
Cream, Shaving. Wilson Chemical Company, Inc. 374,904, Jan. 30, 1940. Republished Aug. 10.
Degreasers, and detergent-type polishes for tile, porcelain, etc. Interchemical Corporation. 437,549, Mar. 30, 1948. Canceled July 7, 1948. O. G. Aug. 10.
Paste and powder, soaps and cleaner, Liquid. B. A. Railton Co. 197,307, Apr. 14, 1925. Republished Aug. 10.
Polish, Metal. Reckitt & Sons, Limited. 68,712, re-renewed Apr. 28, 1948. O. G. Aug. 10.
Preparation for removing spots from garments and fabrics. Adco, Inc. 501,496, Aug. 10; Serial No. 531,638, published Apr. 20, 1948.
Product composed of steel wool and soap. Dirt-Kut Company. 231,818, Aug. 30, 1927. Republished Aug. 10.
Soap and shaving soap, Facial. Andrew Jergens Co. 68,594, re-renewed Apr. 21, 1948. O. G. Aug. 10.
Soap in powder form, Household. R. Spivey. 440,081, Aug. 10; Serial No. 514,228, published Apr. 27, 1948.
Soap, Liquid hand. Crown Zellerbach Corporation. 501,510, Aug. 10; Serial No. 533,706, published May 4, 1948.
Soap, Liquid hand. Crown Zellerbach Corporation. 501,511, Aug. 10; Serial No. 533,712, published May 4, 1948.
Soap, Liquid hand. Crown Zellerbach Corporation. 501,512, Aug. 10; Serial No. 533,715, published May 4, 1948.
Soap, Liquid toilet. U. S. Sanitary Specialties Corporation. 501,495, Aug. 10; Serial No. 531,631, published Apr. 20, 1948.
Soap, Medicated and perfumed. Potter Drug & Chemical Corporation. 49,675, Feb. 13, 1906. Republished Aug. 10.
Soap, Medicated and perfumed. Potter Drug & Chemical Corporation. 53,762, June 12, 1906. Republished Aug. 10.
Soap, Medicated and perfumed. Potter Drug & Chemical Corporation. 59,878–9, Jan. 22, 1907. Republished Aug. 10.
Soaps, liquid scrubbing soaps, soap powders, metal polishes, Liquid toilet. L. L. Dorschler. 239,827, renewed Mar. 13, 1948. O. G. Aug. 10.
Soaps, Toilet. Honbigant, Inc. 501,528, Aug. 10; Serial No. 535,529, published May 4, 1948.

Solution for removing spots and stains from garments. Huntington Laboratories, Inc. 501,436, Aug. 10; Serial No. 501,910, published May 4, 1948.
Tape, Gummed paper. Western Waxed Paper Company. 324,602, May 21, 1935. Republished Aug. 10.

CLASS 6

Alkaline water, Artificially prepared. Kalak Water Co., of New York, Inc. 110,132, May 2, 1916. Republished Aug. 10.
Anaesthetics, Local. S. A. Herman. 416,790, Sept. 25, 1945. Canceled July 6, 1948. O. G. Aug. 10.
Analgesic tablets. Van Pelt & Brown, Inc. 440,105, Aug. 10; Serial No. 519,549, published Sept. 9, 1947.
Anesthetizing and nerve blocking preparations. A. E. Smith. 394,918, May 5, 1942. Republished Aug. 10.
Antacid preparation. King Drug Company. 440,084, Aug. 10; Serial No. 515,766, published May 4, 1948.
Aromatic synthetic liquid base for use in violet perfumes. Haarmann-De Laire-Schaefer Co. 66,217, Nov. 19, 1907. New certificate. O. G. Aug. 10.
Benzoyl peroxide and other solid organic peroxides. Novadel Process Corporation. 242,597, renewed May 29, 1948. O. G. Aug. 10.
Blue for laundry purposes. Reckitt & Sons Limited. 69,593, re-renewed June 23, 1948. O. G. Aug. 10.
Brake fluid, Hydraulic. Hydraulic Brake Company. 258,572, July 9, 1929. Republished Aug. 10.
Calcium and vitamin D tablets. National Institute of Nutrition. 376,848, Apr. 9, 1948. Republished Aug. 10.
Calcium phosphate product. National Institute of Nutrition. 360,566, Sept. 20, 1938. Republished Aug. 10.
Carbon black for general use. Peerless Carbon Black Company. 243,655, renewed June 26, 1948. O. G. Aug. 10.
Caustic soda, canstic potash, carbonate of potash, etc. Niagara Alkali Company. 400,175, Feb. 16, 1943. Republished Aug. 10.
Chemical preparation, Oily, non-hardening. Keystone Lubricating Company. 312,085, Apr. 17, 1934. Republished Aug. 10.
Chemical preparations for use as a wood impregnant wood preservative. Paisley Products Incorporated. 440,091, Aug. 10; Serial No. 517,198, published Apr. 27, 1948.
Chemical wood strengthener and preservative. P. C. Reilly. 69,334, re-renewed June 9, 1948. O. G. Aug. 10.
Cream and cleansing cream, Massage. Charles of the Ritz, Inc. 327,024, Sept. 10, 1935. Republished Aug. 10.
Deodorant. Geo. C. V. Fesler Company. 248,317, renewed Oct. 16, 1948. O. G. Aug. 10.
Disinfectants, insecticides, and deodorants. D. J. Klein. 420,063, March 19, 1946. Canceled June 18, 1948. O. G. Aug. 10.
Eradicator, Ink. Columbia Ribbon & Carbon Manufacturing Company, Inc. 440,090, Aug. 10; Serial No. 516,956, published Apr. 20, 1948.
Hair tonic. Spiros Coochicos. 353,534, Jan. 11, 1938. Republished Aug. 10.
Herb tea. S. C. Wells & Company. 230,561, Dec. 11, 1928. Republished Aug. 10.
Insecticide composition, Liquid. Higley Chemical Company. 440,108, Aug. 10; Serial No. 520,035, published Apr. 13, 1948.
Insecticides. William Cooper & Nephews, Incorporated. 333,206, Mar. 10, 1936. Republished Aug. 10.
Iron and B complex combination. Nion Corporation. 389,084, July 22, 1941. Republished Aug. 10.
Iron, copper and B complex syrup. Lakeside Laboratories, Inc. 440,066, Aug. 10; Serial No. 506,454, published Nov. 4, 1947.
Kit, Permanent wave. G. Vincent. 440,137, Aug. 10; Serial No. 519,611.
Liquid composition for fixing pencil or ink lines on drawings, etc. B. K. Elliot Company. 292,253, Mar. 8, 1932. Republished Aug. 10.
Lotions, skin creams, perfumes, etc., Toilet. Elizabeth Arden Sales Corporation. 501,507, Aug. 10; Serial No. 532,990, published May 11, 1948.
Malt and cod liver oil preparation. R. J. Moran Co. 440,092, Aug. 10; Serial No. 517,423, published May 11, 1948.
Medicinal preparation. Winthrop Chemical Company, Inc. 440,073, Aug. 10; Serial No. 509,620, published May 11, 1948.
Medicinal preparations and products. S. Pfeiffer Mfg. Co. 247,542, renewed Oct. 2, 1948. O. G. Aug. 10.
Medicinal preparations, Liquid. D. Kasten. 501,536, Aug. 10; Serial No. 539,830, published May 11, 1948.
Mineral preparation. Forest Products Chemical Company. 417,824, Nov. 20, 1945. Republished Aug. 10.
Mixture of ingredients for insecticides and fungicides. Cooperative Seed & Farm Supply Service, Inc. 419,508, Feb. 19, 1946. Republished Aug. 10.
Mixture of ingredients for insecticides and fungicides. Cooperative Seed & Farm Supply Service, Inc. 430,896, July 1, 1947. Republished Aug. 10.
Moth cakes and crystals, and deodorants. Mabex Co. 440,118, Aug. 10; Serial No. 523,901, published Apr. 13, 1948.
Odoriferous products. Morana, Incorporated. 168,833, May 29, 1923. Republished Aug. 10.
Oils, Wood-preserving. Forest Products Chemical Company. 120,090, Jan. 8, 1918. Republished Aug. 10.
Ointment. Potter Drug & Chemical Corporation. 36,921, Aug. 20, 1901. Republished Aug. 10.
Ointment. Potter Drug & Chemical Corporation. 49,573, Feb. 13, 1906. Republished Aug. 10.
Ointment. Potter Drug & Chemical Corporation. 50,754, Mar. 27, 1906. Republished Aug. 10.
Ointments. Chatham Pharmaceuticals, Inc. 425,511, Nov. 26, 1946. Republished Aug. 10.
Parasiticides. California Spray-Chemical Corporation. 440,099, Aug. 10; Serial No. 518,128, published Dec. 16, 1947.
Perfume. Societe a Responsabilite Limitee; Cottan, Parfumeur. 440,112, Aug. 10; Serial No. 521,476, published Apr. 13, 1948.
Perfumery. Haarmann-De Laire-Schaefer Co. 41,631, Dec. 8, 1903. New certificate. O. G. Aug. 10.
Perfumes. J. B. Nethercutt. 440,058, Aug. 10; Serial No. 502,394, published May 11, 1948.
Perfumes. Societe Commerciale d'Application et de Representation de la Parfumerie. 440,080, Aug. 10; Serial No. 513,905, published May 11, 1948.
Pharmaceutical preparation for treating nutritive allergic maladies. Chemosan-Union und Fritz-Pezoldt A. G. 276,096, Oct. 7, 1930. Canceled June 18, 1948. O. G. Aug. 10.
Pills, granules, tablet triturates, etc. Norwich Pharmacal Co. 67,983, re-renewed Mar. 3, 1948. O. G. Aug. 10.
Plasters, Medicinal. Potter Drug & Chemical Corporation. 58,770, Dec. 25, 1906. Republished Aug. 10.
Powder, Talcum. Potter Drug & Chemical Corporation. 123,384, Oct. 29, 1918. Republished Aug. 10.
Preparation for the treatment of cardio vascular diseases. Parke, Davis & Company. 440,082, Aug. 10; Serial No. 514,374, published Mar. 16, 1948.
Preparation for the treatment of psoriasis. Siroil Laboratories, Inc. 325,894, July 9, 1935. Republished Aug. 10.
Preparation used to impregnate fabrics. Patek and Co. 501,440, Aug. 10; Serial No. 505,917, published May 11, 1948.
Refrigerants or fluid refrigerating mediums used in effecting refrigeration. Carrier Engineering Corporation. 248,155, renewed Oct. 16, 1948. O. G. Aug. 10.
Remedies for asthma, catarrh, bronchitis, hay-fever, and colds. Peek & Velsor, Inc. 71,212, re-renewed Nov. 10, 1948. O. G. Aug. 10.
Remedy for colds, throat affections, and internal and external pains. Brown Medicine Company. 31,292, Feb. 22, 1898. Republished Aug. 10.
Rust removers, Chemical. Keystone Lubricating Company. 414,462, June 12, 1945. Republished Aug. 10.
Salve. J. J. Mathe. 501,482, Aug. 10; Serial No. 529,907, published May 4, 1948.
Shampoo and cream lotion hair dressing, Hair. I. Marquis. 440,078, Aug. 10; Serial No. 512,788, published Apr. 6, 1948.
Sirup remedy for coughs and whooping coughs, colds, etc. J. R. Angell. 151,664, Feb. 14, 1922. Republished Aug. 10.
Sizing composition, Resinous textile. Eronel Industries. 440,053, Aug. 10; Serial No. 496,771, published Apr. 20, 1948.
Spray, rubbing alcohol, antifreeze, etc., Liquid cattle. Oakes & Company. 440,129, Aug. 10; Serial No. 525,380, published Dec. 9, 1947.
Tablets containing ascorbic acid, thiamine, etc. Nion Corporation. 431,930, Aug. 12, 1947. Republished Aug. 10.
Toilet preparations, perfumery and cosmetics. Les Parfums de Dana, Inc. 440,051, Aug. 10; Serial No. 495,304, published May 4, 1948.
Tooth paste. Wilson Chemical Company, Inc. 375,464, Feb. 20, 1940. Republished Aug. 10.
Vitamin capsules. Nion Corporation. 400,098, Feb. 16, 1943. Republished Aug. 10.
Vitamin capsules. W. S. Thompson Products, Inc. 407,441, June 6, 1944. Republished Aug. 10.
Vitamin D concentrates, Liquid. National Institute of Nutrition. 335,463, June 2, 1936. Republished Aug. 10.
Wax, Compounded petroleum. National Wax Company. 440,064, Aug. 10; Serial No. 504,923, published May 4, 1948.

CLASS 7

Cord and clothesline, Sash. Samson Cordage Works. 405,228, Jan. 11, 1944. Republished Aug. 10.
Cord and twine. Samson Cordage Works. 155,073, May 16, 1922. Republished Aug. 10.
Cord made of cotton. Samson Cordage Works. 80,198, Nov. 15, 1910. Republished Aug. 10.
Cord, Sash. Samson Cordage Works. 316,492, Aug. 28, 1934. Republished Aug. 10.
Cordage, Plastic coated. Carolina Industrial Plastics Corporation. 427,998, Mar. 4, 1947. Republished Aug. 10.
Cords and twines, Braided and twisted. Samson Cordage Works. 247,579, Oct. 2, 1928. Republished Aug. 10.
Cords, lines, twines, and ropes. Samson Cordage Works. 50,828, Apr. 3, 1906. Republished Aug. 10.
Cords, lines, twines, and ropes. Samson Cordage Works. 51,775, Apr. 24, 1906. Republished Aug. 10.
Cords, lines, twines, and ropes. Samson Cordage Works. 255,329, Apr. 23, 1929. Republished Aug. 10.
Twine. Samson Cordage Works. 161,613, Nov. 14, 1922. Republished Aug. 10.

CLASS 8

Lighter of the pyrophoric type, Pocket. Zippo Manufacturing Company. 317,219, Sept. 18, 1934. Republished Aug. 10.
Pipes, pipe cases, cigarette and cigar holders, etc. J. Schwalbe. 429,221, Apr. 22, 1947. Canceled July 2, 1948. O. G. Aug. 10.
Pipes, Smokers'. Reiss-Premier Corporation. 440,101, Aug. 10; Serial No. 518,907, published May 18, 1948.
Pipes, Smoking. Lane Limited. 501,427, Aug. 10; Serial No. 491,270, published May 18, 1948.
Pipes, Smoking. M. Linkman & Company. 501,458, Aug. 10; Serial No. 527,438, published May 18, 1948.

CLASS 9

Sights for rifles, shotguns, pistols and revolvers, Iron and telescopic. W. P. Klapp, Jr. 383,608, Dec. 17, 1940. Republished Aug. 10.

CLASS 10

Fertilizers. Southern States Cooperative, Inc. 347,012, June 15, 1937. Republished Aug. 10.

CLASS 11

Carbon paper and typewriter ribbons. Columbia Ribbon & Carbon Manufacturing Company, Inc. 501,523, Aug. 10; Serial No. 535,397, published May 11, 1948.
Inking ribbons. Addressograph-Multigraph Corporation. 294,526, May 31, 1932. Republished Aug. 10.
Pads and rubber stamp ink, Stamp. Fulton Specialty Co. 331,443, Jan. 7, 1936. Republished Aug. 10.
Pads and rubber stamp ink, Stamp. Fulton Specialty Co. 333,333, Mar. 17, 1936. Republished Aug. 10.
Typewriter ribbons and carbon paper. Columbia Ribbon & Carbon Manufacturing Company, Inc. 501,524–5, Aug. 10; Serial Nos. 535,398–9, published May 11, 1948.

CLASS 12

Asphalt with fibre, Emulsified. Lewis Asphalt Engineering Corporation. 501,493, Aug. 10; Serial No. 531,222, published Apr. 20, 1948.
Awnings, Wood. C. B. Grant. 440,059–61, Aug. 10; Serial Nos. 503,511–13, published Apr. 20, 1948.
Blocks and plates, beams and uprights, Building. Durisol Ag. Fuer Leichtbaustoffe. 440,075, Aug. 10; Serial No. 511,074, published May 4, 1948.
Board and block, etc., Sound deadening. Insulite Company. 380,017, Aug. 6, 1940. Republished Aug. 10.
Board and blocks, asbestos siding, water-proof fiber board, etc., Sound absorbing. Insulite Company. 369,022, July 11, 1939. Republished Aug. 10.
Board and lumber, Composite. MacAndrews & Forbes Company. 501,526, Aug. 10; Serial No. 535,420, published May 4, 1948.
Board consisting of laminations of phenolic resin bonded veneer or wood panels, Composition construction. Plywoods-Plastics Corporation. 440,041, Aug. 10; Serial No. 477,123, published Apr. 20, 1948.
Boards and blocks for insulating, Woodpulp. International Insulation Company. 123,355, Oct. 29, 1918. Republished Aug. 10.
Brick. Acme Brick Company. 501,477, Aug. 10; Serial No. 528,979, published Apr. 13, 1948.
Brick, Fire. Standard Fuel Engineering Company. 440,063, Aug. 10; Serial No. 504,799, published Apr. 20, 1948.
Bricks, Building. Jova Brick Works. 501,509, Aug. 10; Serial No. 533,585, published Apr. 27, 1948.
Cement. Manitowoc Portland Cement Company. 210,808, Mar. 23, 1926. Republished Aug. 10.
Cement compounds. Leadite Company of America. 61,669, Apr. 2, 1907. Republished Aug. 10.
Cement, Lap. Lewis Asphalt Engineering Corporation. 501,494, Aug. 10; Serial No. 531,223, published May 4, 1948.
Cement, Masonry. Medusa Portland Cement Company. 337,905, Aug. 25, 1936. Republished Aug. 10.
Cement, Non-staining water-proofed mortar. Medusa Portland Cement Company. 328,115, Sept. 17, 1935. Republished Aug. 10.
Cement, Portland. Crescent Portland Cement Company. 341,685, Dec. 22, 1936. Republished Aug. 10.
Cement, Portland. Marquette Cement Manufacturing Company. 501,456, Aug. 10; Serial No. 527,205, published May 4, 1948.
Cement, Portland. Newaygo Portland Cement Company. 295,402, June 28, 1932. Republished Aug. 10.
Cement, Portland. Sandusky Portland Cement Company. 44,957, Aug. 1, 1905. Republished Aug. 10.
Cements. Permanente Cement Company. 501,478, Aug. 10; Serial No. 529,082, published May 18, 1948.
Ceramic heat-conducting materials, and ceramic heat-insulating. Orefraction Incorporated. 440,125, Aug. 10; Serial No. 525,018, published Apr. 13, 1948.
Compound for integral admixture to building aggregates. Askania Corporation. 501,469, Aug. 10; Serial No. 528,606, published May 4, 1948.
Concrete aggregate, Lightweight. Southern Lightweight Aggregate Corp. 501,508, Aug. 10; Serial No. 533,066, published Apr. 20, 1948.
Crystalline material, Dry. Rock-Tred Corporation. 440,042, Aug. 10; Serial No. 478,349, published May 4, 1948.
Doors, Garage. Wilson Foundry & Machine Company. 501,531, Aug. 10; Serial No. 537,118, published May 4, 1948.
Fabric saturated with tar. Lewis Asphalt Engineering Corporation. 501,491, Aug. 10; Serial No. 531,220, published Apr. 27, 1948.
Fabrics for water-proofing; asphalt and asphalt products, Asphalt-saturated. Minwax Company, Inc. 238,736, Feb. 14, 1928. Republished Aug. 10.
Fence building materials, fences, gates, etc., Wood. C. Thompson. 501,516, Aug. 10; Serial No. 534,487, published May 4, 1948.
Flooring and trim, Hardwood. Bradley Lumber Company of Arkansas. 250,655, Dec. 11, 1928. Republished Aug. 10.
Lath, Metal. Bostwick Steel Lath Company. 501,518, Aug. 10; Serial No. 534,739, published May 4, 1948.
Liquid material, Substantially transparent. Puritan Company, Incorporated. 501,446, Aug. 10; Serial No. 510,724, published Apr. 27, 1948.
Lumber and lumber products. St. Paul & Tacoma Lumber Co. 501,514, Aug. 10; Serial No. 533,945, published May 4, 1948.
Material for sealing and water-proofing the bottom of lateral expansion joints in concrete roadways and for sealing joints in other structural units. Servicised Products Corporation. 427,441, Feb. 11, 1947. Republished Aug. 10.
Mica mastic, gilsonite mastic and cork mastic surface covering. S. W. Shermet. 440,107, Aug. 10; Serial No. 519,988, published May 4, 1948.
Paper Building. Richkraft Company. 501,475, Aug. 10; Serial No. 528,953, published May 4, 1948.
Plastic bituminous composition. Wailes Dove-Hermiston Corporation. 440,088, Aug. 10; Serial No. 516,591, published May 4, 1948.
Preparations in powder form consisting principally of cement for use in building or decoration. Associated Portland Cement Manufacturers, Limited. 440,126, Aug. 10; Serial No. 525,057, published Apr. 20, 1948.
Primer and asphaltic joint filler Asphalt. Lewis Asphalt Engineering Corporation. 501,492, Aug. 10; Serial No. 531,221, published Apr. 27, 1948.
Rainspouts and gutter hangers, holders and hooks, etc. R. S. Brown Manufacturing Company, Inc. 440,086, Aug. 10; Serial No. 516,252, published Apr. 13, 1948.
Refractories. American Crucible Company. 501,434–5, Aug. 10; Serial Nos. 500,726–7, published Apr. 20, 1948.
Refractory compositions, Granular. Basic Refractories, Inc. 440,074, Aug. 10; Serial No. 510,564, published Apr. 13, 1948.
Roofing, Asphalt-impregnated sheet. United Co-Operatives, Inc. 501,529, Aug. 10; Serial No. 535,909, published Apr. 20, 1948.
Sealing compound. Keystone Lubricating Company. 338,853, Sept. 15, 1936. Republished Aug. 10.
Sealing compound. Puritan Company, Incorporated. 440,114, Aug. 10; Serial No. 522,264, published Apr. 27, 1948.
Sealing compound, Graphite plastic. Keystone Lubricating Company. 337,326, Aug. 4, 1936. Republished Aug. 10.
Shingles, Asphalt. Bird & Son, Inc. 501,506, Aug. 10; Serial No. 532,905, published Apr. 20, 1948.
Sidewall material, Wooden. Perma Products Company. 440,117, Aug. 10; Serial No. 523,877, published May 4, 1948.
Strips, Metal dividing. Chase Brass & Copper Co. Incorporated. 501,490, Aug. 10; Serial No. 531,195, published Apr. 13, 1948.
Thermal insulation blankets formed of paper. H. Moe. 501,502, Aug. 10; Serial No. 532,318, published Apr. 27, 1948.
Tile, Ornamental plastic. Injection Molding Company. 440,094, Aug. 10; Serial No. 517,639, published Apr. 27, 1948.
Tiles, T. W. Hands Fireworks Co. Limited. 440,122, Aug. 10; Serial No. 524,632, published Apr. 13, 1948.
Tiles, Plastic. Falcon Products Company. 501,453, Aug. 10; Serial No. 521,180, published Apr. 13, 1948.
Veneers, wood flooring and hardwood lumber, Wood. Wood-Mosaic Company. 501,520, Aug. 10; Serial No. 534,854, published May 4, 1948.
Veneers, wood flooring and lumber, Wood. Wood-Mosaic Company. 501,519, Aug. 10; Serial No. 534,853, published May 4, 1948.
Wall covering, Inside plastic coated. Bestile Manufacturing Company. 440,100, Aug. 10; Serial No. 518,339, published May 4, 1948.
Waterproofing compound. G. Kay. 501,431, Aug. 10; Serial No. 499,137, published May 4, 1948.
Windows and doors, Aluminum combination storm. Aluminum Products Corporation. 501,437, Aug. 10; Serial No. 503,237, published May 4, 1948.
Windows, sashes, and window frames. Steel Products Corporation. 239,843, renewed Mar. 13, 1948. O. G. Aug. 10.

CLASS 13

Belt-hooks. National Ring Traveler Co. 141,622, Apr. 26, 1921. Republished Aug. 10.

Chains, Conveyer. Inland Engineering Company. 214,896, July 6, 1926. New certificate. O. G. Aug. 10.
Cocks and trough ball cocks, Toilet tank ball. R. A. Casarotti. 242,159, renewed May 15, 1948. O. G. Aug. 10.
Cookers, Non-electrical pressure. Koons-Beebe Associates, Inc. 440,052, Aug. 10; Serial No. 496,450, published Nov. 26, 1946.
Couplings, Flexible pipe. Drinkwater, Inc. 440,093, Aug. 10; Serial No. 517,624, published May 11, 1948.
Eliminators, air valves, brass unions, etc., Metal air. Milwaukee Valve Company. 243,049, renewed June 12, 1948. O. G. Aug. 10.
Fasteners and components therefor, Slide. Talon, Inc. 501,463, Aug. 10; Serial No. 527,766, published May 11, 1948.
Fasteners and components therefor, Slide. Talon, Inc. 501,465, Aug. 10; Serial No. 527,832, published May 11, 1948.
Fasteners, Slide. American Fastener Company. 440,044, Aug. 10; Serial No. 479,019, published May 4, 1948.
Gates, Flume. Andersen Flume Gate Co. 248,165, renewed Oct. 16, 1948. O. G. Aug. 10.
Hollow ware, flat ware, semi-flat ware, etc., Enameled base metal. Moore Enameling and Manufacturing Company. 501,489, Aug. 10; Serial No. 531,139, published Apr. 27, 1948.
Horseshoe nails. Capewell Horse Nail Company. 67,010, Jan. 14, 1908. Republished Aug. 10.
Horseshoe nails. Capewell Horse Nail Company. 157,473, Aug. 8, 1922. Republished Aug. 10.
Horse-nails. Capewell Horse Nail Company. 51,221, Apr. 10, 1906. Republished Aug. 10.
Horse-nails. Capewell Horse Nail Company. 56,605, Oct. 9, 1906. Republished Aug. 10.
Horse-nails. Capewell Horse Nail Company. 93,261, Sept. 2, 1913. Republished Aug. 10.
Hose fittings and pipe couplings. Aeroquip Corporation. 402,388, July 20, 1943. Republished Aug. 10.
Metal ware, etc. Ornamental antique-finished domestic brass and base. Pearson-Page-Jewsbury Company Ltd. 440,065, Aug. 10; Serial No. 506,340, published May 4, 1948.
Metallic fittings. Aeroquip Corporation. 402,052, June 29, 1943. Republished Aug. 10.
Nails. Capewell Manufacturing Company. 372,876, Nov. 14, 1939. Republished Aug. 10.
Ovens, Dutch. Griswold Manufacturing Company. 170,475, July 17, 1923. Republished Aug. 10.
Pans, Metal baking. United Aircraft Products, Inc. 440,085, Aug. 10; Serial No. 516,232, published May 4, 1948.
Screws, bolts, nuts, etc. American Screw Company. 53,739, June 12, 1906. Republished Aug. 10.
Screws, washer head screws, machine screws, etc., Wood. Elco Tool and Screw Corporation. 204,820, Oct. 27, 1925. Republished Aug. 10.
Screws, Wood. Elco Tool and Screw Corporation. 317,277, Sept. 18, 1934. Republished Aug. 10.
Sprinklers, hose nozzles, hose accessories, etc., Garden and lawn. Plymouth Wholesale Dry Goods Corporation. 440,046, Aug. 10; Serial No. 488,419, published May 4, 1948.
Utensils composed of aluminum alloy, etc., Cooking. Advance Aluminum Castings Corp. 334,570, May 5, 1936. Republished Aug. 10.
Utensils, Domestic aluminum and stainless steel cooking. Norris Stamping and Manufacturing Co. 501,441, Aug. 10; Serial No. 506,055, published Apr. 27, 1948.
Valves. Ohio Injector Company. 283,154–5, May 19, 1931. Republished Aug. 10.
Valves, Pipeline. Henry Valve Company. 408,478, Aug. 15, 1944. Republished Aug. 10.

CLASS 14

Alloys, Non-ferrous. Lumen Bearing Company. 49,950, Feb. 27, 1906. Republished Aug. 10.

CLASS 15

Gasoline. Champlin Refining Company. 247,462, renewed Sept. 25, 1948. O. G. Aug. 10.
Gasoline. Cities Service Oil Company. 247,820, renewed Oct. 9, 1948. O. G. Aug. 10.
Lubricants. A. C. Buzby. 99,279, Aug. 25, 1914. Republished Aug. 10.
Lubricants. A. C. Buzby. 115,157, Jan. 30, 1917. Republished Aug. 10.
Lubricants. A. C. Buzby. 121,591, May 14, 1918. Republished Aug. 10.
Lubricants. Keystone Lubricating Company. 126,173, July 29, 1919. Republished Aug. 10.
Lubricants. Keystone Lubricating Company. 203,754–6, Sept. 22, 1925. Republished Aug. 10.
Lubricants. Keystone Lubricating Company. 313,769, June 5, 1934. Republished Aug. 10.
Lubricants. Keystone Lubricating Company. 315,047, July 17, 1934. Republished Aug. 10.
Lubricants. Keystone Lubricating Company. 317,736, Oct. 2, 1934. Republished Aug. 10.
Oils, Lubricating. Illinois Farm Supply Company. 319,526, Nov. 27, 1934. Republished Aug. 10.
Oils, Lubricating. Keystone Lubricating Company. 383,218, Nov. 26, 1940. Republished Aug. 10.
Oils, Lubricating. Keystone Lubricating Company. 417,489, Oct. 30, 1945. Republished Aug. 10.

CLASS 16

Carbon black. Godfrey L. Cabot, Inc. 176,012, Nov. 13, 1923. Republished Aug. 10.
Carbon black for paints, lacquers, enamel, etc. Peerless Carbon Black Company. 242,138, renewed May 15, 1948. O. G. Aug. 10.
Lacquers, reducers, ready-mixed paint, and primers. Berry Brothers, Incorporated. 248,522, renewed Oct. 23, 1948. O. G. Aug. 10.
Paint and paint enamel, Ready-mixed. Boston Varnish Company. 501,543, Aug. 10; Serial No. 533,983.
Paints, etc., Dry paste, and ready-mixed. Medusa Portland Cement Company. 333,641–2, Mar. 31, 1936. Republished Aug. 10.
Paints, lacquer, varnish, etc., Ready-mixed. W. P. Fuller & Co. 244,064, renewed July 10, 1948. O. G. Aug. 10.
Paints, paint enamels, varnishes, etc. Rinshed-Mason Company. 248,413–14, renewed Oct. 23, 1948. O. G. Aug. 10.
Paints, Ready-mixed. Spotless Company, Inc. 351,394, Oct. 26, 1937. Republished Aug. 10.
Paints (ready mixed or liquid, paste form and dry), etc. Paint Merchandising Council. 438,371, Apr. 20, 1948. Canceled June 29, 1948. O. G. Aug. 10.
Primers, House paint. Illinois Farm Supply Company. 349,119, Aug. 17, 1937. Republished Aug. 10.
Varnish, stain, combination of varnish and stain, and paint enamel. Berry Brothers, Incorporated. 248,521, renewed Oct. 23, 1948. O. G. Aug. 10.

CLASS 17

Cigars. Corrall, Wodiska y Ca. 245,639, renewed Aug. 21, 1948. O. G. Aug. 10.
Cigars. P. Lorillard Company. 501,532, Aug. 10; Serial No. 538,551, published May 11, 1948.
Tobacco, Smoking and chewing. P. Lorillard Company. 501,533, Aug. 10; Serial No. 538,552, published May 11, 1948.

CLASS 19

Bolsters, truck side frames, and spring planks, Railway-truck. Buckeye Steel Castings Company. 249,355, Nov. 13, 1928. Republished Aug. 10.
Brakes, Vehicle. Hydraulic Brake Company. 253,474, Feb. 26, 1929. Republished Aug. 10.
Bicycles and parts thereof. Spiegel, Inc. 419,746, Mar. 5, 1946. Republished Aug. 10.
Cars, Motor. Societa Anonima Italiana Ing. Nicola Romeo & C. 228,220, renewed May 24, 1947. O. G. Aug. 10.
Cars, Railway freight and passenger. Union Pacific Railroad Co. 32,036, re-renewed Oct. 4, 1948. O. G. Aug. 10.
Mechanism for manual operation. Ajax Hand Brake Company. 232,365, Sept. 6, 1927. Republished Aug. 10.
Truck side frames, truck and body bolsters, coupler-yokes, etc. Buckeye Steel Castings Company. 111,447, July 18, 1916. Republished Aug. 10.
Trucks, Motor. International Motor Company. 232,268, Sept. 6, 1927. Republished Aug. 10.
Wagon boxes and farm trailers. Spiegel, Inc. 420,772, Apr. 30, 1946. Republished Aug. 10.

CLASS 20

Linoleum. Spiegel, Inc. 423,962, Sept. 17, 1946. Republished Aug. 10.

CLASS 21

Apparatus for controlling or modifying electrical currents. Raytheon Manufacturing Company. 420,872, May 7, 1946. Republished Aug. 10.
Batteries, Electric. National Battery Company. 275,842, Sept. 30, 1930. Republished Aug. 10.
Batteries, Electric. National Battery Company. 289,444, Nov. 24, 1931. Republished Aug. 10.
Batteries, Electric storage. Englert Manufacturing Company. 262,104, Oct. 1, 1929. Republished Aug. 10.
Batteries, Electric storage. Englert Manufacturing Company. 280,405, Feb. 17, 1931. Republished Aug. 10.
Batteries, Electric storage. Power-Plus Battery Company. 243,032, renewed June 2, 1948. O. G. Aug. 10.
Batteries, Storage. Gould Storage Battery Corpartion. 297,723, Sept. 27, 1932. Republished Aug. 10.
Batteries, Storage. National Battery Company. 296,338, Aug. 2, 1932. Republished Aug. 10.
Conductors, Armored. Sprague Electric Co. 68,936, re-renewed May 5, 1948. O. G. Aug. 10.
Fittings, Electrical conduit. Killark Electric Manufacturing Co. 104,618, June 8, 1915. Republished Aug. 10.
Furnaces, Electrometallurgical. Pittsburgh Electric Furnace Corporation. 151,574, Feb. 7, 1922. Republished Aug. 10.
Heaters, electric dryers, etc., Electric air or space. Edwin L. Wiegand Company. 246,652, renewed Sept. 11, 1948. O. G. Aug. 10.
Irons, Electric flat. Spiegel, Inc. 429,799, May 20, 1947. Republished Aug. 10.
Lights, Search. Portable Light Co. 203,852, Sept. 29, 1925. Republished Aug. 10.
Radio receiving sets and radio tubes, and for storage batteries, etc. Spiegel, Inc. 400,293, Mar. 2, 1943. Republished Aug. 10.

Switches for controlling circuits, bus-bar clamps, bus supports, etc. Electric Power Equipment Corporation. 238,412, Feb. 7, 1928. Republished Aug. 10.
Tubes, Electrical space discharge. Raytheon Production Corporation. 299,507, Dec. 6, 1932. Republished Aug. 10.
Tubes, Electrical space discharge. Raytheon Production Corporation. 305,916, Aug. 29, 1933. Republished Aug. 10.
Tubes, Electrical space discharge. Raytheon Production Corporation. 395,167–8, May 12, 1942. Republished Aug. 10.
Tubes, Rectifier. American Appliance Co. 208,886, Feb. 9, 1926. Republished Aug. 10.

CLASS 22

Fish bait, Artificial. Art Wire and Stamping Company. 425,737, Dec. 3, 1946. Republished Aug. 10.
Fishing rods, fishing reels, fishing lines, etc. Spiegel, Inc. 418,968, Jan. 15, 1946. Republished Aug. 10.
Footballs. Draper-Maynard Company. 246,582, renewed Sept. 11, 1948. O. G. Aug. 10.

CLASS 23

Axes, hatchets, adzes, bush-hooks, etc. Collins Company. 323,329, Apr. 9, 1935. Republished Aug. 10.
Axes, hatchets, adzes, etc. Colling Company. 89,537, Dec. 24, 1912. Republished Aug. 10.
Axes, hatchets, adzes, etc. Collins Company. 93,076, Aug. 19, 1913. Republished Aug. 10.
Axes, hatchets, adzes, etc. Collins Company. 100,099, Oct. 6, 1914. Republished Aug. 10.
Axes, hatchets and adzes. Collins Company. 50,481, Mar. 20, 1906. Republished Aug. 10.
Bearings made of hard rubber. Manhattan Rubber Mfg. Co. 247,341, renewed Sept. 25, 1948. O. G. Aug. 10.
Blades and band saw blades, Hack saw. American Saw & Manufacturing Company. 318,312, Oct. 23, 1934. Republished Aug. 10.
Blades, Hack saw. Capewell Manufacturing Company. 384,250, Jan. 7, 1941. Republished Aug. 10.
Blades, Hack saw. Capewell Manufacturing Company. 389,715, Aug. 19, 1941. Republished Aug. 10.
Blades, Hack saw. Capewell Manufacturing Company. 389,739, Aug. 19, 1941. Republished Aug. 10.
Check-protectors, Mechanical. Hedman Manufacturing Company. 108,791, Feb. 29, 1916. Republished Aug. 10.
Clutches, and parts thereof, Power transmission. Rockford Drilling Machine Company. 254,566, Mar. 26, 1929. Republished Aug. 10.
Cups, oil cups, and lubricators, Grease. Keystone Lubricating Company. 175,062, Oct. 30, 1923. Republished Aug. 10.
Cups, oil cups and lubricators, Grease. Keystone Lubricating Company. 345,702, May 4, 1937. Republished Aug. 10.
Earth-boring machinery. Hydrauger Corporation, Ltd. 284,754, July 7, 1931. Republished Aug. 10.
Files. A. A. Wood & Sons Company. 242,304, renewed May 22, 1948. O. G. Aug. 10.
Fittings, Telltale or indicating lubrication. Keystone Lubricating Company. 362,978, Dec. 6, 1938. Republished Aug. 10.
Fittings, Telltale or indicating lubrication. Keystone Lubricating Company. 367,078, May 9, 1939. Republished Aug. 10.
Hammers, hatchets, shovels, etc., and handles therefor. Moore & Handley Hardware Company. 68,728, Apr. 28, 1908. Corrected. O. G. Aug. 10.
Hoes, spades, shovels, picks, etc. Chillington Tool Co., Limited. 70,159, re-renewed Aug. 4, 1948. O. G. Aug. 10.
Injectors for stationary and locomotive steam-boilers. Ohio Injector Company. 61,712, Apr. 2, 1907. Republished Aug. 10.
Metal working machinery. Consolidated Machine Tool Corporation of America. 244,718, renewed July 24, 1948. O. G. Aug. 10.
Mixers, cement mixers, hammer-mills, etc., Cattle feed. Spiegel, Inc. 427,407, Feb. 11, 1947. Republished Aug. 10.
Planes and hammers. Capewell Manufacturing Company. 367,020, May 9, 1939. Republished Aug. 10.
Razors, Jean Jordeau, Inc. 248,051, renewed Oct. 16, 1948. O. G. Aug. 10.
Ring and twister travelers. National Ring Traveler Co. 162,564, Dec. 19, 1922. Republished Aug. 10.
Ring and twister travelers. National Ring Traveler Co. 167,249, Apr. 24, 1923. Republished Aug. 10.
Ring and twister travelers. National Ring Traveler Co. 351,302, Oct. 26, 1937. Republished Aug. 10.
Ring-travelers. National Ring Traveler Co. 139,582, Feb. 8, 1921. Republished Aug. 10.
Ring travelers. National Ring Traveler Co. 141,184, Apr. 12, 1921. Republished Aug. 10.
Ring travelers. National Ring Traveler Co. 142,063, May 3, 1921. Republished Aug. 10.
Ring-travelers. National Ring Traveler Co. 143,110, May 24, 1921. Republished Aug. 10.
Ring travelers. National Ring Traveler Co. 144,251, June 28, 1921. Republished Aug. 10.
Ring travelers. National Ring Traveler Co. 145,424, Aug. 2, 1921. Republished Aug. 10.
Ring travelers. National Ring Traveler Co. 209,498, Feb. 23, 1926. Republished Aug. 10.
Ring travelers. National Ring Traveler Co. 313,236, May 22, 1934. Republished Aug. 10.
Rolls, Rolling mill. United Engineering and Foundry Company. 222,455, Jan. 4, 1927. Republished Aug. 10.
Rolls, Rolling mill. United Engineering and Foundry Company. 266,552, Jan. 28, 1930. Republished Aug. 10.
Silencers. Maxim Silencer Company. 298,702, Nov. 1, 1932. Republished Aug. 10.
Sprayers, spray pumps, etc., Hand and power operated. D. B. Smith & Company, Inc. 248,557, renewed Oct. 23, 1948. O. G. Aug. 10.
Sprayers, spray pumps, etc., Hand and power operated. D. B. Smith & Company, Inc. 249,192, renewed Nov. 6, 1948. O. G. Aug. 10.
Tools, Gear shaving and burnishing. National Tool Company. 332,626, Feb. 18, 1936. Republished Aug. 10.
Tools, machines and devices, Thread cutting. Oster Manufacturing Co. 70,024, re-renewed July 21, 1948. O. G. Aug. 10.
Travelers for use on spinning and twisting rings. National Ring Traveler Co. 384,538, Jan. 21, 1941. Republished Aug. 10.
Travelers for use on spinning and twisting rings. National Ring Traveler Co. 389,082, July 22, 1941. Republished Aug. 10.
Travelers for use on spinning and twisting rings. National Ring Traveler Co. 391,106, Oct. 21, 1941. Republished Aug. 10.
Twister travelers. National Ring Traveler Co. 278,230, Dec. 9, 1930. Republished Aug. 10.
Twister travelers. National Ring Traveler Co. 351,068, Oct. 19, 1937. Republished Aug. 10.
Wrenches, wrench sets, wrench sockets, and tool handles. J. H. Williams & Co. 335,232, May 26, 1936. Republished Aug. 10.

CLASS 24

Agitators for laundry washing machines. Easy Washing Machine Corporation. 341,354, Dec. 8, 1936. Republished Aug. 10.
Laundry machine. Easy Washing Machine Corporation. 367,038, May 9, 1939. Republished Aug. 10.
Laundry washing and drying machines and parts thereof. George W. Dunham Corporation. 218,892, Oct. 5, 1926. Republished Aug. 10.
Laundry washing machines. Easy Washing Machine Corporation. 309,759, Jan. 30, 1934. Republished Aug. 10.
Laundry washing machines, driers, ironers, etc. Syracuse Washing Machine Corporation. 280,417, Feb. 17, 1931. Republished Aug. 10.
Washing machines. Spiegel, Inc. 421,853, June 18, 1946. Republished Aug. 10.

CLASS 26

Actuators for actuating valves, Submersion. Walter Kidde & Company, Inc. 424,795, Oct. 22, 1946. Republished Aug. 10.
Apparatus for ascertaining the quantity and quality of fluid in an earth stratum in a well bore. Houston Engineers. 248,482, renewed Oct. 23, 1948. O. G. Aug. 10.
Balances and scales. Torsion Balance Co. 69,102, re-renewed May 19, 1948. O. G. Aug. 10.
Brake testing machines or apparatus. Thermoid Company. 331,598, Jan. 14, 1936. Republished Aug. 10.

Cavanagh, John F.

Burks, George E., Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif. Liquid collecting and directing means. 2,446,631, Aug. 10.

Burns, Frank D., Long Beach, assignor to The Hays Corporation, Michigan City, Ind. Apparatus for calibrating fluid pressure gauges. 2,446,740, Aug. 10.

Buxton, James E., Elmira, N. Y., assignor to Bendix Aviation Corporation. Engine starter gearing. 2,446,808, Aug. 10.

Byron Jackson Co., assignee: *See*—
Blom, Carl J.

Cahill, Lyale D., Shaker Heights, and V. T. Uber, Willoughby, assignors, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio. Air pressure gauge. 2,446,632, Aug. 10.

Cameron, Emmett T., San Antonio, Tex. Suction feeder. 2,446,573, Aug. 10.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Collins, Tappan.

Carpenter, Albert J., Jr., Battle Creek, Mich., assignor, by mesne assignments, to Goss Printing Press Company, Chicago, Ill. Self-locking paper roll chuck. 2,446,690, Aug. 10.

Carter, Ralph B., Company, assignee: *See*—
Laughlin, William C.

Carter, William J.: *See*—
Goldberg, Harry, Siwek, Long, and Carter.

Castellan, Carl A., assignor to American Viscose Corporation, Wilmington, Del. Thread advancing reel. 2,446,525, Aug. 10.

Caterpillar Tractor Co., assignee: *See*—
Burks, George E.

Cavallito, Chester J., Rensselaer, and F. K. Kirchner, Albany, assignors, by mesne assignments, to Winthrop-Stearns Inc., New York, N. Y. Preparing penicillin. 2,446,574, Aug. 10.

Cavanagh, John F., Providence, assignor to N. G. Burke, Warwick, R. I. Electrical appliance cord. 2,446,907, Aug. 10.

Celanese Corporation of America, assignee: *See*—
Bludworth, Joseph E., and Easter.

Chanal, Lucien, Annecy, France; vested in the Attorney General of the United. Feed controller for record engraver carrying carriages. 2,446,526, Aug. 10.

Chandler, James H., Oak Park, and M. J. Zimmer, Wooddale, assignors to Ekco Products Company, Chicago, Ill. Can opener. 2,446,633, Aug. 10.

Chase Brass & Copper Co., Incorporated, assignee: *See*—
Crampton, Donald K., Petersen, and Wood.

Chemical Laboratories, Inc., assignee: *See*—
Whitner, Thomas C.

Chicago Forging and Manufacturing Company, assignee: *See*—
Krause, Walter H.

Chidakel, Myer R., Washington, D. C. Lumber reclamation machine. 2,446,741, Aug. 10.

Chow, Bacon F., Highland Park, N. J., assignor to E. R. Squibb & Sons, New York, N. Y. Synthesis of a penicillin-protein reaction product. 2,446,974, Aug. 10.

Chromium Mining and Smelting Corpn., Limited, assignee: *See*—
Griffiths, Frederick J.

Chun, Melvin E., Huntington Park, and J. C. Stick, Jr., South Pasadena, assignors to Lane-Wells Company, Los Angeles, Calif. Phase shift logging of well bores. 2,446,527, Aug. 10.

Cities Service Oil Company, assignee: *See*—
Morgan, John D.

Cito, Camillo, Uccle-Brussels, assignor to La Soudure Electrique Autogene, Societe Anonyme, Brussels, Belgium. Automatic tongs for manual electric arc welding or cutting. 2,446,809, Aug. 10.

Clark, Edgar A., Seaside, Oreg. Aircraft having power-driven, adjustable, retractable, and steerable front wheels. 2,446,528, Aug. 10.

Clyde, George, and K. F. Dalley, Columbus, Ohio. Engine starting apparatus. 2,446,691, Aug. 10.

Coach & Car Equipment Corporation, assignee: *See*—
Buker, Edward.

Colt, Burton C., Jr., assignor to Tri-State Engineering Company, Washington, Pa. Load supporting pallet. 2,446,634, Aug. 10.

Cole, John W.: *See*—
Julian, Percy L., Cole, Magnani, and Meyer.

Collins, Francis H.: *See*—
Blair, Alexander, and Collins.

Collins, Tappan, Dormont, Pa., assignor to Carnegie-Illinois Steel Corporation. Structural member. 2,446,692, Aug. 10.

Conable, Walter F.: *See*—
Garrett, Elmer E., and Conable.

Congoleum-Nairn Inc., assignee: *See*—
Hazlehurst, Edward.

Conley, Charles, Canton, assignor to Republic Steel Corporation, Cleveland, Ohio. Silica brick. 2,446,975, Aug. 10.

Consolidated Vultee Aircraft Corporation, assignee: *See*—
Giles, William M., and Kucera.

Continental Electric Company, assignee: *See*—
McIlvaine, Hubert A.

Cook, Leonard W., Stratford, Conn., assignor to General Electric Company. Electric blanket and control therefor. 2,446,810, Aug. 10.

Cooke, Ernest A., assignor to Taylor, Taylor & Hobson Limited, Leicester, England. Copying machine with optical system. 2,446,575, Aug. 10.

Cooke, William T., Pelham Manor, and H. H. Willis, Pelham, assignors to The Sperry Corporation, Brooklyn, N. Y. Shock mounted and stabilized range finder. 2,446,529, Aug. 10.

Cooley, Austin G., New York, N. Y., assignor to Times Facsimile Corporation. Compensating for fading effects in a fascimile system. 2,446,635, Aug. 10.

Coons, Curtis C., assignor to The Hoover Company, North Canton, Ohio. Refrigeration. 2,446,636, Aug. 10.

Corbin, Douglas H., Dunstable, England, assignor to General Motors Corporation, Detroit, Mich. Spark plug manufacture. 2,446,908, Aug. 10.

Cordier, David E., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Urea-formaldehyde composition. 2,446,867, Aug. 10.

Coronet Phosphate Company, assignee: *See*—
Maust, Ernest J.

Cotton, William, Limited, assignee: *See*—
Wilders, George, and Lynam.

Cousins, Edward, assignor to Wingfoot Corporation, Akron, Ohio. Stabilization of vinyl resins. 2,446,976, Aug. 10.

Crampton, Donald K., Marion, and P. E. Petersen and M. L. Wood, assignors to Chase Brass & Copper Co., Incorporated, Waterbury, Conn. Melting brass chips. 2,446,637, Aug. 10.

Crawford, Richard A., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Self-sealing fuel tank construction. 2,446,811, Aug. 10.

Cribb, Harold H., Glenside, and D. J. R. Both, Everard Park, assignors to Vacuum Extractors Limited, Adelaide, South Australia, Australia. Suction evacuator for removing the fluid content of eggs. 2,446,812, Aug. 10.

Crockett, Robert E., Upper Montclair, N. J., assignor to Dings Magnetic Separator Co., Milwaukee, Wis. Magnetic concentrate washing means for submerged belt magnetic separators. 2,446,813, Aug. 10.

Crofton, Nelle M., Parkersburg, W. Va. Broom and mop combination. 2,446,814, Aug. 10.

Crompton & Knowles Loom Works, assignee: *See*—
Dion, Raymond F., and Wakefield.

Crowell, Oscar H., Russellville, Ala. Salt and pepper shaker. 2,446,742, Aug. 10.

Crump, Elmo E.: *See*—
Bryant, Newton W., Crump, Dungan, and Strand.

Crumrine, Chester W., assignor to Eastman Kodak Company, Rochester, N. Y. Focal-plane curtain shutter for cameras. 2,446,638, Aug. 10.

Cunningham, George L., Painesville, Ohio, assignor to Diamond Alkali Company, Pittsburgh, Pa. Purifying aqueous alkali metal hydroxides. 2,446,868, Aug. 10.

Cunningham, George L., Painesville, Ohio, assignor to Diamond Alkali Company, Pittsburgh, Pa. Preparing calcium hypochlorite. 2,446,869, Aug. 10.

Curtiss-Wright Corporation, assignee: *See*—
Maynard, Meade J.
Palmatier, Everett P.
Sprague, Desmond.

Dailey, Karl F.: *See*—
Clyde, George, and Dailey.

Daley, Henry G., Woodbury Heights, and J. W. Payne and E. L. Sargent, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Apparatus for manufacture of spheroidal particles. 2,446,784, Aug. 10.

Daniel, Harry M., assignee: *See*—
Jones, Frank A.

Daniel, Thomas A.: *See*—
Blaisdell, Charles O., and Daniel.

Dath, George E., Mokena, assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock absorbing mechanism for railway draft riggings. 2,446,639, Aug. 10.

Davidson, William L.: *See*—
Davies, John M., Shipman, and Davidson.

Davies, John M., J. J. Shipman, and W. L. Davidson, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Self-sealing fuel tank construction. 2,446,815, Aug. 10.

Davis, Francis W., Belmont, Mass. Knife sharpener. 2,446,009, Aug. 10.

Davis, Harold G., Denver, Colo. Dishwashing machine. 2,446,693, Aug. 10.

Davis, Henry S., West Haven, Conn. Automatic signaling mechanism for automobiles and other vehicles. 2,446,870, Aug. 10.

Davis, Henry S., West Haven, Conn. Signaling system for automobiles and other vehicles. 2,446,871, Aug. 10.

Davis, Latta O., Greenfield, Ind. Screened storm sash. 2,446,743, Aug. 10.

Davis, Robert F., Falls Church, Va., assignor to Well Surveys, Incorporated, Tulsa, Okla. Well perforator. 2,446,640, Aug. 10.

Day-Brite Lighting, Inc., assignee: *See*—
Biller, David J.

Daymon, Wilson, Hamden, Conn. Holder for disk-type phonograph records. 2,446,641, Aug. 10.

Dayton, James A., Litchfield, assignor to The Turner & Seymour Mfg. Co., Torrington, Conn. Tufting button. 2,446,816, Aug. 10.

Deepwater Chemical Co., Ltd., assignee: *See*—
Lawrason, Levering.

De Grazia, Joseph, Washington, D. C., and R. R. Oberender, Freeland, Pa. Expansible hood. 2,446,530, Aug. 10.

De Lancey, Warren H., Springfield, assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass. Fan housing construction for oil burners. 2,446,744, Aug. 10.

Delay, Fernand, Geneva, Switzerland. Clockwork-operated time fuse. 2,446,745, Aug. 10.

Denhard, Harry W., Sebastopol, F. W. Brittain, Piedmont, and A. G. Serpas, assignors to Oliver United Filters Incorporated, Oakland, Calif. Continuous rotary filter. 2,446,746, Aug. 10.

Derby, Palmer P., Boston, assignor to Raytheon Manufacturing Company, Newton, Mass. Electron discharge device. 2,446,531, Aug. 10.

Detrick, M. H., Company, assignee: *See*—
Hosbein, Louis H., and Ellman.

Detroit Harvester Company, assignee: *See*—
Floraday, Burton S.

De Vilbiss, Thomas A.: *See*—
Swallow, Herbert A., and De Vilbiss.

De Vry Corporation, assignee: *See*—
De Vry, William C.

De Vry, William C., assignor to De Vry Corporation, Chicago, Ill. Film splicer. 2,446,576, Aug. 10.

Diamond Alkali Company, assignee: *See*—
Cunningham, George L.

Dickens, Lonnie A., Archdale, N. C. Controls and systems for defrosting cooling units of refrigerating machines. 2,446,910, Aug. 10.

Dickson, James T., Los Angeles, Calif. Pressure actuator for brakes. 2,446,694, Aug. 10.

Didget, Adna S., Cape May Court House, N. J. Automatic poultry fountain. 2,446,695, Aug. 10.

Dings Magnetic Separator Co., assignee: *See*—
Crockett, Robert E.
Manegold, Robert L., and Wynne.

Dion, Raymond F., Leominster, and W. H. Wakefield, assignors to Crompton & Knowles Loom Works, Worcester, Mass. Weft detecting system for convertible looms. 2,446,747, Aug. 10.

Dobrin, Harry, assignor to Furnace Engineers, Inc., Pittsburgh, Pa. Heat-treating furnace. 2,446,642, Aug. 10.

Doeh Development Co., assignee: *See*—
Ruderfer, Martin.

Douglas, John G., Aberfeldy, Scotland. Mechanism for transforming linear movement of one member into arcuate or angular movement of another member or vice-versa with particular reference to screw and nut type steering gears. 2,446,911, Aug. 10.

Downing, Rexford D.: *See*—
Pool, Stuart D., and Downing.

Drane, Phillips B., and C. D. Laidley, Tulsa, Okla. Resilient gauging gate. 2,446,577, Aug. 10.

Dungan, Merrill R.: *See*—
Bryant, Newton W., Crump, Dungan, and Strand.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Rosenberg, Hans R.

Eastman Kodak Company, assignee: *See*—
Bean, Frederic R.
Brown, Fordyce M.
Crumrine, Chester W.
Tuttle, Clifton M., Kuns, and Brown.

Eckel, Arthur F., assignor to M. S. Eckel, Chicago, and L. W. Pickett, La Grange, Ill. Decimal point locator for slide rules. 2,446,696, Aug. 10.

Eckel, Myrtle S., assignee, et al.: *See*—
Eckel, Arthur F.

Eddison, Clifford, Haddon Heights, N. J., assignor to Radio Corporation of America. Sound record manufacture. 2,446,578, Aug. 10.

Edison, Thomas A., Incorporated, assignee: *See*—
Fritzinger, George H.

Edwards, Robert S., Hempstead, N. Y., assignor to The Sperry Corporation. Electronic fine and coarse signal control system. 2,446,532, Aug. 10.

Ehlers, Russell W., Flint, assignor to General Motors Corporation, Detroit, Mich. Molding ceramic articles. 2,446,872, Aug. 10.

Ehrhart, Gustav: *See*—
Bockmühl, Max, and Ehrhart, Eisleb, and Stein.

Eisleb, Otto: *See*—
Bockmühl, Max, and Ehrhart, Eisleb, and Stein.

Ekco Products Company, assignee: *See*—
Chandler, James H., and Zimmer.

Elder, Harry J.: *See*—
McKinley, Joseph B., and Elder.

Electric & Musical Industries Limited, assignee: *See*—
Bull, Cabot S.
Henderson, Stanley T.

Ellman, Louis: *See*—
Hosbein, Louis H., and Ellman.

England, John H., Wellesley Hills, assignor to Raytheon Manufacturing Company, Newton, Mass. Control circuit for gas discharge tubes. 2,446,533, Aug. 10.

Erbach, Margaret, Milwaukee, Wis. Antirattler for window sashes. 2,446,912, Aug. 10.

Erlich, Victor L., New York, N. Y. Utilizing proteinaceous waste liquids. 2,446,913, Aug. 10.

Ester, Donald P.: *See*—
Bludworth, Joseph E., and Ester.

Etter, Henry L., Lemasters, Pa. Pump. 2,446,748, Aug. 10.

Evernden, George D., Dallas, Tex. Bean and pea pod splitter. 2,446,749, Aug. 10.

Fairley, Frank E., Canton, Ohio, and L. T. Lindquist, Bessemer, and C. D. Michaels and H. C. Rodgers, Birmingham, Ala., assignors to Tennessee Coal, Iron and Railroad Company. Apparatus for coating metal sheets. 2,446,697, Aug. 10.

Fallert, Clifford D., and J. W. Meinhardt, assignors to Gaylord Container Corporation, St. Louis, Mo. Pallet construction. 2,446,914, Aug. 10.

Farmer, Paul M., Maplewood, N. J. Selective control system for dispensing apparatus. 2,446,643, Aug. 10.

Farrel-Birmingham Company, Inc., assignee: *See*—
Grant, James M. W.
MacLeod, Douglas W., and Perkins.

Fausek, Arthur J. and I. F., Clayton, Mo. Liquefaction and rectification column. 2,446,534, Aug. 10.

Fausek, Arthur J. and I. F., Clayton, Mo. Liquefaction and rectification column. 2,446,535, Aug. 10.

Fausek, Irwing F.: *See*—
Fausek, Arthur J. and I. F.

Feller, Frederick W., Bloomfield, assignor to Weldon Roberts Rubber Co., Newark, N. J. Vulcanized filled rubber grinding wheel. 2,446,817, Aug. 10.

Ferris, Donald K., assignor to General Motors Corporation, Dayton, Ohio. Clothes-washing machine. 2,446,750, Aug. 10.

Ferté, André M. A., Terny, par Margival, France. Operating diffusion batteries. 2,446,751, Aug. 10.

Fiddyment, Earl, North Quincy, assignor to Pneumatic Scale Corporation, Limited, Quincy, Mass. Material feeding device. 2,446,752, Aug. 10.

Filmer, Philip G., Pleasant Ridge, assignor to General Motors Corporation, Detroit, Mich. Photographic process of producing a printing image. 2,446,915, Aug. 10.

Fischer, Albert C., Chicago, Ill. Method and apparatus for compacting fibrous material. 2,446,644, Aug. 10.

Fisher Scientific Company, assignee: *See*—
Feffner, Joseph, and Millen.

Fishko, Abraham, Brooklyn, N. Y. Building construction. 2,446,987, Aug. 10.

Fitch, Raymond L., Pacific Palisades, Calif. Magnetic inspection apparatus. 2,446,873, Aug. 10.

Flam, Stephen, Sherman Oaks, Calif. Vibrator. 2,446,818, Aug. 10.

Flinchbaugh, Henry K., York, Pa. Power transmission unit. 2,446,645, Aug. 10.

Floraday, Burton S., Toledo, Ohio, assignor to Detroit Harvester Company, Detroit, Mich. Door handle assembly. 2,446,753, Aug. 10.

Flory, Leslie E.: *See*—
Morton, George A., and Flory.

Floyd, Theodore: *See*—
Schwarz, Carl W., and Floyd.

Flukes, Andrew, and J. T. Smith, assignor to Mills Industries, Incorporated, Chicago, Ill. Absorption refrigeration apparatus. 2,446,988, Aug. 10.

Ford Instrument Company, Inc., assignee: *See*—
Garrett, Elmer E., and Conable.

Forrest, Thomas W. W., assignor to D. R. Hoak, Fresno, Calif. Raisin stemming device including reciprocating ladderlike grids. 2,446,646, Aug. 10.

Fountain, James M., assignee: *See*—
King, Gladys S.

Franklin Transformer Manufacturing Company, assignee: *See*—
Savidge, Clinton W.

Frankwich, Alexander C., Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for detecting imperfections in filamentary materials. 2,446,647, Aug. 10.

Freedman, Louis, Mount Vernon, assignor to U. S. Vitamin Corporation, New York, N. Y. Therapeutic composition. 2,446,916, Aug. 10.

Frez-O-Mat Sales Corporation, assignee: *See*—
Rifkin, Milton.

Fritzinger, George H., assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Polarized armature current ratiometer. 2,446,579, Aug. 10.

Fujiwara, Hatsue, assignee: *See*—
Fujiwara, Mack M.

Fujiwara, Mack M., assignor of 40 per cent to H. Fujiwara, Chicago, Ill. Toy cap gun. 2,446,698, Aug. 10.

Furnace Engineers, Inc., assignee: *See*—
Dobrin, Harry.

Fyler, George W., Stratford, Conn., assignor to General Electric Company. Synchronized pulse communication system. 2,446,819, Aug. 10.

Gaimari, Angelo I., Chicago, Ill. Nursing bottle. 2,446,917, Aug. 10.

Gambrill, Richard D., and C. E. Lewis, Baltimore, Md., assignors to Western Electric Company, Incorporated, New York, N. Y. Apparatus for testing electric cables. 2,446,820, Aug. 10.

Garden, Henry B., Paoli, Pa., assignor to American Viscose Corporation, Wilmington, Del. Beaming apparatus. 2,446,580, Aug. 10.

Garnett, Edward V.: *See*—
Garnett, Vactor G., and E. V.

Garnett, Vactor G. and E. V., Denver, Colo. Dual wheel construction. 2,446,699, Aug. 10.

Garrett, Elmer E., Floral Park, and W. F. Conable, Bellerose, assignors to Ford Instrument Company, Inc., Long Island City, N. Y. Rate generating mechanism. 2,446,754, Aug. 10.

Gassel, William, Philadelphia, Pa., and H. Grits, Iuka, Miss., assignors to Philco Corporation, Philadelphia, Pa. Resistance-capacitance tuned oscillator. 2,446,821, Aug. 10.

Gates, Jesse A., Royal Oak, Mich. Spring winder. 2,446,755, Aug. 10.

Gaylord Container Corporation, assignee: *See*—
Fallert, Clifford D., and Meinhardt.

Gaylord Products, Incorporated, assignee: *See*—
Norin, Allan A.

Geffner, Joseph, Weirton, W. Va., and E. R. Millen, Mc Candless Township, Allegheny County, Pa., assignors to Fisher Scientific Company, Pittsburgh, Pa. Electronic apparatus for spectrographic analysis. 2,446,874, Aug. 10.

Geltz, Harold G., assignee, et al.: *See*—
Whittall, Henry C.

General Controls Co., assignee: *See*—
Ray, William A.

General Electric Company, assignee: *See*—
Cook, Leonard W.
Fyler, George W.
Gurewitsch, Anatole M.
Hickey, John S., and Teare.
Hottenroth, Frederick W., Jr.
McArthur, Elmer D.
Root, Charles S.
Seibel, Richard M.
Traver, Oliver C., and Walle.
Warner, Donald F.

General Motors Corporation, assignee: *See*—
Corbin, Douglas H.
Ehlers, Russell W.
Ferris, Donald K.
Filmer, Philip G.
Hardy, Vaughn H.
Rowland, Charles W.
Short, Brooks H., and Hartzell.
Zeigler, Philip B.

General Tire & Rubber Company, The, assignee: *See*—
Thiry, Leon F.

Geyh, Charles P., Hartsdale, N. Y., assignor to Bendix Aviation Corporation, Towson, Md. Radio cabinet having integral handle device. 2,446,756, Aug. 10.

Gilbert & Barker Manufacturing Company, assignee: *See*—
De Lancey, Warren H.
Mesh, Theodore J.

Gilbert, Lee E.: *See*—
Book, Raymond H., and Gilbert.

Giles, William M., San Diego, Calif., and C. M. Kucera, Houston, Tex., assignors to Consolidated Vultee Aircraft Corporation, San Diego, Calif. Throttle control device operable to control reversible pitch propellers. 2,446,700, Aug. 10.

Gillette Safety Razor Company, assignee: *See*—
Muros, Joseph.

Glantzer, Russel M., Washington, Pa. Electrical resistance welder with indexing finger control. 2,446,648, Aug. 10.

Glidden Company, The, assignee: *See*—
Julian, Percy L., Cole, Magnani, and Meyer.

Goddard, Holly R., North Hollywood, Calif. Lawn sprinkler head. 2,446,918, Aug. 10.

Goetz, Carlos C., assignee: *See*—
Goetz, Paul C.

Goetz, Paul C., Mount Holly, N. J., assignor of one-half to C. C. Goetz, New York, N. Y. Surface treated pictures. 2,446,757, Aug. 10.

Gold, Leon J., Shorewood, and S. Zweig, assignors to Milprint, Inc., Milwaukee, Wis. Adhesive composition comprising a polyalkylene glycol and an alkyd resin. 2,446,581, Aug. 10.

Goldberg, Harry, S. Z. Siwek, A. R. Long, and W. J. Carter, assignors, by mesne assignments, to Pioneer Gen-E-Motor Corporation, Chicago, Ill. Engine unit. 2,446,919, Aug. 10.

Goldberg, Harry, S. Z. Siwek, and W. J. Carter, assignors, by mesne assignments, to Pioneer Gen-E-Motor Corporation, Chicago, Ill. Internal-combustion engine and air cleaner therefor. 2,446,920, Aug. 10.

Golick, Joseph: *See*—
Briskin, Jack, and Golick.

Golomb, Jules, Rago Park, assignor to Benlee Sporting Goods Mfg. Co., New York, N. Y. Boxing glove. 2,446,758, Aug. 10.

Goodman Manufacturing Company, assignee: *See*—
Sweeten, Howard C.

Goodrich, B. F., Company, The, assignee: *See*—
Crawford, Richard A.
Davies, John M., Shipman, and Davidson.

Gopner, Ernest, Elmwood Park, Ill. Adjustable dispenser for comminuted materials. 2,446,582, Aug. 10.

Gopner, Ernest, Elmwood Park, Ill. Reel winding and line drying device. 2,446,583, Aug. 10.

Goss Printing Press Company, assignee: *See*—
Carpenter, Albert J., Jr.
Lacure, Earl P.

Grant, James M. W., assignor to Farrel-Birmingham Company, Inc., Ansonia, Conn. Equalizer for platen presses or the like. 2,446,823, Aug. 10.

Grant, William F., Miami, Fla. Lined rubber glove. 2,446,921, Aug. 10.

Gra— Herbert L., Minneapolis, Minn. Method and apparatus for removing volatiles from articles involving the use of infra-red lamps. 2,446,822, Aug. 10.

Green, Lee B., Lakewood, Ohio. Metal-bending machine with hold-down means to prevent die deflection. 2,446,824, Aug. 10.

Green, Robert H., Kalamazoo, Mich. Tractor hitch. 2,446,584, Aug. 10.

Greene, George B., Los Angeles, assignor to L. M. Harvey, La Canada, Calif. Radio apparatus of replaceable standardized units. 2,446,701, Aug. 10.

Gregory, Ernest, assignee: *See*—
Thompson, Frank W.

Gregory, Whitney J., Peoria, Ill. Automatic machine for making beaded cups. 2,446,649, Aug. 10.

Griffiths, Frederick J., Massillon, Ohio, assignor to Chromium Mining and Smelting Corpn., Limited, Sault Ste. Marie, Ontario, Canada. Open-hearth process. 2,446,759, Aug. 10.

Gritz, Henry: *See*—
Gassel, William, and Gritz.

Grundner, Louis, assignor to The Lincoln Electric Company, Cleveland, Ohio. Welding spatter prevention. 2,446,922, Aug. 10.

Gulf Research & Development Company, assignee: *See*—
McKinley, Joseph B., and Elder.

Gurewitsch, Anatole M., Schenectady, N. Y., assignor to General Electric Company. Ultra high frequency electric discharge device. 2,446,825, Aug. 10.

Haebnel, Herbert E., West Reading, assignor to Textile Machine Works, Wyomissing, Pa. Fabric take-up device for knitting machines. 2,446,875, Aug. 10.

Hall, Howard E., assignor to Olson Manufacturing Company, Boise, Idaho. Scoop and trip mechanism therefor. 2,446,827, Aug. 10.

Hamer, Francis R., West Asheville, N. C. Auxiliary door locking mechanism for automobiles. 2,446,828, Aug. 10.

Hammers, James E., Aberdeen, S. Dak. Electrical scriber. 2,446,650, Aug. 10.

Hammond Machinery Builders, Inc., assignee: *See*—
Kingsbury, Henry J.

Hampson, Frederick W., assignor to Plating Processes Corporation, Holyoke, Mass. Leak detector for the protective well of a thermal instrument sensitive element. 2,446,760, Aug. 10.

Hanners, Cleiburn T., Etna, Calif. Wood splitting machine. 2,446,585, Aug. 10.

Harbaugh, Walter, Indianapolis, Ind. Hydraulic crane. 2,446,586, Aug. 10.

Hardy, Paul E., Elizabeth, N. J., assignor to Standard Oil Development Company. Treatment of styrene-isobutylene polymer films and resultant product. 2,446,536, Aug. 10.

Hardy, Vaughn H., Rochester, N. Y., assignor to General Motors Corporation, Detroit, Mich. Centrifugal switch. 2,446,923, Aug. 10.

Harmon, Kenneth A., Longmeadow, assignor to Wico Electric Company, West Springfield, Mass. Combined magneto and alternator. 2,446,761, Aug. 10.

Hartford National Bank and Trust Company, The, assignee, trustee: *See*—
Latimer, Kenneth E., and Smith.

Hartman, Blanche M.: *See*—
Rouy, Auguste L. M. A.

Hartung, Walter H., Baltimore, Md. Preparation of alpha-amino-beta-hydroxy aliphatic carboxylic acids. 2,446,651, Aug. 10.

Hartzell, Herman L.: *See*—
Short, Brooks H., and Hartzell.

Harvey, Leo M., assignee: *See*—
Greene, George B.

Harvey, Thomas H., assignee, et al.: *See*—
Whittall, Henry C.

Hatcher, Grant E.: *See*—
Mulkey, Stanley A., and Hatcher.

Hauck, Armin G., assignor to Pneumatic Scale Corporation, Limited, Quincy, Mass. Packaging machine for compressible commodities. 2,446,762, Aug. 10.

Hawes, Albert H., Erdington, Birmingham, assignor, by mesne assignments, to Kwikform Limited, Small Heath, Birmingham, England. Scaffolding. 2,446,924, Aug. 10.

Haymond, Paul, Fairmont, W. Va. Refrigerant evaporator. 2,446,763, Aug. 10.

Hays Corporation, The, assignee: *See*—
Burns, Frank D.

Hazeltine Research, Inc., assignee: *See*—
Hergenrother, Rudolf C.
Shapiro, David L.

Hazlehurst, Edward, West Caldwell, N. J., assignor to Congoleum-Nairn Inc. Drying oil composition and making same. 2,446,652, Aug. 10.

Heath, James C., Los Angeles, Calif. Target for a ball game. 2,446,702, Aug. 10.

Hemminger, Charles E., Westfield, N. J., assignor to Standard Oil Development Company. Cracking of hydrocarbons with suspended catalyst. 2,446,925, Aug. 10.

Henderson, Stanley T., Buckinghamshire, assignor to Electrtic & Musical Industries Limited, Hayes, Middlesex, England. Cathode ray tube. 2,446,764, Aug. 10.

Henry, Robert S., New Hartford, N. Y. Sludge trap. 2,446,587, Aug. 10.

Hergenrother, Rudolf C., West Newton, Mass., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Modulated-signal generator. 2,446,829, Aug. 10.

Herzog, Gerhard, and A. Wolf, Houston, Tex., assignors to The Texas Company, New York, N. Y. Determining the permeability of substrata. 2,446,588, Aug. 10.

Hesse, Jack: *See*—
Otis, Harold J., and Hesse.

Hickey, John S., Schenectady, and W. H. Teare, Ballston Lake, N. Y., assignors to General Electric Company. Electrical discharge tube. 2,446,765, Aug. 10.

Hickman, Clarence N., Jackson Heights, N. Y. Thrust gauge. 2,446,537, Aug. 10.

High Standard Manufacturing Corporation, The, assignee: *See*—
Wilson, George A.

Hildenbrand, Kenneth W., assignor to Monroe Auto Equipment Company, Monroe, Mich. Spacer. 2,446,589, Aug. 10.

Hill, Helen G., Port Washington, N. Y. Abdominal and garter support. 2,446,590, Aug. 10.

Hill, Walter E., Streetly, and T. D. G. Wintle, Walsall, England. Electric socket. 2,446,926, Aug. 10.

Hineline, Harris D., Mount Vernon, N. Y., assignor to Standard Oil Development Company. Thickened lubricant. 2,446,927, Aug. 10.

Hirschberg, Charles A., Mountain Lakes, N. J. Percussive apparatus. 2,446,830, Aug. 10.

Hi-Seat Corporation, assignee: *See*—
Ross, Matthew.

Hoak, D. R., assignee: *See*—
Forrest, Thomas W. W.

Hodgdon, Frank B., Naperville, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Method of making dielectric materials. 2,446,928, Aug. 10.

Hoerle, Christian K., Torrington, Conn. Metal ski. 2,446,591, Aug. 10.

Hoffmann-La Roche Inc., assignee: *See*—
Bergel, Frans, Morrison, and Rinderknecht.

Honigman, Hans, East Cleveland, Ohio. Variable speed clutch pulley. 2,446,703, Aug. 10.

Hoover Company, The, assignee: *See*—
Coons, Curtis C.

Hopkins, Robert K., assignor to The M. W. Kellogg Company, New York, N. Y. Method and apparatus for electrically heating material. 2,446,929, Aug. 10.

Hosbein, Louis H., Glencoe, Ill., and L. Ellman, Pittsburgh, Pa., assignors to M. H. Detrick Company, Chicago, Ill. Furnace arch or roof construction. 2,446,766, Aug. 10.

Hottenroth, Frederick W., Jr., Schenectady, N. Y., assignor to General Electric Company. Thermal timing switch apparatus. 2,446,831, Aug. 10.

Houdry Process Corporation, assignee: *See*—
Mills, George A.

Hower, Bruce A., Gary, Ind. Drain assister. 2,446,930, Aug. 10.

Huldt, Kristoffer A., Stockholm, Sweden. Car wheel axle. 2,446,592, Aug. 10.

Hurxthal, Alpheus O.: *See*—
Leithmann, Warren J., Jr., and Hurxthal.

Induction Heating Corp., assignee: *See*—
Schutz, Phillip W., and McMahon.

Industrial Rayon Corporation, assignee: *See*—
McLellan, Kenneth M.

Insley, Jacob H., Johnstown, Pa. Pendent dress form. 2,446,832, Aug. 10.

International Harvester Company, assignee: *See*—
Kaupke, Lee H., and Raney.
Pool, Stuart D., and Downing.

International Projector Corporation, assignee: *See*—
Lorance, George T.
Seebinger, Fred L., Jr.

Iwashita, George K., Indianapolis, Ind., assignor, by mesne assignments, to Admiral Corporation, Chicago, Ill. Refrigerator cabinet and mounting a compressor and condenser therein. 2,446,876, Aug. 10.

Jack & Heintz, Precision Industries, Inc., assignee: *See*—
Cahill, Lysle D., and Uber.

Jackson, Horace J., Columbus, Ohio. Shoe shining bracket with adjustable shoe tree. 2,446,931, Aug. 10.

James, Lorenzo D., Long Beach, Calif. Tank valve. 2,446,767, Aug. 10.

Jeffrey Manufacturing Company, The, assignee: *See*—
Levin, Nils D.

Jimopoulos, Sam C., St. Louis, Mo. Air conditioning system. 2,446,593, Aug. 10.

Johansson, Arthur K. A., Goteborg, Sweden. Machine for pressing grooves in pasteboard sheets. 2,446,594, Aug. 10.

Johns-Manville Corporation, assignee: *See*—
Otis, Harold J., and Hesse.

Johnson, Arden L., assignor to Vinco Corporation, Detroit, Mich. Apparatus for producing controlled relative motion between tools and workpieces. 2,446,833, Aug. 10.

Johnson, Fred H., Pleasant Ridge, Mich. Welding apparatus. 2,446,932, Aug. 10.

Jones, Charles A., assignor to Jones Manufacturing Company, Limited, North Easthope Township, Ontario, Canada. Adjustable cycle saddle. 2,446,933, Aug. 10.

Jones, Frank A., Bristol, Tenn., assignor to H. M. Daniel, Bristol, Va. Equalizing spring suspension for tandem axle vehicles. 2,446,877, Aug. 10.

Jones Manufacturing Company, Limited, assignee: *See*—
Jones, Charles A.

Joslyn Manufacturing and Supply Company, assignee: *See*—
Yonkers, Edward H.

Jourdan, Felix, and J. Beéche, Vina Del Mar, Chile. Decomposing alkali metal salts. 2,446,595, Aug. 10.

Judd, H. L., Company, assignee: *See*—
Toelle, Walter, and Ulbrich.

Julian, Percy L., Maywood, J. W. Cole, Chicago, A. Magnani, Wilmette, and E. W. Meyer, Chicago, Ill., assignors to The Glidden Company, Cleveland, Ohio. 3-amino steroids and their preparation. 2,446,538, Aug. 10.

Junker, William O., assignee: *See*—
Lee, William F.

Kandarian, Samuel M.: *See*—
Baxter, Benjamin, and Kandarian.

Kassebohm, Walter H., assignee, et al.: *See*—
Whittall, Henry C.

Kaufman, Daniel, assignor, by mesne assignments, to The Oil Equipment Manufacturing Corporation, New Haven, Conn. Air control mechanism and switch for oil burners. 2,446,834, Aug. 10.

Kaufman, Samuel, Brooklyn, N. Y. Loom and method of weaving. 2,446,596, Aug. 10.

Kaufman, William, assignor to Kulka Electric Company, Mount Vernon, N. Y., a partnership composed of W. and E. R. Kulka. Electrical switch device for lamp sockets. 2,446,768, Aug. 10.

Kaupe, Lee H., and R. R. Raney, La Grange, Ill., assignors to International Harvester Company. Tier. 2,446,878, Aug. 10.

Kearfott Company, Inc., assignee: *See*—
Rose, Howard E.

Keary, Thomas J., San Diego, Calif., assignor, by mesne assignments, to United States of America as represented by the Secretary of War. Compression-wave delay device. 2,446,835, Aug. 10.

Kiersey, Robert C., Roy, N. Mex. Tilting chute. 2,446,769, Aug. 10.

Kellog, Henry B.: *See*—
Young, David W., and Kellog.

Kellogg, M. W., Company, The, assignee: *See*—
Hopkins, Robert K.

Kelly, Thomas C., Hinsdale, Ill. Holder for abrasives, detergents, and polishing materials. 2,446,633, Aug. 10.

Kennedy, Walter W., assignor to Barber-Colman Company, Rockford, Ill. Air flow control. 2,446,879, Aug. 10.

Kershisnik, John F., Elmhurst, N. Y. Construction toy. 2,446,770, Aug. 10.

King, Gladys S., Metairie, La., assignor to J. M. Fountain, Bryan, Tex. Herbicides. 2,446,836, Aug. 10.

Kingsbury, Henry J., assignor to Hammond Machinery Builders, Inc., Kalamazoo, Mich. Worktable for belt grinders or the like. 2,446,597, Aug. 10.

Kirchner, Frederick K.: *See*—
Cavallito, Chester J., and Kirchner.

Kleinschmidt, Robert V., Stoneham, assignor to Arthur D. Little, Inc., Cambridge, Mass. Distillation and heat exchange apparatus. 2,446,880, Aug. 10.

Klinke, Henry O., Forest Hills, N. Y., assignor to Air Reduction Company, Incorporated. Automatic arc welding apparatus. 2,446,598, Aug. 10.

Knaggs, Harold J., assignor to The Weatherhead Company, Cleveland, Ohio. Hose insert. 2,446,599, Aug. 10.

Knickerbocker, Ivan E., Havre de Grace, Md. Gun reloader testing instrument. 2,446,539, Aug. 10.

Knowland, Thomas M., Belmont, assignor to Boston Woven Hose & Rubber Company, Cambridge, Mass. Imparting surface effects to thermoplastic sheets. 2,446,771, Aug. 10.

Kraus, John D., Newton Center, and C. A. Misen, Needham Heights, Mass., assignors to United States of America as represented by the Secretary of War. Magnetic sweep generator. 2,446,837, Aug. 10.

Krause, Fred A., assignee: *See*—
Bright, Elvin M.

Krause, Walter H., assignor, by mesne assignments, to Chicago Forging and Manufacturing Company, Chicago, Ill. Ratchet type latch. 2,446,934, Aug. 10.

Kremar, Joseph A., Chicago, Ill. Protector pad. 2,446,654, Aug. 10.

Kreer, Oscar G., Detroit, Mich. Automatic electric toaster. 2,446,935, Aug. 10.

Kucera, Clement M.: *See*—
Giles, William M., and Kucera.

Kulka Electric Company, assignee: *See*—
Kaufman, William.

Kuns, Charles J.: *See*—
Tuttle, Clifton M., Kuns, and Brown.

Kwikform Limited, assignee: *See*—
Hawes, Albert H.

L. L. H. Company, assignee: *See*—
Rouy, Auguste L. M. A.

Lacure, Earl P., Battle Creek, Mich., assignor, by mesne assignments, to Goss Printing Press Company, Chicago, Ill. End clip assembly. 2,446,704, Aug. 10.

Laidley, Clarence D.: *See*—
Drane, Philips B., and Laidley.

Lamm, Uno, Ludvika, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden. Anode tube for ionic valves for high-voltage static current converters. 2,446,600, Aug. 10.

Lampert, Milton, New York, N. Y. Hat construction. 2,446,705, Aug. 10.

La Soundure Electrique Autogene, assignee: *See*—
Cito, Camillo.

Latendorf Conveying Corporation, assignee: *See*—
Stadelman, Frank.

Latimer, Kenneth E., and S. C. Smith, London, England, assignors to The Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Plug and socket joint suitable for electrical conductors carrying high-frequency currents. 2,446,706, Aug. 10.

Laughlin, William C., New York, N. Y., assignor to Ralph B. Carter Company, Hackensack, N. J. Combined wet screening and shredding apparatus. 2,446,772, Aug. 10.

Lawrason, Levering, Palos Verdes Estates, assignor to Deepwater Chemical Co., Ltd., Compton, Calif. Method and apparatus for clarifying alkaline well waters. 2,446,655, Aug. 10.

Lawrence, Howard C., Jr., Haddonfield, N. J., assignor to Radio Corporation of America. Pulse forming circuit. 2,446,838, Aug. 10.

Leach, John M., Port Washington, N. Y. Amusement device. 2,446,540, Aug. 10.

Lear, Incorporated, assignee: *See*—
Wehner, John M.

Lebedeff, Yurii E., Metuchen, and H. H. Monson, Avenel, N. J., assignors to American Smelting and Refining Company, New York, N. Y. Pyrometallurgical treatment of tetrahedrite ores. 2,446,656, Aug. 10.

Lee, Robert J.: *See*—
Wadsworth, Francis T., Lee, and Brandt.

Lee, William F., assignor to W. O. Junker, Spartanburg, S. C. Bottom roll clearer for textile machines. 2,446,839, Aug. 10.

Leight, Charles, Los Angeles, Calif. Ear plug. 2,446,707, Aug. 10.

Leister, Nora M., executrix: *See*—
Leister, William P.

Leister, William P., deceased, Gastonia, N. C.: N. M. Leister, executrix. Fiber treating apparatus. 2,446,840, Aug. 10.

Leithmann, Warren J., Jr., Roxborough, and A. O. Hurxthal, Wyncote, assignors to Proctor & Schwartz, Inc., Philadelphia, Pa. Conveyer. 2,446,936, Aug. 10.

Lelyveld, Louis, Weymouth, Mass. Shoe fitting and foot-rest accessories for shoe stores. 2,446,601, Aug. 10.

Leskiewicz, Stanley J., Lynn, Mass. Clamping tool. 2,446,778, Aug. 10.

Les Usines De Melle (Societe Anonyme), assignee: *See*—
Boinot, Firmin, and Boige.

Le Tourneau, R. G., Inc., assignee: *See*—
Loech, Albert A.

Levin, Nils D., Columbus, Ohio, assignor to The Jeffrey Manufacturing Company. Electric motor armature. 2,446,708, Aug. 10.

Lewis, Clay E.: *See*—
Gambrill, Richard D., and Lewis.

Libbey-Owens-Ford Glass Company, assignee: *See*—
Cordier, David B.

Lieberherr, Hans, assignor to Sulzer Freres, Societe Anonyme, Winterthur, Switzerland. Cylinder liner for opposed-piston engines. 2,446,841, Aug. 10.

Lincoln Electric Company, The, assignee: *See*—
Grundner, Louis.

Lindquist, Louis T.: *See*—
Fairley, Frank B., Lindquist, Michaels, and Rodgers.

Lippincott, Samuel B.: *See*—
Welch, Leete M., and Lippincott.

Litkenbous, Edward E., assignor to Tennessee Products Corporation, Nashville, Tenn. Extraction of nitrocellulose from nitrating solution. 2,446,541, Aug. 10.

Little, Arthur D., Inc., assignee: *See*—
Kleinschmidt, Robert V.
Sjöström, Loren B.

Little, Lawernce: *See*—
North, Gerald C., and Little.

Lone Star Gas Company, assignee: *See*—
Martin, James W.

Lone-Wells Company, assignee: *See*—
Chun, Melvin E., and Stick.

Long, Arthur R.: *See*—
Goldberg, Harry, Siwek, Long, and Carter.

Lorance, George T., Chappaqua, assignor to International Projector Corporation, New York, N. Y. Echo sounding indicator. 2,446,937, Aug. 10.

Lord, Thomas: *See*—
Rouy, Augustee L. M. A.

Losch, Albert A., Rydalmere, New South Wales, Australia, assignor to R. G. Le Tourneau, Inc., Stockton, Calif. Overhead loader. 2,446,938, Aug. 10.

Lowey, Francis J.: *See*—
Tower, Charles H., and Lowey.

Lowey, Francis J., Bay Village, assignor to The S. K. Wellman Company, Cleveland, Ohio. Shaping bimetallic articles. 2,446,602, Aug. 10.

Ludwig, Louis, New York, N. Y. Plug tap. 2,446,709, Aug. 10.

Lynam, John H.: *See*—
Wilders, George, and Lynam.

MacCallum, Alan M., Maywood, assignor to Bendix Aviation Corporation, Teterboro, N. J. Frequency doubling transformer. 2,446,939, Aug. 10.

MacInnes, Donald, New York, N. Y. Electrical cable connector. 2,446,542, Aug. 10.

MacLeod, Douglas W., Ansonia, and R. H. Perkins, Milford, assignors to Farrel-Birmingham Company, Inc., Ansonia, Conn. Indicator for rubber mixers or the like. 2,446,657, Aug. 10.

Magnani, Arthur: *See*—
Julian, Percy L., Cole, Magnani, and Meyer.

Mahon, Bently L., Grand Prairie, Tex. Air pressure stage lift. 2,446,940, Aug. 10.

Makaroff, Gregory, Lanesboro, Mass. Safety type ski tow-rope grip. 2,446,710, Aug. 10.

Mall, Arthur W., Flossmoor, assignor to Mall Tool Company, Chicago, Ill. Chain saw. 2,446,774, Aug. 10.

Mall Tool Company, assignee: *See*—
Mall, Arthur W.

Mallory, Marion, Detroit, Mich. Throttle control for internal-combustion engines. 2,446,711, Aug. 10.

Mample, Adolph Z., Glen Rock, N. J., assignor to The Western Union Telegraph Company, New York, N. Y. Cable splice joint and making same. 2,446,543, Aug. 10.

Manegold, Robert L., Shorewood, and I. H. Wynne, assignors to Dings Magnetic Separator Co., Milwaukee, Wis. Detecting tramp material. 2,446,977, Aug. 10.

Marcellus, Brooks, and E. A. Peterson, assignors to Barber-Colman Company, Rockford, Ill. Method of and apparatus for operating upon warps. 2,446,544, Aug. 10.

Marsack, Max, assignor to Marsack Patents Corporation, Milwaukee, Wis. Innerspring mattress construction. 2,446,775, Aug. 10.

Marsack Patents Corporation, assignee: *See*—
Marsack, Max.

Martin, James W., assignor to Lone Star Gas Company, Dallas, Tex. Vaporizing apparatus for liquefied gases. 2,446,941, Aug. 10.

Master Industries, Inc., assignee: *See*—
Sherick, Adrian R.

Matson, Olof, Hatboro, Pa. Ratchet wrench having a magnetized sectional socket. 2,446,776, Aug. 10.

Maust, Ernest J., Lakeland, Fla., assignor to Coronet Phosphate Company, New York, N. Y. Defluorination of phosphate rock. 2,446,978, Aug. 10.

Maynard, Meade J., West Caldwell, N. J., assignor to Curtiss-Wright Corporation. Propeller pitch changing arrangement. 2,446,658, Aug. 10.

McArthur, Elmer D., Schenectady, N. Y., assignor to General Electric Company. Magnetron. 2,446,826, Aug. 10.

McCaslin, James F., Cleveland, Ohio. Delay arming device. 2,446,545, Aug. 10.

McComb, Richard J., Chicago, Ill. Rail anchor. 2,446,842, Aug. 10.

McCurdy, Everett D., trustee: *See*—
Brennan, Joseph B.

McFarland, Forest R., Huntington Woods, assignor to Packard Motor Car Company, Detroit, Mich. Elastic rotational system. 2,446,942, Aug. 10.

McGee, Robert V. J.: *See*—
Munday, John C., and McGee.

McGoffin, William W., Olympia, Wash., assignor of one-fifth to S. S. Baker, New York, N. Y. Automatic radio call apparatus. 2,446,943, Aug. 10.
McIlvaine, Hubert A., assignor to Continental Electric Company, Geneva, Ill. Lamp device. 2,446,712, Aug. 10.
McKinley, Joseph B., Pittsburgh, and H. J. Elder, Springdale, assignors to Gulf Research & Development Company, Pittsburgh, Pa. Destructive hydrogenation of heavy hydrocarbon oils. 2,446,602, Aug. 10.
McLellan, Kenneth M., assignor to Industrial Rayon Corporation, Cleveland, Ohio. Candle-filter mounting. 2,446,979, Aug. 10.
McMahon, Everett K.: *See*—
Schutz, Phillip W., and McMahon.
McMullen, John, Cleveland, Ohio. Railway journal box lid. 2,446,779, Aug. 10.
Meinhardt, John W.: *See*—
Fallert, Clifford D., and Meinhardt.
Melick, William E., Toledo, Ohio. Hand riveter. 2,446,713, Aug. 10.
Menenko, Frederick C., La Porte, Ind. Shoehorn. 2,446,777, Aug. 10.
Merla Tool Corporation, assignee: *See*—
Walton, Robert O.
Merrell, Wm. S., Company, The, assignee: *See*—
Shelton, Robert S., and Van Campen.
Van Campen, Marcus G., Jr., and Shelton.
Merritt, George E., Elmira Heights, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind. Lens and filter for cameras. 2,446,843, Aug. 10.
Mesh, Theodore J., Easthampton, assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass. Control for automatic burners. 2,446,778, Aug. 10.
Meston, Alexander W., Yonkers, N. Y., assignor to The Sperry Corporation. Pressure responsive controller device. 2,446,546, Aug. 10.
Metals and Controls Corporation, assignee: *See*—
Vaughan, Victor G., and Moorehead.
Meyer, Charles A.: *See*—
Bradbury, Donald, and Meyer.
Meyer, Edwin W.: *See*—
Julian, Percy L., Cole, Magnani, and Meyer.
Michaels, Clyde D.: *See*—
Fairley, Frank E., Lindquist, Michaels, and Rodgers.
Mihalik, Andrew S., assignee: *See*—
Wellman, Charles P.
Millen, Edwin R.: *See*—
Giffner, Joseph, and Millen.
Miller, Edwin A., Fairfield, Conn. Mechanism for power electrical tap switches. 2,446,881, Aug. 10.
Mills, George A., Ridley Park, Pa., assignor to Houdry Process Corporation, Wilmington, Del. Catalytic conversion of hydrocarbons with a thorium phosphate catalyst. 2,446,547, Aug. 10.
Mills Industries, Incorporated, assignee: *See*—
Flukes, Andrew, and Smith.
Milner, Charles E., Birmingham, England. Valve. 2,446,714, Aug. 10.
Milprint, Inc., assignee: *See*—
Gold, Leon J., and Zweig.
Miner, W. H., Inc., assignee: *See*—
Dath, George E.
Minneapolis-Honeywell Regulator Company, assignee: *See*—
Strother, Fred P.
Upton, Albert P.
Mizen, Carlton A.: *See*—
Kraus, John D., and Mizen.
Molaver, Harry, assignor, by mesne assignments, to The Oil Equipment Manufacturing Corporation, New Haven, Conn. Liquid gauge. 2,446,844, Aug. 10.
Monroe Auto Equipment Company, assignee: *See*—
Hildenbrand, Kenneth W.
Monson, Harold H.: *See*—
Lededeff, Yurii E., and Monson.
Moore, Frank J.: *See*—
Stewart, Meredith M., and Moore.

New Castle Products, assignee: *See*—
Shearer, William A.
Newton, Amos S., Ames, Iowa, assignor to the United States of America, as represented by the United States Atomic Energy Commission. Preparing uranium hydride. 2,446,780, Aug. 10.
Nies, Abby W., Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y. Chromium complexes of pyrazalone azo dyes. 2,446,662, Aug. 10.
Ninger, Frederick C., Flushing, assignor to Vick Chemical Company, New York, N. Y. Aluminum hydroxide antacid composition. 2,446,981, Aug. 10.
Noble, Lilly F. S., assignee: *See*—
Noble, Warren.
Noble, Warren, Washington, D. C., assignor to L. F. S. Noble, Garden City, L. I., N. Y. Joint construction. 2,446,846, Aug. 10.
Nopco Chemical Company, assignee: *See*—
Price, Donald, and Sprules.
Norin, Allan A., assignor to Gaylord Products, Incorporated, Chicago, Ill. Comb. 2,446,781, Aug. 10.
Norman, Augustus, Pittsburgh, Pa. Float valve. 2,446,549, Aug. 10.
North, Gerald C., and L. Little, assignors to Beatrice Creamery Co., Chicago, Ill. Cottage cheese. 2,446,550, Aug. 10.
Ohlson, Clas, Insjon, Sweden. Cooking vessel with automatic pressure regulation. 2,446,606, Aug. 10.
Oil Equipment Manufacturing Corporation, The, assignee: *See*—
Kaufman, Daniel.
Molaver, Harry.
Oliver United Filters Incorporated, assignee: *See*—
Denhard, Harry W., Brittain, and Serpas.
Olson Manufacturing Company, assignee: *See*—
Hall, Howard E.
Osborne, Eugene F., Peach Bottom, Pa. Turbine engine. 2,446,847, Aug. 10.
Otis, Harold J., New Orleans, and J. Hesse, Gretna, La., assignors to Johns-Manville Corporation, New York, N. Y. Manufacture of cementitious sheets. 2,446,782, Aug. 10.
Packard Motor Car Company, assignee: *See*—
McFarland, Forest R.
Palmatier, Everett P., Upper Montclair, N. J., assignor to Curtiss-Wright Corporation. Fan deicing or anticing means. 2,446,663, Aug. 10.
Pan American Refining Corporation, assignee: *See*—
Wadsworth, Francis T., Lee, and Brandt.
Parkhurst, Elmer, Indianapolis, Ind. Applicator's guide. 2,446,950, Aug. 10.
Pauley, Robert D., assignor to Weyerhaeuser Timber Company, Longview, Wash. Separation of pure bark fiber from finely comminuted bark. 2,446,551, Aug. 10.
Payne, John W.: *See*—
Daley, Henry G., Payne, and Sargent.
Payne, John W., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Apparatus for forming gel into beads. 2,446,783, Aug. 10.
Pearl, Irwin A., Appleton, Wis., assignor, by mesne assignments, to Sulphite Products Corporation. Production of vanillic acid. 2,446,606, Aug. 10.
Perkins, Raymond H.: *See*—
MacLeod, Douglas W., and Perkins.
Petersen, Paul E.: *See*—
Crampton, Donald K., Petersen, and Wood.
Petersen, Harold O., Riverhead, N. Y., assignor to Radio Corporation of America. Remote control system. 2,446,607, Aug. 10.
Philco Corporation, assignee: *See*—
Gassel, William, and Gritz.

Phillips Petroleum Company, assignee: *See*—
Thodos, George.
Pickett, Louis W., assignee, et al.: *See*—
Eckel, Arthur F.
Pioneer Gen-E-Motor Corporation, assignee: *See*—
Goldberg, Hary, Siwek, and Carter.
Goldberg, Harry, Siwek, Long, and Carter.
Plastal Corporation, assignee: *See*—
Swikart, George.
Plating Processes Corporation, assignee: *See*—
Hampson, Frederick W.
Pneumatic Scale Corporation, Limited, assignee: *See*—
Fiddyment, Earl.
Hauck, Armin G.
Vergobbi, John G.
Polhemus, Peres G., Roselle, N. J. Automatic heat controlled apparatus for preparing pads. 2,446,989, Aug. 10.
Pons, Helene, New York, N. Y. Shoulder pad construction. 2,446,664, Aug. 10.
Pool, Stuart D., Moline, and R. D. Downing, Rock Island, Ill., assignors to International Harvester Company. Tractor-mounted thresher. 2,446,883, Aug. 10.
Pound, Robert V., Cambridge, Mass., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of Navy. Apparatus for broadband radio transmission. 2,446,982, Aug. 10.
Prester, Arthur, Philadelphia, Pa. Punch. 2,446,848, Aug. 10.
Price, Donald, New York, N. Y., and F. J. Sprules, Arlington, assignors to Nopco Chemical Company, Harrison, N. J. Oxidation of fatty substances. 2,446,849, Aug. 10.
Price, Earl R., assignor to Bendix Aviation Corporation, South Bend, Ind. Booster for brake systems. 2,446,884, Aug. 10.
Proctor & Schwartz, Inc., assignee: *See*—
Leithmann, Warren J., Jr., and Hurxthal.
Prust, Alvin F., Warren, assignor to Republic Steel Corporation, Cleveland, Ohio. Zinc plating process and electrolyte. 2,446,983, Aug. 10.
Quaker Chemical Products Corp., assignee: *See*—
Abrams, Ellis.
Queitzsch, Karl E., York, Pa. Machine for bending wire into ribbon form. 2,446,608, Aug. 10.
Quick, William M., Houston, Tex. Internal-combustion reaction motor. 2,446,785, Aug. 10.
Quilter, John R. C., Woking, England. Disconnectible push coupling. 2,446,951, Aug. 10.
Radio Corporation of America, assignee: *See*—
Blitz, Daniel.
Eddison, Clifford.
Lawrence, Howard C., Jr.
Morton, George A., and Flory.
Peterson, Harold O.
Schroeder, Alfred C.
Randolph, Oliver W., Toledo, Ohio. Fruit and vegetable comminutor and drier. 2,446,952, Aug. 10.
Raney, Russell R.: *See*—
Kaupke, Lee H., and Raney.
Ransburg Electro-Coating Corp., assignee: *See*—
Ransburg, Harold P.
Ransburg, Harold P., assignor, by mesne assignments, to Ransburg Electro-Coating Corp., Indianapolis, Ind. Apparatus for electrostatically coating articles. 2,446,953, Aug. 10.
Ray, William A., Glendale, Calif., assignor to General Controls Co. Thermostatic safety control for fuel burners. 2,446,718, Aug. 10.
Ray, William A., North Hollywood, assignor to General Controls Co., Glendale, Calif. Electric circuit for electromagnets. 2,446,719, Aug. 10.
Raytheon Manufacturing Company, assignee: *See*—
Derby, Palmer P.
England, John H.
Redding, Arnold H., Swarthmore, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Compressor. 2,446,552, Aug. 10.
Redfern, Donald V., assignor to Adhesive Products Company, Seattle, Wash. Soya meal-sewage sludge adhesive. 2,446,954, Aug. 10.
Redhead, Melvin W., Los Angeles, Calif., assignor to Vacuum Concentrator Inc. Vertical current pneumatic separator. 2,446,786, Aug. 10.
Reed, Forrest D., St. Paul, Ind. Releasable airplane cabin. 2,446,609, Aug. 10.
Reetz, Herman H., Dickinson, N. Dak. Pilot guide device. 2,446,787, Aug. 10.
Regents of the University of Minnesota, assignee: *See*—
Smith, Lee I.
Renfroe, Joseph C., Jacksonville, Fla. Plate lifting clamp. 2,446,610, Aug. 10.
Republic Steel Corporation, assignee: *See*—
Conley, Charles.
Prust, Alvin F.
Research Corporation, assignee: *See*—
Shive, William, and Snell.
Revere Camera Company, assignee: *See*—
Briskin, Jack, and Golick.
Reynolds Wire Co., assignee: *See*—
Book, Raymond H., and Gilbert.
Ricards, Charles L.: *See*—
Tollison, Paul L., and Ricards.
Riffin, Milton, Chicago, Ill., assignor, by mesne assignments, to Free-O-Mat Sales Corporation. Refrigerated dispensing cabinet. 2,446,788, Aug. 10.
Rinderknecht, Heinrich: *See*—
Bergel, Franz, and Morrison, and Rinderknecht.
Robey, William G., Grafton, W. Va. Rotary toothbrush. 2,446,955, Aug. 10.
Rodgers, Howard C.: *See*—
Fairley, Frank E., Lindquist, Michaels, and Rodgers.
Rogers, Thomas H., Jr., and R. D. Vickers, assignors to Wingfoot Corporation, Akron, Ohio. Thermosetting vinyl chloride-containing plastics. 2,446,984, Aug. 10.
Rollefson, Karl E., Evanston, assignor to The Muter Company, Chicago, Ill. Airplane engine ice indicator. 2,446,885, Aug. 10.
Rominski, James A., Chicago, Ill. Gaff weigh hook. 2,446,720, Aug. 10.
Root, Charles S., Bridgeport, Conn., assignor to General Electric Company. Radio echo apparatus. 2,446,850, Aug. 10.
Rose, Howard E., Normandy, Mo., assignor, by mesne assignments, to Kearfott Company, Inc., New York, N. Y. Hydraulic windshield wiper. 2,446,611; Aug. 10.
Rosenberg, Hans R., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Producing nicotinamide. 2,446,957, Aug. 10.
Ross, Matthew, Rego Park, assignor to Hi-Seat Corporation, New York, N. Y. Meat testing fork. 2,446,956, Aug. 10.
Rothbardt, Adolph M., assignor to Statler Mfg. Co., Chicago, Ill. Miniature steering wheel. 2,446,721, Aug. 10.
Rouy, Auguste L. M. A., New York, N. Y., assignor to L. L. H. Company, Erie, Pa., a partnership comprising H. C. and T. Lord, and B. M. Hartman. Electrometer vacuum tube. 2,446,553, Aug. 10.
Rouy, Auguste L. M. A., New York, N. Y., assignor to L. L. H. Company, Erie, Pa., a partnership comprising H. C. and T. Lord, and B. M. Hartman. Electrometer vacuum tube. 2,446,554, Aug. 10.
Rowland, Charles W., Pontiac, assignor to General Motors Corporation, Detroit, Mich. Film-developing holder. 2,446,958, Aug. 10.
Rozner, Joseph J., Chicago, Ill. Humidifier. 2,446,665, Aug. 10.
Ruderfer, Martin, Brooklyn, assignor to Doeh Development Co., New York, N. Y. Electrically operated typewriter with constantly rotating type wheel. 2,446,851, Aug. 10.
Rust, Frederick F.: *See*—
Vaughan, William E., and Rust.
Rust, Henri, Paris, France. Hair curler. 2,446,722, Aug. 10.
Sacchetti, Nicholas, Upper Darby, Pa. Coat foundation. 2,446,959, Aug. 10.
Sage, Warren M., Fort Worth, Tex., assignor, by mesne assignments, to J. A. and N. Sanders, Buffalo, N. Y., jointly. Thermostatically controlled electric heater. 2,446,555, Aug. 10.
Sailer, Rudolph J., Townley, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Presser foot for sewing machines. 2,446,852, Aug. 10.
Sanders, Joseph A., assignee, et al.: *See*—
Sage, Warren M.
Sanders, Nelle, assignee, et al.: *See*—
Sage, Warren M.
Sargent, Edmund L.: *See*—
Daley, Henry G., and Payne, and Sargent.
Satchik, Kalman, Pittsburgh, Pa. Furnace ashpan. 2,446,669, Aug. 10.
Sauser, Donald J. and A. J., Evanston, Ill. Fuel tank. 2,446,612, Aug. 10.
Sauser, Joseph A.: *See*—
Sauser, Donald J. and J. A.
Savidge, Clinton W., assignor to Franklin Transformer Manufacturing Company, Minneapolis, Minn. Restrictor-suction line assembly. 2,446,853, Aug. 10.
Schaechterle, Henry, Denver, Colo. Lawn nozzle support. 2,446,723, Aug. 10.
Schaich, Wilbur A., Glen Ellyn, Ill. Rear sight and latch for firearms. 2,446,556, Aug. 10.
Schmid, William, Bronson, Mich. Electric switch. 2,446,789, Aug. 10.
Schmitz, William L., Jr., San Marino, Calif. Introducer. 2,446,724, Aug. 10.
Schoeppell, Ray, Huntington Park, Calif. Renewable fuse casing. 2,446,886, Aug. 10.
Schroeder, Alfred C., Feasterville, Pa., assignor to Radio Corporation of America. Color television tube. 2,446,791, Aug. 10.
Schroeder, Charles S., Philadelphia, Pa., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Transmission and clutch assembly. 2,446,854, Aug. 10.
Schuetz, Clyde C., Mount Prospect, assignor to United States Gypsum Company, Chicago, Ill. Water-setting cement composition. 2,446,990, Aug. 10.
Schutz, Phillip W., Leonia, N. J., and E. K. McMahon, Jackson Heights, assignors to Induction Heating Corp., New York, N. Y. Dielectric heating of emulsions. 2,446,557, Aug. 10.

Schwarz, Carl W., Washington, D. C., and T. Floyd, Hyattsville, Md. Bench tool for stripping armor from cable. 2,446,553, Aug. 10.

Scola, Alfred N., West Roxbury, Mass. Hair drier shield. 2,446,790, Aug. 10.

Seebinger, Fred L., Jr., Vallejo, Calif., assignor to International Projector Corporation, New York, N. Y. Echo sounding indicator. 2,446,960, Aug. 10.

Seguin, Jean H., St. Eustache, Quebec, Canada. Adjustable nose bridge support for bifocal spectacles. 2,446,725, Aug. 10.

Seibel, Richard M., Ballston Spa, N. Y., assignor to General Electric Company. Double-acting solenoid. 2,446,855, Aug. 10.

Serpas, Anthony G.: *See*—
Denhard, Harry W., Brittain, and Serpas.

Shapiro, David L., Kew Gardens, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Pulse slope-amplitude relation restoring system. 2,446,613, Aug. 10.

Sharples Corporation, The, assignee: *See*—
Sharples, Laurence P.

Sharples, Laurence P., Ardmore, assignor to The Sharples Corporation, Philadelphia, Pa. Centrifugal apparatus. 2,446,559, Aug. 10.

Shearer, William A., assignor to New Castle Products, a copartnership composed of H. D. and J. S. Oberdorfer, New Castle, Ind. Trolley yoke structure. 2,446,887, Aug. 10.

Shell Development Company, assignee: *See*—
Vaughan, William E., and Rust.

Shelton, Robert S.: *See*—
Van Campen, Marcus G., Jr., and Shelton.

Shelton, Robert S., Mariemont, and M. G. Van Campen, Jr., Deer Park, assignors to The Wm. S. Merrell Company, Cincinnati, Ohio. Substituted pyridinium and piperidinium compounds. 2,446,792, Aug. 10.

Shelton, Robert S., Mariemont, and M. G. Van Campen, Jr., Wyoming, assignors to The Wm. S. Merrell Company, Cincinnati, Ohio. Substituted pyridinium and piperidinium componnds. 2,446,793, Aug. 10.

Sherlock, Adian R., assignor, by mesne assignments to Master Industries, Inc., New York, N. Y. Dressing apparatus. 2,446,614, Aug. 10.

Sheridan, Hiram W., Oak Park, and W. G. Taylor, Chicago, Ill. Ignition system. 2,446,888, Aug. 10.

Sherlock, John E., assignor to The British Thermostat Company Limited, Sunbury-on-Thames, England. Thermostatically operated electrical switching device. 2,446,961, Aug. 10.

Shikles, Horace E., Jr., and D. E. Williams, Kansas City, Mo. Carrying device. 2,446,670, Aug. 10.

Shipman, James J.: *See*—
Davies, John M., Shipman, and Davidson.

Shive, William, Austin, Tex., and E. E. Snell, Madison, Wis., assignors to Research Corporation, New York, N. Y. N-substituted pantoyl amides. 2,446,615, Aug. 10.

Short, Brooks H., and H. L. Hartzell, Anderson, Ind., assignors to General Motors Corpration, Detroit, Mich. Ignition system. 2,446,671, Aug. 10.

Shumaker, Howard A., Somerville, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Vacuum cleaner having a floating nozzle. 2,446,985, Aug. 10.

Simpson, Thomas P., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Apparatus for contacting gases with particle form solid material. 2,446,986, Aug. 10.

Singer Manufacturing Company, The, assignee: *See*—
Sailer, Rudolph J.
Shumaker, Howard A.

Sirp, Emil, Downers Grove, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Machining article blanks. 2,446,672, Aug. 10.

Siwek, Stanley Z.: *See*—
Goldberg, Harry, Siwek, and Carter.
Goldberg, Harry, Siwek, Long, and Carter.

Sjöström, Loren B., Wakefield, assignor to Arthur D. Little, Inc., Cambridge, Mass. Canned fish of improved palatability and preparing same. 2,446,889, Aug. 10.

Skinner, Leslie A., United States Army, Washington, D. C., assignor to the United States of America as represented by the Secretary of War. Rocket charge suspension arrangement. 2,446,560, Aug. 10.

Smith, Clyde J., assignee, et al.: *See*—
Wemp, Ernest E.

Smith, Franklin N., Cedar Rapids, Iowa. Bearing structure for conveyer rollers and the like. 2,446,616, Aug. 10.

Smith, James T.: *See*—
Flukes, Andrew, and Smith.

Smith, Leah K.: *See*—
Wemp, Ernest E.

Smith, Lee L., assignor to Regents of the University of Minnesota, Minneapolis, Minn. Treating phenols. 2,446,856, Aug. 10.

Smith, Stanley C.: *See*—
Latimer, Kenneth E., and Smith.

Snell, Esmond E.: *See*—
Shive, William, and Snell.

Snyder, Jacob R., Cleveland, Ohio. Rail fastening. 2,446,857, Aug. 10.

Sobelman, Benjamin H., assignee: *See*—
Toner, George E.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Bergstrom, Eric V.
Daley, Henry G., Payne, and Sargent.
Payne, John W.
Simpson, Thomas P.

Spalding, A. G., & Bros., Inc., assignee: *See*—
Tynan, James N.

Sperry Corporation, The, assignee: *See*—
Cooke, William T., and Willis.
Edwards, Robert S.
Meston, Alexander W.
White, Gifford E., and Belson.

Sprague, Desmond, West Caldwell, N. J., assignor to Curtiss-Wright Corporation. Grooved slip ring. 2,446,673, Aug. 10.

Spring, Kenneth B., Des Moines, Iowa. Head support for hair driers. 2,446,962, Aug. 10.

Sproul, Philip T., Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Cathode-ray device mounting. 2,446,674, Aug. 10.

Sprules, Francis J.: *See*—
Price, Donald, and Sprules.

Squibb, E. R., & Sons, assignee: *See*—
Chow, Bacon F.

Stadelman, Frank, Cranford, assignor to Latendorf Conveying Corporation, Bayonne, N. J. Lateral bend power-driven conveyer. 2,446,890, Aug. 10.

Stillhane, Bertil, Stockholm, assignor to Allmanna Svenska Elektriska Aktiebolaget, Vasteras, Sweden. Producing electrically semiconducting coatings. 2,446,617, Aug. 10.

Standard Oil Company, assignee: *See*—
Voorhees, Vanderveer.

Standard Oil Development Company, assignee: *See*—
Hardy, Paul E.
Hemminger, Charles E.
Hineline, Harris D.
Munday, John C., and McGee.
Welch, Lester, and Lippincott.
Young, David W., and Kellog.

Stansel, Leo: *See*—
Brown, Harry W., and Stansel.

Statler Mfg. Co., assignee: *See*—
Rothbardt, Adolph M.

Stein, Leonard: *See*—
Bockmühl, Max, and Ehrhart, Eisleb, and Stein.

Stephano Brothers, assignee: *See*—
Stephano, Constantine S.

Stephano, Constantine S., Elkins Park, assignor to Stephano Brothers, Philadelphia, Pa. Apparatus for producing wrapper material with tear tape sections. 2,446,618, Aug. 10.

Stewart, Meredith M., and F. J. Moore, Beacon, assignors to The Texas Company, New York, N. Y. Polymerization of olefins in the presence of hydrogen. 2,446,619, Aug. 10.

Stick, John C., Jr.: *See*—
Chun, Melvin E., and Stick.

Stolz, Henry, Bound Brook, N. J. Axially shifting type screw shaft actuated tire removing device. 2,446,963, Aug. 10.

Stone, Frank, Lakewood, Ohio. Sewer mole. 2,446,964, Aug. 10.

Strand, John: *See*—
Bryant, Newton W., Crump, Dungan, and Strand.

Strang, John M., and J. H. Bull, assignors to Barr & Stroud, Limited, Glasgow, Scotland. Rangefinger, heightfinder, and like optical observation instrument. 2,446,726, Aug. 10.

Streets, James E., Jr., Charleston, S. C. Combination square. 2,446,561, Aug. 10.

Strother, Fred P., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Gyroscope construction. 2,446,727, Aug. 10.

Sulphite Products Corporation, assignee: *See*—
Pearl, Irwin A.

Sulzer Freres, Societe Anonyme, assignee: *See*—
Lieberherr, Hans.

Swallow, Herbert A., and T. A. De Vilbiss, Plainfield, N. J., assignors to Bakelite Corporation. Automatic pressure sealing device. 2,446,620, Aug. 10.

Sweeten, Howard C., Hazard, Ky., assignor to Goodman Manufacturing Company, Chicago, Ill. Angle drive for shaker conveyers. 2,446,965, Aug. 10.

Swikart, George, Yonkers, assignor to Plastal Corporation, New York, N. Y. Spectacle case. 2,446,966, Aug. 10.

Sykes, Wesley P., North Hollywood, assignor to Turco Products, Inc., Los Angeles, Calif. Soap dispenser. 2,446,967, Aug. 10.

Taylor, Taylor & Hobson Limited, assignee: *See*—
Cooke, Ernest A.

Taylor, Warren G.: *See*—
Sheridan, Hiram W., and Taylor.

Teare, William H.: *See*—
Hickey, John S., and Teare.

Tennessee Coal, Iron and Railroad Company, assignee: *See*—
Fairley, Frank E., Lindquist, Michaels, and Rodgers.

Tennessee Products Corporation, assignee: *See*—
Litkenhous, Edward E.

Texas Company, The, assignee: *See*—
Herzog, Gerhard, and Wolf.
Stewart, Meredith M., and Moore.

Textile Machine Works, assignee: *See*—
Haehnel, Herbert E.

Thiry, Leon F., Montclair, N. J., assignor to The General Tire & Rubber Company, Akron, Ohio. Making precision antivibration mountings. 2,446,621, Aug. 10.

Thodos, George, Evanston, Ill., assignor to Phillips Petroleum Company. Furfural purification. 2,446,728, Aug. 10.

Thompson, Frank W., New Haven, assignor to E. Gregory, Hamden, Conn. Electric cooking heater. 2,446,666, Aug. 10.

Thornton, Rudolph B., Winchester, Mass. Portable fire alarm. 2,446,794, Aug. 10.

Tide Water Associated Oil Company, assignee: *See*—
Winding, Charles C.

Times Facsimile Corporation, assignee: *See*—
Cooley, Austin G.

Toelle, Walter H., and F. R. Ulbrich, assignors to H. L. Judd Company, Wallingford, Conn. Drapery fixture. 2,446,667, Aug. 10.

Tollison, Paul L., North Plainfield, and C. L. Ricards, South Plainfield, assignors to Wood Newspaper Machinery Corporation, Plainfield, N. J. Stereotype plate-cooling machine. 2,446,858, Aug. 10.

Toner, George E., assignor to B. H. Sobelman, Philadelphia, Pa. Grain trimmer. 2,446,968, Aug. 10.

Tower, Charles H., Cleveland, and F. J. Lowey, Bay Village, assignors to The S. K. Wellman Company, Cleveland, Ohio. Bending bimetallic articles. 2,446,891, Aug. 10.

Trailmobile Company, The, assignee: *See*—
Black, James J.

Traver, Oliver C., Drexel Hill, and L. S. Walle, Lansdowne, Pa., assignors to General Electric Company. Switch. 2,446,859, Aug. 10.

Trbojevich, Nikola, Detroit, Mich. Angle measuring bar and gauge. 2,446,562, Aug. 10.

Trimble, Earl H., Los Angeles, Calif. Drill. 2,446,795, Aug. 10.

Tri-State Engineering Company, assignee: *See*—
Coit, Burton C., Jr.

Turco Products Inc., assignee: *See*—
Sykes, Wesley P.

Turner, Archibald J., assignor to Wilson Athletic Goods Mfg. Co., Inc., Chicago, Ill. Producing grips for handles. 2,446,622, Aug. 10.

Turner & Seymour Mfg. Co., The, assignee: *See*—
Dayton, James A.

Tuttle, Clifton M., C. J. Kuns, and F. M. Brown, assignors to Eastman Kodak Company, Rochester, N. Y. Combined camera, processing apparatus, and projector. 2,446,668, Aug. 10.

Tyler, Tracy B.: *See*—
Arnold, George B., and Tyler.

Tynan, James N., assignor to A. G. Spalding & Bros., Inc., Chicopee, Mass. Laminated construction. 2,446,893, Aug. 10.

Uber, Victor T.: *See*—
Cahill, Lyle D., and Uber.

Ulbrich, Frank R.: *See*—
Toelle, Walter H., and Ulbrich.

Union Switch & Signal Company, The, assignee: *See*—
Allison, Leslie R.

United Shoe Machinery Corporation, assignee: *See*—
Ashworth, Fred.
Welch, Edward S., Jr.

United States Atomic Energy Commission, United States of America as represented by the, assignee: *See*—
Newton, Amos S.

United States Gypsum Company, assignee: *See*—
Schuetz, Clyde C.

U. S. Vitamin Corporation, assignee: *See*—
Freedman, Louis.

Upton, Albert P., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Motor system with voltage limiting feedback. 2,446,563, Aug. 10.

Vacuum Concentrator, Inc., assignee: *See*—
Redhead, Melvin W.

Vacuum Extractors Limited, assignee: *See*—
Cribb, Harold H., and Both.

Van Alstyne, Richard F., Davenport, Iowa. Chimney insulation. 2,446,729, Aug. 10.

Van Campen, Marcus G., Jr.: *See*—
Shelton, Robert S., and Van Campen.

Van Campen, Marcus G., Jr., Wyoming, and R. S. Shelton, Mariemont, assignors to The Wm. S. Merrell Company, Cincinnati, Ohio. Substituted pyridinium and piperidinium compounds. 2,446,796, Aug. 10.

Vaughan, Victor G., and J. O. Moorehead, assignors to Metals and Controls Corporation, Attleboro, Mass. Heating control system. 2,446,677, Aug. 10.

Vaughan, William E., and F. F. Rust, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Catalytic oxidation of halogenated hydrocarbons. 2,446,797, Aug. 10.

Vergobbi, John G., assignor to Pneumatic Scale Corporation, Limited, Quincy, Mass. Container forming machine. 2,446,798, Aug. 10.

Verzosi, Ferdinand D., Newark, N. J., assignor to the United States of America as represented by the Secretary of War. Clamping device. 2,446,564, Aug. 10.

Vick Chemical Company, assignee: *See*—
Ninger, Frederick C.

Vickers, Robert D.: *See*—
Rogers, Thomas H., Jr., and Vickers.

Vinco Corporation, assignee: *See*—
Johnson, Arden L.

Voorhees, Vanderveer, Homewood, assignor to Standard Oil Company, Chicago, Ill. Powdered catalyst conversion system. 2,446,678, Aug. 10.

Wadsworth, Francis T., Texas City, R. J. Lee, La Marque, and P. L. Brandt, Galveston, Tex., assignors to Pan American Refining Corporation, New York, N. Y. Refining toluene with toluene sulfonic acid. 2,446,679, Aug. 10.

Waggoner, Frank H., Ramsey, N. J. Unitary andiron locking fuel holder. 2,446,894, Aug. 10.

Wakefield, Walter H.: *See*—
Dion, Raymond F., and Wakefield.

Wallace, Milton A., Mystic, Conn. Boat. 2,446,860, Aug. 10.

Walle, Ludwig S.: *See*—
Traver, Oliver C., and Walle.

Walton, Robert O., assignor to Merla Tool Corporation, Dallas, Tex. Well flow device. 2,446,680, Aug. 10.

War, United States of America, as represented by the Secretary of, assignee: *See*—
Bell, Persa R., Jr.
Keary, Thomas J.
Kraus, John D., and Mizen.
Skinner, Leslie A.
Verzosi, Ferdinand D.
Yevick, George J.

Warner, Donald F., Swampscott, Mass., assignor to General Electric Company. Centrifugal speed governor. 2,446,861, Aug. 10.

Wasmansdorff, Carlton, Glendale, Calif. Radio receiver noise reducing circuit. 2,446,565, Aug. 10.

Weatherhead Company, The, assignee: *See*—
Knagga, Harold J.

Wehner, John M., Culver City, Calif., assignor, by mesne assignments, to Lear, Incorporated, Grand Rapids, Mich. Adjustable switch operator. 2,446,681, Aug. 10.

Weiss, Louis, University City, Mo. Cooling unit for beverage serving assemblies. 2,446,895, Aug. 10.

Welch, Edward S., Jr., Framingham, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. High-frequency progressive bonding apparatus for plastic materials. 2,446,623, Aug. 10.

Welch, Lester M., Madison, and S. B. Lippincott, Westfield, N. J., assignors to Standard Oil Development Company. Inhibition of diolefin polymer growth. 2,446,969, Aug. 10.

Weldon Roberts Rubber Co., assignee: *See*—
Feiler, Frederick W.

Well Surveys, Incorporated, assignee: *See*—
Davis, Robert F.

Wellman, Charles P., deceased, by M. M. Wellman, administratrix, Pleasant Ridge, Mich., assignor, by mesne assignments, to A. S. Mihalik. Crayon box. 2,446,896, Aug. 10.

Wellman, Minnie M., administratix: *See*—
Wellman, Charles P.

Wellman, S. K., Company, The, assignee: *See*—
Lowey, Francis J.
Tower, Charles H., and Lowey.

Wemp, Eleanor M., assignee, et al.: *See*—
Wemp, Ernest E.

Wemp, Ernest E., Detroit, Mich., assignor of five per cent to E. M. Wemp, Los Angeles, Calif., twenty per cent to L. A. Wemp, five per cent to L. K. Smith, and five per cent to C. J. Smith, Detroit, Mich. Pressure control for hydraulic systems. 2,446,730, Aug. 10.

Wemp, Lila A., assignee, et al.: *See*—
Wemp, Ernest E.

Wenk, Edward, Jr., Cabin John, Md. Model testing apparatus. 2,446,566, Aug. 10.

Western Electric Company, Incorporated, assignee: *See*—
Blaisdell, Charles O., and Daniel.
Frankwich, Alexander C.
Gambrill, Richard D., and Lewis.
Hodgdon, Frank B.
Sirp, Emil.

Western Union Telegraph Company, The, assignee: *See*—
Mample, Adolph Z.

Westinghouse Electric Corporation, assignee: *See*—
Bradbury, Donald, and Meyer.
Redding, Arnold H.

Weyerhaeuser Timber Company, assignee: *See*—
Pauley, Robert D.

Wheler, John R., Toronto, Ontario, Canada. Bicycle. 2,446,731, Aug. 10.

White, Gifford E., Hempstead, and M. Belson, Kew Gardens, N. Y., assignors to The Sperry Corporation. Alternating current rate circuits. 2,446,567, Aug. 10.

Whitner, Thomas C., Elisabeth, N. J., assignor to Chemical Laboratories, Inc. Modifying cellulose textiles with an alkylolamine-copper complex. 2,446,682, Aug. 10.

Whittall, Henry C., assignor of twenty-four per cent to H. G. Geltz, Oakland, twenty-four per cent to W. H. Kassebohm, and twenty-four per cent to T. H. Harvey, Berkeley, Calif. Tumberless safe. 2,446,732, Aug. 10.
Wico Electric Company, assignee: *See*—
Harmon, Kenneth A.
Wilders, George, Kegworth, and J. E. Lynam, Mapperley, Nottingham, assignors to William Cotton Limited, Loughborough, Leicestershire, England. Knitting machine. 2,446,862, Aug. 10.
Williams, Dyle E.: *See*—
Shikles, Horace E., Jr., and Williams.
Willis, Horace H.: *See*—
Cooke, William T., and Willis.
Wilson Athletic Goods Mfg. Co., Inc., assignee: *See*—
Turner, Archibald J.
Wilson, George A., Hamden, assignor to The High Standard Manufacturing Corporation, New Haven, Conn. Adjustable front sight for small arms. 2,446,970, Aug. 10.
Winding, Charles C., Ithaca, N. Y., assignor to Tide Water Associated Oil Company, Bayonne, N. J. Adsorbent refining method. 2,446,799, Aug. 10.
Wingfoot Corporation, assignee: *See*—
Cousins, Edward.
Rogers, Thomas H., Jr., and Vickers.
Winthrop-Stearns Inc., assignee: *See*—
Bockmühl, Max, Ehrhart, Eisleb, and Stein.
Cavallito, Chester J., and Kirchner.
Wintle, Thomas D. G.: *See*—
Hill, Walter E., and Wintle.
Wittig, Diedrich J., assignee: *See*—
Wittig, Homer F.
Wittig, Homer F., assignor of one-half to D. J. Wittig, Green Bay, Wis. Safety plug-in electrical receptacle. 2,446,971, Aug. 10.
Wolf, Alexander: *See*—
Hersog, Gerhard, and Wolf.
Wolfe, Lester, U. S. Navy. Magnetic compass. 2,446,568, Aug. 10.
Wood, Maurice L.: *See*—
Crampton, Donald K., and Petersen, and Wood.
Wood Newspaper Machinery Corporation, assignee: *See*—
Tollison, Paul L., and Ricardo.
Wyen, Peter A., Minster, Ohio. Adjustable scaffold structure. 2,446,972, Aug. 10.
Wynne, Ira H.: *See*—
Manegold, Robert L., and Wynne.
Yale & Towne Manufacturing Company, The, assignee: *See*—
Schroeder, Charles S.
Yevick, George J., Boston, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Adjustable transmission line. 2,446,863, Aug. 10.
Yonkers, Edward H., assignor to Joslyn Mfg. and Supply Co., Chicago, Ill. Fused cutout. 2,446,675, Aug. 10.
Yonkers, Edward H., assignor to Joslyn Manufacturing and Supply Company, Chicago, Ill. Fused cutout. 2,446,676, Aug. 10.
Young, David W., Roselle, and H. R. Kellog, Union City, N. J., assignors to Standard Oil Development Company. Polymerizing olefinic compounds with metal halide-organic acid double salts. 2,446,897, Aug. 10.
Zeigler, Philip B., Saginaw, assignor to General Motors Corporation, Detroit, Mich. Magnetic chuck and loading device therefor. 2,446,973, Aug. 10.
Zimmer, Myron J.: *See*—
Chandler, James H., and Zimmer.
Zweig, Samuel: *See*—
Gold, Leon J., and Zweig.

LIST OF DESIGN INVENTIONS

Belt. A. Unger. 150,524, Aug. 10.
Bottle. G. B. Brown. 150,490, Aug. 10.
Bottle and stand therefor, Combined. J. Heim. 150,499, Aug. 10.
Brooch or similar article. A. Philippe. 150,515, Aug. 10.
Building unit. P. L. Schluttig. 150,519, Aug. 10.
Camera. S. I. Rochwhite. 150,517, Aug. 10.
Card for artificial teeth or similar article. S. Myerson. 150,509, Aug. 10.
Chain for a bracelet or similar article, Expansible. A. W. Koppell. 150,505, Aug. 10.
Cigarette container and lamp, Combined. C. J. Zahn. 150,528, Aug. 10.
Container, Display. F. P. Holden. 150,500, Aug. 10.
Cookstove, Gas. H. M. Reeves and M. Ferar. 150,516, Aug. 10.
Dispenser, Cigarette. D. W. Dunberg. 150,495, Aug. 10.
Divider for a milk bottle case or the like. E. R. Erickson. 150,496, Aug. 10.
Dress. K. Rost. 150,518, Aug. 10.
Dress. J. Walker. 150,525, Aug. 10.
Earring or similar article. A. Philippe. 150,514, Aug. 10.
Envelope or similar article. H. S. Davis. 150,494, Aug. 10.
Eyeshield or similar article. W. A. Mendelsohn. 150,508, Aug. 10.
Fountain, Wash. C. B. Stevens. 150,521–2, Aug. 10.
Frame, Tape dispenser. C. J. Haselton. 150,498, Aug. 10.
Guard, Lamp. I. E. Wright. 150,527, Aug. 10.
Holder, Safety razor. K. S. McEntire. 150,507, Aug. 10.
Holder unit, Memorandum. W. Le Blanc. 150,506, Aug. 10.
Humidor, Tobacco. M. Pendriss. 150,512, Aug. 10.
Knife and glass cutter, Combined putty. W. E. Amatuts. 150,488, Aug. 10.
Locket or similar article. A. Katz. 150,501, Aug. 10.
Masticator for fruits, vegetables, or the like. C. Stuart. 150,523, Aug. 10.
Necklace or similar article. A. Katz. 150,502–3, Aug. 10.
Necklace or similar article. A. Philippe. 150,513, Aug. 10.
Ornament, Christmas tree. V. P. O'Brien. 150,511, Aug. 10.
Putting aid device for a golf club. C. F. Forsell. 150,497, Aug. 10.
Service station. H. C. Brown. 150,491, Aug. 10.
Slip, Lady's. H. Caplin. 150,492, Aug. 10.
Spoon or similar article. G. N. Allen and M. P. Fleming. 150,486, Aug. 10.
Spoon or similar article. G. N. Allen and W. H. Gerth. 150,485, Aug. 10.
Spoon or similar article. G. N. Allen and W. H. Gerth. 150,487, Aug. 10.
Table, X-ray. H. A. Newman. 150,510, Aug. 10.
Toothbrush and receptacle therefor, Combined folding. T. R. Stacey. 150,520, Aug. 10.
Toy house. S. Chin. 150,493, Aug. 10.
Toy, Panel. R. C. Bockus. 150,489, Aug. 10.
Tripod. W. S. Kinnard. 150,504, Aug. 10.
Wire supporting arm for fences, Barbed. W. A. Webster. 150,526, Aug. 10.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 10TH DAY OF AUGUST, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abdominal and garter support. H. G. Hill. 2,446,590, Aug. 10.
Absorption refrigeration apparatus. A. Flukes and J. T. Smith. 2,446,988, Aug. 10.
Adhesive composition comprising a polyalkylene glycol and an alkyd resin. L. J. Gold and S. Zweig. 2,446,581, Aug. 10.
Adhesive, Soya meal-sewage sludge. D. V. Redfern. 2,446,954, Aug. 10.
Adsorbent refining method. C. C. Winding. 2,446,799, Aug. 10.
Air conditioning system. S. C. Jimopoulos. 2,446,593, Aug. 10.
Air control mechanism and switch for oil burners. D. Kaufman. 2,446,834, Aug. 10.
Aircraft having power-driven, adjustable, retractable and steerable front wheels. E. A. Clark. 2,446,528, Aug. 10.
Air flow control. W. W. Kennedy. 2,446,879, Aug. 10.
Airplane engine ice indicator. K. E. Rollefson. 2,446,885, Aug. 10.
Air pressure gauge. L. D. Cahill and V. T. Uber. 2,446,632, Aug. 10.
Alkali metal salts, Decomposing. F. Jourdan and J. Beeche. 2,446,595, Aug. 10.
Alkaline well waters, Method and apparatus for clarifying. L. Lawrason. 2,446,655, Aug. 10.
Alpha-amino-beta-hydroxy aliphatic carboxylic acids, Preparation of. W. H. Hartung. 2,446,651, Aug. 10.
Aluminum hydroxide antacid composition. F. C. Ninger. 2,446,981, Aug. 10.
Aminophenols, Preparing. F. R. Bean. 2,446,519, Aug. 10.
Amusement device. J. M. Leach. 2,446,540, Aug. 10.
Anchor, Rail. R. J. McComb. 2,446,842, Aug. 10.
Angle drive for shaker conveyers. H. C. Sweeten. 2,446,965, Aug. 10.
Anode tube for ionic valves for high-voltage static current converters. U. Lamm. 2,446,600, Aug. 10.
Antirattler for window sashes. M. Erbach. 2,446,912, Aug. 10.
Apparatus for broad-band radio transmission. R. V. Pound. 2,446,982, Aug. 10.
Apparatus for calibrating fluid pressure gauges. F. D. Burns. 2,446,740, Aug. 10.
Apparatus for coating metal sheets. F. E. Fairley, L. T. Lindquist, C. D. Michaels, and H. C. Rodgers. 2,446,697, Aug. 10.
Apparatus for contacting gases with particle form solid material. T. P. Simpson. 2,446,986, Aug. 10.
Apparatus for detecting imperfections in filamentary materials. A. C. Frankwich. 2,446,647, Aug. 10.
Apparatus for electrostatically coating articles. H. P. Ransburg. 2,446,953, Aug. 10.
Apparatus for forming gel into beads. J. W. Payne. 2,446,783, Aug. 10.
Apparatus for manufacture of spheroidal particles. H. G. Daley, J. W. Payne, and E. L. Sargent. 2,446,784, Aug. 10.
Apparatus for producing controlled relative motion between tools and workpieces. A. L. Johnson. 2,446,833, Aug. 10.
Apparatus for producing wrapper material with tear tape sections. C. S. Stephano. 2,446,618, Aug. 10.
Apparatus for testing electric cables. R. D. Gambrill and C. E. Lewis. 2,446,820, Aug. 10.
Arc welding apparatus, Automatic. H. O. Klinke. 2,446,598, Aug. 10.
Arch or roof construction, Furnace. L. H. Hosbein and L. Ellman. 2,446,766, Aug. 10.
Armature current ratiometer, Polarized. G. H. Fritzinger. 2,446,579, Aug. 10.
Armature, Electric motor. N. D. Levin. 2,446,708, Aug. 10.
Arming device, Delay. J. F. McCaslin. 2,446,545, Aug. 10.
Ashpan, Furnace. K. Satchik. 2,446,669, Aug. 10.
Asphaltic molding material. E. M. Bright. 2,446,903, Aug. 10.
Axle, Car wheel. K. A. Huldt. 2,446,592, Aug. 10.
Bandage, Ankle. J. Brand. 2,446,902, Aug. 10.
Bar and gauge, Angle measuring. N. Trbojevich. 2,446,562, Aug. 10.
Bark fiber from finely comminuted bark, Separation of pure. R. D. Pauley. 2,446,551, Aug. 10.
Bath, Terne electroplating. J. S. Nachtman. 2,446,716, Aug. 10.
Batteries, Operating diffusion. A. M. A. Ferté. 2,446,751, Aug. 10.
Beaming apparatus. H. B. Garden. 2,446,580, Aug. 10.
Bearing structure for conveyer rollers and the like. F. N. Smith. 2,446,616, Aug. 10.
Bib. H. B. and L. D. Broce. 2,446,689, Aug. 10.
Bicycle. J. R. Wheler. 2,446,731, Aug. 10.
Bimetallic articles, Bending. C. H. Tower and F. J. Lowey. 2,446,891, Aug. 10.
Bimetallic articles, Shaping. F. J. Lowey. 2,446,892, Aug. 10.
Blanket and control therefor, Electric. L. W. Cook. 2,446,810, Aug. 10.
Blanks, Machining article. E. Sirp. 2,446,672, Aug. 10.
Blat. M. A. Wallace. 2,446,860, Aug. 10.
Booster for brake systems. E. R. Price. 2,446,884, Aug. 10.
Bottle dispenser. A. Blair and F. H. Collins. 2,446,807, Aug. 10.
Bottle, Nursing. A. I. Galmari. 2,446,917, Aug. 10.
Bottom roll clearer for textile machines. W. F. Lee. 2,446,839, Aug. 10.
Box: *See*—
Crayon box.
Bracket with adjustable shoe tree, Shoe shining. H. J. Jackson. 2,446,931, Aug. 10.
Brassière. P. Amyot. 2,446,683, Aug. 10.
Brick, Silica. C. Conley. 2,446,975, Aug. 10.
Bridge support for bifocal spectacles, Adjustable nose. J. H. Seguin. 2,446,725, Aug. 10.
Broom and mop combination. N. M. Crofton. 2,446,814, Aug. 10.
Building construction. A. Fishko. 2,446,987, Aug. 10.
Burners, Control for automatic. T. J. Mesh. 2,446,778, Aug. 10.
Button, Tufting. J. A. Dayton. 2,446,816, Aug. 10.
Cabin, Releasable airplane. F. D. Reed. 2,446,609, Aug. 10.
Cabinet: *See*—
Refrigerated dispensing cabinet.
Calcium hypochlorite, Preparing. G. L. Cunningham. 2,446,869, Aug. 10.
Camera, processing apparatus, and projector, Combined. C. M. Tuttle, C. J. Kunz, and F. M. Brown. 2,446,668, Aug. 10.
Candle-filter mounting. K. M. McLellan. 2,446,979, Aug. 10.
Canned fish of improved palatability and preparing same. L. B. Björström. 2,446,889, Aug. 10.
Carrying device. H. E. Shikles, Jr., and D. E. Williams. 2,446,670, Aug. 10.
Case: *See*—
Spectacle case.
Catalytic conversion of hydrocarbons with a thorium phosphate catalyst. G. A. Mills. 2,446,547, Aug. 10.
Cathode-ray device mounting. P. T. Sproul. 2,446,674, Aug. 10.
Cathode ray tube. S. T. Henderson. 2,446,764, Aug. 10.
Cellulose textiles with an alkylolamine-copper complex, Modifying. T. C. Whitner. 2,446,682, Aug. 10.
Cement composition, Water-setting. C. C. Schuetz. 2,446,990, Aug. 10.
Cementitious sheets, Manufacture of. H. J. Otis and J. Hesse. 2,446,782, Aug. 10.
Centrifugal apparatus. L. P. Sharples. 2,446,559, Aug. 10.
Centrifugal switch. V. H. Hardy. 2,446,923, Aug. 10.
Chain structure, Conveyer. S. S. Barker. 2,446,685, Aug. 10.
Check valve. L. H. Browne. 2,446,571, Aug. 10.
Cheese, Cottage. G. C. North and L. Little. 2,446,550, Aug. 10.
Chimney insulation. R. F. Van Alstyne. 2,446,729, Aug. 10.
Chips, Melting brass. D. K. Crampton, P. E. Petersen, and M. L. Wood. 2,446,637, Aug. 10.
Chromium complexes of pyrazalone azo dyes. A. W. Nies. 2,446,662, Aug. 10.
Chuck, Self-locking paper roll. A. J. Carpenter, Jr. 2,446,690, Aug. 10.
Chute, Tilting. R. C. Keirsey. 2,446,769, Aug. 10.
Circuit: *See*—
Pulse forming circuit. Radio receiver noise reduc-
Pulse shaping circuit. ing circuit.
Circuit embodying electron discharge devices of the velocity modulation type, Damping. C. S. Bull. 2,446,572, Aug. 10.
Circuits, Alternating current rate. G. E. White and M. Relson. 2,446,567, Aug. 10.
Clamp: *See*—
Plate clamp.
Clamping device. F. D. Vezzoli. 2,446,564, Aug. 10.
Clamping tool. S. J. Leskiewicz. 2,446,773, Aug. 10.
Clip assembly, End. F. P. Lacure. 2,446,704, Aug. 10.
Clockwork-operated time fuse. F. Delay. 2,446,745, Aug 10.
Coat fundation. N. Sacchetti. 2,446,959, Aug. 10.

Color television tube. A. C. Schroeder. 2,446,791, Aug. 10.
Column, Liquefaction and rectification. A. J. and I. F. Fausek. 2,446,534–5, Aug. 10.
Comb. A. A. Norin. 2,446,781, Aug. 10.
Comminutor and drier, Fruit and vegetable. O. W. Randolph. 2,446,952, Aug. 10.
Compass, Magnetic. L. Wolfe. 2,446,568, Aug. 10.
Composition and process for imparting durable water repellent finish to textiles. E. Abrams. 2,446,864, Aug. 10.
Compression-wave delay device. T. J. Keary. 2,446,835, Aug. 10.
Compressor. A. H. Redding. 2,446,552, Aug. 10.
Connecter: *See*—
Connector.
Connector: *See*—
Electrical cable connector.
Contact roll construction. J. S. Nachtman. 2,446,548, Aug. 10.
Container forming machine. J. G. Vergobbi. 2,446,798, Aug. 10.
Continuous rotary filter. H. W. Denhard, F. W. Brittain, and A. G. Serpas. 2,446,746, Aug. 10.
Control circuit for gas discharge tubes. J. H. England. 2,446,533, Aug. 10.
Control system for dispensing apparatus, Selective. P. M. Farmer. 2,446,643, Aug. 10.
Controller device, Pressure responsive. A. W. Meston. 2,446,546, Aug. 10.
Controls and systems for defrosting cooling units of refrigerating machines. L. A. Dickens. 2,446,910, Aug. 10.
Conversion system, Powdered catalyst. V. Voorhees. 2,446,678, Aug. 10.
Conveyer. W. J. Leithmann, Jr., and A. O. Hurxthal. 2,446,936, Aug. 10.
Conveyer, Lateral bend power-driven. F. Stadelman. 2,446,890, Aug. 10.
Cooking vessel with automatic pressure regulation. C. Ohlson. 2,446,605, Aug. 10.
Cooling unit for beverage serving assemblies. L. Weiss. 2,446,895, Aug. 10.
Copying machine with optical system. E. A. Cooke. 2,446,575, Aug. 10.
Cord, Electrical appliance. J. F. Cavanagh. 2,446,907, Aug. 10.
Coupling: *See*—
Disconnectible push coupling.
Cracking of hydrocarbons with suspended catalyst. C. E. Hemminger. 2,446,925, Aug. 10.
Crane, Hydraulic. W. Harbaugh. 2,446,586, Aug. 10.
Crayon box. C. P. Wellman. 2,446,896, Aug. 10.
Crosstie and rail fastening means. E. C. Barnes. 2,446,899, Aug. 10.
Crusher, Can. O. E. Alvarez. 2,446,898, Aug. 10.
Curler, Hair. H. Rust. 2,446,722, Aug. 10.
Cutout, Fused. E. H. Yonkers. 2,446,675–6, Aug. 10.
Cutting device, Tube. R. S. Armstrong. 2,446,734, Aug. 10.
Cylinder liner for opposed-piston engines. H. Lieberherr. 2,446,841, Aug. 10.
Decimal point locator for slide rules. A. F. Eckel. 2,446,696, Aug. 10.
Defluorination of phosphate rock. E. J. Maust. 2,446,978, Aug. 10.
Deicing or anti-icing means, Fan. E. P. Palmatier. 2,446,663, Aug. 10.
Destroying froth. J. O. Nauclér. 2,446,717, Aug. 10.
Determining the permeability of substrata. G. Herzog and A. Wolf. 2,446,588, Aug. 10.
Device for preventing underground freezing. R. J. Neutra. 2,446,948, Aug. 10.
Diaryl nitrogenous heterocyclic alkylene compounds. M. Bockmuhl, G. Ehrhart, O. Eisleb, and L. Stein. 2,446,522, Aug. 10.
Dielectric materials, Making. F. B. Hodgdon. 2,446,928, Aug. 10.
Diolefin polymer growth, Inhibition of. L. M. Welch and S. B. Lippincott. 2,446,969, Aug. 10.
Disconnectible push coupling. J. R. Quilter. 2,446,951, Aug. 10.
Dishwashing machine. H. G. Davis. 2,446,693, Aug. 10.
Dispenser: *See*—
Bottle dispenser. Soap dispenser.
Dispenser for comminuted materials, Adjustable. E. Gopner. 2,446,582, Aug. 10.
Distillation and heat exchange apparatus. R. V. Kleinschmidt. 2,446,880, Aug. 10.
Dolly, Transport and shipping. G. B. Arnold and T. B. Tyler. 2,446,518, Aug. 10.
Drain assister. B. A. Hower. 2,446,930, Aug. 10.
Dress form, Pendent. J. H. Insley. 2,446,832, Aug. 10.
Drill. E. H. Trimble. 2,446,795, Aug. 10.
Ear plug. C. Leight. 2,446,707, Aug. 10.
Echo sounding indicator. G. T. Lorance. 2,446,937, Aug. 10.
Echo sounding indicator. F. L. Seebinger, Jr. 2,446,960, Aug. 10.
Elastic rotational system. F. R. McFarland. 2,446,942, Aug. 10.
Electric circuit for electromagnets. W. A. Ray. 2,446,719, Aug. 10.
Electric cooking heater. F. W. Thompson. 2,446,666, Aug. 10.
Electric switch. W. Schmid. 2,446,789, Aug. 10.
Electrical cable connector. D. MacInnes. 2,446,542, Aug. 10.
Electrical discharge tube. J. S. Hickey and W. H. Teare. 2,446,765, Aug. 10.
Electrical scriber. J. E. Hammers. 2,446,650, Aug. 10.
Electrical switch device for lamp sockets. W. Kaufman. 2,446,768, Aug. 10.
Electrically heating material, Method and apparatus for. R. K. Hopkins. 2,446,929, Aug. 10.
Electrically semiconducting coatings, Producing. B. Ställbane. 2,446,617, Aug. 10.
Electrode and making same. J. B. Brennan. 2,446,524, Aug. 10.
Electrometer vacuum tube. A. L. M. A. Ruoy. 2,446,553–4, Aug. 10.
Electron discharge device. P. P. Derby. 2,446,531, Aug. 10.
Electronic apparatus for spectrographic analysis. J. Geffner and E. R. Millen. 2,446,874, Aug. 10.
Electronic computing device. G. A. Morton and L. E. Flory. 2,446,945, Aug. 10.
Engine: *See*—
Turbine engine.
Engine starting apparatus. G. Clyde and K. F. Dailey. 2,446,691, Aug. 10.
Engine unit. H. Goldberg, S. Z. Siwek, A. R. Long, and W. J. Carter. 2,446,919, Aug. 10.
Equalizer for platen presses or the like. J. M. W. Grant. 2,446,823, Aug. 10.
Equalizing spring suspension for tandem axle vehicles. F. A. Jones. 2,446,877, Aug. 10.
Ethers of 1-(3,4-dihydroxy-cyclohexyl)-1,2-dihydroxybutanone. J. E. Bludworth and D. P. Easter. 2,446,570, Aug. 10.
Evaporator, Refrigerant. P. Haymond. 2,446,763, Aug. 10.
Fabric take-up device for knitting machines. H. E. Haehnel. 2,446,875, Aug. 10.
Fading effects in a facsimile system, Compensating for. A. G. Cooley. 2,446,635, Aug. 10.
Fan housing construction for oil burners. W. H. DeLancey. 2,446,744, Aug. 10.
Fastener: *See*—
Lock bolt operated door fastener.
Feed controller for record engraver carrying carriages. L. Chanal. 2,446,526, Aug. 10.
Feeder: *See*—
Suction feeder.
Feeding apparatus, Article. C. O. Blaisdell and T. A. Daniel. 2,446,901, Aug. 10.
Feeding device, Material. E. Fiddyment. 2,446,752, Aug. 10.
Fiber treating apparatus. W. P. Leister. 2,446,840, Aug. 10.
Fibrous material, Method and apparatus for compacting. A. C. Fischer. 2,446,644, Aug. 10.
Film-developing holder. C. W. Rowland. 2,446,958, Aug. 10.
Filter: *See*—
Continuous rotary filter.
Fire alarm, Portable. R. B. Thornton. 2,446,794, Aug. 10.
Fitting and footrest accessories for shoe stores, Shoe. L. Lelyveld. 2,446,601, Aug. 10.
Fixture, Drapery. W. H. Toelle and F. R. Ulbrich. 2,446,667, Aug. 10.
Float valve. A. Norman. 2,446,549, Aug. 10.
Fork, Meat testing. M. Ross. 2,446,956, Aug. 10.
Foundation device for load supporting columns. R. J. Neutra. 2,446,949, Aug. 10.
Fountain, Automatic poultry. A. S. Didget. 2,446,695, Aug. 10.
Freezing apparatus. A. R. Sherick. 2,446,614, Aug. 10.
Frequency doubling transformer. A. M. MacCallum. 2,446,939, Aug. 10.
Friction shock absorbing mechanism for railway draft riggings. G. E. Dath. 2,446,639, Aug. 10.
Fuel control apparatus for liquid fuel burners. D. Bradbury and C. A. Meyer. 2,446,523, Aug. 10.
Fuel pump. J. L. L. A. A. Moulet. 2,446,604, Aug. 10.
Fuel tank. D. J. and J. A. Sauser. 2,446,612, Aug. 10.
Furnace: *See*—
Heat-treating furnace.
Furfural purification. G. Thodos. 2,446,728, Aug. 10.
Fuse casing, Renewable. R. Schoeppell. 2,446,886, Aug. 10.
Gaff weigh hook. J. A. Rominski. 2,446,720, Aug. 10.
Gate: *See*—
Resilient gauging gate.
Gauge: *See*—
Air pressure gauge. Thrust gauge.
Liquid gauge.
Gearing, Engine starter. J. E. Buxton. 2,446,808, Aug. 10.
Generating mechanism, Rate. E. E. Garrett and W. F. Conable. 2,446,754, Aug. 10.
Generator: *See*—
Magnetic sweep generator.
Modulated-signal generator.
Glove, Boxing. J. Golomb. 2,446,758, Aug. 10.
Glove, Lined rubber. W. F. Grant. 2,446,921, Aug. 10.

Governor, Centrifugal speed. D. F. Warner. 2,446,861, Aug. 10.
Grip, Safety type ski towrope. G. Makaroff. 2,446,710, Aug. 10.
Grips for handles, Producing. A. J. Turner. 2,446,622, Aug. 10.
Grooved slip ring. D. Sprague. 2,446,673, Aug. 10.
Grooves in pasteboard sheets, Machine for pressing. A. K. A. Johansson. 2,446,594, Aug. 10.
Guanamines, Preparing. D. E. Nagy. 2,446,980, Aug. 10.
Guide, Applicator's. E. Parkhurst. 2,446,950, Aug. 10.
Guide, Window glass channel. D. C. Bailey. 2,446,516, Aug. 10.
Gyroscope construction. F. P. Strother. 2,446,727, Aug. 10.
Halogenated hydrocarbons, Catalytic oxidation of. W. E. Vaughan and F. F. Rust. 2,446,797, Aug. 10.
Handle assembly, Door. B. S. Floraday. 2,446,753, Aug. 10.
Hat construction. M. Lampert. 2,446,705, Aug. 10.
Head support for hair driers. K. B. Spring. 2,446,962, Aug. 10.
Heat controlled apparatus for preparing pads, Automatic. P. G. Polhemus. 2,446,989, Aug. 10.
Heat-treating furnace. H. Dobrin. 2,446,642, Aug. 10.
Heater: *See*—
Electric cooking heater.
Thermostatically controlled electric heater.
Heater. E. V. Bergstrom. 2,446,805, Aug. 10.
Heating control system. V. G. Vaughan and J. O. Moorehead. 2,446,677, Aug. 10.
Heating of emulsions, Dielectric. P. W. Schutz and E. K. McMahon. 2,446,557, Aug. 10.
Heelpiece for boots and shoes. E. Bier. 2,446,627, Aug. 10.
Herbicides. G. S. King. 2,446,836, Aug. 10.
Heterocyclic bases, Manufacture of. F. Bergel, A. L. Morrison, and H. Rinderknecht. 2,446,803, Aug. 10.
High-frequency progressive bonding apparatus for plastic materials. E. S. Welch, Jr. 2,446,623, Aug. 10.
Hitch, Tractor. R. H. Green. 2,446,584, Aug. 10.
Holder: *See*—
Film-developing holder.
Sandpaper holder.
Unitary andiron locking fuel holder.
Holder for abrasives, detergents, and polishing materials. T. C. Kelly. 2,446,653, Aug. 10.
Holder for disk-type phonograph records. W. Daymon. 2,446,641, Aug. 10.
Hood, Expansible. J. De Grazia and R. R. Oberrender. 2,446,530, Aug. 10.
Hook: *See*—
Gaff weigh hook.
Hose insert. H. J. Knaggs. 2,446,599, Aug. 10.
Humidifier. J. J. Rozner. 2,446,665, Aug. 10.
Hydrogenation of heavy hydrocarbon oils, Destructive. J. B. McKinley and H. J. Elder. 2,446,602, Aug. 10.
Hydroxides, Purifying aqueous alkali metal. G. L. Cunningham. 2,446,868, Aug. 10.
Ignition system. H. W. Sheridan and W. G. Taylor. 2,446,888, Aug. 10.
Ignition system. B. H. Short and H. L. Hartzell. 2,446,671, Aug. 10.
Indexing mechanism. J. H. Barnes. 2,446,865, Aug. 10.
Indicator: *See*—
Airplane engine ice indicator.
Echo sounding indicator.
Indicator for rubber mixers or the like. D. W. Mac Leod and R. H. Perkins. 2,446,657, Aug. 10.
Internal-combustion engine and air cleaner therefor. H. Goldberg, S. Z. Siwek, and W. J. Carter. 2,446,920, Aug. 10.
Internal-combustion reaction motor. W. M. Quick. 2,446,785, Aug. 10.
Introducer. W. L. Schmitz, Jr. 2,446,724, Aug. 10.
Joint and making same, Cable splice. A. Z. Mample. 2,446,543, Aug. 10.
Joint construction. W. Noble. 2,446,846, Aug. 10.
Knitting machine. G. Wilders and J. E. Lynam. 2,446,862, Aug. 10.
Laminated construction. J. N. Tynan. 2,446,893, Aug. 10.
Lamp device. H. A. McIlvaine. 2,446,712, Aug. 10.
Latch: *See*—
Ratchet type latch.
Latching mechanism, Shuttle. R. H. Book and L. E. Gilbert. 2,446,688, Aug. 10.
Lawn nozzle support. H. Schaechterle. 2,446,723, Aug. 10.
Leak detector for the protective well of a thermal instrument sensitive element. F. W. Hampson. 2,446,760, Aug. 10.
Lens and filter for cameras. G. E. Merritt. 2,446,843, Aug. 10.
Lid, Railway journal box. J. McMullen. 2,444,779, Aug. 10.
Lift, Air pressure stage. B. L. Mahon. 2,446,940, Aug. 10.
Lifter and container, Pastry. H. W. Brown and L. Stanzel. 2,446,629, Aug. 10.
Liquid collecting and directing means. G. E. Burks. 2,446,631, Aug. 10.
Liquid gauge. H. Molaver. 2,446,844, Aug. 10.
Loader, Overhead. A. A. Losch. 2,446,938, Aug. 10.
Lock bolt operated door fastener. W. F. Banham. 2,446,735, Aug. 10.
Locking mechanism for automobiles, Auxiliary door. F. R. Hamer. 2,446,828, Aug. 10.
Logging of well bores, Phase shift. M. E. Chun and J. C. Stick, Jr. 2,446,527, Aug. 10.
Loom and method of weaving. S. Kaufman. 2,446,596, Aug. 10.
Lubricant, Thickened. H. D. Hineline. 2,446,927, Aug. 10.
Lumber reclamation machine. M. R. Chidakel. 2,446,741, Aug. 10.
Machine for making beaded cups, Automatic. W. J. Gregory. 2,446,649, Aug. 10.
Magazine for safety razor blades. J. Muros. 2,446,715, Aug. 10.
Magnetic chuck and loading device therefor. P. B. Zeigler. 2,446,973, Aug. 10.
Magnetic concentrate washing means for submerged belt magnetic separators. R. E. Crockett. 2,446,813, Aug. 10.
Magnetic inspection apparatus. R. L. Fitch. 2,446,873, Aug. 10.
Magnetic sweep generator. J. D. Kraus and C. A. Mizen. 2,446,837, Aug. 10.
Magneto and alternator, Combined. K. A. Harmon. 2,446,761, Aug. 10.
Magnetron. E. D. McArthur. 2,446,826, Aug. 10.
Mattress construction, Innerspring. M. Marsack. 2,446,775, Aug. 10.
Mechanism for power electrical tap switches. E. A. Miller. 2,446,881, Aug. 10.
Mechanism for transforming linear movement of one member into arcuate or angular movement of another member or vice-versa with particular reference to screw and nut type steering gears. J. G. Douglas. 2,446,911, Aug. 10.
Metal-bending machine with hold-down means to prevent die deflection. L. B. Green. 2,446,824, Aug. 10.
Miniature steering wheel. A. M. Rothbardt. 2,446,721, Aug. 10.
Model testing apparatus. E. Wenk, Jr. 2,446,566, Aug. 10.
Modulated-signal generator. R. C. Hergenrother. 2,446,829, Aug. 10.
Molding ceramic articles. R. W. Ehlers. 2,446,872, Aug. 10.
Motor: *See*—
Internal-combustion reaction motor.
Motor structure, Submersible. C. J. Blom. 2,446,521, Aug. 10.
Motor system with voltage limiting feedback. A. P. Upton. 2,446,563, Aug. 10.
Mounting: *See*—
Candle-filter mounting.
Cathode-ray device mounting.
N-substituted pantoyl amides. W. Shive and E. E. Snell. 2,446,615, Aug. 10.
Nicotinamide, Producing. H. R. Rosenberg. 2,446,957, Aug. 10.
Nitrocellulose from nitrating solution, Extraction of. E. E. Litkenhous. 2,446,541, Aug. 10.
Oil composition and making same, Drying. E. Hazlehurst. 2,446,652, Aug. 10.
Oil, High capillarity lubricating. J. D. Morgan. 2,446,944, Aug. 10.
Oil separator. J. I. Morrison. 2,446,882, Aug. 10.
Open hearth process. F. J. Griffiths. 2,446,759, Aug. 10.
Opener, Can. J. H. Chandler and M. J. Zimmer. 2,446,633, Aug. 10.
Operating upon warps, Method of and apparatus for. B. Marcellus and B. A. Peterson. 2,446,544, Aug. 10.
Oscillator, Resistance-capacitance tuned. W. Gassel and H. Gritz. 2,446,821, Aug. 10.
Oxidation of fatty substances. D. Price and F. J. Sprules. 2,446,849, Aug. 10.
Pad: *See*—
Protector pad.
Pad construction, Shoulder. H. Pons. 2,446,664, Aug. 10.
Pallet construction. C. D. Fallert and J. W. Meinhardt. 2,446,914, Aug. 10.
Pallet, Load supporting. B. C. Colt, Jr. 2,446,634, Aug. 10.
Penicillin, Preparing. C. J. Cavallito and F. K. Kirchner. 2,446,574, Aug. 10.
Percussive apparatus. C. A. Hirschberg. 2,446,830, Aug. 10.
Perforator, Well. R. F. Davis. 2,446,640, Aug. 10.
Phenols, Treating. L. I. Smith. 2,446,856, Aug. 10.
Photographic process of producing a printing image. P. G. Filmer. 2,446,915, Aug. 10.
Picture, Surface treated. P. C. Goetz. 2,446,757, Aug. 10.
Pilot guide device. H. H. Reetz. 2,446,787, Aug. 10.
Pitch changing arrangement, Propeller. M. J. Maynard. 2,446,658, Aug. 10.
Plate lifting clamp. J. C. Renfroe. 2,446,610, Aug. 10.
Plug: *See*—
Ear plug.
Plug and socket joint suitable for electrical conductors carrying high-frequency currents. K. E. Latimer and S. C. Smith. 2,446,706, Aug. 10.
Polymerization of olefins in the presence of hydrogen. M. M. Stewart and F. J. Moore. 2,446,619, Aug. 10.

Polymerization process. J. C. Munday and R. V. J. McGee. 2,446,947, Aug. 10.
Polymerizing olefinic compounds with metal halide-organic acid double salts. D. W. Young and H. R. Kellog. 2,446,897, Aug. 10.
Power transmission unit. H. K. Flinchbaugh. 2,446,645, Aug. 10.
Precision antivibration mountings, Making. L. F. Thiry. 2,446,621, Aug. 10.
Press and case, Necktie. K. P. Abbe. 2,446,733, Aug. 10.
Presser foot for sewing machines. R. J. Sailer. 2,446,852, Aug. 10.
Pressure actuator for brakes. J. T. Dickson. 2,446,694, Aug. 10.
Pressure control for hydraulic systems. E. E. Wemp. 2,446,730, Aug. 10.
Pressure sealing device, Automatic. H. A. Swallow and T. A. De Vilbiss. 2,446,620, Aug. 10.
Protector pad. J. A. Kremar. 2,446,654, Aug. 10.
Proteinaceous waste liquids, Utilizing. V. L. Erlich. 2,446,913, Aug. 10.
Pulley, Variable speed clutch. H. Honigman. 2,446,703, Aug. 10.
Pulse communication system, Synchronized. G. W. Fyler. 2,446,819, Aug. 10.
Pulse forming circuit. H. C. Lawrence, Jr. 2,446,838, Aug. 10.
Pulse shaping circuit. P. R. Bell, Jr. 2,446,802, Aug. 10.
Pulse slope-amplitude relation restoring system. D. L. Shapiro. 2,446,613, Aug. 10.
Pump: *See*—
Fuel pump.
Pump. H. L. Etter. 2,446,748, Aug. 10.
Punch. J. G. Barrick. 2,446,801, Aug. 10.
Punch. A. Prester. 2,446,848, Aug. 10.
Pyridinium and piperidinium compounds, Substituted. R. S. Shelton and M. G. Van Campen, Jr. 2,446,792–3, Aug. 10.
Pyrometallurgical treatment of tetrahedrite ores. Y. E. Lebedeff and H. H. Monson. 2,446,656, Aug. 10.
Radio apparatus of replaceable standardized units. G. B. Greene. 2,446,701, Aug. 10.
Radio cabinet having integral handle device. C. P. Geyh. 2,446,756, Aug. 10.
Radio call apparatus, Automatic. W. W. McGoffin. 2,446,943, Aug. 10.
Radio echo apparatus. C. S. Root. 2,446,850, Aug. 10.
Radio receiver noise reducing circuit. C. Wasmansdorff. 2,446,565, Aug. 10.
Rail fastening. J. R. Snyder. 2,446,857, Aug. 10.
Rangefinder, heightfinder, and like optical observation instrument. J. M. Strang and J. H. Bull. 2,446,726, Aug. 10.
Range finder, Shock mounted and stabilized. W. T. Cooke and H. H. Willis. 2,446,529, Aug. 10.
Range measurement. N. W. Bryant, E. E. Crump, M. R. Dungan, and J. Strand. 2,446,630, Aug. 10.
Ratchet type latch. W. H. Krause. 2,446,934, Aug. 10.
Reactance device. L. R. Allison. 2,446,624, Aug. 10.
Receptacle: *See*—
Safety plug-in electrical receptacle.
Reel: *See*—
Thread advancing reel.
Reel winding and line drying device. E. Gopner. 2,446,583, Aug. 10.
Refrigerated dispensing cabinet. M. Rifkin. 2,446,788, Aug. 10.
Refrigeration. C. C. Coons. 2,446,636, Aug. 10.
Refrigerator cabinet and maintaining a layer of cold air therein. L. H. Behrens. 2,446,686, Aug. 10.
Refrigerator cabinet and mounting a compressor and condenser therein. G. K. Iwashita. 2,446,876, Aug. 10.
Reloader testing instrument, Gun. I. E. Knickerbocker. 2,446,539, Aug. 10.
Remote control system. H. O. Peterson. 2,446,607, Aug. 10.
Repeating electric fuse. J. W. Bryan. 2,446,739, Aug. 10.
Resilient gauging gate. P. B. Drane and C. D. Laidley. 2,446,577, Aug. 10.
Resins, Stabilization of vinyl. E. Cousins. 2,446,976, Aug. 10.
Restrictor-suction line assembly. C. W. Savidge. 2,446,853, Aug. 10.
Reversible seat. E. Buker. 2,446,906, Aug. 10.
Rigging, Clasp brake. E. G. Mueller. 2,446,659, Aug. 10.
Ring: *See*—
Grooved slip ring.
Riveter, Hand. W. E. Melick. 2,446,713, Aug. 10.
Rocket charge suspension arrangement. L. A. Skinner. 2,446,560, Aug. 10.
Roll clearer for textile machines, Bottom. W. F. Lee. 2,446,839, Aug. 10.
Saddle, Adjustable cycle. C. A. Jones. 2,446,933, Aug. 10.
Safe, Tumblerless. H. C. Whittall. 2,446,732, Aug. 10.
Safety plug-in electrical receptacle. H. F. Wittig. 2,446,971, Aug. 10.
Safety valve. B. Baxter and S. M. Kandarian. 2,446,626, Aug. 10.
Sandpaper holder. E. G. Anderson. 2,446,625, Aug. 10.
Sash, Screened storm. L. O. Davis. 2,446,743, Aug. 10.
Saw, Chain. A. W. Mall. 2,446,774, Aug. 10.
Scaffold structure, Adjustable. P. A. Wyen. 2,446,972, Aug. 10.
Scaffolding. A. H. Hawes. 2,446,924, Aug. 10.
Scoop and trip mechanism therefor. H. E. Hall. 2,446,827, Aug. 10.
Screen for motor vehicles, Glare. L. A. Bell. 2,446,866, Aug. 10.
Screening and shredding apparatus, Combined wet. W. C. Laughlin. 2,446,772, Aug. 10.
Seat: *See*—
Reversible seat.
Separator: *See*—
Oil separator.
Vertical current pneumatic separator.
Sewer mole. F. Stone. 2,446,964, Aug. 10.
Sewing machine. F. Ashworth. 2,446,569, Aug. 10.
Shaker, Salt and pepper. O. H. Crowell. 2,446,742, Aug. 10.
Sharpener, Knife. F. W. Davis. 2,446,909, Aug. 10.
Shield, Hair drier, A. N. Scola. 2,446,790, Aug. 10.
Shoehorn. F. C. Menenko. 2,446,777, Aug. 10.
Shoe tree with desiccant. H. F. Brush. 2,446,904, Aug. 10.
Shutter for cameras, Focal-plane curtain. C. W. Crumrine. 2,446,638, Aug. 10.
Side rod attachment for trucks. E. Arrighi. 2,446,800, Aug. 10.
Sight and latch for firearms, Rear. W. A. Schaich. 2,446,556, Aug. 10.
Sight for small arms, Adjustable front. G. A. Wilson. 2,446,970, Aug. 10.
Signal control system, Electronic fine and coarse. R. S. Edwards. 2,446,532, Aug. 10.
Signaling mechanism for automobiles and other vehicles, Automatic. H. S. Davis. 2,446,870, Aug. 10.
Signaling system for automobiles and other vehicles. H. S. Davis. 2,446,871, Aug. 10.
Ski, Metal. C. K. Hoerle. 2,446,591, Aug. 10.
Slider, Play. J. H. Buffum. 2,446,905, Aug. 10.
Sludge trap. R. S. Henry. 2,446,587, Aug. 10.
Soap dispenser. W. P. Sykes. 2,446,967, Aug. 10.
Socket, Electric. W. E. Hill and T. D. G. Wintle. 2,446,926, Aug. 10.
Solenoid, Double-acting. R. M. Selbel. 2,446,855, Aug. 10.
Sound record manufacture. C. Eddison. 2,446,578, Aug. 10.
Spacer. K. W. Hildenbrand. 2,446,589, Aug. 10.
Spark plug manufacture. D. H. Corbin. 2,446,908, Aug. 10.
Spatter prevention, Welding. L. Grundner. 2,446,922, Aug. 10.
Spectacle case. G. Swikart. 2,446,966, Aug. 10.
Speedometer, Absolute aircraft. M. Morrison. 2,446,845, Aug. 10.
Splicer, Film. W. C. De Vry. 2,446,576, Aug. 10.
Splitter, Bean and pea pod. G. D. Evernden. 2,446,749, Aug. 10.
Spring opened index. S. I. Berger. 2,446,900, Aug. 10.
Sprinkler head, Lawn. H. R. Goddard. 2,446,918, Aug. 10.
Square, Combination. J. E. Streets, Jr. 2,446,561, Aug. 10.
Stemming device including reciprocating ladder-like grids, Raisin. T. W. W. Forrest. 2,446,646, Aug. 10.
Stereotype plate-cooling machine. P. L. Tollison and C. L. Ricards. 2,446,858, Aug. 10.
Stopper, Bottle. J. A. Murdock. 2,446,661, Aug. 10.
Structural member. T. Collins. 2,446,692, Aug. 10.
Styrene-isobutylene polymer films and resultant product, Treatment of. P. E. Hardy. 2,446,536, Aug. 10.
Substitute leather, Production of. A. Bernard. 2,446,806, Aug. 10.
Substituted pyridinium and piperidinium compounds. M. G. Van Campen, Jr., and R. S. Shelton. 2,446,796, Aug. 10.
Suction evacuator for removing the fluid content of eggs. H. H. Cribb and D. J. R. Both. 2,446,812, Aug. 10.
Suction feeder. E. T. Cameron. 2,446,573, Aug. 10.
Support: *See*—
Abdominal and garter support.
Lawn nozzle support.
Surface effects to thermoplastic sheets, Imparting. T. M. Knowland. 2,446,771, Aug. 10.
Suspension support for electric lighting fixtures. D. J. Biller. 2,446,736, Aug. 10.
Switch: *See*—
Centrifugal switch.
Electric switch.
Switch. O. C. Traver and L. S. Walle. 2,446,859, Aug. 10.
Switch apparatus, Thermal timing. F. W. Hottenroth, Jr. 2,446,831, Aug. 10.
Switch operator, Adjustable. J. M. Wehner. 2,446,681, Aug. 10.
Synthesis of a penicillin-protein reaction product. B. F. Chow. 2,446,974, Aug. 10.
Tank: *See*—
Fuel tank.
Tank construction, Self-sealing fuel. R. A. Crawford. 2,446,811, Aug. 10.
Tank construction, Self-sealing fuel. J. M. Davies, J. J. Shipman, and W. L. Davidson. 2,446,815, Aug. 10.
Tank valve. L. D. James. 2,446,767, Aug. 10.
Tap, Plug. L. Ludwig. 2,446,709, Aug. 10.
Target for a ball game. J. C. Heath. 2,446,702, Aug. 10.

Testing apparatus, Flatness. F. M. Brown. 2,446,628, Aug. 10.
Therapeutic composition. L. Freedman. 2,446,916, Aug. 10.
Thermosetting vinyl chloride-containing plastics. T. H. Rogers, Jr., and R. D. Vickers. 2,446,984, Aug. 10.
Thermostatic safety control for fuel burners. W. A. Ray. 2,446,718, Aug. 10.
Thermostatically controlled electric heater. W. M. Sage. 2,446,555, Aug. 10.
Thermostatically operated electrical switching device. J. E. Sherlock. 2,446,961, Aug. 10.
Thread advancing reel. C. A. Castellan. 2,446,525, Aug. 10.
3-amino steroids and their preparation. P. L. Julian, J. W. Cole, A. Magnani, and E. W. Meyer. 2,446,538, Aug. 10.
3-aryl-2-carbalkoxy piperidines and pyrrolidines and synthesis thereof. F. Bergel, A. L. Morrison, and H. Rinderknecht. 2,446,804, Aug. 10.
Thresher, Tractor-mounted. S. D. Pool and R. D. Downing. 2,446,883, Aug. 10.
Throttle control device operable to control reversible pitch propellers. W. M. Giles and C. M. Kucera. 2,446,700, Aug. 10.
Throttle control for internal-combustion engines. M. Mallory. 2,446,711, Aug. 10.
Thrust gauge. C. N. Hickman. 2,446,537, Aug. 10.
Tier. L. H. Kaupke and R. R. Raney. 2,446,878, Aug. 10.
Tire removing device, Axially shifting type screw shaft actuated. H. Stolz. 2,446,963, Aug. 10.
Toaster, Automatic electric. O. G. Kreer. 2,446,935, Aug. 10.
Toluene with toluene sulfonic acid, Refining. F. T. Wadsworth, R. J. Lee, and P. L. Brandt. 2,446,679, Aug. 10.
Tongs for manual electric arc welding or cutting, Automatic. C. Clio. 2,446,809, Aug. 10.
Tool: *See*—
Clamping tool.
Tool for stripping armor from cables, Bench. C. W. Schwarz and T. Floyd. 2,446,558, Aug. 10.
Toothbrush, Rotary. W. G. Robey. 2,446,955, Aug. 10.
Toy cap gun. M. M. Fujiwara. 2,446,698, Aug. 10.
Toy-carrying and releasing device for kites. P. C. Armbrust. 2,446,684, Aug. 10.
Toy, Construction. J. F. Kershisnik. 2,446,770, Aug. 10.
Trailer prop, Antifriction. J. J. Black. 2,446,517, Aug. 10.
Tramp material, Detecting. R. L. Manegold and I. H. Wynne. 2,446,977, Aug. 10.
Transmission and clutch assembly. C. S. Schroeder. 2,446,854, Aug. 10.
Transmission line, Adjustable. G. J. Yevick. 2,446,863, Aug. 10.
Transmitter for distance determining system. D. Blitz. 2,446,520, Aug. 10.
Trap: *See*—
Sludge trap.
Trap. E. E. Billings. 2,446,687, Aug. 10.
Trimmer, Grain. G. E. Toner. 2,446,968, Aug. 10.
Tube: *See*—
Cathode ray tube. Electrical discharge tube.
Color television tube. Electrometer vacuum tube.
Turbine engine. E. F. Osborne. 2,446,847, Aug. 10.
Two-temperature refrigeration system. E. T. Morton. 2,446,946, Aug. 10.
Typewriter with constantly rotating type wheel, Electrically operated. M. Ruderfer. 2,446,851, Aug. 10.
Ultra high frequency electric discharge device. A. M. Gurewitsch. 2,446,825, Aug. 10.
Unitary andiron locking fuel holder. F. H. Waggoner. 2,446,894, Aug. 10.
Uranium hydride, Preparing. A. S. Newton. 2,446,780, Aug. 10.
Urea-formaldehyde composition. D. E. Cordier. 2,446,867, Aug. 10.
Vacuum cleaner having a floating nozzle. H. A. Shumaker. 2,446,985, Aug. 10.
Valve: *See*—
Check valve. Safety valve.
Float valve. Tank valve.
Valve. C. E. Milner. 2,446,714, Aug. 10.
Vanillic acid, Production of. I. A. Pearl. 2,446,606, Aug. 10.
Vaporizing apparatus for liquefied gases. J. W. Martin. 2,446,941, Aug. 10.
Variable-speed drive for elevators. S. A. Mulkey and G. E. Hatcher. 2,446,660, Aug. 10.
Vertical current pneumatic separator. M. W. Redhead. 2,446,786, Aug. 10.
Vibrator. S. Flam. 2,446,818, Aug. 10.
View finder. J. Briskin and J. Golick. 2,446,738, Aug. 10.
Volatiles from articles involving the use of infra-red lamps, Method and apparatus for removing. H. L. Grapp. 2,446,822, Aug. 10.
Vulcanized filled rubber grinding wheel. F. W. Feiler. 2,446,817, Aug. 10.
Washing machine, Clothes. D. K. Ferris. 2,446,750, Aug. 10.
Watchcase, Watertight. E. Morf. 2,446,603, Aug. 10.
Weft detecting system for convertible looms. R. F. Dion and W. H. Wakefield. 2,446,747, Aug. 10.
Welder with indexing finger control, Electrical resistance. R. M. Glantzer. 2,446,648, Aug. 10.
Welding apparatus. F. H. Johnson. 2,446,932, Aug. 10.
Well flow device. R. O. Walton. 2,446,680, Aug. 10.
Wheel: *See*—
Miniature steering wheel.
Vulcanized filled rubber grinding wheel.
Wheel construction, Dual. V. G. and E. V. Garnett. 2,446,699, Aug. 10.
Windshield wiper, Hydraulic. H. E. Rose. 2,446,611, Aug. 10.
Winder, Spring. J. A. Gates. 2,446,755, Aug. 10.
Wire into ribbon form, Machine for bending. K. E. Queitzsch. 2,446,608, Aug. 10.
Wood splitting machine. C. T. Hanners. 2,446,585, Aug. 10.
Worktable for belt grinders or the like. H. J. Kingsbury. 2,446,597, Aug. 10.
Wrench having a magnetized sectional socket., Ratchet. O. Matson. 2,446,776, Aug. 10.
Yeast, Manufacture of. F. Boinot and J. Boige. 2,446,737, Aug. 10.
Yoke structure, Trolley. W. A. Shearer. 2,446,887, Aug. 10.
Zinc plating process and electrolyte. A. F. Prust. 2,446,983, Aug. 10.

CLASSIFICATION OF PATENTS

ISSUED AUGUST 10, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number=class, second number=subclass, third number=patent number

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Appeals for the District of Columbia

THE LUBRI-ZOL CORPORATION

v.

LAWRENCE C. KINGSLAND, COMMISSIONER OF PATENTS

No. 9576. Decided June 15, 1948

[— F.2d —; — USPQ —]

1. PATENTABILITY — INVENTION — LUBRICATING COMPOSITION.

Where the claims sought relate to a lubricant consisting of ordinary mineral oil plus an additive, and the Commissioner says that the claims define no invention over the lubricant containing an additive described in the patent to D, *Held* that the dispute is not whether the several additives are the same, but whether those mentioned by D reasonably anticipated those here claimed, i. e., would lead a person to experiment with them without the exercise of an inventive sense, and *Held* that this is a question of fact.

2. SAME—SAME—SAME.

Where the expert witness presented by appellant in the court below admitted on cross-examination that one of the additives mentioned by the reference responded precisely to the description of the additive in three of the claims of appellant and was closely similar to several of the other claims, *Held*, under such circumstances, this court cannot reverse the Patent Office and the district court on a question of chemical fact.

APPEAL from the District Court of the United States for the District of Columbia. Civil Action 30,356.

AFFIRMED.

Oscar C. Limbach and *Edwin R. Hutchinson* for Lubri-Zol.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

Before EDGERTON, PRETTYMAN AND PROCTOR, *Associate Justices*

PRETTYMAN, *J.*:

This is a chemical patent case. Appellant claimed a patent on a lubricant which consisted of ordinary mineral lubricating oil plus an additive. The dispute concerns the additive.

[1] Appellant made twelve claims as to additives, which it groups in three groups, one describing the additives by the method of manufacture, one describing them by molecular structure, and the other being general in description but specifying a halogen. Generally speaking, the additives described were derivatives of a phosphorous acid.

The Commissioner says that these claims were anticipated by two patents, principally one to inventor Downing. Downing's patent was for a lubricant in which the additives were derivatives of acid phosphorous, and he specifically mentioned dilorol cresyl phosphate and tricresyl phosphate. The Commissioner says that the present claims define no invention over the latter additive and are literally anticipated by the former.

The dispute is not whether the several additives are the same, but whether those mentioned by Downing reasonably anticipated those here claimed, i. e., would lead a person to experiment with them without the exercise of an inventive sense. This is, of course, a question of fact.

Obviously, the dispute is a matter of chemistry and the answer is a matter of chemical fact.

The Examiner and the Board of Appeals twice (once upon appeal and again upon reconsideration) made definite findings that the additives described in the present claims were anticipated by Downing's examples, especially his mention of tricresyl phosphate and dilorol cresyl phosphate.

[2] In the court below, one expert witness was presented by appellant, and he described in detail the molecular structure and the process of derivation of the various additives involved. But on cross examination he admitted that dilorol cresyl phosphate (mentioned by Downing) is an alkylated aromatic ester of phosphoric acid containing an alkyl group having at least two carbon atoms (the precise description in three of the claims of appellant and closely similar to several of the other claims). Under such circumstances, this court cannot reverse the Patent Office and the district court on a question of chemical fact.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

STANDARD LABORATORIES, INC.

v.

THE PROCTER & GAMBLE COMPANY

No. 5456. Decided May 4, 1948

[167 F.2d 1022; 77 USPQ 617]

1. TRADE-MARK—OPPOSITION—BASED UPON REGISTERED MARK.

Where appellant introduced no evidence other than a copy of the certificate of registration of the word "Stim" as a trade-mark, which copy as was held by the tribunals of the Patent Office, constituted prima facie evidence of appellant's ownership, *Held* that it cannot be accepted as evidence of other facts alleged in its notice of opposition but challenged by appellee.

Vol. 613 • No. 2 Tuesday, August 10, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

2. SAME—SAME—GOODS OF SAME DESCRIPTIVE PROPERTIES—SHAMPOO AND DANDRUFF PREPARATION.

Held that a preparation for the treatment of dandruff and the like is generally regarded as something different from a mere shampoo preparation applied as a hair cleaner.

3. SAME—SAME—"STRAN" AND "STIM."

"Stran" and "Stim" are so lacking in resemblance as to appearance, sound or meaning that there is no likelihood of confusion in trade.

APPEAL from the Patent Office. Opposition No. 23,896.

AFFIRMED.

John M. Leach (*James M. Mason* of counsel) for Standard.

Erastus S. Allen (*Allen & Allen* of counsel) for Procter.

GARRETT, *P. J.*:

This case is before us by appeal from the decision of the Commissioner of Patents, acting through the First Assistant Commissioner, reversing the decision of the Examiner of Trade-Mark Interferences sustaining the opposition of appellant to appellee's application for registration, under the Trade-Mark Act of February 20, 1905, of the word "Stran" for use as a trade-mark for a shampoo preparation, 71 USPQ 210.

Appellant's opposition, notice of which is in conventional form, is based upon its ownership, by assignment from the original registrant, of the registration of the word "Stim" (registered under the Trade-Mark Act of February 20, 1905) as a trade-mark for use on preparations for falling hair, dandruff and itching scalp.

[1] Although appellee's answer to the notice of opposition challenged practically all the allegations of fact in the notice, appellant introduced no evidence other than a copy of the Certificate of Registration presented following notice given under Patent Office Rule 154(*e*). This copy, as was held by the tribunals of the Patent Office, constituted prima facie evidence of appellant's ownership but it cannot be accepted as evidence of other facts alleged in its notice of opposition but challenged by appellee. Appellee presented testimony bearing upon the researches made on its behalf before filing the application for registration, but this testimony, except to the extent that it tends to support the statement of the application that the merchandise is a shampoo, is of no particular aid in determining the issue here involved, which, briefly stated, is whether the concurrent use of the marks upon the goods of the respective parties would be likely to cause confusion in the mind of the public or deceive purchasers as to origin.

In the course of his decision the Examiner of Trade-Mark Interferences said:

> Applicant's application and the testimony adduced on applicant's behalf indicate that applicant sells a shampoo. Opposer's registration, on the other hand, indicates that it deals in a preparation for falling hair, dandruff and itching scalp. Doubtless these goods are specifically different in their composition, nevertheless, both are hair preparations sold over the same counters to the same class of purchasers and they are believed to be so intimately related in their trade appeal as to constitute clearly goods of the same descriptive properties.

With respect to the marks, he expressed the belief that "the similarities predominate to such an extent that the concurrent use of these marks on the goods in question is reasonably likely to result in confusion in trade."

The First Assistant Commissioner pointing out that "there is no evidence on the subject," and citing *Lever Brothers Company* v. *Butler Manufacturing Company*, 24 CCPA (Patents) 1000, 88 F.2d 842, 33 USPQ 38, 483 O. G. 464; expressed doubt as to the "propriety" of the Examiner's finding that the goods are sold over the same counters to the same class of purchasers, but said further:

> • • • in any event, the specific differences between applicant's product, which is essentially a cleansing agent, and opposer's product, which is essentially a medicinal preparation, must be considered in resolving the question of possible confusion. • • •

As to the words themselves, the First Assistant Commissioner was of opinion that the words "Stran" and "Stim" "have very little in common" and, in effect, he held that because of the differences in the goods and the difference in the words their concurrent use would not result in confusing the public or deceiving purchasers.

[2] We find ourselves in agreement with the conclusion reached by the First Assistant Commissioner. In the absence of any evidence introduced by appellant except the registration upon which it relies, nothing can be determined as to the actual chemical properties of its goods, but we think it not improper to say that a preparation for the treatment of dandruff and the like is generally regarded as something different from a mere shampoo preparation applied as a hair cleanser. In any event, we feel confident that the marks themselves are so lacking in resemblance as to appearance, sound or meaning that there is no likelihood of confusion in trade.

The decision of the First Assistant Commissioner, reversing that of the Examiner of Trade-Mark Interferences, therefore, is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE HATCH ET AL.

No. 5424. Decided April 6, 1948. Petition for rehearing denied June 1, 1948

[167 F.2d 1003; 77 USPQ 580]

1. PATENTABILITY—CLAIMS COPIED FROM A PATENT—CONSTRUCTION THEREOF.

Where both the Primary Examiner and the Board of Appeals referred to the patent in which the appealed claims originated in interpreting an expression therein, *Held* that such a reference is proper if the claims are ambiguous or are susceptible of more than one interpretation.

2. SAME—SAME—SAME—ACIDIC KAOLINITIC TYPE CLAY.

Held that the expression "acidic kaolinitic type clay" is susceptible of more than one meaning, and that, under such circumstances, it was proper for the Examiner and the Board to construe the appealed claims in the light of the patent in which they originated.

3. SAME—DISCLOSURE—SUFFICIENCY—RULE OF INHERENCY.

Held that where there is a lack of express disclosure that kaolin is an acidic substance, appellants, to succeed, must show that kaolin is inherently acidic as it comes from the mine, and it is not sufficient to show that one following the teaching of appellants' application might sometimes use clay of the type called for by the appealed claims.

4. SAME—SAME—SAME—SAME.

Held that appellants have failed to sustain their burden of proving that the kaolinitic type of clays disclosed in their application will inherently be acidic as mined, and that, therefore, the appealed claims are not supported by appellants' original disclosure.

5. APPEAL—MATTERS INVOLVING PATENT OFFICE PRACTICE.

Matters involving Patent Office practice and rulings of the Patent Office tribunals in such matters will not be disturbed by this court unless they are manifestly wrong.

6. SAME—SAME—PETITIONS TO THE COMMISSIONER.

Where the reasons of appeal allege error in the action of the Commissioner in dismissing a petition requesting that he direct that affidavits filed after the Board's decision be admitted, *Held* that it is elementary that this court is without authority to review the action of the Commissioner in cases of this character.

7. PATENTABILITY—COATING HYDRAULIC CEMENT PRODUCT.

Certain claims to a method of coating a hydraulic cement product involving the use of a composition containing an acidic kaolinitic type clay *Held* properly rejected as not supported by the disclosure in appellants' application.

APPEAL from the Patent Office. Serial No. 591,242.

AFFIRMED.

William H. Abbott (*Carpenter, Abbott, Coulter & Kinney* of counsel) for Hatch et al.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting all the claims—19, 21, 41, 43, 45, and 49—in appellants' application for the reissue of a patent relating to the coating of calcinable lithic slabs.

The appealed claims were copied from the patent to Greider et al., No. 2,350,030, and have been rejected on the ground that they are not supported by the disclosure of the application on which appellants' patent was granted, and therefore cannot properly be included in appellants' application.

Claim 19, which is representative of the appealed claims, reads:

> 19. A method of coating an hydraulic cement product which comprises applying to the product as a coating an aqueous composition that contains soluble silicate and an acidic kaolinitic type clay, and heat curing the coating to insolubilize soluble silicate contained therein at a temperature below 750° F.

Appellants' application relates to a process which includes coating cement products with a composition containing a soluble silicate and a clay, and to the product of that process. Kaolin is specified as the preferred type of clay. The details of the process and product need not be considered, since the rejection of the appealed claims relates solely to the type of clay used. Each of the appealed claims contains the statement that the clay is of an "acidic kaolinitic type" and the Patent Office tribunals held that appellants' original application does not disclose such a clay.

[1] Both the Primary Examiner in his statement, and the Board of Appeals in its decision on a request by counsel for appellants for reconsideration, referred to the Greider et al. patent, in which the appealed claims originated, in interpreting the expression "acidic kaolinitic type clay." Such a reference is proper, if the claims are ambiguous or are susceptible of more than one interpretation. *Ernest M. Brogden* v. *Henry B. Slater*, 17 CCPA (Patents) 1240, 40 F.2d 988, 5 USPQ 145, 399 O. G. 630; and *Neumair* v. *Malocsay*, 22 CCPA (Patents) 1349, 77 F.2d 622, 25 USPQ 468, 461 O. G. 733. Although the Examiner and the Board did not expressly state that the appealed claims are ambiguous, they were evidently of that opinion, since, otherwise, they could not properly have resorted to the patent in construing the claims.

[2] It seems clear that the expression "acidic kaolinitic type clay" is susceptible of more than one meaning. For example, it might mean that the clay, in its original condition, is acidic, or that it has been made acidic by treatment between the time when it is mined and the time when it is used in the coating. Under such circumstances, it was proper for the Examiner and the Board to construe the appealed claims in the light of the disclosure of the Greider et al. patent. That patent contains the following very clear statement as to what is meant by acidic clay:

> By "acidic" clay, as this term is used herein, is meant a clay wherein the clay substance as mined from clay deposits is acidic in character.

In view of the quoted statement it is evident that the appealed claims are limited to the use of kaolinitic clays which are acid as they come from the mine, and that unless appellants' original application contains a disclosure of the use of such clays, the rejection of the appealed claims was proper.

[3] In support of their contention that they are entitled to make the appealed claims, counsel for appellants rely on the disclosure in appellants' original application that kaolin is a preferred type of clay for use in their process and product. Kaolin is, of course, a "kaolinitic type clay" but it is conceded by counsel for appellants in their brief that appellants "did not in so many words state that kaolin is an acidic substance." In view of this lack of express disclosure, counsel for appellants, if they are to succeed in this appeal, must show that kaolin is inherently acidic as it comes from the mine. It is not sufficient to show that one following the teaching of appellants' application might sometimes use clay of the type called for by the appealed claims. See *Brand* v. *Thomas*, 25 CCPA (Patents) 1053, 96 F.2d 301, 37 USPQ 505, 496 O. G. 561.

The patent to Greider et al. contains the statement that:

> Most kaolinitic type clays occur in deposits which contain among other impurities substantial quantities of alkali or alkaline earth compounds that impart to the clay slightly alkaline characteristics, as shown by a pH of about 8 or higher.

The following statement to the same general effect appears in an affidavit by Nelson W. Taylor, which was filed by counsel for appellants:

Kaolin is a natural product and can become contaminated with alkaline salts in the soil.

[4] The statements hereinbefore referred to clearly indicate that kaolin, as mined, is by no means invariably acidic. No showing has been made which would justify a holding that those statements are incorrect. The evidence relied on by counsel for appellants relates principally to clays which have been washed or purified, rather than in the "as mined" condition, and falls considerably short of establishing that kaolin is invariably, or even usually, acidic as it comes from the mine. Appellants, therefore, have failed to sustain their burden of proving that the kaolinitic type of clays disclosed in their application will inherently be acidic as mined. We are of opinion, therefore, that the appealed claims are not supported by appellants' original application.

Counsel for appellants, in their brief and in their reasons of appeal to this court, allege certain errors in procedure by the Patent Office tribunals. The record shows that the Board, in its original decision, referred to a publication by Riess, which was not previously of record, and stated that "This [the properties of kaolin] and other matters are commented on" in the Riess publication. It is not clear that the Board relied on the publication as a new basis for rejection. The Board also said that "We are not satisfied * * * that kaolin is necessarily an acidic kaolinitic type of clay or is essentially kaolinite."

Counsel for appellants requested reconsideration of the Board's decision and presented additional affidavits, which the Board refused to consider "as affidavits" although it did consider them "as argument," without remanding the case to the Examiner. Counsel for appellants further requested that the Board cite authority in support of its opinion that kaolin was not necessarily acidic. This the Board refused to do. A further request for reconsideration was filed but, before it was acted on by the Board, counsel for appellants filed a notice of appeal to this court and the Board thereupon declined to consider this request for reconsideration, holding that it had lost jurisdiction of the case in view of the filing of the notice of appeal. Appellants then petitioned the Commissioner to direct that the affidavits filed after the Board's decision be admitted. The petition was dismissed by the Commissioner of Patents on the ground that jurisdiction of the case had been transferred to this court by the filing of the notice of appeal.

[5] The reasons of appeal filed by counsel for appellants allege that the Board erred in refusing to admit the affidavits filed after its original decision and in failing to cite its authority for the statement that it was not satisfied that kaolin is inherently acidic. Those allegations involve matters of Patent Office practice and rulings of the Patent Office tribunals in such matters will not be disturbed by this court unless they are manifestly wrong. See *In re Walter M. Austin*, 17 CCPA (Patents) 1202, 40 F.2d 756, 5 USPQ 285, 399 O. G. 625. No such error is found in the instant case.

[6] Counsel for appellants also filed "supplemental" reasons of appeal alleging error in the action of the Commissioner in dismissing the petition hereinbefore referred to. It is elementary that this court is without authority to review the action of the Commissioner in cases of this character. See *In re Aristote Mavrogenis*, 19 CCPA (Patents) 1063, 57 F.2d 361, 13 USPQ 25, 421 O. G. 547, and *In re Slate*, 27 CCPA (Patents) 810, 108 F.2d 268, 44 USPQ 123, 515 O. G. 560.

The various arguments advanced by counsel for appellants have been given careful consideration, but we are of opinion that the tribunals of the Patent Office were right in rejecting the appealed claims. Accordingly the decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE LOBDELL

No. 5430. Decided April 6, 1948

[167 F.2d 634; 77 USPQ 377]

1. APPEAL TO COURT—REASONS OF APPEAL—REASON NOT RELIED UPON IN BRIEF—NOT ENTITLED TO CONSIDERATION.

While appellant in its reasons of appeal alleged error by the Board in affirming the action of the Primary Examiner rejecting the claims as being unpatentable over both references taken together, and he does not mention in his brief such reason of appeal, *Held* he is not entitled to be heard in that respect, since it is well settled in this court that a reason of appeal not relied upon in the brief will not be considered.

2. PATENTABILITY—EVIDENCE OF—COMMERCIAL SUCCESS—MUST BE OF RECORD.

Where appellant attached to his brief an appendix seemingly intended to show commercial success of his device, but there is nothing in the record to indicate that any such showing was made before the Examiner or before the Board, *Held* that if there was such evidence, it should have been made part of the record.

3. SAME—SAME—SAME—SAME.

Commercial success even though properly in the record, is immaterial if it is clearly shown that there is lack of patentability over the references.

4. SAME—ANTICIPATION—EQUIVALENTS—SILVER-SOLDERING AND BRAZING.

Where the reference relied upon discloses brazing and appellant's application discloses brazing or silver-soldering, and where the appealed claims are not limited to the use of silver-soldering, *Held* that, even though silver solder had been a limitation therein, the disclosure of brazing in the reference negatives the patentability of these claims.

5. SAME—SAME—COMPARISON WITH ALLOWED CLAIMS.

Where appellant argues that the involved claims should be allowed because other claims were allowed in his application, *Held* that rejected claims cannot be allowed merely for the reason that a substantially similar claim in the same or other applications had been allowed in the Patent Office.

6. SAME—SAME—RESULTS NOT DISCLOSED IN REFERENCE.

Where the patent relied upon discloses the use of cast iron as clearly as other materials, and where the appealed claims are limited to the use of cast iron, and appellant contends that it is the use of cast iron that produces the improved results, *Held* that the patentee was under no obligation to discuss results peculiar to cast iron, and that appellant is not entitled to have claims allowed merely for the reason that in his application he sets out results accruing from the use of cast iron in his structure.

7. SAME—CRITICAL LIMITATION—ORIGINAL DISCLOSURE.

Held that if the limitation in the claims that the cast iron possesses "a majority of its carbon content in the uncombined form" is to be considered as imparting patentability, it must appear from appellant's original disclosure that such carbon content is critical.

8. SAME—TOOL.

Certain claims for a tool comprising a carbide tip portion cemented to a cast iron support *Held* properly rejected in view of the prior art.

APPEAL from the Patent Office. Serial No. 534,951.

AFFIRMED.

Paul M. Geist (*Robert C. Watson* of counsel) for Lobdell.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

JACKSON, *J.*:

Appellant has appealed from a decision of the Board of Appeals of the United States Patent Office, affirming that of the Primary Examiner, rejecting claims 8, 9, and 10 of an application for a patent "For Tools" for want of patentability over the prior art, consisting of a patent to Emmons et al., 1,187,373, November 8, 1932, and "The Making, Shaping and Treating of Steel, Fifth Edition," by C. B. Francis, published in 1940 by the Carnegie-Illinois Steel Corporation, Pittsburgh, Pa., pages 237 and 239. Seven claims were allowed.

The involved claims read as follows:

8. A tool having a cutting tip portion of a relatively brittle material; a tip-supporting portion made from cast iron having a majority of its carbon content in the uncombined form; and a homogeneous bond between said tip and tip-supporting portion including a strain-resistant layer of bonding material having a melting point lower than either the tip or tip-supporting materials, whereby tendencies toward tip fracture during normal use are substantially eliminated.

9. A tool having a cemented carbide tip portion; a tip-supporting portion made from cast iron having a majority of its carbon content in the uncombined form; and a strain resistant layer of bonding material between said tip and tip-supporting portion, whereby tendencies toward tip fracture during normal use are substantially eliminated.

10. A tool comprising in combination, a cutting tip portion made from a cemented carbide; a tip-supporting portion made from a cast iron having a silicon content up to about 2.25% whereby uncombined carbon is present in substantial quantities; and a layer of bonding material between said tip and tip-supporting portion.

The invention discloses a metal machining tool comprising a cutting tip of any one of a number of materials, such as high-speed cutting tool steel, cemented carbides, non-ferrous alloys of chromium and cobalt and the like bonded to a cast iron shank or support.

The patent to Emmons et al. relates to metal cutting tools such as reamers and the like. A tool is disclosed comprising on the tip thereof a hard metal alloy, i. e. tungsten carbide for cutting means. The cutting tip is secured to the tool body by brazing or welding. The body may be composed of various materials among which cast iron is mentioned.

The cited publication has reference to iron castings and under the paragraph entitled "Gray Iron Castings" a composition of such castings is shown to contain silicon from "0.5% to 3%."

The Examiner in his statement, dated April 20, 1945, rejected the involved claims as unpatentable over the Emmons et al. patent in view of the "Gray Iron Castings" paragraph in the publication. A second statement by the Examiner, dated May 20, 1946, appears in the record, presumably in answer to a petition by appellant. There is nothing in the record to indicate why the second statement was made. It answers several arguments apparently made by counsel for appellant after the first decision, and it discusses the original decision in more detail.

The Board of Appeals in its decision agreed with the reasoning of the Examiner.

[1] While appellant in its reasons of appeal alleged error by the Board in affirming the action of the Primary Examiner rejecting the claims as being unpatentable over both references taken together, he does not mention in his brief such reason of appeal. Consequently he is not entitled to be heard in that respect. It is well settled in this court that a reason of appeal not relied upon in the brief will not be considered. *Boileau* v. *Godfrey*, 31 CCPA (Patents) 723, 730, 138 F.2d 67, 59 USPQ 149, 557 O. G. 417.

[2], [3] Appellant attached to his brief an appendix seemingly intended to show commercial success of his device. There is nothing in the record to indicate that any such showing was made before the Examiner. The Board made reference to appellant's "allegation of commercial success of the invention," but there is nothing in the record to indicate there was any such evidence before the Board. If there was such evidence, it should have been made part of the record. *In re Britton*, 28 CCPA (Patents) 726, 115 F.2d 249, 47 USPQ 265, 523 O. G. 3; *Vickery* v. *Barnhart*, 28 CCPA (Patents) 979, 118 F.2d 578, 49 USPQ 106, 529 O. G. 245. Commercial success, however, even though properly in the record, is immaterial if it is clearly shown that there is lack of patentability over the references.

[4] Appellant in his brief contends that claims 8 and 9 are patentable for the reason that they contain a limitation to a "strain-resistant layer or bonding material," which he alleges is neither shown nor suggested in the patent to Emmons et al. Appellant in his specification with respect to the cutter tip and its supporting shank merely describes that they are preferably brazed or silver-soldered in place by methods "well known in the art." In the patent to Emmons et al., the cutter is secured to its support by a brazing or welding method. There is nothing

in claims 8 and 9 which would limit the welding to the use of silver solder and it is clear that appellant has shown silver-soldering and brazing to be equivalents. Therefore, brazing, as shown in the Emmons et al. patent, negatives the patentability of those claims even though silver solder had been a limitation therein. *In re Withington*, 26 CCPA (Patents) 1290, 104 F.2d 192, 41 USPQ 742, 508 O. G. 296. Therefore, since the structure in the Emmons et al. patent discloses bonding material such as is disclosed by appellant, his contention can not be upheld.

[5] It has been held many times by this court that rejected claims can not be allowed merely for the reason that a substantially similar claim in the same or in other applications had been allowed in the Patent Office. Therefore, we may not consider the argument of appellant that the involved claims should be allowed because other claims were allowed in his application. *In re Oakes*, 31 CCPA (Patents) 833, 837, 140 F.2d 669, 60 USPQ 453, 561 O. G. 181.

Claim 10 contains the limitation that the cast iron of the tip-supporting portion of the tool has a silicon content up to about 2.25%. That limitation does not lend patentability to the claim for the reason that the publication reference discloses that gray cast iron may have such silicon content.

[6] Appellant argues that the disclosure in the Emmons et al. patent of the use of cast iron in the cutter-supporting portion of the tool is accidental. In that patent the use of cast iron is just as clearly disclosed as wrought iron, cast steel, malleable iron, brass, and bronze. The patentee was under no obligation to discuss results peculiar to the use of cast iron, and appellant is not entitled to have claims allowed merely for the reason that in his application he sets out results accruing from the use of cast iron in his structure. It may well be, as appellant contends, that it is the use of cast iron that produces the improved results he claims, but the use of such material can not lend patentability to the involved claims for the reason that the patent to Emmons et al. discloses the use of the same material in the same relationship. *General Electric Co. v. Jewel Incandescent Lamp Co. et al.*, 326 U. S. 242, 249, 582 O. G. 623.

[7] If the limitation in the claims that the cast iron possesses "a majority of its carbon content in the uncombined form" is to be considered as imparting patentability, it must appear that such carbon content is critical. There is no showing or teaching of criticalness in that respect in appellant's original disclosure. His specification does state that the material contains "uncombined carbon in substantial quantities." But a substantial quantity may be very much less than a majority of carbon content.

[8] It is clear that the Emmons et al. patent discloses the use of cast iron in the same fashion as it is used by appellant. The publication clearly teaches that cast iron commonly contains a silicon content of from "0.5% to 3%."

We find no reason to disturb the decision of the Board of Appeals and its decision is accordingly affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

MCKESSON & ROBBINS, INCORPORATED

v.

WILLIAM ISENBERG

No. 5436. Decided April 6, 1948

[— F.2d —; 77 USPQ 382]

1. TRADE-MARKS—OPPOSITION—RIGHT TO REGISTRATION.
It is not only the right but the duty of the tribunals of the Patent Office to determine ex parte and without reference to the issues raised by the notice of opposition, whether a mark is entitled to registration.

2. SAME—SAME—SAME.
Where party opposing the registration of the mark "Shavel" for razor blades did not plead the use of its mark on razor blades or similar article, *Held* the Examiner of Interferences and the Commissioner of Patents were not obliged to consider the allegation of descriptiveness of the mark sought.

3. SAME—SAME—SAME.
In the ex parte consideration of the right of an applicant to register his mark, it is the Commissioner of Patents and not the opposer who represents the public and his decision is final so far as the opposer is concerned. Therefore, appellant here cannot invoke error on the part of the Patent Office in its not ruling that the interest of the public at large requires rejection of the application for registration based on descriptiveness.

4. SAME—SAME—GOODS OF THE SAME DESCRIPTIVE PROPERTIES—RAZOR BLADES AND SHAMPOO NOT.
Although the goods of the parties, razor blades and shampoo, are sold in the same stores to the same general public, *Held* that the goods are so dissimilar in appearance, use, and structure that we are not able to hold that they are of the same descriptive properties and that the use by the parties of the marks on their respective goods would be likely to confuse, mislead, or deceive the purchasers.

APPEAL from the Patent Office. Opposition No. 23,979.

AFFIRMED.

Samuel Herrick for McKesson.

No appearance for Isenberg.

JACKSON, *J.*:

Appellee, doing business as Columbia Razor Blade Company, filed an application in the United States Patent Office for registration of the trade-mark "SHAVEL" as applied to razor blades alleging use of the mark since June 28, 1944. On January 9, 1945, notice of said application was duly published in the OFFICIAL GAZETTE. On January 31, 1945, appellant filed its notice of opposition to said registration relying upon its ownership and registration of the trade-mark "SHAV" as applied to shampoo. In its notice of opposition, appellant's allegations related to likelihood of confusion in trade under section 5 of the Trade-Mark Act of 1905, and it was further alleged that the mark sought to be registered is not registerable under that act for the reason that it is descriptive of the goods to which it is applied.

Appellee in his answer denied that the mark sought to be registered is so similar to appellant's mark as to be likely to cause confusion in the mind of the public and to deceive purchasers and also denied that the goods of the parties possessed the same descriptive properties. The allegation in the notice of opposition with respect to the descriptiveness of appellee's mark was not traversed.

The Examiner of Interferences dismissed the notice of opposition and adjudged ex parte that appellee was entitled to the registration he sought. As to whether or not the goods of the parties possessed the same descriptive properties, the Examiner considered the contention of appellant that the goods are related because both are likely to be used in the bathroom and may be used one after the other. However, it seemed to the Examiner that razor blades and shampoo possess such different essential characteristics and different trade appeal that purchasers thereof would not be likely to assume that they had a common source of origin. He, therefore, held them to be goods of different descriptive properties.

With respect to appellant's allegation that appellee's mark is descriptive of his razor blades, the Examiner stated that since appellant had neither pleaded nor proved that it sells razor blades or like products, that it had not established damage or the right to intervene on the basis of descriptiveness, citing the case of *The Kroger Grocery & Baking Company* v. *Maine Potato Growers*, 63 USPQ 184.

In its appeal to the Commissioner of Patents, appellant alleged error in dismissing the notice of opposition and also in the ex parte holding of the Examiner that appellee was entitled to register his mark. The Commissioner of Patents affirmed the decision of the Examiner, 71 USPQ 186. He stated, citing the cases of *In re Laskin Brothers, Inc.*, 32 CCPA (Patents) 820, 146 F.2d 308, 64 USPQ 225, 572 O. G. 353, and *Skol Company, Inc.* v. *Olson*, 33 CCPA (Patents) 715, 151 F.2d 200, 67 USPQ 96, 582 O. G. 491, that the courts have laid down a liberal interpretation with respect to "merchandise of the same descriptive properties," and also pointed out that products with which substantially identical trade-marks are used may so differ in their relationship to each other that there is no likelihood of confusion or deception, citing *Kraft Phenix Cheese Corp.* v. *Consolidated Beverages, Ltd.*, 27 CCPA (Patents) 803, 107 F. 2d 1004, 44 USPQ 41, 514 O. G. 827.

The Commissioner, stating that neither of the parties had filed testimony nor entered into a stipulation of facts, noted that there is nothing in the record concerning the relationship of the involved goods in trade and use or other facts. From the decision of the Commissioner, this appeal was taken. Appellee has made no appearance in this court by either counsel or brief.

There is nothing in the decision of the Commissioner expressly ruling upon the holding by the Examiner of Interferences with respect to appellant's right under its pleadings concerning the descriptiveness of appellee's mark.

Appellant in its reasons for appeal to this court alleged error on the part of the Commissioner in not ruling that the interest of the public at large requires rejection of the involved application by reason of appellant's claim that appellee's mark is descriptive of the goods with which it is used.

[1] We have held many times that it is not only the right but the duty of the tribunals of the Patent Office to determine ex parte and without reference to the issues raised by the notice of opposition, whether a mark is entitled to registration. *Dubonnet Wine Corp.* v. *Ben-Burk, Inc.*, 28 CCPA (Patents) 1298, 1301, 1302, 121 F.2d 508, 50 USPQ 76, 533 O. G. 753; and *Sparklets Corporation* v. *Walter Kidde Sales Company*, 26 CCPA (Patents) 1342, 1345, 104 F.2d 396, 42 USPQ 73, 76, 509 O. G. 533.

[2] The Examiner in the instant case, as hereinabove noted, held ex parte that appellee is entitled to the registration of his mark. The Commissioner did not reverse such holding and under the facts in this case was not obliged to do so. *Goldsmith Bros.* v. *Atlas Supply Co.*, 32 CCPA (Patents) 1001, 1003, 1004, 148 F.2d 1016, 65 USPQ 378, 577 O. G. 312. In that case we stated that since appellant had not pleaded the use of its mark on motor oil or its registration for polishing wax used on automobiles, that evidence in respect thereto could not be deemed pertinent, and that the Examiner of Interferences and Commissioner properly refused to consider it. In the instant case, appellant did not plead the use of its mark on razor blades or similar articles, and, therefore, the Examiner of Interferences and the Commissioner of Patents were not obliged to consider the allegation of descriptiveness of the mark of appellee.

[3] Furthermore in the case of *Revere Paint Company* v. *20th Century Chemical Company*, 32 CCPA (Patents) 1096, 1101, 150 F.2d 135, 66 USPQ 65, 581 O. G. 167, we held that in the ex parte consideration of the right of an applicant to register his mark, it is the Commissioner of Patents and not the opposer who represents the public and his decision is final so far as the opposer is concerned. Therefore, appellant here can not invoke error on the part of the tribunals of the Patent Office in its not ruling that the interest of the public at large requires rejection of the application for registration based on descriptiveness.

[4] It is clear that shampoo and razor blades, the former being a pharmaceutical preparation and the latter being machine fabricated cutting instru-

ments, are made of distinctly different materials. With respect to use, the shampoo is essentially for cleansing the hair on the head, and razor blades have for their chief function the shaving of beard from the face. It is true that in use the goods of the parties, particularly by the male members of the human family, are employed to make neat and clean the hair and face of the users. The goods of the parties are sold in the same drug stores to the same general public. However, in our opinion the goods are so dissimilar in appearance, use, and structure that on the meager record before us we are not able to hold that they are of the same descriptive properties and that the use by the parties of their marks on their respective goods would be likely to confuse, mislead, or deceive the purchasers.

For the reasons hereinabove given, the decision of the Commissioner is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

NOTICES

Adjudicated Patents

(D. C. Calif.) Blanchard patent, No. 2,199,611, for device intended for use in conjunction with operation of dials and outlets for steam boilers, claims 1, 2, and 5 *Held* valid but not infringed. *Blanchard* v. *J. L. Pinkerton, Inc.*, 77 F. Supp. 861, 78 USPQ —.

(D. C. Calif.) Blanchard patent, No. 2,233,395, for improvements in safety devices for boilers, *Held* valid but not infringed. *Id.*

(D. C. Mass.) Storck reissue patent, No. 19,951, for apparatus for duplicating printing matter, *Held* invalid. *Standard Duplicating Machines Company, Inc.*, v. *American Business Machines Corporation*, 77 F. Supp. 871; 77 USPQ 529.

Adverse Decisions in Interferences

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed.

Pat. 2,411,106, T. A. Petry and G. L. Payne, Separation of styrene from ethyl benzene by azeotropic distillation, decided July 8, 1948, claims 1, 2, 3, 4 and 5.

Pat. 2,411,660, F. W. Manning, Method of making filter cartridges, abrasive sheets, scouring pads and the like, decided July 14, 1948, claims 1 and 8.

Pat. 2,413,108, W. B. Latchford and L. C. Holmes, Recording and reproducing head for magnetic recording, decided July 9, 1948, claim 1.

Disclaimers

2,389,161.—*Howard M. McCoy*, Fairfield, Ohio. CONTROLLABLE PITCH CHANGE MECHANISM FOR DUAL ROTATION PROPELLERS. Patent dated Nov. 20, 1945. Disclaimer filed July 12, 1948, by the inventor.

Hereby enters disclaimer to claim 13 of said patent.

2,419,100.—*Virgil L. Weaver*, Greenwood, Mass. DYNAMOMETER TYPE ELECTRICAL MEASURING INSTRUMENT. Patent dated Apr. 15, 1947. Disclaimer filed June 24, 1948, by the assignee, *General Electric Company.*

Hereby enters this disclaimer of claim 2 of said patent.

Changes in Subscription Prices

The Superintendent of Documents of the Government Printing Office has advised that effective with the first issue in August 1948, the subscription prices of Decision Leaflets and Trade-Mark Supplements will be changed as follows:

Decision Leaflets

	From	To
Domestic	$2.00 per year	$2.50 per year
Foreign	3.50 per year	4.25 per year
Single copy	.05	.05

Trade-Mark Supplements

	From	To
Domestic	$6.00 per year	$8.00 per year
Foreign	8.00 per year	10.00 per year
Single copy	.15	.20

C. E. HAGLUND,
Executive Officer.

Public Laws 690 and 220

The following second tabulation summarizes and gives references to the notices which have appeared in the OFFICIAL GAZETTE from time to time with respect to Public Laws 690 and 220, and also gives notice of additional countries with respect to which reciprocity has been recognised.

As stated in the first summary (606 O. G. 527) the absence of a particular country from this list does not indicate that the extensions provided by Public Laws 690 and 220 are refused to citizens of that country, but only indicates that a notice has not been published in the OFFICIAL GAZETTE. In the case of some countries additional information concerning the corresponding laws is being sought through official channels; in the case of other countries, the Patent Office has received no information with respect to the corresponding laws; and in the case of some countries all information received indicates that there is no corresponding law. Applications by citizens of countries with respect to which a notice has not been published will be considered individually when they are taken up for action.

LAWRENCE C. KINGSLAND,
Commissioner of Patents.

July 23, 1948.

Notices Regarding Reciprocity

Country	Time limit for filing applications, etc., in United States	Publication of notice in Official Gazette
Austria	Feb. 29, 1948	606 O. G. 527, Jan. 27, 1948.
Belgium	do	602 O. G. 362, Sept. 16, 1947.

[4] Time varies according to circumstances but not later than February 29, 1948.

Notice of Tentative Recordation of Trade Name

[T. D. 51965]

Tentative recordation of trade name under section 42, Trade-Mark Act of July 5, 1946, and section 11.16, as amended, Customs Regulations of 1943

TREASURY DEPARTMENT
OFFICE OF THE COMMISSIONER OF CUSTOMS
Washington, D. C., July 12, 1948

To Collectors of Customs and Others Concerned:

An application has been filed in the Treasury Department for the recordation of the following-described trade name under the provisions of section 42, Trade-Mark Act of July 5, 1946, and section 11.16, as amended, Customs Regulations of 1943:

"Philco Corporation," owned by the Philco Corporation, a corporation of Philadelphia, Pennsylvania, Tioga and C Streets, Philadelphia 34, Pennsylvania, which is applied to, and used in connection with the sale of, radio receiving sets, apparatus and parts thereof; television receiving sets, apparatus and parts thereof; refrigerators and freezers, apparatus and parts thereof; phonographs, apparatus and parts thereof; and bicycles; all of the articles mentioned being manufactured in Philadelphia, Watsontown, Croydon, and Lansdale, Pennsylvania, Connersville, Indiana, and Shelby, Ohio

The recordation of the foregoing trade name shall become final at the expiration of 30 days after August 1, 1948. Any person who desires to file an opposition to the recordation of this trade name shall file it with the Commissioner of Customs prior to the expiration of such 30-day period.

Until the expiration of the above-mentioned 30-day period any articles of foreign manufacture bearing names or marks which copy or simulate the above-mentioned trade name shall be detained, but not seized, and thereafter shall receive the treatment provided for in sction 11.17, Customs Rgulations of 1943, unless notice of the cancellation of the recordation is sooner received.

(Signed) W. R. JOHNSON,
Acting Commissioner of Customs.

Cancellation Notices

Metro Hosiery Co., Inc., its assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Northmont Hosiery Corporation, Fairmont and Alton Sts., Reading, Pa., to effect the cancellation of trade-mark registration of Metro Hosiery Co., Inc., 51 Canal St., New York, N. Y., No. 299,925, dated December 27, 1932, and the notice of such proceeding sent by registered mail to the said Metro Hosiery Co., Inc. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Metro Hosiery Co., Inc., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

July 9, 1948.

West Virginia Macaroni Co., its assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Hershel California Fruit Products Co., San Jose, Calif., to effect the cancellation of trade-mark registration of West Virginia Macaroni Co., Clarksburg, W. Va., No. 258,853, dated July 16, 1929, and the notice of such proceeding sent by registered mail to the said West Virginia Macaroni Co., at the said address having been returned by the post office undeliverable, notice is hereby given that unless said West Virginia Macaroni Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

July 22, 1948.

Tampa Importers, Inc., its assigns or legal representatives take notice:

A cancellation proceeding has been instituted by this Office upon the petition of Manuel A. Fernandes, 225 West 74th St., Los Angeles 3, Calif., to effect the cancellation of trade-mark registration of Tampa Importers, Inc., No. 334,671 dated May 12, 1936. The assignment records of this Office show a transfer of title to this registration to Harold W. Bonwit, Scarsdale, N. Y., who has been substituted for said Tampa Importers, Inc., to defend the registration concerned. The notice of such proceeding sent by registered mail to said Bonwit, at his address of record, Scarsdale, N. Y., having been returned by the post office undeliverable, notice is hereby given that unless said Tampa Importers, Inc., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

July 9, 1948.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,435,870. MEANS FOR QUICK-DETACHABLY CONNECTING A HANDBAG TO ITS FRAMEWORK. Patented Feb. 10, 1948. A wide selection of fabric and leather bag portions may be interchangeably used within a single frame. The frame is conventional in shape and includes two hinged portions provided with U-shaped channels or recesses and inwardly extending flanges. In each corner of the frame, pivoted to the flange, is an arm having split ends that form oppositely directed tabs. The top edge of the bag is reinforced and, when inserted within the recess, is held firmly by pushing the arms upwardly. The bag portion is removed by pulling the arms out of engagement with the top of the bag. Frame may be of silver, etc. Modification shown. (Owner) Louis H. Campos, % Benita Products Co., 1947 Broadway, New York 23, N. Y. Groups 31—71; 34—54; 40. Reg. No. 9,819.

Pat. 2,441,178. RACK AND GEAR OPERATED COLUMN CLAMP. Patented May 11, 1948. A clamp for use with concrete forms. The clamping arrangement consists of four similar bars adapted to engage the external surfaces of a form. Each bar is provided with a gear rack. The clamps, in use, are placed in position around a rectangular or round column and temporarily tightened by the use of a traveling meshing gear mechanism that operates in the gear rack. After the mechanism is adjusted, a key plate is inserted to lock the bars in place. The plate is easily removed and the bars released after the concrete has set. The clamp is capable of adjustment to suit various sizes of forms. (Owner) G. R. Abbott, Sr., 2323 North Charles St., Baltimore 18, Md. Groups 32—71; 35—69. Reg. No. 9,820.

United States Government Owned Patents

The following patents have been assigned to the United States as represented by the Secretary of Agriculture. The patents are divided into two groups, the first six relating to enzyme research, the second to research carried on in the Western Regional Research Laboratory. Licenses to practice the inventions are issued on a royalty-free, non-exclusive, non-transferable, revocable basis. Applications for licenses should be addressed to the Bureau of Agricultural and Industrial Chemistry, U. S. Department of Agriculture, Washington, D. C.

Pat. 2,257,218. PROCESS FOR THE PREPARATION OF PAPAIN. Patented Sept. 30, 1941. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Process involves extracting the latex from papayas, adding salt, and then drying the resulting mixture to a paste. The product contains more of the original activity of the latex and retains it longer than the usual preparations. Group 20—99. Reg. No. 9,821.

Pat. 2,313,504. SULPHYDRYL COMPOUND OBTAINED FROM FLOUR. Patented Mar. 9, 1943. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Process involves extraction of a flour, such as wheat, lima bean, cottonseed, or peanut flours, with organic solvents to separate sulphydryl compounds. These compounds may be used as oxidizing or reducing agents, depending on the state in which they exist, in chemical operations. Group 28—89. Reg. No. 9,822.

Pat. 2,366,952. PROTEINOUS MATERIAL. Patented Jan. 9, 1945. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Sulphydryl compounds are isolated from cereal grains by an extraction process, then subjected to hydrolysis and purification procedures. The product is highly toxic to certain bacteria and yeasts and is thus useful as a germicide. Group 28—34. Reg. No. 9,823.

Pat. 2,381,421. METHOD OF TREATING CEREAL GRAINS. Patented Aug. 7, 1945. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Process of storing grain which involves contacting the grain in bulk storage with an atmosphere containing a low concentration of ethylene gas (about 1 part ethylene per 10,000 to 100,000 parts of air). By such procedure the tendency of the grain to undergo spontaneous heating is prevented. Group 28—86. Reg. No. 9,824.

Pat. 2,436,699. NITROGENOUS DIACYL-GLYCEROPHOSPHATES. Patented Feb. 24, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Patent describes methods for preparing aminoethyl esters of diacyl-glycerophosphoric acids by a process involving reaction of a diacyl-glycerophosphoryl chloride with carbobenzoxyaminoethanol. The products are useful as emulsifying, water binding and dispersing agents. Group 28—89. Reg. No. 9,825.

Pat. 2,434,874. SEPARATION OF STARCH AND PROTEIN IN WHEAT GRAIN PRODUCTS AND EXTRACTION OF DIASTASE THEREFROM. Patented Jan. 20, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Invention relates to isolation of starch, gluten, and diastase from cereal products such as wheat flour. Thus, wheat flour is contacted with an aqueous solution of a sulphite salt. Air is then beaten into the mixture causing the gluten to rise to the top of the mixture as a scum. The starch particles settle to the bottom while the diastase remains dissolved in the liquid phase. Group 20—94. Reg. No. 9,826.

Pat. 2,344,267. PROTEINOUS COMPOSITIONS AND THEIR PROCESS OF PRODUCTION. Patented Mar. 14, 1944. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Relates to the preparation of sulphated proteins, particularly sulphated gluten. Process involves reacting the protein with chlorosulphonic acid. Products have gelling properties and are valuable as substitutes for the natural gums. Group 28—94. Reg. No. 9,827.

Pat. 2,375,376. METHOD OF EXTRACTING PECTINOUS MATERIALS. Patented May 8, 1945. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Improved method of extracting pectin from plant materials such as citrus peel, sugar beets, etc., which involves adding an alkali metaphosphate or alkali polyphosphate to the extracting solution. Process allows complete extraction in short period of time. Group 20—99. Reg. No. 9,828.

Pat. 2,386,323. METHOD FOR ACCELERATING THE ALKALINE DE-ESTERIFICATION OF PECTIN. Patented Oct. 9, 1945. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Improvement in the alkaline de-esterification of pectin to produce pectinic acids wherein a salt, such as sodium chloride, is added to the

reaction mixture. The reaction is accelerated by addition of the salt. Invention permits use of mild alkali whereby degradation of pectin is avoided. Group 20—99. Reg. No. 9,829.

Pat. 2,399,161. PROCESS FOR PRODUCING GLUES AND ADHESIVES FROM KERATIN PROTEIN MATERIALS. Patented Apr. 30, 1946. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Adhesive made by reducing a keratin material with an alkaline sulphide solution, dispersing the product in caustic soda and drying it. Process enables waste keratin materials such as feathers, animal hair, etc., to be converted into useful products. Group 28—94. Reg. No. 9,830.

Pat. 2,403,923. DEVICE FOR PEELING AGRICULTURAL PRODUCTS. Patented July 16, 1946. Device consists essentially of a furnace through which products, potatoes for example, are conveyed. A mechanism is provided to tumble the products in their passage through the furnace whereby entire surface is exposed to radiant heat to char skin. Charred skin is readily removed by water sprays. Group 36—21. Reg. No. 9,831.

Pat. 2,425,550. PROCESS OF MAKING ORIENTED REGENERATED PROTEIN PRODUCTS. Patented Aug. 12, 1947. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Process of preparing films or fibers from protein materials. Waste keratin materials such as feathers, animal hair, etc., may be used as the raw material. The process essentially involves dispersing the protein in a detergent solution, precipitating a protein-detergent complex, forming a film or fiber therefrom by extrusion, and then extracting the film or fiber with a solvent to remove the detergent. Group 28—83. Reg. No. 9,832.

Pat. 2,430,897. PROCESS FOR VAPOR-PHASE DEHYDROCHLORINATION. Patented Nov. 18, 1947. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Invention involves conversion of saturated fatty acids into unsaturated fatty acids, the latter being useful to prepare drying oils. Saturated fatty acid is first chlorinated, then subjected to dehydrochlorination in the vapor phase whereby unsaturated product is formed. Group 28—81. Reg. No. 9,833.

Pat. 2,434,715. GLUTAMIC ACID-FREE PROTEIN HYDROLYSATE AND THE PRODUCTION THEREOF. Patented Jan. 20, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Glutamic acid separated from protein hydrolysates by heating at particular pH to convert glutamic acid into its lactam, followed by extraction of the lactam. The glutamic acid-free hydrolysate is useful as culture medium for microorganisms, particularly for bioassay procedures. Group 28—31. Reg. No. 9,834.

Pat. 2,438,209. REACTION PRODUCT OF GRAMICIDIN AND FORMALDEHYDE AND METHOD OF PRODUCTION. Patented Mar. 23, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Gramicidin, an antibiotic, is reacted with formaldehyde to produce a derivative of decreased hemolytic and toxic properties. Group 28—31. Reg. No. 9,835.

Pat. 2,439,903. THREAD ADVANCING, STORAGE, AND STRETCHING REEL. Patented Apr. 20, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Device consists essentially of a reel provided with a series of endless belts arranged longitudinally. Thread is supported by belts and caused to advance by moving belts longitudinally. Belts are also adjustable toward or away from shaft so that thread can be stretched or contracted while in motion. Device is useful in preparation of artificial fibers of any type. Group 35—51. Reg. No. 9,836.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 10, 1948

[VOL. 613. No. 2]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 504,892. THE FABRI-FORM COMPANY, Byesville, Ohio. Filed July 1, 1946.

THE Fabri-Form Co.

The words "The" and "Co." are disclaimed apart from the mark shown.

FOR SHEETS, RODS, AND TUBES MADE IN WHOLE OR IN PART OF SYNTHETIC THERMOSETTING AND/OR THERMOPLASTIC RESINS FOR THE FABRICATION, MOLDING AND CONSTRUCTION OF PLASTIC ARTICLES.

Claims use since Sept. 1, 1943.

Ser. No. 521,542. TAILOR MADE LAWN, INC., New York, N. Y. Filed Apr. 29, 1947.

TAILOR MADE LAWN

No claim is made to the word "Lawn" apart from the mark.

FOR CELLULOSE MATERIAL IN SHEET FORM CARRYING GRASS SEED AND FERTILIZER.

Claims use since Dec. 8, 1941.

Ser. No. 521,885. WM. HENRY MAULE CO., Philadelphia, Pa., assignor to W. Atlee Burpee Company, Philadelphia, Pa., a corporation of Pennsylvania. Filed May 5, 1947. Under 10-year proviso.

WM. HENRY MAULE

FOR VEGETABLE AND FLOWER SEEDS, BULBS, AND PLANTS; AND SOIL.

Claims use since 1878.

RED GOLD

Registration rights in the word "Red" apart from the mark are disclaimed.
FOR ROUGE AND LIPSTICK.
Claims use since July 2, 1941.

Ser. No. 508,256. UNEXCELLED CHEMICAL CORPORATION, New York, N. Y. Filed Aug. 29, 1946.

The term "UNXLD" is disclaimed apart from the mark shown. The drawing is lined for the color green.
FOR INSECT REPELLENT COMPOSITIONS.
Claims use since June 14, 1946.

Ser. No. 508,298. MAISON EVILYA, Brooklyn, N. Y. Filed Aug. 30, 1946.

No claim is made to the outline of the label appearing in the drawing. The drawing is lined to represent pink and yellow colors.
FOR FACE CREAM.
Claims use since January 1946.

Ser. No. 508,495. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Sept. 4, 1946.

CREMOTHIAZOLE

FOR ANTIBACTERIAL PREPARATION.
Claims use since Aug. 2, 1946.

Ser. No. 508,840. THE FAST FLIGHT COMPANY, Detroit, Mich. Filed Sept. 11, 1946.

FAST-FLIGHT

FOR PREPARATION IN POWDERED FORM FOR ADMINISTRATION TO AND APPLICATION TO RACING AND HOMING PIGEONS, POULTRY, FOWL, AND DOMESTICATED BIRDS FOR USE IN THE BUILDING UP OF MUSCULAR TISSUES AND INCREASING PLUMAGE.
Claims use since Feb. 2, 1946.

Ser. No. 512,640. CHEMICAL RESEARCH PRODUCTS, INC., East Rutherford, N. J. Filed Nov. 15, 1946.

INSOL

FOR INSECT REPELLENT AND PREPARATION TO BE APPLIED TO SKIN TO SECURE AN EVEN SUN TAN WITHOUT BURNING THE SKIN.
Claims use since Oct. 29, 1946.

Ser. No. 513,269. NIPA LABORATORIES LTD., London, England. Filed Nov. 26, 1946.

PHENOXETOL

FOR CHEMICAL COMPOUNDS, BEING BENZENE DERIVATIVES OF THE GLYCOLS, FOR USE AS PRESERVATIVES IN PHARMACEUTICAL AND MEDICAL PREPARATIONS, IN OILS AND FATS (ANIMAL AND VEGETABLE), IN OINTMENTS, IN EMULSIONS, IN ESSENTIAL OILS, IN PERFUMES, AND IN COSMETIC PREPARATIONS.
Claims use since July 12, 1944.

Ser. No. 523,951. FIRST TEXAS CHEMICAL MFG. CO., Dallas, Tex. Filed June 11, 1947.

AMYLOFENE

FOR PHARMACEUTICAL PREPARATION IN THE FORM OF CAPSULES TO BE GIVEN ORALLY FOR RELIEF OF NERVOUSNESS AND INDUCING SLEEP, AND TO BE USED ONLY BY OR DISPENSED UPON THE PRESCRIPTION OF A PHYSICIAN.
Claims use since March 1934.

CLASS 8

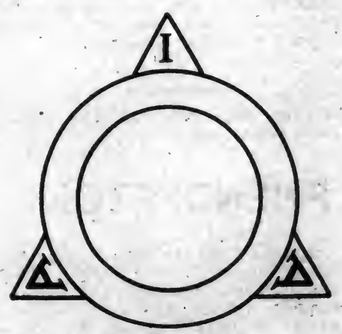
SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 508,458. VICTORY PLASTICS CO., Hudson, Mass. Filed Sept. 3, 1946.

Shaka-Way

FOR ASH TRAYS MADE OF PLASTIC OR CERAMIC MATERIALS.
Claims use since Aug. 12, 1946.

CLASS 16



PAINTS AND PAINTERS' MATERIALS

Ser. No. 486,213. JOHN MCQUADE & CO., INC., New York, N. Y. Filed July 24, 1945.

HOME KRAFT

Applicant claims no exclusive right to the use of the word "Home" per se.
FOR ENAMEL PAINTS.
Claims use since at least 1913.

Ser. No. 508,527. ILLINOIS AGRICULTURAL ASSOCIATION, Chicago, Ill. Filed Sept. 5, 1946. Under the act of February 20, 1905, as amended June 10, 1938.

FOR READY MIXED OIL PAINT, PAINT ENAMELS, AND LIQUID AND PLASTIC ROOF COATINGS.
Claims use since September 1931.

Ser. No. 511,017. THE GREAT ATLANTIC & PACIFIC TEA COMPANY, New York, N. Y. Filed Oct. 17, 1946.

Bright Sail

No claim is made to the exclusive use of the word "Bright" apart from the mark.
FOR LIQUID FLOOR WAX AND WAX PASTE FOR FLOORS, FURNITURE, WOODWORK AND AUTOMOBILES.
Claims use since Feb. 16, 1946.

Ser. No. 514,974. THE MASTER MECHANICS CO., Cleveland, Ohio. Filed Dec. 28, 1946.

RUBBERTEX

FOR RAPID DRYING RUBBERIZED WALL FINISH—NAMELY, A SYNTHETIC PHENOLIC READY MIXED LIQUID PAINT FOR INTERIOR CEMENT, PLASTIC, OR BRICK SURFACES, AND PAINT ENAMEL.
Claims use since November 1924.

Ser. No. 515,063. ARTO MANUFACTURING CO., Philadelphia, Pa. Filed Dec. 31, 1946.

ART-GLO

No claim is made to the word "Glo" apart from the mark.
FOR PAINT ENAMEL FINISH, LACQUER, AND VARNISH.
Claims use since Dec. 2, 1925.

Ser. No. 515,169. GATES ENGINEERING COMPANY, New Castle, Del. Filed Jan. 2, 1947.

Gaco

FOR LIQUID LINING PREPARATIONS COMPOSED PRIMARILY OF CHEMICALS, PLASTICS, RESIN, AND RUBBER TO BE SPRAYED OR BRUSHED ON MACHINERY TO PROTECT IT AGAINST CHEMICAL OR CORROSIVE ACTION.
Claims use since April 1942.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 489,205. COMPANIA INDUSTRIAL TABACALERA, S. A., Havana, Cuba. Filed Oct. 1, 1945.

DYKIRI

FOR CIGARS.
Claims use since Apr. 7, 1945.

Ser. No. 511,061. BENSON & HEDGES, New York, N. Y. Filed Oct. 18, 1946.

FOR CIGARS.
Claims use since 1901.

Ser. No. 511,948. IMPERIAL TOBACCO COMPANY OF CANADA, LIMITED, Montreal, Canada. Filed Nov. 2, 1946.

IMPERIAL

FOR CIGARS, CIGARETTES, SMOKING TOBACCO, CHEWING TOBACCO, AND SNUFF.
Claims use since July 31, 1946.

CLASS 19

VEHICLES

Ser. No. 472,948. FOOD MACHINERY CORPORATION, San Jose, Calif. Filed Aug. 4, 1944.

Use of the word "Water" apart from the mark is disclaimed.
FOR AMPHIBIAN TRACKED LANDING VEHICLES.
Claims use since May 9, 1944.

Ser. No. 490,250. LOCKHEED AIRCRAFT CORPORATION, Burbank, Calif. Filed Oct. 20, 1945.

STARLINER

FOR AIRPLANES AND STRUCTURAL PARTS THEREFOR.
Claims use since February 1940.

Ser. No. 518,882. ARTHUR J. PELTAULT, doing business as Visor-Ads, West Hartford, Conn. Filed Mar. 12, 1947.

No claim is made for the term "Vis-R" apart from the mark as shown.
FOR MAP HOLDERS OR JACKETS ADAPTED FOR APPLICATION TO SUN VISORS FOR AUTOMOBILES.
Claims use since Oct. 22, 1946.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 491,437. TELETONE RADIO COMPANY, New York, N. Y., assignor to Tele-Tone Radio Corp., New York, N. Y., a corporation of New York. Filed Nov. 10, 1945.

FOR RADIO RECEIVING SETS AND PARTS THEREOF.
Claims use since Aug. 2, 1945.

Ser. No. 519,693. PRECISION ELECTRONICS, INC., Chicago, Ill. Filed Mar. 27, 1947.

Trade-mark comprises particular representation of "Triad Vacuum Tube" and "Sine Wave" and particular arrangement thereof. No claim is made to exclusive use of either representation apart from mark.
FOR APPARATUS FOR PROVIDING AUDIBLE INDICATION TO TRACE ELECTRONIC SIGNALS IN RADIO APPARATUS AND THE LIKE, AND ELECTRONIC SOUND AMPLIFIERS.
Claims use since Aug. 19, 1946.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 512,406. HENRY M. FORD, Madison, Wis. Filed Nov. 12, 1946.

ZIP-O-DIZ

FOR CHILD'S GAME CONSISTING OF COLORED ADHESIVE CUT-OUTS WHICH CAN BE ARRANGED AND RE-ARRANGED IN NUMEROUS PRESCRIBED OR ORIGINAL PATTERNS.

Claims use since Oct. 22, 1946.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 487,184. A. B. FARQUHAR COMPANY, York, Pa. Filed Aug. 17, 1945.

Applicant disclaims "York, Pa." except as used in the mark with the scroll with "Iron Age" thereon. The drawing is lined for the color red.

FOR SEED AND FERTILIZER PLANTING MACHINES; WHEEL HOES, AND PLOWS; CULTIVATORS; HARROWS; PLANT-SPRAYING MACHINES; HORSE-DRAWN POTATO PLANTERS; TRACTOR-DRAWN POTATO PLANTERS; WALKING POTATO DIGGERS; HORSEDRAWN POTATO DIGGERS; TRACTOR-DRAWN POTATO DIGGERS; HORSE-DRAWN POTATO DIGGERS HAVING ELEVATORS; TRACTOR-DRAWN POTATO DIGGERS HAVING ELEVATORS; HORSE-DRAWN BEAN PLANTERS; TRACTOR-DRAWN BEAN PLANTERS; HORSE-DRAWN PEA PLANTERS; TRACTOR-DRAWN PEA PLANTERS; HORSE-DRAWN CORN PLANTERS; TRACTOR-DRAWN CORN PLANTERS; COTTON PLANTERS; TRANSPLANTING MACHINES; FERTILIZER DISTRIBUTORS; COMBINED FERTILIZER DISTRIBUTORS AND ROW MAKERS; FERTILIZER DRILLS; LIME SPREADERS; GRAIN DRILLS; RIDING CULTIVATORS; ONE-HORSE CULTIVATORS; ROW MARKERS; ASPARAGUS RIDGERS; MANURE SPREADERS; WOOD FRAME HARROWS; STEEL FRAME HARROWS; COMBINED HARROWS AND ROLLERS; MACHINES FOR CUTTING UP POTATOES; POTATO HILLERS; FEED GRINDERS; PLOW STOCKS; ROW CROP SPRAYERS; ORCHARD SPRAYERS; SPRAY PUMPS; PICK UP HAY BALERS; WALKING WEEDERS; RIDING WEEDERS; TRACTOR WEEDERS; ROW CROP DUSTERS; ORCHARD DUSTERS; CORN SHELLERS; POTATO GRADERS; POTATO PICKERS; AND STRUCTURAL PARTS FOR THE FOREGOING.

Claims use since 1880 as to the word "Farquhar"; since Jan. 1, 1876, as to the expression "Iron Age"; and since July 1, 1944, as to the mark.

Ser. No. 487,185. A. B. FARQUHAR COMPANY, York, Pa. Filed Aug. 17, 1945.

IRON AGE

Applicant is the owner of registration No. 68,826.

FOR VEGETABLE SEED PLANTERS (1876), FERTILIZER PLANTING MACHINES (1876), WHEEL HOES (1876), PLOWS (1876), AGRICULTURAL CULTIVATORS (1876), HARROWS (1876), PLANT SPRAYING MACHINES (1876), HORSE-DRAWN POTATO PLANTERS (1876), TRACTOR-DRAWN POTATO PLANTERS (1917), WALKING POTATO DIGGERS (1876), HORSE-DRAWN POTATO DIGGERS (1876), TRACTOR-DRAWN POTATO DIGGERS (1917), HORSE-DRAWN POTATO DIGGERS WITH ELEVATORS (1917), TRACTOR-DRAWN POTATO DIGGERS WITH ELEVATORS (1917), HORSE-DRAWN BEAN PLANTERS (1936), TRACTOR-DRAWN BEAN PLANTERS (1936), HORSE-DRAWN PEA PLANTERS (1936), TRACTOR-DRAWN PEA PLANTERS (1936), HORSE-DRAWN CORN PLANTERS (1917), TRACTOR-DRAWN CORN PLANTERS (1917), COTTON PLANTERS (1936), MACHINES FOR TRANSPLANTING PLANTS (1925), FERTILIZER DISTRIBUTORS (1917), COMBINED FERTILIZER DISTRIBUTORS AND ROW MARKERS (1917), FERTILIZER DRILLS (1876), LIME SPREADERS (1930), GRAIN DRILLS (1876), RIDING CULTIVATORS (1876), ONE-HORSE CULTIVATORS (1876), ROW MARKERS (1876), ASPARAGUS RIDGERS (1905), MANURE SPREADERS (1920), WOOD FRAME HARROWS (1876), STEEL FRAME HARROWS (1876), COMBINED HARROWS AND ROLLERS (1876), MACHINES FOR CUTTING UP POTATOES (1920), POTATO HILLERS (1876), FEED GRINDERS (1876), PLOW STOCKS (1876), ROW CROP SPRAYERS (1876), ORCHARD SPRAYERS (1876), PUMPS FOR SPRAYERS (1876), PICK-UP HAY BALERS (1936), WALKING WEEDERS (1876), RIDING WEEDERS (1876), TRACTOR WEEDERS (1936), ROW CROP DUSTERS (1920), ORCHARD DUSTERS (1920), CORN SHELLERS (1876), POTATO GRADING MACHINES (1900), POTATO PICKERS (1876), AND STRUCTURAL PARTS FOR THE FOREGOING.

Claims use since July 1, of the years stated above after each of the respective kinds of goods.

Ser. No. 495,188. LOUIS ELOI PERNET, Paris, France. Filed Jan. 22, 1946.

Eloi

FOR CUTLERY OF BASE METAL FOR HOUSEHOLD USE—NAMELY, CARVING KNIVES, PARING KNIVES, FORKS, AND SPOONS.

Claims use since May 24, 1945.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 522,374. CLINTON S. DAVIS, doing business as Davis Electronic Laboratories, Chicago, Ill. Filed May 14, 1947.

SERVO-FLASH

The word "Flash" is disclaimed apart from the mark shown.

FOR PHOTOGRAPHER'S AUTOMATIC-REMOTE, ELECTRONIC PHOTO-FLASH UNIT UTILIZING RADAR PULSE TECHNIQUE FOR SYNCHRONIZING MASTER FLASH AND SLAVE FLASH.

Claims use since Jan. 15, 1947.

CLASS 27

HOROLOGICAL INSTRUMENTS

Ser. No. 457,552. SOCIETE ANONYME MIDO, Bienne, Switzerland, assignor to Mido Watch Company of America, Inc., New York, N. Y. Filed Dec. 21, 1942.

Mido
MULTIFORT
SUPERAUTOMATIC

Applicant is the owner of registrations Nos. 225,024 and 399,480. The word "Superautomatic" is disclaimed apart from the mark.

FOR WATCHES AND CHRONOMETERS, WATCH MOVEMENTS, WATCH CASES, DIALS AND PARTS OF WATCHES.

Claims use since 1938.

Ser. No. 512,903. FABRIQUE D'HORLOGERIE LEMANIA LUCRIN S. A., ORIENT, Vallee de Joux, Switzerland. Filed Nov. 20, 1946.

LEMANIA

FOR WATCHES AND CLOCKS, WATCH DIALS, WATCH-CASES, AND PARTS OF WATCHES.

Claims use since 1924.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

OILFOS

FOR INORGANIC PHOSPHATES FOR GENERAL USE IN THE PETROLEUM INDUSTRY INCLUDING THE TREATMENT OF PETROLEUM OILS.

Claims use since Jan. 4, 1946.

Ser. No. 514,101. F. W. BOLGIANO & CO., INC., Washington, D. C. Filed Aug. 25, 1947.

CAPITOL PARK

FOR GRASS SEEDS.

Claims use since January 1900.

Ser. No. 531,240. THE PITTSBURG & MIDWAY COAL MINING CO., Kansas City, Mo. Filed Aug. 13, 1947.

BLUEBIRD

FOR SEMI ANTHRACITE COAL.

Claims use since September 1924.

Ser. No. 531,241. THE PITTSBURG & MIDWAY COAL MINING CO., Kansas City, Mo. Filed Aug. 13, 1947.

ROYAL SMOKELESS

No claim is made to the word "Smokeless" except as shown.

FOR SEMI ANTHRACITE COAL.

Claims use since 1925.

Ser. No. 533,685. ARTHUR A. REICHMAN, Philadelphia, Pa. Filed Sept. 6, 1947.

ARCO

FOR DRESSED HORSE HAIR.

Claims use since March 1934.

Ser. No. 533,798. WACONIA SORGHUM COMPANY, Cedar Rapids, Iowa. Filed Sept. 8, 1947.

Waconia

Applicant claims ownership of registration No. 369,098.

FOR FIELD SEEDS—NAMELY, SORGHUM, SORGO, CANE, SACCHARINE SORGHUM, AND NON-SACCHARINE SORGHUM.

Claims use since 1918.

Ser. No. 534,048. THE PERMUTIT COMPANY, New York, N. Y. Filed Sept. 10, 1947.

CARBO-DUR

Applicant claims ownership of registrations Nos. 299,632, 323,155, and 344,008.

FOR ACTIVATED CARBON FOR GENERAL USE IN THE INDUSTRIAL ARTS AND MORE PARTICULARLY THE TREATMENT OF LIQUIDS.

Claims use since July 15, 1947.

Ser. No. 534,629. J. M. HUBER CORPORATION, Red Bank, N. J., and New York, N. Y. Filed Sept. 16, 1947.

AROMEX

FOR CARBON BLACK HAVING A VARIETY OF INDUSTRIAL USES.
Claims use since August 1947.

Ser. No. 544,646. CORNELI SEED COMPANY, St. Louis, Mo. Filed Oct. 13, 1947.

KEYSTONE

Applicant claims ownership of registration No. 238,594.
FOR GARDEN AND FIELD SEEDS AND BULBS.
Claims use since July 28, 1926.

Ser. No. 546,158. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md. Filed Aug. 28, 1947.

SERAX

Applicant claims ownership of registration No. 73,322.
FOR ARTIFICIAL CORK.
Claims use since Sept. 18, 1898.

CLASS 2

RECEPTACLES

Ser. No. 539,964. LES PARFUMS DE DANA, INC., New York, N. Y. Filed Nov. 3, 1947.

PERFIDE

FOR VANITY CASES, COMPACTS, AND LIPSTICK HOLDERS MADE OF BASE METAL AND PLASTIC AND SOLD IN TRADE EMPTY.
Claims use since Oct. 24, 1947.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 518,693. PLATT LUGGAGE, INC., Chicago, Ill. Filed July 5, 1947.

AIRESS

FOR LADIES' HAND LUGGAGE—NAMELY, WEEK-END CASES, OVERNIGHT CASES, WARDROBE CASES, PULLMAN CASES, TRAIN CASES, VICTORIA CASES, TRAY CASES, FITTED CASES, JACKKNIFE CASES, HAT BOXES, AND COMBINATION HAT AND SHOE BOXES.
Claims use since January 1937.

Ser. No. 520,642. NORTHWESTERN LUGGAGE CO., Seattle, Wash. Filed Oct. 11, 1947.

Strat-o-way

FOR HAND LUGGAGE—NAMELY, VICTORIA MAKE-UP CASES, OVERNIGHT CASES, WEEK-END CASES, PULLMAN CASES, WARDROBE HANGER CASES, SHOE AND HAT BOXES, FORTNIGHTER CASES, TWO-SUITER BAGS AND CASES, COMPANION CASES, CLUB BAGS, FLIGHT BAGS, GLADSTONE BAGS; ALL OF LEATHER, FABRIC, SYNTHETIC LEATHER, AND COMBINATIONS THEREOF.

AMERICANA

Applicant claims ownership of registration No. 397,372.
FOR LUGGAGE—NAMELY, WARDROBES, FITTED CASES, OVERNIGHT CASES, WEEKEND CASES, HAT BOXES, LEATHER VANITY AND MAKEUP CASES, AND UTILITY CASES.
Claims use since Aug. 26, 1940.

CLASS 5

ADHESIVES

Ser. No. 542,399. MID-STATES GUMMED PAPER CO., Chicago, Ill. Filed Sept. 9, 1947.

GREY CORE

Applicant claims ownership of registration No. 351,891.
FOR GUMMED TEXTILE-FABRIC TAPE SOLD IN ROLLS.
Claims use since May 1, 1939.

Ser. No. 544,406. UNION RUBBER & ASBESTOS CO., Trenton, N. J. Filed Dec. 15, 1947. Under section 2f of the act of 1946.

BEST-TEST

FOR PAPER AND RUBBER CEMENT.
Claims use since July 1, 1923.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 513,035. EASTMAN KODAK COMPANY, Flemington, N. J., and Rochester, N. Y. Filed Sept. 11, 1947.

EKTACHROME

FOR PHOTOGRAPHIC PROCESSING KITS CONSISTING OF CHEMICALS FOR DEVELOPING PHOTOGRAPHIC COLOR FILM, PHOTOGRAPHIC DEVELOPERS, PHOTOGRAPHIC COLOR DEVELOPERS, PHOTOGRAPHIC HARDENERS, PHOTOGRAPHIC CLEARING AND FIXING BATH, AND PHOTOGRAPHIC BLEACH.
Claims use since Oct. 28, 1946.

Ser. No. 514,636. VIGNY, INC., New York, N. Y. Filed Sept. 23, 1947. Under section 2f of the act of 1946.

VIGNY

FOR PERFUMES, TOILET WATERS, FACE LOTIONS, FACE CREAMS, FACE POWDERS, ROUGES, AND LIPSTICKS.
Claims use since October 1921.

Ser. No. 522,622. CHEBRA, INC., New York, N. Y. Filed July 5, 1947.

EVERSHAPE

FOR LIP STICKS.
Claims use since Dec. 20, 1946.

Ser. No. 526,934. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo. Filed July 5, 1947.

MALLOPHENE

Applicant claims ownership of registration No. 265,223.
FOR THE PRODUCT PHENYL-AZO-ALPHA-ALPHA-DIAMINO-PYRIDINE HYDROCHLORIDE AND BASE IN VARIOUS FORMS AND COMBINATIONS FOR ANTISEPTIC, HEALING, AND VARIOUS OTHER THERAPEUTIC AND LABORATORY PURPOSES.
Claims use since Oct. 31, 1928.

Ser. No. 526,935. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo. Filed July 5, 1947.

ICHTHYMALL

Applicant claims ownership of registration No. 162,302.
FOR AMMONIUM ICHTHOSULFONATE USED FOR THE TREATMENT OF SKIN DISEASES.
Claims use since Jan. 1, 1922.

Ser. No. 528,147. JEANNE PIAUBERT, née Jeanne Quanon, Paris, France. Filed July 8, 1947.

VIVE LA VIE

Applicant claims ownership of French registration No. 401,729 dated Dec. 18, 1946.
FOR PERFUMES, TOILET LOTIONS, CREAMS—NAMELY, PRODUCTS HAVING A FATTY BASE AND WHICH ARE USED FOR THE CARE OF THE SKIN, FACE POWDERS, MAKE-UP—NAMELY, PRODUCTS WITH A FATTY BASE AND COLORING MATTER USED FOR PAINTING THE FACE, EYE LIDS, AND EYE LASHES, LIPSTICKS.

Ser. No. 532,336. PARKE, DAVIS & COMPANY, Detroit, Mich. Filed Aug. 25, 1947.

GLUCO-THRICIL

FOR A SOLUTION FOR THE RELIEF OF CONGESTION OF THE MUCOUS MEMBRANE OF THE NOSE AND THROAT.
Claims use since July 21, 1947.

Ser. No. 532,472. THE MATHIESON ALKALI WORKS, New York, N. Y., now by change of name to Mathieson Chemical Corporation. Filed Aug. 26, 1947.

ALL-KYL

Applicant disclaims the word "KYL" apart from the mark.
FOR SENSITIZING AGENTS WITH GERMICIDAL PROPERTIES.
Claims use since July 11, 1947.

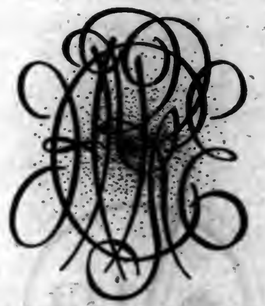
Ser. No. 534,959. WILLIAM R. WARNER & CO. INC., New York, N. Y. Filed Sept. 18, 1947.

HEMOSULES

FOR PREPARATION FOR USE IN THE TREATMENT OF ANEMIAS AND NUTRITIONAL DEFICIENCIES.
Claims use since Sept. 5, 1947.

Ser. No. 535,115. AMERICAN CHEMICAL PAINT COMPANY, Ambler, Pa. Filed Sept. 20, 1947.

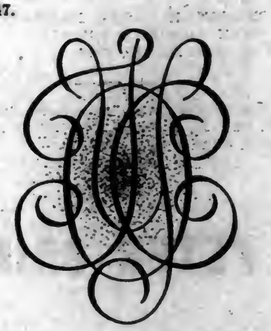
ZINODINE



FOR SOLID OR LIQUID CHEMICAL ADMIXTURES USED FOR THE PRODUCTION OF CHEMICAL COATINGS FOR THE PREVENTION OF OXIDATION TO ZINC AND CADMIUM SURFACES AND TO PREPARE SUCH SURFACES FOR THE APPLICATION OF PAINT ON OTHER FINISH.
Claims use since Aug. 1, 1947.

Ser. No. 536,871. PAUL C. BRAGG, doing business as Live Food Products Co., Burbank, Calif. Filed Oct. 6, 1947. Under section 2f of the act of 1946.

BRAGG



Applicant claims ownership of Reg. No. 380,906 dated Sept. 10, 1939; Reg. No. 380,419 dated Aug. 20, 1940; Reg. No. 384,758 dated Feb. 4, 1941; Reg. No. 385,869 dated Mar. 18, 1941; Reg. No. 385,870 dated Mar. 18, 1941; Reg. No. 390,179 dated Sept. 9, 1941; Reg. No. 392,681 dated Jan. 6, 1942; Reg. No. 405,107 dated Jan. 4, 1944; Reg. No. 406,888 dated May 2, 1944; and Reg. No. 407,736 dated June 20, 1944.
FOR VITAMIN PRODUCTS AND A BULK LAXATIVE PREPARATION.
Claims use since 1928.

Ser. No. 538,100. COTY, INC., New York, N. Y. Filed Oct. 17, 1947.

The mark comprises a fanciful arrangement of letters comprising the word "Chypre" over a design. No claim is made to the word "Chypre" as such. However, applicant does claim the unique and fanciful ensemble and embellishments as shown in the drawing.
FOR PERFUME, TOILET WATER, TALCUM POWDER, FACE POWDER, DUSTING POWDER.
Claims use since May 15, 1947.

Ser. No. 538,101. COTY, INC., New York, N. Y. Filed Oct. 17, 1947.

The mark comprises a fanciful arrangement of letters of COTY over a design.
FOR PERFUME, TOILET WATER, TALCUM POWDER, FACE POWDER, DUSTING POWDER.
Claims use since May 15, 1947.

Ser. No. 542,633. THE DE PREE COMPANY, Holland, Mich. Filed Feb. 27, 1948.

NURSOLA

FOR ANTACID POWDER.
Claims use since Mar. 8, 1934.

Ser. No. 543,702. RALPH I. GUY, doing business as The Rig Company, Glendale, Calif. Filed Dec. 8, 1947.

BT 4

FOR CALCIUM AND PHOSPHATE PREPARATION.
Claims use since Jan. 10, 1936.

Reg. No. 543,703. RALPH I. GUY, doing business as The Rig Company, Glendale, Calif. Filed Dec. 8, 1947.

C 4

FOR IODINE PREPARATION.
Claims use since Jan. 10, 1936.

Ser. No. 543,707. RALPH I. GUY, doing business as The Rig Company, Glendale, Calif. Filed Dec. 8, 1947.

DA 2

FOR VITAMIN B PREPARATION.
Claims use since Jan. 10, 1936.

Ser. No. 548,485. KAY DAUMIT, INC., Jersey City, N. J. Filed Jan. 31, 1948.

Petal Mist

FOR FACE POWDER.
Claims use since Dec. 9, 1947.

Ser. No. 548,926. CALOTABS COMPANY, Atlanta, Ga. Filed Feb. 6, 1948.

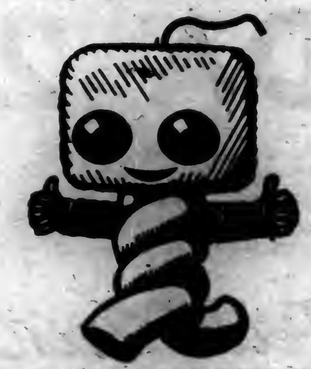
Calotabs

Applicant claims ownership of registration No. 119,257.
FOR LAXATIVE.
Claims use since June 7, 1917.

Ser. No. 549,046. BATHASWEET CORPORATION, New York, N. Y. Filed Feb. 7, 1948.

Bathasweet

Applicant claims ownership of registrations Nos. 169,910, 411,279, and 412,001.
FOR WATER SOFTENER, TALCUM POWDER, COLOGNE AND BATH OIL.
Claims use since Oct. 1, 1947.



CLASS 7
CORDAGE

Ser. No. 527,139. TUBBS CORDAGE COMPANY, San Francisco, Calif. Filed July 5, 1947. Under section 2f of the act of 1946.

MALAYSIA

Applicant claims ownership of registration No. 175,670.
FOR ROPE AND TWINE MADE OF HARD FIBRE.
Claims use since April 1920.

Ser. No. 533,722. THE J. E. FRICKE CO., Philadelphia, Pa. Filed Sept. 8, 1947.

FOR TWINES, ROPE, SEINE TWINE, TROT LINE, CHALK AND MASON LINES, CABLE LAID CORD, CLOTHES LINE, SASH CORDS, AND SMALL CORDS.
Claims use since December 1945.

Ser. No. 542,200. THE EDWIN H. FILTER CO., Philadelphia, Pa. Filed Aug. 9, 1947. Under section 2f of the act of 1946.

LUBRICORE

Applicant claims ownership of registration No. 391,432.
FOR MANILA ROPE.
Claims use since Sept. 23, 1940.

CLASS 8
SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 511,288. PIONEER SUSPENDER COMPANY, Philadelphia, Pa. Filed Aug. 8, 1947.

FOR CIGARETTE CASES, MADE OF MATERIAL OTHER THAN PRECIOUS METAL.
Claims use since May 17, 1946.

Ser. No. 526,546. PIONEER SUSPENDER COMPANY, Philadelphia, Pa. Filed July 5, 1947. Under section 2f of the act of 1946.

PETER BAIN

Applicant claims ownership of registration No. 190,306.
FOR CIGARETTE CASES OF NON-PRECIOUS METAL.
Claims use since Dec. 1, 1920.

CLASS 11
INKS AND INKING MATERIALS

Ser. No. 533,506. THE SHERWIN WILLIAMS COMPANY, Cleveland, Ohio. Filed Aug. 29, 1947.

FOR PRINTING INKS; LITHOGRAPHING INKS; AND PIGMENTS, DYES, DYESTUFFS, DRY COLORS, OILS, AND VARNISHES FOR MANUFACTURE OF PRINTING AND LITHOGRAPHING INKS.
Claims use since 1903.

CLASS 14
METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 502,946. THE CLEVELAND HEATER COMPANY, Cleveland, Ohio. Filed Nov. 5, 1947.

ELNO

FOR METALLIC FITTINGS AND ALLOYS INCLUDING ANODE RODS FOR PREVENTING CORROSION OF TANKS, LIQUID CONTAINERS AND WATER HEATERS.
Claims use since Jan. 1, 1946.

Ser. No. 528,148. AMERICAN ZINC INSTITUTE INCORPORATED, New York, N. Y. Filed July 8, 1947. Under section 2f of the act of 1946.

Applicant claims ownership of registration No. 366,841.
FOR ZINC COATED FERROUS SHEETS.
Claims use since June 29, 1931.

Ser. No. 528,896. THE SYMINGTON-GOULD CORPORATION, Rochester and Depew, N. Y. Filed July 18, 1947. Under section 2f of the act of 1946.

FARLOW

Applicant claims ownership of registration No. 205,025.
FOR MALLEABLE IRON AND STEEL CASTINGS AND FORGINGS—NAMELY, RAILWAY CAR DRAFT RIGGING CASTINGS AND FORGINGS.
Claims use since December 1906.

Ser. No. 534,448. INLAND STEEL COMPANY, Chicago, Ill. Filed Sept. 13, 1947.

INLAND

Applicant claims ownership of registration No. 346,705.
FOR STEEL SHEETS AND PLATES.
Claims use since December 1904.

Ser. No. 542,322. KANSAS OXYGEN COMPANY, INC., Hutchinson, Kans. Filed Nov. 25, 1947.

XCELITE

FOR HARD FACING ALLOY METAL.
Claims use since Apr. 1, 1947.

Ser. No. 546,706. THE INTERNATIONAL NICKEL COMPANY, INC., New York, N. Y. Filed Jan. 10, 1948.

NISILOY

FOR NICKEL-CONTAINING ALLOY ADDITION AGENT IN CRUSHED FORM FOR ADDITION TO CAST IRON.
Claims use since Nov. 25, 1947.

CLASS 15
OILS AND GREASES

Ser. No. 529,376. HAGGERTY REFINING CO., New York, N. Y. Filed July 24, 1947.

THERMOLINE

Applicant claims ownership of registrations Nos. 139,142 and 58,255.
FOR LUBRICATING OILS AND GREASES.
Claims use since July 1, 1918.

CLASS 16
PAINTS AND PAINTERS' MATERIALS

Ser. No. 530,122. JAMES B. SIPE AND COMPANY, Pittsburgh, Pa. Filed July 31, 1947.

LUXURY

Applicant claims ownership of registration No. 221,583.
FOR MIXED AND PASTE PAINT.
Claims use since September 1919.

Ser. No. 530,714. BOATWRIGHT PAINT & VARNISH WORKS, INC., Atlanta, Ga. Filed Aug. 7, 1947.

KAL-O-KOTE

The word "Kote" is disclaimed apart from its association with the mark shown.
FOR FLAT WALL PAINT.
Claims use since 1943.

Ser. No. 530,715. BOATWRIGHT PAINT & VARNISH WORKS, INC., Atlanta, Ga. Filed Aug. 7, 1947.

ZIN-TI-LED

The word "Led" is disclaimed apart from the mark.
FOR PASTE OUTSIDE PAINT.
Claims use since 1937.

Ser. No. 532,603. KELLOGGS & MILLER SALES CORP., Amsterdam, N. Y., and Philadelphia, Pa. Filed Aug. 27, 1947.

K & M

FOR PAINT OIL, USED BOTH AS A VEHICLE FOR PAINT PIGMENTS AND ALSO IN THINNING PASTE PAINTS.
Claims use since Jan. 30, 1947.

Ser. No. 534,272. GREAT LAKES VARNISH WORKS, INC., Chicago, Ill. Filed Sept. 12, 1947. Under section 2f of the act of 1946.

FLEECE WHITE

Applicant claims ownership of registration No. 208,397.
FOR PASTE PAINT AND PAINT ENAMEL.
Claims use since Nov. 9, 1923.

Ser. No. 534,273. GREAT LAKES VARNISH WORKS, INC., doing business as Great Lakes Varnish Works, Chicago, Ill. Filed Sept. 12, 1947. Under section 2f of the act of 1946.

WHITEPLUS

Applicant claims ownership of registration No. 213,451.
FOR PAINT ENAMEL.
Claims use since Apr. 16, 1925.

The word "Bright" is disclaimed apart from the mark shown. Applicant claims ownership of registration No. 390,820.
FOR LIQUID FLOOR WAX AND WAX PASTE FOR FLOORS, FURNITURE, WOODWORK AND AUTOMOBILES.
Claims use since Feb. 16, 1946.

Ser. No. 538,292. KEYSTONE VARNISH COMPANY, Brooklyn, N. Y. Filed Oct. 18, 1947.

KEY-LUX

Applicant claims ownership of registrations Nos. 55,505 of Aug. 14, 1906, renewed; 62,662 of May 21, 1907, renewed; 63,625 of July 2, 1907, renewed; 72,686 of Feb. 9, 1909, renewed; 76,718 of Feb. 8, 1910, renewed; 207,346 of Dec. 29, 1925, renewed; 222,531 of Jan. 4, 1927, renewed; 231,184 of Aug. 16, 1927, renewed; 234,684 of Nov. 1, 1927, renewed; 238,774 of Feb. 14, 1928; and 391,275 of Oct. 28, 1941.
FOR PAINT ENAMELS.
Claims use since Sept. 15, 1947.

Ser. No. 539,602. MINNESOTA LINSEED OIL PAINT CO., Minneapolis, Minn. Filed July 5, 1947.

DULVAR

Applicant claims ownership of registration No. 232,830.
FOR VARNISH.
Claims use since Jan. 30, 1918.

CLASS 17
TOBACCO PRODUCTS

Ser. No. 503,225. A. SENSENBRENNER SONS, Los Angeles, Calif. Filed Sept. 23, 1947. Under section 2f of the act of 1946.

Santa Fe Trail

Applicant claims ownership of registrations Nos. 276,494, 276,498, 317,621, 317,622, 396,981, and 276,497.
FOR CIGARS.
Claims use since Apr. 2, 1946.

Ser. No. 530,663. MEDALIST CO., INC., Passaic, N. J. Filed Aug. 6, 1947.

BLUE LABEL

No claim is made to the right to the exclusive use of a label colored blue. Applicant claims ownership of registrations Nos. 317,493 and 403,043.
FOR CIGARS AND SMOKING TOBACCO.
Claims use since September 1919.

Ser. No. 539,214. J. W. ROBERTS & SON, INC., Tampa, Fla. Filed Oct. 27, 1947. Under section 2f of the act of 1946.

PEDRO CASTRO

The name "Pedro Castro" is fanciful and is not the name of a particular living individual.
FOR CIGARS.
Claims use since Jan. 1, 1919.

CLASS 21
ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 526,981. THE EDWIN F. GUTH COMPANY, St. Louis, Mo. Filed July 5, 1947.

CADET

FOR ELECTRIC LIGHTING FIXTURES.
Claims use since July 1, 1944.

Ser. No. 527,020. THE EDWIN F. GUTH COMPANY, St. Louis, Mo. Filed July 5, 1947.

INDUSTROLITE

Applicant claims ownership of registration No. 120,405.
FOR FIXTURES FOR ELECTRIC LIGHTS.
Claims use since Aug. 28, 1915.

Ser. No. 533,319. EUGENE S. KARLSEN, doing business as American Engineering Steel & Tool Co., Chicago, Ill. Filed Sept. 4, 1947.

ESKAR

FOR PORTABLE ELECTRIC HAND MANIPULABLE DRILLS.
Claims use since Nov. 11, 1935.

Ser. No. 534,667. THE PEP BOYS, MANNY, MOE & JACK, doing business as Stratford Storage Battery Co., Philadelphia, Pa. Filed Sept. 16, 1947. Under section 2f of the act of 1946.

STRATFORD

Applicant claims ownership of registration No. 272,965.
FOR STORAGE BATTERIES.
Claims use since Jan. 1, 1929.

Ser. No. 537,503. RADIO ENGINEERING LABORATORIES, INC., Long Island City, N. Y. Filed Oct. 10, 1947.

QUADRILINE

FOR RADIO FREQUENCY POWER AMPLIFIERS.
Claims use since Aug. 30, 1947.

Ser. No. 538,093. BRIGHT LIGHT REFLECTOR CO., INC., Bridgeport, Conn. Filed Oct. 17, 1947.

SILV-A-KING

Applicant claims ownership of registration No. 272,173.
FOR ELECTRIC LIGHTING EQUIPMENT—NAMELY, REFLECTORS, FLOOD LIGHTS, AND SPOT LIGHTS.
Claims use since Sept. 27, 1929.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 539,014. ALBANY BILLIARD BALL COMPANY, Albany, N. Y. Filed Oct. 25, 1947.

TRIANGLE CUE

No claim is made to the exclusive use of the word "Cue" apart from the mark. Applicant claims ownership of registration No. 221,882.
FOR CUE BALLS.

The following marks registered under the act of 1905, or the act of 1881, are published under the provisions of section 12(c) of the Trade-Mark Act of 1946. These registrations are not subject to opposition but are subject to cancellation under section 14 of the act of 1946.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Reg. No. 126,847. Registered Oct. 7, 1919. FOREST PRODUCTS CHEMICAL COMPANY, Memphis, Tenn., a corporation of Tennessee. Republished by registrant.

RED-SEAL

FOR CHARCOAL.
Claims use since May 1, 1918.

Reg. No. 175,004. Registered Oct. 30, 1923. THE RUBBER SERVICE LABORATORIES COMPANY, Akron, Ohio. Republished by Forest Products Chemical Company, Memphis, Tenn., a corporation of Tennessee.

"FLUXOL"

FOR HARDWOOD PITCH.
Claims use since July 15, 1922.

Reg. No. 347,013. Registered June 15, 1937. SOUTHERN STATES COOPERATIVE, INC., Richmond, Va., a corporation of Virginia. Republished by registrant.

SOUTHERN STATES COOPERATIVE Quality

The word "Quality" is disclaimed.
FOR FLOWER, FIELD AND GARDEN SEEDS.
Claims use since Aug. 22, 1933.

Reg. No. 382,799. Registered Nov 12, 1940. THE BISHOPRIC PRODUCTS CO., INC., Cincinnati, Ohio., a corporation of Ohio. Republished by registrant.

LASTIGLAS

FOR RESINOUS PLASTIC MATERIAL.
Claims use since August 1935.

Reg. No. 406,839. Registered May 2, 1944. UNIVERSAL BULB CORPORATION, Yonkers, N. Y., a corporation of New York. Republished by registrant.

Beautiflora

FOR FLOWER BULBS.
Claims use since Oct. 28, 1942.

Reg. No. 411,229. Registered Jan. 9, 1945. CARNEGIE DOCK AND FUEL COMPANY, Minneapolis, Minn., a corporation of Pennsylvania. Republished by registrant.

Sunny Home POCAHONTAS STOKER

The words "Pocahontas" and "Stoker" are disclaimed.
FOR COAL.
Claims use since May 16, 1944.

Reg. No. 417,003. Registered Oct. 9, 1945. THE SUPERB GLOVE COMPANY, Johnstown, N. Y., a firm. Republished by registrant.

Crescendoe

FOR LEATHER.
Claims use since Oct. 27, 1942.

Reg. No. 425,485. Registered Nov. 26, 1946. ALBERT C. FISCHER, Chicago, Ill. Republished by registrant.

SERVICISED

FOR NATURAL AND SYNTHETIC PLASTIC COMPOSITIONS IN SHEET, ROD OR TUBE FORM FROM WHICH FINISHED ARTICLES ARE MANUFACTURED; ASPHALT AND/OR ASPHALT COMPOSITIONS ADAPTED TO BE HEATED AND POURED IN PLACE OR MOLDED INTO STRIPS; CORK SHEETS; CORK-RUBBER COMPOSITION SHEETS; SPONGE RUBBER SHEETS; CORK-RUBBER COMPOSITIONS WITH OR WITHOUT OTHER FIBROUS OR MINERAL FILLING MATERIAL; SEED GERMINATING TAPES OF FIBROUS MATERIAL FOR HAVING SEEDS MOUNTED THEREON.
Claims use since May 1, 1915.

CLASS 2

RECEPTACLES

Reg. No. 213,338. Registered May 25, 1926. UNITED STATES ENVELOPE COMPANY, Springfield, Mass., a corporation of Maine. Republished by registrant.

U.S. ENVELOPE CO. USE SPRINGFIELD, MASS

The corporate name "U. S. Envelope Co." and the words "Springfield, Mass." are disclaimed.
FOR MERCHANDISE ENVELOPES AND PAPER DRINKING CUPS.
Claims use since Jan. 1, 1899.

Reg. No. 220,882. Registered Nov. 16, 1926. B. A. RAILTON CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR PAPER ITEMS—NAMELY, CASES MADE OF PAPER AND USED TO RECEIVE NUTS, CONDIMENTS, ETC.; PAPER PLATES, SODA-FOUNTAIN CUPS, AND SOUFFLE CASES.
Claims use since July 1922.

Reg. No. 265,048. Registered Dec. 10, 1929. UNITED STATES ENVELOPE COMPANY, Springfield, Mass., a corporation of Maine. Republished by registrant.

AJAX

FOR PAPER CUPS.
Claims use since Feb. 15, 1929.

Reg. No. 299,904. Registered Dec. 27, 1932. UNITED STATES ENVELOPE COMPANY, Springfield, Mass., a corporation of Maine. Republished by registrant.

ARTIKS

FOR CONTAINERS OR BAGS OF TRANSPARENT PAPER OR CELLULOSE FILM, USED PARTICULARLY FOR FOOD PRESERVATION.
Claims use since July 1, 1932.

Reg. No. 342,179. Registered Jan. 5, 1937. UNITED STATES ENVELOPE COMPANY, Springfield, Mass., a corporation of Maine. Republished by registrant.

AERO

FOR PAPER CUPS.
Claims use since June 12, 1936.

Reg. No. 403,048. Registered Aug. 31, 1943. UNITED STATES ENVELOPE COMPANY, Springfield, Mass., a corporation of Maine. Republished by registrant.

VICTOR

FOR PAPER DRINKING CUPS.
Claims use since July 1, 1919.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Reg. No. 49,675. Registered Feb. 13, 1906. POTTER DRUG & CHEMICAL CORPORATION, Boston, Mass., a corporation of Maine. Republished by registrant, present location Malden, Mass.

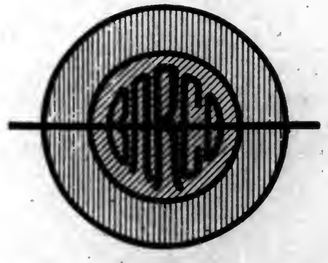
The trade-mark appears in red upon a black rectangular background.
FOR MEDICATED AND PERFUMED SOAP.
Claims use since Jan. 1, 1889.

Reg. No. 53,762. Registered June 12, 1906. POTTER DRUG & CHEMICAL CORPORATION, Boston, Mass., a corporation of Maine. Republished by registrant, present location Malden, Mass.

Cuticura

FOR MEDICATED AND PERFUMED SOAP.
Claims use since 1878.

Reg. No. 59,878. Registered Jan. 22, 1907. POTTER DRUG & CHEMICAL CORPORATION, Portland, Maine, and Boston, Mass., a corporation of Maine. Republished by registrant, present location Malden, Mass.



The trade-mark appears in red in the drawing.
FOR MEDICATED AND PERFUMED SOAP.
Claims use since Aug. 1, 1906.

Reg. No. 59,879. Registered Jan. 22, 1907. POTTER DRUG & CHEMICAL CORPORATION, Portland, Maine, and Boston, Mass., a corporation of Maine. Republished by registrant, present location Malden, Mass.

The trade-mark appears in red in the drawing.
FOR MEDICATED AND PERFUMED SOAP.
Claims use since Oct. 1, 1906.

Reg. No. 197,307. Registered Apr. 14, 1925. B. A. RAILTON CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

In the drawing, the shaded portion contained within the inner circle designates a black color and the shaded portion contained between the inner circle and the outer circle indicates a red color.
FOR LIQUID PASTE AND POWDER, SOAPS AND CLEANSER—NAMELY, CHIPS, LAUNDRY, POWDER, AND TOILET.
Claims use since about July 1922.

Reg. No. 231,818. Registered Aug. 30, 1927. THE DIRT-KUT COMPANY, Springfield, Ohio. Republished by The S. O. S. Company, Chicago, Ill., a corporation of Delaware.

BIS-KUT

FOR PRODUCT COMPOSED OF STEEL WOOL AND SOAP FOR CLEANSING, SCOURING, AND POLISHING.
Claims use since Jan. 1, 1922.

Reg. No. 374,904. Registered Jan. 30, 1940. THE WILSON CHEMICAL COMPANY, INC., Tyrone, Pa., a corporation of Delaware. Republished by registrant.

CLOVERINE

FOR SHAVING CREAM.
Claims use since Jan. 10, 1922.

CLASS 5

ADHESIVES

Reg. No. 324,602. Registered May 21, 1935. WESTERN WAXED PAPER COMPANY, Oakland, Calif., and Portland, Oreg. Republished by Crown Zellerbach Corporation, doing business as Western Waxed Paper Company, San Francisco, Calif., a corporation of Nevada.

STREAMLINE

FOR GUMMED PAPER TAPE.
Claims use since Nov. 26, 1934.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

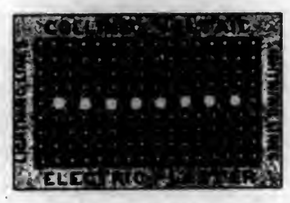
Reg. No. 31,292. Registered Feb. 22, 1898. THE BROWN MEDICINE COMPANY, Erie, Pa. Republished by S. C. Wells & Co., Le Roy, N. Y., a corporation of New York.

FOR A REMEDY FOR COLDS, THROAT AFFECTIONS, AND INTERNAL AND EXTERNAL PAINS.
Claims use since 1884.

Reg. No. 36,921. Registered Aug. 20, 1901. POTTER DRUG & CHEMICAL CORPORATION, Boston, Mass. Republished by Potter Drug & Chemical Corporation, Malden, Mass., a corporation of Maine.

FOR OINTMENT.
Claims use since March 1878.

Reg. No. 49,573. Registered Feb. 13, 1906. POTTER DRUG & CHEMICAL CORPORATION, Boston, Mass., a corporation of Maine. Republished by registrant, present location Malden, Mass.



The trade-mark appears in red upon a black circular background.
FOR OINTMENT.
Claims use since Jan. 1, 1889.

Reg. No. 50,754. Registered Mar. 27, 1906. POTTER DRUG & CHEMICAL CORPORATION, Boston, Mass., a corporation of Maine. Republished by registrant, present location Malden, Mass.

Cuticura

FOR OINTMENT.
Claims use since 1878.

Reg. No. 58,770. Registered Dec. 25, 1906. POTTER DRUG & CHEMICAL CORPORATION, Portland, Maine, and Boston, Mass., a corporation of Maine. Republished by registrant, present location Malden, Mass.

FOR MEDICINAL PLASTERS.
Claims use since January 1887.

Reg. No. 110,132. Registered May 2, 1916. KALAK WATER CO., OF NEW YORK, INC., Brooklyn, N. Y., a corporation of New York. Republished by registrant, present location New York, N. Y.

Kalak

FOR ARTIFICIALLY-PREPARED ALKALINE WATER FOR NEUTRALIZING THE ACIDITY OF THE URINE.
Claims use since June 26, 1915.

Reg. No. 120,090. Registered Jan. 8, 1918. FOREST PRODUCTS CHEMICAL COMPANY, Memphis, Tenn., a corporation of Tennessee. Republished by registrant.

Cre-wood

FOR WOOD-PRESERVING OILS.
Claims use since about Feb. 1, 1917.

Reg. No. 123,384. Registered Oct. 29, 1918. POTTER DRUG & CHEMICAL CORPORATION, Portland, Maine, and Boston, Mass., a corporation of Maine. Republished by registrant, present location Malden, Mass.

Cuticura

FOR TALCUM POWDER.
Claims use since Apr. 10, 1918.

Reg. No. 151,664. Registered Feb. 14, 1922. JAMES R. ANGELL, New Orleans, La. Republished by registrant.

ANGELL'S

FOR A SIRUP REMEDY FOR COUGHS AND WHOOPING COUGHS, COLDS, AND BRONCHITIS.
Claims use since 1899.

Reg. No. 168,833. Registered May 29, 1923. MORANA, INCORPORATED, doing business as Compagnie Morana, New York, N. Y. Republished by Van Ameringen-Haebler, Inc., New York, N. Y., a corporation of New York.

GERANOXIDE

FOR ODORIFEROUS PRODUCTS SUITABLE FOR USE IN THE PRODUCTION OF SOAPS AND PERFUMES.
Claims use since Sept. 1, 1918.

Reg. No. 250,561. Registered Dec. 11, 1928. S. C. WELLS & COMPANY, Le Roy, N. Y., a corporation of New York. Republished by registrant.

DR. CARTER'S K&B. TEA.

The word "Tea" is disclaimed.
FOR HERB TEA.
Claims use since 1844.

Reg. No. 258,572. Registered July 9, 1929. HYDRAULIC BRAKE COMPANY, Los Angeles, Calif., and Detroit, Mich., a corporation of California. Republished by registrant, present location Detroit, Mich.

LOCKHEED

FOR HYDRAULIC BRAKE FLUID.
Claims use since Jan. 2, 1923.

Reg. No. 292,253. Registered Mar. 8, 1932. B. K. ELLIOTT COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

PROTECT-O-LINE

The words "Protect" and "Line" are disclaimed.
FOR LIQUID COMPOSITION FOR FIXING PENCIL OR INK LINES ON DRAWINGS MADE ON CLOTH AND PAPER, TYPEWRITTEN MATTER ON CLOTH AND PAPER, AND THE LIKE.
Claims use since on or about Sept. 17, 1931.

Reg. No. 312,085. Registered Apr. 17, 1934. KEYSTONE LUBRICATING COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

KEYSTONE

The drawing is lined for red and blue, but color is not claimed as an essential feature of the trade-mark.
FOR OILY, NON-HARDENING, CHEMICAL PREPARATION (NOT A PAINT OR PAINT SUBSTITUTE) USED AS A TEMPORARY COVERING FOR METAL TO PREVENT THE SAME FROM RUSTING.
Claims use since Nov. 7, 1933.

Reg. No. 325,894. Registered July 9, 1935. SIROIL LABORATORIES, INC., Detroit, Mich., a corporation of Delaware. Republished by registrant.

SIROIL

FOR PREPARATION FOR THE TREATMENT OF PSORIASIS.
Claims use since November 1933.

Reg. No. 327,924. Registered Sept. 10, 1935. CHARLES OF THE RITZ, INC., New York, N. Y. Republished by Charles of The Ritz, Inc., (1937), New York, N. Y., a corporation of Delaware.

RITZTONE

FOR MASSAGE CREAM AND CLEANSING CREAM.
Claims use since Mar. 11, 1935.

Reg. No. 333,208. Registered Mar. 10, 1936. WILLIAM COOPER & NEPHEWS, INCORPORATED, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR INSECTICIDES.
Claims use since 1851.

Reg. No. 335,463. Registered June 2, 1936. NATIONAL INSTITUTE OF NUTRITION, Los Angeles, Calif., and Buffalo, N. Y. Republished by Nion Corporation, Los Angeles, Calif., a corporation of California.

conDOL

FOR LIQUID VITAMIN D CONCENTRATES.
Claims use since Jan. 13, 1936.

Reg. No. 353,534. Registered Jan. 11, 1938. SPIROS COOCHICOS, New York, N. Y. Republished by The Odell Company, Inc., Newark, N. J., a corporation of New Jersey.

TROEL

FOR HAIR TONIC.
Claims use since July 2, 1936.

Reg. No. 360,566. Registered Sept. 20, 1938. NATIONAL INSTITUTE OF NUTRITION, Los Angeles, Calif. Republished by Nion Corporation, Los Angeles, Calif., a corporation of California.

CALCIWAFERS

FOR CALCIUM PHOSPHATE PRODUCT CONTAINING VITAMIN D TO BE USED IN THE TREATMENT FOR CALCIUM DEFICIENCY AND GENERAL METABOLISM.
Claims use since Apr. 2, 1938.

Reg. No. 375,464. Registered Feb. 20, 1940. THE WILSON CHEMICAL COMPANY, INC., Tyrone, Pa., a corporation of Delaware. Republished by registrant.

Cloverine

FOR TOOTH PASTE.
Claims use since Mar. 15, 1910.

Reg. No. 376,848. Registered Apr. 9, 1940. NATIONAL INSTITUTE OF NUTRITION, Los Angeles, Calif., and Buffalo, N. Y. Republished by Nion Corporation, Los Angeles, Calif., a corporation of California.

CALCICAPS

FOR CALCIUM AND VITAMIN D TABLETS USED FOR THE TREATMENT AND PROPHYLAXIS OF CALCIUM DEFICIENCIES.
Claims use since Oct. 7, 1939.

Reg. No. 389,084. Registered July 22, 1941. NION CORPORATION, Los Angeles, Calif., a corporation of California. Republished by registrant.

HEMONUTRON

FOR IRON AND B COMPLEX COMBINATION.
Claims use since Mar. 7, 1941.

Reg. No. 394,918. Registered May 5, 1942. ARTHUR E. SMITH, Los Angeles, Calif. Republished by registrant.

The illustration of the ampule and stoppers, also, the color blue is disclaimed. The drawing is lined for the colors red and blue.
FOR ANESTHETIZING AND NERVE BLOCKING PREPARATIONS.
Claims use since Aug. 1, 1941.

Reg. No. 400,098. Registered Feb. 16, 1943. NION CORPORATION, Los Angeles, Calif., a corporation of California. Republished by registrant.

conDOCAPS

FOR VITAMIN CAPSULES CONTAINING VITAMIN D (IRRADIATED ERGOSTEROL) AND YEAST CONCENTRATES.
Claims use since Jan. 13, 1942.

Reg. No. 400,175. Registered Feb. 16, 1943. NIAGARA ALKALI COMPANY, Niagara Falls, N. Y., a corporation of New York. Republished by registrant.

Nialk

FOR CAUSTIC SODA, CAUSTIC POTASH, CARBONATE OF POTASH, BLEACHING POWDER, ORTHODICHLORO-BENZENE, PARADICHLORO-BENZENE, AND CHLORINE PRODUCTS USED FOR BLEACHING, SANITARY PURPOSES, DISINFECTING, STERILIZING, AND AS INSECTICIDES AND DEODORANTS.
Claims use since Sept. 11, 1942.

Reg. No. 407,441. Registered June 6, 1944. W. S. THOMPSON PRODUCTS, INC., Washington, D. C., a corporation of Maryland. Republished by registrant.

OCTA-PERLS

The word "Perls" is disclaimed.
FOR VITAMIN CAPSULES.
Claims use since Dec. 12, 1941.

Reg. No. 414,462. Registered June 12, 1945. KEYSTONE LUBRICATING COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

KEYSTONE

FOR CHEMICAL RUST REMOVERS.
Claims use since about 1929.

Reg. No. 417,824. Registered Nov. 20, 1945. FOREST PRODUCTS CHEMICAL COMPANY, Memphis, Tenn., a corporation of Tennessee. Republished by registrant.

Star

FOR MINERAL PREPARATION FOR USE AS A FOOD SUPPLEMENT FOR FARM ANIMALS, CONTAINING CHARCOAL, BONE BLACK, CARBON BLACK, GROUND LIMESTONE, AND CONDITIONING SALTS.

Life-Laquer

The word "Laquer" is disclaimed.
FOR LINOLEUM.
Claims use since January 1942.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 104,618. Registered June 8, 1915. KILLARK ELECTRIC MANUFACTURING CO., St. Louis, Mo., a corporation of Missouri. Republished by registrant.

ELECTROLET

FOR ELECTRICAL CONDUIT FITTINGS.
Claims use since June 1911.

Reg. No. 151,574. Registered Feb. 7, 1922. PITTSBURGH ELECTRIC FURNACE CORPORATION, Pittsburgh, Pa. Republished by Pittsburgh Lectromelt Furnace Corporation, Pittsburgh, Pa., a corporation of Pennsylvania.

'LECTROMELT

FOR ELECTROMETALLURGICAL FURNACES.
Claims use since May 1, 1920.

Reg. No. 203,852. Registered Sept. 29, 1925. THE PORTABLE LIGHT CO., New York, N. Y. Republished by The Portable Light Co., Inc., New York, N. Y., a corporation of New York.

The words "Half-Mile Ray," "New York," and "The Portable Light Co." are disclaimed.
FOR SEARCHLIGHTS.
Claims use since Oct. 1, 1923.

Reg. No. 208,886. Registered Feb. 9, 1926. AMERICAN APPLIANCE CO., Cambridge, Mass. Republished by Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware.

Raytheon

FOR RECTIFIER TUBES.
Claims use since Aug. 14, 1925.

Reg. No. 238,412. Registered Feb. 7, 1928. ELECTRIC POWER EQUIPMENT CORPORATION, Philadelphia, Pa. Republished by Electric Power Equipment Corporation, Philadelphia, Pa., a corporation of Delaware.

ELPEQ

FOR SWITCHES FOR CONTROLLING CIRCUITS, BUS-BAR CLAMPS, BUS SUPPORTS, CHOKE COILS, CONTROL SWITCHES, COPPER CONNECTERS FOR ENDS OF COPPER CABLES, BARS, AND TUBING, DISCONNECTING SWITCHES, INSULATOR PINS, OUTDOOR SUBSTATIONS, HORN-GAP SWITCHES, LIGHTNING ARRESTERS, MALLEABLE-IRON FITTINGS FOR SUPPORTING STRUCTURAL PIPE FRAMES ESPECIALLY DESIGNED FOR THE MOUNTING OF ELECTRICAL EQUIPMENT.
Claims use since Feb. 7, 1927.

Reg. No. 262,104. Registered Oct. 1, 1929. ENGLERT MANUFACTURING COMPANY, doing business as Chieftain Storage Battery Co., Pittsburgh, Pa. Republished by National Battery Company, St. Paul, Minn., a corporation of Delaware.

FOR ELECTRIC STORAGE BATTERIES.
Claims use since on or about Apr. 1, 1929.

Reg. No. 275,842. Registered Sept. 30, 1930. NATIONAL BATTERY COMPANY, St. Paul, Minn., a corporation of Delaware. Republished by registrant.

NATCO

FOR ELECTRIC BATTERIES.
Claims use since Apr. 16, 1930.

Reg. No. 280,405. Registered Feb. 17, 1931. ENGLERT MANUFACTURING COMPANY, Pittsburgh, Pa. Republished by National Battery Company, St. Paul, Minn., a corporation of Delaware.

The drawing is lined for the colors red and green.
FOR ELECTRIC STORAGE BATTERIES.
Claims use since on or about May 1, 1929.

Reg. No. 289,444. Registered Nov. 24, 1931. NATIONAL BATTERY COMPANY, St. Paul, Minn., a corporation of Delaware. Republished by registrant.

EAGLE

FOR ELECTRIC BATTERIES.
Claims use since on or about Jan. 10, 1925.

Reg. No. 296,338. Registered Aug. 2, 1932. NATIONAL BATTERY COMPANY, St. Paul, Minn., a corporation of Delaware. Republished by registrant.

FOR STORAGE BATTERIES.
Claims use since Jan. 22, 1932.

Reg. No. 297,723. Registered Sept. 27, 1932. GOULD STORAGE BATTERY CORPORATION, Depew, N. Y. Republished by National Battery Company, St. Paul, Minn., a corporation of Delaware.

The word "Battery" is disclaimed.
FOR STORAGE BATTERIES.
Claims use since Jan. 1, 1916.

Reg. No. 299,507. Registered Dec. 6, 1932. RAYTHEON PRODUCTION CORPORATION, Newton, Mass. Republished by Raytheon Manufacturing Company, Newton, Mass., a Delaware corporation.

PLATO

FOR ELECTRICAL SPACE DISCHARGE TUBES.
Claims use since July 6, 1932.

Reg. No. 305,916. Registered Aug. 29, 1933. RAYTHEON PRODUCTION CORPORATION, Newton, Mass. Republished by Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware.

FOR ELECTRICAL SPACE DISCHARGE TUBES.
Claims use since Apr. 3, 1933.

Reg. No. 395,167. Registered May 12, 1942. RAYTHEON PRODUCTION CORPORATION, Newton, Mass. Republished by Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware.

CK

FOR ELECTRICAL SPACE DISCHARGE TUBES.
Claims use since August 1933.

Reg. No. 395,168. Registered May 12, 1942. RAYTHEON PRODUCTION CORPORATION, Newton, Mass. Republished by Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware.

RK

FOR ELECTRICAL SPACE DISCHARGE TUBES.
Claims use since April 1933.

Reg. No. 400,293. Registered Mar. 2, 1943. SPIEGEL, INC., Chicago, Ill., a corporation of Delaware. Republished by registrant.

AIR CASTLE

FOR RADIO RECEIVING SETS AND RADIO TUBES, AND FOR STORAGE BATTERIES AND DRY CELL BATTERIES.
Claims use since February 1934.

Reg. No. 420,872. Registered May 7, 1946. RAYTHEON MANUFACTURING COMPANY, Newton, Mass., a corporation of Delaware. Republished by registrant.

RAYTHEON

FOR APPARATUS FOR CONTROLLING OR MODIFYING ELECTRICAL CURRENTS—NAMELY, ALTERNATING CURRENT RECTIFYING SYSTEMS, ELECTRIC CURRENT AMPLIFIERS, AUTOMATIC SELF-REGULATING BATTERY CHARGERS, CHOKES, ELECTRIC RESISTANCE WELDERS, GENERATORS OF HIGH FREQUENCY INDUCTION HEATING CURRENT, TRANSFORMERS, VIBRATORY FEEDER CONTROLLERS, AND VOLTAGE REGULATORS.
Claims use since on or about November 1934.

Reg. No. 429,799. Registered May 20, 1947. SPIEGEL, INC., Chicago, Ill., a corporation of Delaware. Republished by registrant.

Housemaid

FOR ELECTRIC FLAT IRONS.
Claims use since January 1939.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 418,968. Registered Jan. 15, 1946. SPIEGEL, INC., Chicago, Ill., a corporation of Delaware. Republished by registrant.

FOR FISHING RODS, FISHING REELS, FISHING LINES, ARTIFICIAL FLIES, AND FISHING LINE BOBBERS.
Claims use since September 1935.

Reg. No. 425,737. Registered Dec. 3, 1946. ART WIRE AND STAMPING COMPANY, Newark, N. J., a corporation of New Jersey. Republished by registrant.

FOR ARTIFICIAL FISH BAIT.
Claims use since July 1, 1907.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 50,481. Registered Mar. 20, 1906. THE COLLINS COMPANY, Collinsville, Conn., a corporation of Connecticut. Republished by registrant.

LEGITIMUS

FOR AXES, HATCHETS, AND ADZES.
Claims use since 1876.

Reg. No. 61,712. Registered Apr. 2, 1907. THE OHIO INJECTOR COMPANY, Wadsworth, Ohio, a corporation of Ohio. Republished by registrant.

OHIO

FOR INJECTORS FOR STATIONARY AND LOCOMOTIVE STEAM-BOILERS.
Claims use since June 20, 1893.

Reg. No. 89,537. Registered Dec. 24, 1912. THE COLLINS COMPANY, Collinsville, Conn., a corporation of Connecticut. Republished by registrant.

FOR AXES, HATCHETS, ADZES, BUSH-HOOKS, MACHETES, SAWS, CHISELS, KNIVES OTHER THAN CLASP AND POCKET KNIVES, SWORDS, SICKLES, MATTOCKS, PICKAXES, SHOVELS, SPADES, CROWBARS, PICKS, HOES, MILL-PICKS, SLEDGES, HAMMERS, WEDGES, WRENCHES, AUGERS, BORING-BITS, EARTH AND ROCK DRILLS, CAVADORES, BARRETONES, TARPALAS, PALAS, TERCADOS, JINCOLAS, BARRAS, LANZAS, LANCITAS, ARPONES, CLEAVERS, AND BAYONETS.
Claims use since 1826.

Reg. No. 93,076. Registered Aug. 19, 1913. THE COLLINS COMPANY, Collinsville, Conn., a corporation of Connecticut. Republished by registrant.

COLLINS & CO.

FOR AXES, HATCHETS, ADZES, BUSH-HOOKS, MACHETES, SAWS, CHISELS, KNIVES, SWORDS, SICKLES, MATTOCKS, PICKAXES, SHOVELS, SPADES, CROWBARS, PICKS, HOES, MILL-PICKS, SLEDGES, HAMMERS, WEDGES, WRENCHES, AUGERS, BORING-BITS, EARTH AND ROCK DRILLS, CAVADORES, BARRETONES, TARPALAS, PALAS, TERCADOS, JINCOLAS, BARRAS, LANZAS, LANCITAS, ARPONES, CLEAVERS, BAYONETS, AND PLOWS AND PARTS THEREOF.
Claims use since 1826.

Reg. No. 100,099. Registered Oct. 6, 1914. THE COLLINS COMPANY, Collinsville, Conn., a corporation of Connecticut. Republished by registrant.

FOR AXES, HATCHETS, ADZES, AUGERS, SWORDS, TABLE AND OTHER KNIVES OF BASE METALS (NOT INCLUDING SURGICAL KNIVES), CHISELS, BORING-BITS, BUSH-HOOKS, PICKAXES, CLEAVERS, MATTOCKS, MACHETES, BAYONETS, AND SPEARS.
Claims use since 1875.

Reg. No. 108,791. Registered Feb. 29, 1916. HEDMAN MANUFACTURING COMPANY, Chicago, Ill. Republished by The Hedman Company, Chicago, Ill., a corporation of Illinois.

F AND E

FOR MECHANICAL CHECK-PROTECTORS.
Claims use since June 11, 1914.

Reg. No. 139,582. Registered Feb. 8, 1921. NATIONAL RING TRAVELER CO., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

HICKS'

FOR RING-TRAVELERS.
Claims use since 1869.

Reg. No. 141,184. Registered Apr. 12, 1921. NATIONAL RING TRAVELER CO., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

WILSON'S

FOR RING TRAVELERS.
Claims use since 1869.

Reg. No. 142,063. Registered May 3, 1921. NATIONAL RING TRAVELER CO., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

NATIONAL

FOR RING TRAVELERS.
Claims use since 1893.

Reg. No. 143,110. Registered May 24, 1921. NATIONAL RING TRAVELER CO., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

The expression "Prov., R. I., U. S. A." is disclaimed.
FOR RING-TRAVELERS.
Claims use since 1870.

Reg. No. 144,251. Registered June 28, 1921. NATIONAL RING TRAVELER CO., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

SHAW'S

FOR RING-TRAVELERS.
Claims use since 1876.

Reg. No. 145,424. Registered Aug. 2, 1921. NATIONAL RING TRAVELER CO., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

The expression "Prov., R. I., U. S. A." is disclaimed.
FOR RING-TRAVELERS.
Claims use since 1880.

Reg. No. 162,564. Registered Dec. 19, 1922. NATIONAL RING TRAVELER CO., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

The expression "Made in All N. R. T. Co. Standards. Domestic and Foreign Patents Pend'g" the word "Travelers" and the representation of the traveler are all disclaimed.
FOR RING AND TWISTER TRAVELERS.
Claims use since March 1921.

Reg. No. 167,249. Registered Apr. 24, 1923. NATIONAL RING TRAVELER CO., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

DOUBLE DUTY

FOR RING AND TWISTER TRAVELERS.
Claims use since March 1921.

Reg. No. 175,062. Registered Oct. 30, 1923. KEYSTONE LUBRICATING COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

KEYSTONE

FOR GREASE CUPS, OIL CUPS, AND LUBRICATORS FOR THE APPLICATION OF LUBRICANTS.
Claims use since 1890.

Reg. No. 209,498. Registered Feb. 23, 1926. NATIONAL RING TRAVELER CO., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

The representation of the traveler is disclaimed.
FOR RING TRAVELERS.
Claims use since 1870.

Reg. No. 222,455. Registered Jan. 4, 1927. UNITED ENGINEERING AND FOUNDRY COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

The representation of the roll is disclaimed. The drawing is lined for the color green.
FOR ROLLING-MILL ROLLS.
Claims use since Nov. 30, 1925.

Reg. No. 254,566. Registered Mar. 26, 1929. ROCKFORD DRILLING MACHINE COMPANY, Rockford, Ill. Republished by Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois.

PULLMORE

FOR POWER-TRANSMISSION CLUTCHES, AND PARTS THEREOF.
Claims use since Aug. 27, 1927.

Reg. No. 266,552. Registered Jan. 28, 1930. UNITED ENGINEERING AND FOUNDRY COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant.

UNEFCO

FOR ROLLING MILL ROLLS.
Claims use since Aug. 21, 1929.

Reg. No. 278,230. Registered Dec. 9, 1930. NATIONAL RING TRAVELER CO., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

SPECIALLOY

FOR TWISTER TRAVELERS.
Claims use since June 19, 1930.

Reg. No. 284,754. Registered July 7, 1931. HYDRAUGER CORPORATION, LTD., San Francisco, Calif., a corporation of California. Republished by registrant.

HYDRAUGER

FOR EARTH-BORING MACHINERY PARTICULARLY OF THE HORIZONTAL TYPE.
Claims use since Aug. 30, 1930.

Reg. No. 298,702. Registered Nov. 1, 1932. THE MAXIM SILENCER COMPANY, Hartford, Conn., a corporation of Connecticut. Republished by registrant.

FOR SILENCERS FOR QUIETING GAS FLOW NOISES AT EXHAUSTS AND INLETS FOR ENGINES, PUMPS, COMPRESSORS, BLOWERS, REDUCING VALVES, AND SAFETY VALVES.
Claims use since May 1931.

Reg. No. 318,236. Registered May 22, 1934. NATIONAL RING TRAVELER CO., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

LOWBOY

FOR RING TRAVELERS.
Claims use since March 1932.

Reg. No. 318,312. Registered Oct. 23, 1934. AMERICAN SAW & MANUFACTURING COMPANY, Springfield, Mass., a corporation of Massachusetts. Republished by registrant.

SUPER-FLEX

FOR HACK SAW BLADES AND BAND SAW BLADES.
Claims use since Feb. 1, 1928.

Reg. No. 323,329. Registered Apr. 9, 1935. THE COLLINS COMPANY, Collinsville, Conn., a corporation of Connecticut. Republished by registrant.

FOR AXES, HATCHETS, ADZES, BUSH-HOOKS, MACHETES, SAWS, CHISELS, KNIVES WITH FIXED BLADES AND HANDLES INTENDED FOR MANUAL USE AS AN IMPLEMENT OF HOUSEHOLD OR OUTDOOR USE, SWORDS, SICKLES, MATTOCKS, PICK-AXES, SHOVELS, SPADES, CROWBARS, PICKS, HOES, MILL-PICKS, SLEDGES, HAMMERS, WEDGES, WRENCHES, AUGERS, BORING-BITS, EARTH AND ROCK DRILLS, CAVADORES, BARRETONES, TAR-PALAS, PALAS, TERCADOS, JINCOLAS, BARRAS, LANZAS, LANCITAS, ARPONES, CLEAVERS, AND BAYONETS.
Claims use since 1876.

Reg. No. 332,626. Registered Feb. 18, 1936. THE NATIONAL TOOL COMPANY, Cleveland, Ohio. Republished by National Tool Company, Cleveland, Ohio, a corporation of Ohio.

BURNI – SHAVE

The word "Shave" is disclaimed.
FOR GEAR SHAVING AND BURNISHING TOOLS.
Claims use since on or about Apr. 2, 1935.

Reg. No. 335,232. Registered May 26, 1936. J. H. WILLIAMS & CO., Buffalo, N. Y., a corporation of New York. Republished by registrant.

"SUPERECTOR"

FOR WRENCHES, WRENCH SETS, WRENCH SOCKETS, AND TOOL HANDLES.
Claims use since Dec. 13, 1935.

Reg. No. 345,702. Registered May 4, 1937. KEYSTONE LUBRICATING COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR GREASE CUPS, OIL CUPS, AND LUBRICATORS.
Claims use since 1890.

Reg. No. 351,068. Registered Oct. 19, 1937. NATIONAL RING TRAVELER CO., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

DUPLEX

FOR TWISTER TRAVELERS FOR TEXTILE MACHINES.
Claims use since Nov. 18, 1931.

Reg. No. 351,302. Registered Oct. 26, 1937. NATIONAL RING TRAVELER CO., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

Beryllian Finish

The word "Finish" is disclaimed.
FOR RING AND TWISTER TRAVELERS.
Claims use since Apr. 8, 1937.

Reg. No. 362,978. Registered Dec. 6, 1938. KEYSTONE LUBRICATING COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR TELLTALE OR INDICATING LUBRICATION FITTINGS.
Claims use since Jan. 10, 1938.

Reg. No. 367,020. Registered May 9, 1939. THE CAPEWELL MANUFACTURING COMPANY, Hartford, Conn., a corporation of Connecticut. Republished by registrant.

CAPEWELL 1861

FOR PLANES AND HAMMERS.
Claims use since Oct. 28, 1937.

Reg. No. 367,078. Registered May 9, 1939. KEYSTONE LUBRICATING COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

KEYSTONE

FOR TELLTALE OR INDICATING LUBRICATION FITTINGS.
Claims use since Jan. 10, 1938.

Reg. No. 384,250. Registered Jan. 7, 1941. THE CAPEWELL MANUFACTURING COMPANY, Hartford, Conn., a corporation of Connecticut. Republished by registrant.

FLEXLOY

FOR HACK SAW BLADES.
Claims use since Sept. 3, 1940.

Reg. No. 384,538. Registered Jan. 21, 1941. NATIONAL RING TRAVELER CO., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

AMERICAN

FOR TRAVELERS FOR USE ON SPINNING AND TWISTING RINGS.
Claims use since 1870.

Reg. No. 389,082. Registered July 22, 1941. NATIONAL RING TRAVELER CO., Providence, R. I., a corporation of Rhode Island. Republished by registrant, present location Pawtucket, R. I.

STRIPTEASE

FOR TRAVELERS FOR USE ON SPINNING AND TWISTING RINGS.
Claims use since Jan. 10, 1941.

Reg. No. 389,715. Registered Aug. 19, 1941. THE CAPEWELL MANUFACTURING COMPANY, Hartford, Conn., a corporation of Connecticut. Republished by registrant.

HARD-TUNG

The word "Hard" is disclaimed.
FOR HACK SAW BLADES.
Claims use since Jan. 30, 1941.

Reg. No. 389,739. Registered Aug. 19, 1941. THE CAPEWELL MANUFACTURING COMPANY, Hartford, Conn., a corporation of Connecticut. Republished by registrant.

WORLD WIDE

FOR HACK SAW BLADES.
Claims use since Feb. 28, 1941.

Reg. No. 391,106. Registered Oct. 21, 1941. NATIONAL RING TRAVELER CO., Pawtucket, R. I., a corporation of Rhode Island. Republished by registrant.

NATIONAL-ETARTNEP

FOR TRAVELERS FOR USE ON SPINNING AND TWISTING RINGS.
Claims use since Apr. 30, 1941.

Reg. No. 427,407. Registered Feb. 11, 1947. SPIEGEL, INC., Chicago, Ill., a corporation of Delaware. Republished by registrant.

HARVEST KING

FOR CATTLE FEED MIXERS, CEMENT MIXERS, HAMMER-MILLS, SAW FRAMES, SEED GRATERS AND CLEANERS, CORN SHELLERS, BLOWER AND CONVEYER TYPE GRAIN ELEVATORS, LIME AND FERTILIZER SPREADERS, MANURE LOADERS, HAY LOADERS, PLOWS, HARROWS, CULTIVATORS, LIFTING SCOOPS, AND FRESNO TYPE ROTARY SCRAPERS.
Claims use since January 1945.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Reg. No. 218,892. Registered Oct. 5, 1926. GEORGE W. DUNHAM CORPORATION, Utica, N. Y. Republished by Easy Washing Machine Corporation, Syracuse, N. Y., a corporation of Delaware.

WHIRLDRY

FOR LAUNDRY WASHING AND DRYING MACHINES AND PARTS THEREOF.
Claims use since May 1, 1925.

Reg. No. 280,417. Registered Feb. 17, 1931. SYRACUSE WASHING MACHINE CORPORATION, Syracuse, N. Y. Republished by Easy Washing Machine Corporation, Syracuse, N. Y., a corporation of Delaware.

EASY

FOR LAUNDRY WASHING MACHINES, DRIERS, IRONERS, AND WRINGERS AND COMBINATIONS OF THE SAME.
Claims use since Jan. 1, 1894.

Reg. No. 309,759. Registered Jan. 30, 1934. EASY WASHING MACHINE CORPORATION, Syracuse, N. Y., a corporation of Delaware. Republished by registrant.

SPIRALATOR

FOR LAUNDRY WASHING MACHINES.
Claims use since Aug. 28, 1933.

Reg. No. 341,354. Registered Dec. 8, 1936. EASY WASHING MACHINE CORPORATION, Syracuse, N. Y., a corporation of Delaware. Republished by registrant.

TURBOLATOR

FOR AGITATORS FOR LAUNDRY WASHING MACHINES.
Claims use since Jan. 28, 1936.

Reg. No. 367,038. Registered May 9, 1939. EASY WASHING MACHINE CORPORATION, Syracuse, N. Y., a corporation of Delaware. Republished by registrant.

EASY-MATIC

FOR LAUNDRY MACHINE.
Claims use since Nov. 15, 1937.

Reg. No. 421,853. Registered June 18, 1946. SPIEGEL, INC., Chicago, Ill., a corporation of Delaware. Republished by registrant.

Homestead

FOR WASHING MACHINES.
Claims use since 1939.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Reg. No. 213,231. Registered May 25, 1926. CONTINENTAL OPTICAL CORPORATION, New York, N. Y. Republished by Continental Optical Company, Inc., Indianapolis, Ind., a corporation of Indiana.

CONTINENTAL

FOR OPHTHALMIC AND OTHER OPTICAL LENSES AND LENS BLANKS, EYEGLASS FRAMES AND MOUNTINGS, APPLIANCES FOR MEASURING OPTICAL LENSES, DETERMINING THE CURVATURES THEREOF, GRINDING SURFACES OF PROPER CURVATURE THEREOF, AND TESTING THE POWERS AND VISION THEREOF.
Claims use since Aug. 15, 1925.

Reg. No. 213,232. Registered May 25, 1926. CONTINENTAL OPTICAL CORPORATION, New York, N. Y. Republished by Continental Optical Company, Inc., Indianapolis, Ind., a corporation of Indiana.

FOR OPHTHALMIC AND OTHER OPTICAL LENSES AND LENS BLANKS, EYEGLASS FRAMES AND MOUNTINGS, APPLIANCES FOR MEASURING OPTICAL LENSES, DETERMINING THE CURVATURES THEREOF, GRINDING SURFACES OF PROPER CURVATURE THEREOF, AND TESTING THE POWERS AND VISION THEREOF.
Claims use since Aug. 15, 1925.

Reg. No. 331,598. Registered Jan. 14, 1936. THERMOID COMPANY, Trenton, N. J., a corporation of Delaware. Republished by registrant.

Thermoid

Tru-check

The term "Tru-Check" is disclaimed.
FOR BRAKE TESTING MACHINES OR APPARATUS.
Claims use since July 16, 1935.

Reg. No. 342,591. Registered Jan. 19, 1937. THE EPPLEY LABORATORY, INC., Newport, R. I., a corporation of Rhode Island. Republished by registrant.

EPLAB

FOR PYROMETER STANDARD CELLS.
Claims use since July 10, 1936.

Reg. No. 343,723. Registered Mar. 2, 1937. PETER G. SCHREUDERS, Tacoma, Wash. Republished by registrant.

KANAK

FOR DEVICE FOR MEASURING FOODS, THE DEVICE ADAPTED TO BE ATTACHED TO THE FOOD CONTAINER.
Claims use since June 15, 1936.

Reg. No. 351,949. Registered Nov. 16, 1937. R K O RADIO PICTURES, INC., New York, N. Y., a corporation of Delaware. Republished by registrant.

R K O RADIO PICTURES

The word "Pictures" is disclaimed.
FOR FILMS ADAPTED FOR REPRODUCTION AND CONTAINING RECORDED IMAGES OF PICTURES AND/OR RECORDED SOUND.
Claims use since Aug. 13, 1935.

Reg. No. 353,827. Registered Jan. 18, 1938. R K O RADIO PICTURES, INC., New York, N. Y., a corporation of Delaware. Republished by registrant.

an RKO Radio Picture

The word "Picture" is disclaimed.
FOR FILMS ADAPTED FOR REPRODUCTION AND CONTAINING RECORDED IMAGES OF PICTURES AND/OR RECORDED SOUND.
Claims use since June 30, 1937.

Reg. No. 364,229. Registered Jan. 24, 1939. INTERNATIONAL RADIO CORPORATION, Ann Arbor, Mich. Republished by Argus, Incorporated, Ann Arbor, Mich., a corporation of Michigan.

argus

FOR CAMERAS, PROJECTORS FOR PROJECTING PHOTOGRAPHIC FILM, LENS FILTERS, AUXILIARY LENSES, CAMERA CASES, PROJECTION SLIDE CASES, AND FLASH BULB APPLIANCES.
Claims use since on or about Oct. 24, 1935.

Reg. No. 372,833. Registered Nov. 14, 1939. MATCH KING, INC., Chicago, Ill. Republished by Galter Products Co., Chicago, Ill., a corporation of Illinois.

GALTEX

FOR CAMERAS, PHOTOGRAPHIC LENSES, AND SENSITIZED PHOTOGRAPHIC FILMS.
Claims use since June 1, 1938.

Reg. No. 390,879. Registered Oct. 7, 1941. WAYNE KNITTING MILLS, Fort Wayne, Ind., a corporation of Indiana. Republished by registrant.

Belle-Shar-Meter

The word "Meter" is disclaimed.
FOR DEVICE TO MEASURE THE LENGTH AND WIDTH OF HOSIERY FOR LADIES AND MISSES.
Claims use since May 1, 1941.

Reg. No. 395,581. Registered June 2, 1942. The UNIVIS LENS COMPANY, Dayton, Ohio, a corporation of Ohio. Republished by registrant.

VISION EFFICIENCY

The words "Vision and Efficiency" are disclaimed.
FOR OPHTHALMIC LENS BLANKS AND EYEGLASS LENSES.
Claims use since Apr. 10, 1940.

Reg. No. 424,795. Registered Oct. 22, 1946. WALTER KIDDE & COMPANY, INC., New York, N. Y., and Belleville, N. J., a corporation of New York. Republished by registrant, present location Belleville, N. J.

K

FOR SUBMERSION ACTUATORS FOR ACTUATING VALVES FOR THE RELEASE OF GAS UNDER PRESSURE, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since on or about Dec. 1, 1940.

CLASS 27

HOROLOGICAL INSTRUMENTS

Reg. No. 382,941. Registered Nov. 19, 1940. SPIEGEL, INC., Chicago, Ill., a corporation of Delaware. Republished by registrant.

BUGLE BOY

FOR CLOCKS.
Claims use since January 1935.

Reg. No. 384,594. Registered Jan. 21, 1941. JACK GALTER, Chicago, Ill. Republished by registrant.

DUTCHMILL

FOR ELECTRIC CLOCKS.
Claims use since May 12, 1929.

Reg. No. 385,048. Registered Feb. 11, 1941. JACK GALTER, Chicago, Ill. Republished by registrant.

SUPERCRAFT

FOR ELECTRIC CLOCKS.
Claims use since May 12, 1929.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 203,945. Registered Sept. 29, 1925. KREMENTZ & COMPANY, Newark, N. J., a corporation of New Jersey. Republished by registrant.

FOR CANDY.
Claims use since Oct. 28, 1926.

Reg. No. 234,435. Registered Oct. 25, 1927. GREGORY J. DECK, doing business as Deco Refreshments, Buffalo, N. Y. Republished by Deco Restaurants Inc., Buffalo, N. Y., a corporation of New York.

Deco

FOR FINGER ROLLS, SANDWICH ROLLS, WIENERS, MINCED MEAT, PICKLES AND PICKLE RELISH.
Claims use since about Aug. 1, 1918.

Reg. No. 236,107. Registered Dec. 6, 1927. HANSEN PACKING COMPANY, Butte, Mont. Republished by The Vitamont Sales Co., Butte, Mont., a corporation of Montana.

VITAMONT

The lining in the drawing is for shading only.
FOR HOG FOOD AND CHICKEN FOOD.
Claims use since Dec. 16, 1926.

Reg. No. 236,761. Registered Dec. 20, 1927. J. J. GIELOW & SONS, Highland Park, Mich., assignor to J. J. Gielow & Sons. Republished by J. J. Gielow & Sons, Inc., Detroit, Mich., a corporation of Michigan.

AUNT JANE'S

FOR HORSE-RADISH, PICKLES, SWEET PEPPER RELISH, VINEGAR, CATCHUP, MAYONNAISE, HONEY, FRUIT PRESERVES, MUSTARD, SAUERKRAUT, MARMALADE, AND PEANUT BUTTER.
Claims use since 1922.

Reg. No. 238,071. Registered Jan. 24, 1928. JOHN S. BIERHAUS, doing business as E. Bierhaus & Sons, Vincennes, Ind. Republished by E. Bierhaus & Sons, Vincennes, Ind., a firm.

Scout Cabin

FOR CANNED FRUIT AND CANNED VEGETABLES.
Claims use since Dec. 15, 1925.

Reg. No. 238,865. Registered Feb. 14, 1928. JORDAN STEVENS COMPANY, Minneapolis, Minn., a corporation of Delaware. Republished by registrant.

TONKA

FOR CANNED FRUITS, CANNED VEGETABLES, COFFEE, FRUIT PRESERVES, JELLIES, PEANUT BUTTER, CANNED FISH, AND CONDIMENTS—NAMELY, TOMATO CATSUP AND PICKLES, OLIVES, AND JAMS.
Claims use since Mar. 15, 1927.

Reg. No. 241,277. Registered Apr. 24, 1928. SOUTHERN CALIFORNIA FISH CORPORATION, Terminal Island, Calif., a corporation of California. Republished by registrant.

SEABOARD

FOR CANNED FISH.
Claims use since Apr. 2, 1927.

Reg. No. 257,863. Registered June 18, 1929. THE VITAMONT SALES CO., Butte, Mont., a corporation of Montana. Republished by registrant.

VITAMONT

FOR DOG FOOD.
Claims use since Aug. 25, 1928.

Reg. No. 260,300. Registered Aug. 20, 1929. KRASNE BROS, New York, N. Y., a partnership. Republished by registrant.

Bernice

FOR FRUIT PRESERVES, CANNED FRUITS, OLIVES, CANNED FISH, AND CANNED VEGETABLES.
Claims use since February 1926.

Reg. No. 265,132. Registered Dec. 17, 1929. PAUL F. BEICH COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Etchings of Chocolate

The word "Chocolate" is disclaimed.
FOR CANDY.
Claims use since July 6, 1929.

Reg. No. 268,803. Registered Mar. 18, 1930. S. V. CHRISTIERSON, Salinas, Calif. Republished by registrant.

SUN FOOD

The word "Food" is disclaimed.
FOR FRESH VEGETABLES, FRESH DECIDUOUS FRUITS, AND FRESH CITRUS FRUITS.
Claims use since Oct. 10, 1929.

Reg. No. 272,108. Registered July 1, 1930. GENTILE BROS. COMPANY, Cincinnati, Ohio, and Orlando, Fla., a corporation of Ohio. Republished by registrant, present location Cincinnati, Ohio, and Winter Park, Fla.

TREE GOLD

FOR FRESH CITRUS FRUITS.
Claims use since September 1928.

Reg. No. 275,063. Registered Sept. 16, 1930. PHILLIPS PACKING COMPANY, INC., Cambridge, Md., a corporation of Maryland. Republished by registrant.

Castle Haven

FOR CANNED VEGETABLES AND CANNED PORK AND BEANS.
Claims use since 1905.

Reg. No. 276,019. Registered Oct. 7, 1930. E. M. TODD CO., INC., Richmond, Va., a corporation of Virginia. Republished by registrant.

TODD'S

OLD VIRGINIA

FOR HAM AND BACON PUT UP IN GLASS JARS.
Claims use since April 1929.

Reg. No. 278,789. Registered Dec. 30, 1930. CALIFORNIA LIMA BEAN GROWERS ASSOCIATION, Oxnard, Calif., a corporation of California. Republished by registrant.

SEASIDE

FOR CANNED LIMA BEANS.
Claims use since Apr. 22, 1930.

Reg. No. 279,909. Registered Feb. 3, 1931. GENTILE BROS. COMPANY, Orlando, Fla., a corporation of Ohio. Republished by registrant, present location Winter Park, Fla.

RED PRINCE

The drawing is lined for the color red.
FOR FRESH CITRUS FRUITS.
Claims use since Nov. 1, 1929.

Reg. No. 281,848. Registered Mar. 31, 1931. DWINELL-WRIGHT COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

DIAMOND D

FOR COFFEE.
Claims use since Dec. 10, 1890.

Reg. No. 289,189. Registered Nov. 24, 1931. GENTILE BROS. COMPANY, Orlando, Fla., a corporation of Ohio. Republished by registrant, present location Winter Park, Fla.

Liberty Bell

FOR FRESH FRUITS—NAMELY, ORANGES, LEMONS, PEARS, GRAPEFRUIT, APPLES, GRAPES, HONEY DEWS, PEACHES, AND CASABAS; AND FRESH VEGETABLES—NAMELY, LETTUCE, CANTALOUPES, AND TOMATOES.
Claims use since 1905.

Reg. No. 309,115. Registered Jan. 2, 1934. THE CAREY SALT COMPANY, Hutchinson, Kans., a corporation of Kansas. Republished by registrant.

LILY

FOR TABLE SALT.
Claims use since Feb. 1, 1903.

Reg. No. 311,024. Registered Mar. 13, 1934. A. J. GAHAN, doing business as Canine Food Company, San Francisco, Calif. Republished by The Theobald Industries, Kearney and Harrison, N. J., a corporation of New Jersey.

WAG

FOR CANNED DOG AND CAT FOOD.
Claims use since June 1, 1933.

Reg. No. 312,658. Registered May 1, 1934. DWINELL-WRIGHT COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

AIREDALE

FOR TEA.
Claims use since July 23, 1914.

Reg. No. 318,059. Registered Oct. 16, 1934. NATIONAL INSTITUTE OF NUTRITION, Los Angeles, Calif. Republished by Nion Corporation, Los Angeles, Calif., a corporation of California.

Nin-amin

FOR COMBINATION OF PURE FOOD CONCENTRATES CONTAINING MINERALS AND VITAMINS.
Claims use since May 1, 1934.

Reg. No. 322,360. Registered Mar. 5, 1935. PILLSBURY FLOUR MILLS COMPANY, Minneapolis, Minn. Republished by Pillsbury Mills, Inc., Minneapolis, Minn., a corporation of Delaware.

MINITMIX

The word "Minit" is disclaimed apart from the word "Mix" and the word "Mix" is disclaimed apart from the word "Minit."
FOR PREPARED MIXTURE FOR THE MAKING OF BISCUITS.
Claims use since Apr. 28, 1933.

Reg. No. 327,805. Registered Sept. 3, 1935. PILLSBURY FLOUR MILLS COMPANY, Minneapolis, Minn. Republished by Pillsbury Mills, Inc., Minneapolis, Minn., a corporation of Delaware.

DELCO

FOR WHEAT FLOUR.
Claims use since Sept. 7, 1934.

Reg. No. 337,351. Registered Aug. 4, 1936. LYONS-MAGNUS, INCORPORATED, San Francisco, Calif., a corporation of Delaware. Republished by registrant.

MELLOW DRIPS

FOR FOOD SYRUPS MADE WITH CORN SYRUP, INVERT, AND CANE SUGARS.
Claims use since June 1933.

Reg. No. 340,625. Registered Nov. 17, 1936. DWINELL-WRIGHT COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

CIRCLE W

FOR COFFEE AND TEA.
Claims use since August 1917.

Reg. No. 340,626. Registered Nov. 17, 1936. DWINELL-WRIGHT COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

DIAMOND D

FOR COFFEE AND TEA.
Claims use since Dec. 10, 1890.

Reg. No. 344,356. Registered Mar. 23, 1937. LYONS-MAGNUS, INCORPORATED, San Francisco, Calif., a corporation of Delaware. Republished by registrant.

The name "Lyons" is disclaimed.
FOR FOOD PRODUCTS MADE FROM FRUITS—NAMELY, GLACE FRUIT AND FRUIT FLAVORING EXTRACTS FOR FOOD PRODUCTS.
Claims use since Dec. 1, 1934.

Reg. No. 344,797. Registered Apr. 6, 1937. LIBERTY ORCHARDS COMPANY, Cashmere, Wash., a firm. Republished by registrant.

COTLETS

FOR CONFECTION—NAMELY, CANDY.
Claims use since June 30, 1936.

Reg. No. 350,063. Registered Sept. 14, 1937. LYONS-MAGNUS, INCORPORATED, San Francisco, Calif., a corporation of Delaware. Republished by registrant.

FRUTICENE

FOR FLAVORING EXTRACTS FOR USE IN CAKE ICING, CAKE BATTER, ICE CREAM, AND CANDY CENTERS.
Claims use since May 1927.

Reg. No. 352,348. Registered Nov. 30, 1937. Southern States Cooperative, Inc., doing business as Cooperative Mills, Incorporated, Richmond, Norfolk, and Roanoke, Va., and Baltimore, Md., a corporation of Virginia. Republished by registrant, present location Richmond, Va.

SOUTHERN STATES COOPERATIVE Quality

The word "Quality" is disclaimed.
FOR DAIRY AND POULTRY FEED.
Claims use since Aug. 22, 1933.

Reg. No. 356,474. Registered Apr. 26, 1938. Wenatchee Valley Foods, Inc., Wenatchee, Wash. Republished by Wenatchee Foods, Inc., Wenatchee, Wash., a corporation of Washington.

"Yes Madame"

FOR CANNED FRUITS.
Claims use since Aug. 28, 1937.

Reg. No. 362,767. Registered Nov. 29, 1938. Paul F. Beich Company, Bloomington and Chicago, Ill., a corporation of Illinois. Republished by registrant.

FIL-A-BUSTER

FOR CANDY.
Claims use since Feb. 21, 1938.

Reg. No. 364,108. Registered Jan. 17, 1939. Paul F. Beich Company, Bloomington and Chicago, Ill., a corporation of Illinois. Republished by registrant.

ONE GRAND

FOR CANDY.
Claims use since Sept. 1, 1938.

Reg. No. 364,281. Registered Jan. 24, 1939. Paul F. Beich Company, Bloomington and Chicago, Ill., a corporation of Illinois. Republished by registrant.

JITTERBUG

FOR CANDY.
Claims use since June 24, 1938.

Reg. No. 370,048. Registered Aug. 15, 1939. William Amerise, Hazelton, Pa. Republished by registrant.

Italian Maide

The words "Italian Maide" are disclaimed.
FOR TOMATO PASTE, MACARONI, CANNED FISH, CANNED SOUPS, TOMATO SAUCE WITH MUSHROOMS, CHEESE, HOT CRUSHED RED PEPPERS, MEXICAN CECI GARBANZOS, CANNED VEGETABLES, AND CANNED TOMATOES.
Claims use since February 1918.

Reg. No. 371,978. Registered Oct. 17, 1939. Southern California Fish Corporation, Terminal Island, Calif., a corporation of California. Republished by registrant.

PURR

FOR CANNED CAT FOOD.
Claims use since May 12, 1939.

Reg. No. 374,598. Registered Jan. 16, 1940. The Fuji Trading Company, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Fuji

FOR CHOP SUEY SAUCE, CANNED BEAN SPROUTS, CANNED CHOW MEIN NOODLES, CANNED CHOP SUEY, CANNED CHOP SUEY VEGETABLES, AND BEAD MOLASSES.
Claims use since October 1911.

Reg. No. 377,087. Registered Apr. 16, 1940. American Bakeries Company, Atlanta, Ga., a corporation of Florida. Republished by registrant.

CHEESE CHEX

The word "Cheese" is disclaimed
FOR CRACKERS.
Claims use since June 1927.

Reg. No. 381,329. Registered Sept. 17, 1940. Arvin Grape Growers Association, Bakersfield, Calif., a corporation of California. Republished by registrant.

AGGA

FOR FRESH GRAPES.
Claims use since July 15 1939.

Reg. No. 381,330. Registered Sept. 17, 1940. Arvin Grape Growers Association, Bakersfield, Calif., a corporation of California. Republished by registrant.

BLUE LUPINE

FOR FRESH GRAPES.
Claims use since July 15, 1939.

Reg. No. 388,899. Registered July 15, 1941. Dwinell-Wright Company, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

WhiteHouse

FOR SALTED PEANUTS.
Claims use since Dec. 31, 1940.

Reg. No. 389,990. Registered Sept. 2, 1941. Paul F. Beich Company, Bloomington, Ill., a corporation of Illinois. Republished by registrant.

BEICH PECAN PETE 5¢

The word "Pecan" and the symbol "5¢" is disclaimed.
FOR CANDY.
Claims use since on or about Dec. 20, 1940.

Reg. No. 394,818. Registered Apr. 28, 1942. Marine Products Company, San Diego, Calif., a corporation of California. Republished by registrant.

CAL-SEA

The word "Sea" is disclaimed.
FOR FRESH FROZEN SHRIMP.
Claims use since July 7, 1936.

Reg. No. 395,177. Registered May 12, 1942. Ralph E. Myers, doing business as Ralph E. Myers Co., Salinas, Calif. Republished by Salinas Valley Ice Company, Ltd., Salinas, Calif., a corporation of California.

"REM"

FOR FRESH VEGETABLES.
Claims use since Nov. 15, 1941.

Reg. No. 395,721. Registered June 9, 1942. E. Bierhaus & Sons, Vincennes, Ind., a firm. Republished by registrant.

ANY TIME

FOR COFFEE.
Claims use since July 6, 1928.

Reg. No. 400,683. Registered Mar. 23, 1943. General Mills, Inc., Minneapolis, Minn., a corporation of Delaware. Republished by registrant.

BUILDER

FOR STOCK FEED.
Claims use since Nov. 3, 1942.

Reg. No. 401,739. Registered June 8, 1943. Ralph E. Myers, doing business as Ralph E. Myers Co., Salinas, Calif. Republished by Salinas Valley Ice Company, Ltd., Salinas, Calif., a corporation of California.

No claim is made to the outline of a label, the words "Brand," "California," "Lettuce," "Products," and "Vegetables."
FOR FRESH VEGETABLES—NAMELY, LETTUCE.
Claims use since Apr. 9, 1940.

Reg. No. 403,898. Registered Oct. 19, 1943. SECURITY MILLS, INC., Knoxville, Tenn., a corporation of Tennessee. Republished by registrant.

SECURITY

FOR MANUFACTURED FOOD MIXTURES FOR ANIMALS AND POULTRY, TO WIT: DAIRY COW, BEEF CATTLE, AND CALF FEEDS, HORSE AND MULE FEEDS, HOG AND PIG FEEDS, DOG AND CAT FEEDS, RABBIT FEEDS, GOAT FEEDS, CHICKEN, TURKEY, AND OTHER POULTRY FEEDS.
Claims use since January 1917.

Reg. No. 407,887. Registered July 4, 1944. WENATCHEE VALLEY FOODS, INC., North Wenatchee, Wash. Republished by Wenatchee Foods, Inc., Wenatchee, Wash., a corporation of Washington.

For You

FOR CANNED FRUITS AND VEGETABLES.
Claims use since January 1940.

Reg. No. 409,229. Registered Sept. 26, 1944. WENATCHEE VALLEY FOODS, INC., Wenatchee, Wash. Republished by Wenatchee Foods, Inc., Wenatchee, Wash., a corporation of Washington.

3-PLUS

FOR CANNED FRUITS.
Claims use since September 1942.

Reg. No. 416,077. Registered Aug. 28, 1945. LYONS-MAGNUS, INCORPORATED, San Francisco, Calif., a corporation of Delaware. Republished by registrant.

KREAMEX

FOR NONALCOHOLIC INDUSTRIAL FLUID FLAVORINGS FOR MANUFACTURING BAKERS, CONFECTIONERS, AND THE LIKE SOLD IN BOTTLES OF LARGE VOLUME.
Claims use since Jan. 1, 1942.

Reg. No. 418,141. Registered Dec. 4, 1945. RALPH E. MYERS, doing business as Ralph E. Myers Co., Salinas, Calif. Republished by Salinas Valley Ice Company, Ltd., Salinas, Calif., a corporation of California.

MAGIC CARPET

FOR FRESH VEGETABLES.
Claims use since June 14, 1945.

Reg. No. 421,053. Registered May 14, 1946. RALPH E. MYERS, doing business as Ralph E. Myers Co., Salinas, Calif. Republished by Salinas Valley Ice Company, Ltd., Salinas, Calif., a corporation of California.

PAY PAK

The word "Pak" is disclaimed.
FOR FRESH VEGETABLES.
Claims use since Sept. 19, 1945.

Reg. No. 422,435. Registered July 23, 1946. RALPH E. MYERS, doing business as Ralph E. Myers Co., Salinas, Calif. Republished by Salinas Valley Ice Company, Ltd., Salinas, Calif., a corporation of California.

FLYING HUCKSTER

FOR FRESH VEGETABLES.
Claims use since July 19, 1945.

Reg. No. 425,634. Registered Nov. 26, 1946. THE THEOBALD INDUSTRIES, Kearny and Harrison, N. J., a corporation of New Jersey. Republished by registrant.

QUADBERGER

FOR DOG FOOD.
Claims use since Feb. 4, 1946.

Reg. No. 431,170. Registered July 15, 1947. COOPERATIVE MILLS, INC., Baltimore, Md., a corporation of Virginia. Republished by registrant.

Southern Breakfast

The word "Breakfast" is disclaimed.
A MIXTURE OF INGREDIENTS FOR MAKING PANCAKES.
Claims use since Aug. 14, 1944.

CLASS 48
MALT BEVERAGES AND LIQUORS

Reg. No. 363,354. Registered Dec. 20, 1938. THE STROH BREWERY COMPANY, Detroit, Mich., a corporation of Arizona. Republished by regiatrant.

STROH'S Bohemian

FOR BEER.
Claims use since 1886.

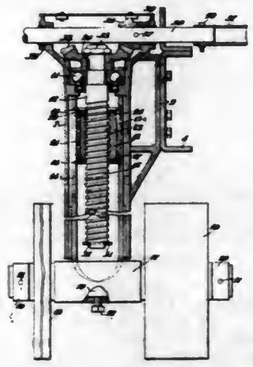
CLASS 49
DISTILLED ALCOHOLIC LIQUORS

Reg. No. 102,677. Registered Feb. 23, 1915. ROBERT BROWN, LIMITED, Glasgow, Scotland, and London, England, a corporation under the laws of Great Britain. Republished by registrant.

BROWN'S FOUR CROWN BRAND

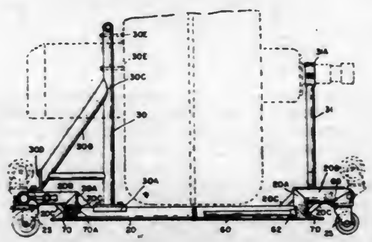
FOR WHISKEY.
Claims use since 1869.

PATENTS



GRANTED AUGUST 10, 1948

2,446,516
WINDOW GLASS CHANNEL GUIDE
David C. Bailey, Amesbury, Mass., assignor to The Bailey Company, Inc., Amesbury, Mass., a corporation of Massachusetts
Application June 6, 1946, Serial No. 674,913
11 Claims. (Cl. 296—44.5)



1. A window glass guide comprising a metallic generally channel-shaped bendable strip, a sheet of paper covering at least the exterior surfaces and the longitudinally extending edges of the metallic strip, said paper sheet having a tacky adhesive on its inner surface adhering to the metal, and having a smooth moisture impervious coating on its outer surface providing exterior surfaces which shed water and which are quick-drying when water comes in contact therewith, and cushioning strips secured on the bottom and sides of the channel interiorly thereof, with said paper covering sheet extending over interior surfaces of the channel at least from the longitudinal edges thereof to the cushioning strips at the sides of the channel.

2,446,517
ANTIFRICTION TRAILER PROP
James J. Black, Cincinnati, Ohio, assignor to The Trailmobile Company, Cincinnati, Ohio, a corporation of Delaware
Application December 6, 1944, Serial No. 566,824
5 Claims. (Cl. 254—86)

1. A prop for a trailer comprising a pair of tubes, one arranged within the other, one of said tubes carrying prop wheels at a projecting endwise portion thereof and the other being adapted to be mounted rigidly upon a trailer frame, a screw supported by one of said tubes and a nut supported by the other in engagement with said screw, said nut and screw having mating grooves therein and being threadedly interconnected one with another through a plurality of balls disposed within said mating grooves whereby said nut and screw are substantially non-locking under weight load, said nut having an external slot, the opposite ends of which open into said grooves to provide a ball return passageway, rotatable means for effecting relative rotation between said nut and screw to effect telescopic movement of said tubes for positioning said prop wheels, an operating shaft mounted crosswise in the trailer frame for rotating said screw, said shaft including means for rotating the same, and self-locking mechanism on the operating shaft effective for locking the operating shaft and screw against rotation when the rotative thrust occurs through forces exerted by the nut on the screw.

2,446,518
TRANSPORT AND SHIPPING DOLLY
George B. Arnold, Coral Gables, and Tracy B. Tyler, Miami Beach, Fla.
Application November 8, 1944, Serial No. 562,486
11 Claims. (Cl. 280—43)

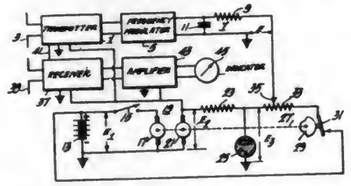
1. A device for supporting cargo in transit comprising in combination a frame of substantially rectangular form, having side members and cross members, said side members adapted to function as skids; a swivel mounted wheel at each corner of said frame, the transverse center line of said wheels being substantially in line with said side members, means whereby said wheels may be extended or retracted to cause said frame to assume a rolling condition or to rest in non-rolling condition on any general supporting surface, said wheels being larger in diameter than the distance from the bottom of the frame side members to the general supporting surface when the device is in rolling condition, means for fastening said frame to the general supporting surface when it is resting thereupon in non-rolling condition, automatic means for locking said wheels against non-intended retraction when in rolling position, means for locking said wheels against swivel rotation in a predetermined swivel position, means to prevent release of said wheel retraction locks until swivel locks are engaged, detachable cargo supports being provided on said frame and means whereby said cargo supports may be adjusted to accommodate cargo of various sizes.

2,446,519

PROCESS FOR PREPARING AMINOPHENOLS

Frederic R. Bean, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application July 29, 1944, Serial No. 547,296
16 Claims. (Cl. 260—575)



1. A process for preparing an aminophenol comprising reducing a nitroaromatic compound containing no substituent in the para position to the nitro group by reacting the nitroaromatic compound simultaneously with aluminium and an aqueous solution of an acid selected from the group consisting of sulfuric acid, phosphoric acid and hydrochloric acid, said solution containing not more than 50 per cent by weight of said acid, the quantity of acid present being sufficient to maintain an acid reaction medium, until after the reduction is finished.

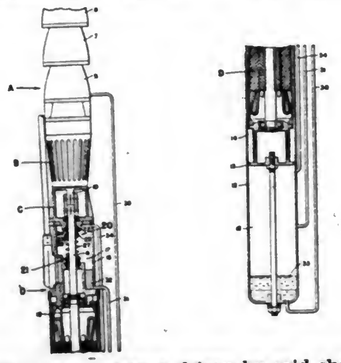
2,446,520

TRANSMITTER FOR DISTANCE DETERMINING SYSTEM

Daniel Blitz, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application April 17, 1945, Serial No. 588,769
5 Claims. (Cl. 250—17)

1. In a radio reflection distance measuring system including a transmitter and modulator means for cyclically varying the frequency of operation thereof, a source of D.-C. energy subject to fluctuations in voltage, a voltage convertor connected to said source and including a mechanically moving part, a voltage regulator connected to the output circuit of said convertor, said voltage regulator providing an output which varies in voltage in accordance with variations in the voltage of said source but in a relatively much smaller percentage, a switch mechanically coupled to said moving part for cyclical operation thereby, a resistor connected to said voltage regulator and through said switch to said D.-C. source, in such polarities that the voltages from said source and said regulator oppose each other, a wave shaping circuit connected to said resistor and including an integrating network, and means for applying the output of said wave shaping circuit to said modulator means.



2,446,521

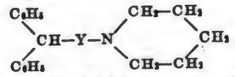
SUBMERSIBLE MOTOR STRUCTURE

Carl J. Blom, San Marino, Calif., assignor to Byron Jackson Co., Vernon, Calif., a corporation of Delaware

Application August 2, 1946, Serial No. 688,001
10 Claims. (Cl. 103—87)

1. In a submersible electric motor structure, the combination of: a shell adapted to be immersed in an external liquid and providing a main chamber containing an internal liquid; walls defining a seal chamber above said main chamber and containing internal liquid; a motor in said main chamber and having a shaft extending upwardly through said seal chamber and into the external liquid; a mechanical seal structure surrounding said shaft and sealing said seal chamber from said external liquid; a second mechanical seal structure surrounding said shaft and sealing said seal chamber from said main

chamber; pump means driven by said shaft for building up a pressure in said main chamber which is greater than the pressure of the external liquid surrounding said shell; and pressure transfer means communicating with said main chamber and with said seal chamber for equalizing the pressures in said chambers.



2,446,522

DIARYL NITROGENOUS HETEROCYCLIC ALKYLENE COMPOUNDS

Max Bockmühl and Gustav Ehrhart, Frankfort-on-the-Main, Otto Eisleb, Hofheim in Taunus, and Leonhard Stein, Bad Soden in Taunus, Germany, assignors, by mesne assignments, to Winthrop-Stearns Inc., New York, N. Y., a corporation of Delaware

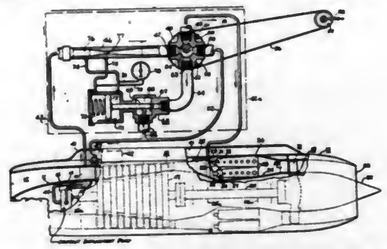
No Drawing. Application June 21, 1941, Serial No. 399,206. In Germany July 8, 1940
6 Claims. (Cl. 260—293)

1. A compound of the class consisting of amines of the formula

where Y is a lower alkylene chain having two to three carbon atoms separating the

and the —N portions of the amine molecule; and the water-soluble salts of said amines with non-toxic acids; said compound having pronounced antispasmodic properties.

2,446,523



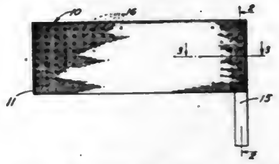
FUEL CONTROL APPARATUS FOR LIQUID FUEL BURNERS

Donald Bradbury, Prospect Park, and Charles A. Meyer, Drexel Hill, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application January 31, 1944, Serial No. 520,564
2 Claims. (Cl. 158—36.4)

1. In apparatus for supplying liquid fuel to a burner or burners to provide heated products of

combustion serving as motive fluid to operate a prime mover, a pump operated by the prime mover for supplying liquid fuel at a rate dependent upon prime mover speed; a valve body having a valve chamber and provided with inlet, supply, by-pass, and outlet ports communicating with said valve chamber; a first conduit connecting said supply port to the burner or burners; a second conduit for supplying fuel from said pump to said inlet port; a third conduit connecting said outlet port with the inlet side of the pump; a



fourth conduit providing communication between the by-pass port and the third conduit; a valve for opening and closing the by-pass; means for biasing the valve to closed position; means responsive to the rate at which liquid fuel is supplied to said second conduit to open the valve against the force of the biasing means; a valve in said chamber and movable from the position lapping said supply port with the outlet port open to a position lapping the outlet port with the supply port open and vice versa; and means for moving the last-named valve.

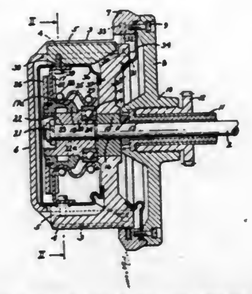
2,446,524

ELECTRODE AND METHOD OF MAKING SAME

Joseph B. Brennan, Euclid, Ohio, assignor to Everett D. McCurdy, as trustee

Application November 14, 1941, Serial No. 419,157
7 Claims. (Cl. 175—315)

1. An electrode for electrolytic condensers comprising at least two layers of fibrous flexible material disposed in direct face-to-face contact throughout substantially the entire effective electrode area and a multiplicity of particles of film-forming metal adhering to the fibers of said layers and an additional metallic conductor between said layers and in electrical contact with the particles of film-forming metal.



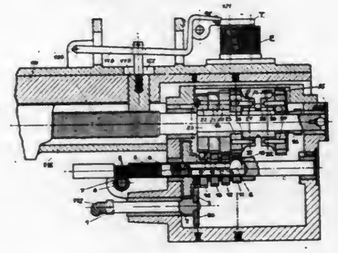
2,446,525

THREAD ADVANCING REEL

Carl A. Castellan, Wilmington, Del., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware

Application December 29, 1945, Serial No. 638,266
16 Claims. (Cl. 28—71.7)

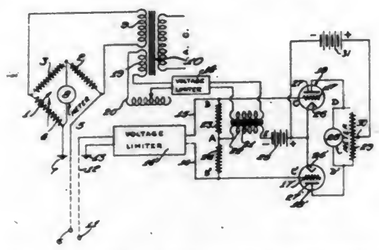
1. A thread-handling device adapted to convey thread carried in convolutions thereabout in the general form of a helix comprising a set of longitudinally extending bars rotatable about an axis, a second set of bars interdigitating with those of the first set mounted for rotation about an axis displaced from the axis of rotation of the first set, and means interdigitating with the two sets of bars for moving the thread relative to the two sets of bars in a direction comprising a compo-



nent parallel to the axis of the device the thread-conveying peripheral surfaces of the interdigitating means being of approximately the same length, axially of the reel, as those of the two sets of bars, so that each convolution of a helix thereon is engaged by each of the two sets of bars and the interdigitating means.

2,446,526

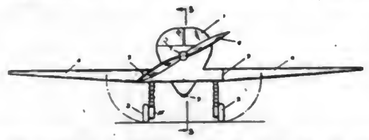
FEED CONTROLLER FOR RECORD ENGRAVER CARRYING CARRIAGES



Lucien Chanal, Annecy, France; vested in the Attorney General of the United States

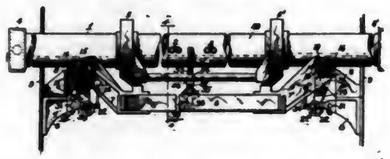
Application October 27, 1942, Serial No. 463,571
In Switzerland November 8, 1941
8 Claims. (Cl. 274—13)

1. A sound track registering machine, having a controller for the feeder of the carriage carrying the engraver for the record, supported on a rotating platform, driving means common and operatively connected to both, said platform and said feeder, characterized in that the controller is automatically operable and comprises in combination, a pair of free wheel devices adapted to be driven by said driving means and selectively connected to said carriage feeder, a primary gear for coupling said driving means to said feeder through one of said free wheel devices, a secondary gear for coupling said driving means to the feeder through the other free wheel device, the two gears having a different gearing ratio, a clutch associated with the gears, and means for operating the clutch and changing over the drive from one gear to the other to vary the feed rate.



2,446,527
PHASE SHIFT LOGGING OF WELL BORES
Melvin E. Chun, Huntington Park, and John C. Stick, Jr., South Pasadena, Calif., assignors to Lane-Wells Company, Los Angeles, Calif., a corporation of Delaware
Application March 28, 1942, Serial No. 436,570
10 Claims. (Cl. 175—182)

10. A method of electrically logging well bores, characterized by: passing an alternating electric current through formations traversed by a well bore; establishing a probe circuit for electrically sampling portions of the resultant electric fields at different locations in said formations; deriving from the electric field portions thus sampled, alternating currents having substantially constant phase angles with respect to those of said sampled field portions; limiting the amplitude of said derived alternating currents so that they remain substantially constant in amplitude regardless of amplitude changes occurring in either the said current passed through the formations or in the said sampled field portions; converting the thus derived and limited alternating currents to pulsating currents having variable unidirectional components and having pulsations in synchronism with said derived and limited alternating currents; controlling said conversion by means operating in synchronism with the said alternating current passed through said formations and having a substantially fixed phase relationship thereto, to vary said unidirectional current components of said pulsating currents in accordance with a function of the phase difference between the said alternating current passed through the formations and the said derived alternating currents, to obtain therefrom unidirectional current components independent of amplitude variations of said sampled field portions and amplitude variations of said alternating current passed through said formations; probing the formations at different locations within said bore and measuring the said unidirectional current components resulting from said conversion to indicate thereby, a shifting of the phase of the sampled alternating field portions in the formation with respect to to said alternating current passed through said formations, due to differences in the inductive or capacitive characteristics of the formations at said different locations.

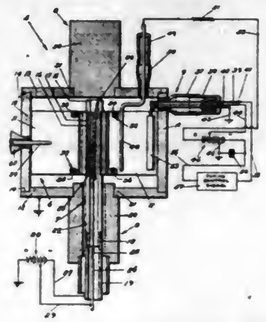


2,446,528
AIRCRAFT HAVING POWER-DRIVEN, ADJUSTABLE, RETRACTABLE, AND STEERABLE FRONT WHEELS
Edgar A. Clark, Seaside, Oreg.
Application December 23, 1944, Serial No. 569,470
3 Claims. (Cl. 244—50)

1. A combination road vehicle and aircraft consisting of a body supported upon power-driven adjustable, retractible and steerable front wheels and an idling rear wheel, an engine disposed within the body and operatively connected with a propeller at the forward end of the body, means operated by said engine for extending or retracting said front wheels in a vertical plane parallel to the longitudinal axis to the aircraft and for driving said wheels while extended or retracted,

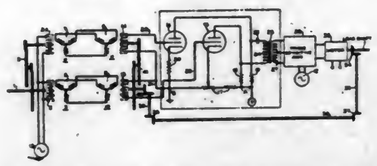
further means operated by the engine for swinging the front wheels laterally into cavities formed in wings removably secured to the body, flight controls and controls for steering said front wheels being disposed within the body, whereby removal of the wings and the propeller render the vehicle capable for use as an automobile.

2,446,529
SHOCK MOUNTED AND STABILIZED RANGE FINDER
William T. Cooke, Pelham Manor, and Horace H. Willis, Pelham, N. Y., assignors to The Sperry Corporation, a corporation of Delaware
Application July 23, 1937, Serial No. 155,184
5 Claims. (Cl. 33—46)



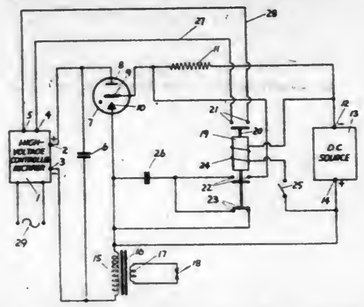
1. In an optical instrument, a cushioned support, a sighting device mounted on said support for angular movement in elevation thereon, a gyro vertical mounted on said support, an armature carried by said gyroscope, a transformer member magnetically coupled to said armature, a control circuit fed from said transformer member and responsive to relative movements in elevation of said gyro vertical and device, and a motor connected to be controlled from said circuit and operating to stabilize said sighting device without twisting said support.

2,446,530
EXPANSIBLE HOOD
Joseph De Grazia, Washington, D. C., and Robert R. Oberrender, Freeland, Pa.
Application September 20, 1945, Serial No. 617,662
2 Claims. (Cl. 2—205)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In an expansible hood of substantially gas-impervious flexible material, a front portion defining a face opening, drawstring means for adjusting the size of said face opening, an arcuate housing for said drawstring means bordering the edge of said face opening, split edges in the crown of said hood, said split edges extending substantially longitudinally through the forehead portion of said hood to said face opening, a slide fastener for selectively joining and separating said split edges, and a triangular gusset of gas-impervious flexible material connecting said split edges, said gusset being foldable beneath said slide fastener to provide a gas-impenetrable seal when said slide fastener is closed.

2,446,531
ELECTRON DISCHARGE DEVICE
Palmer P. Derby, Boston, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application May 21, 1945, Serial No. 594,841
5 Claims. (Cl. 250—27.5)

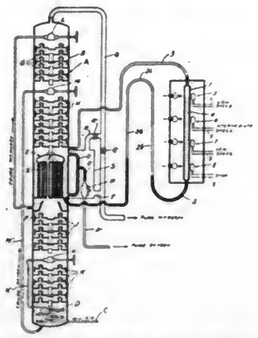


1. An electron-discharge device comprising a cathode; an anode structure spaced from said cathode and incorporating a cavity resonator; means adjacent said anode structure for establishing a magnetic field through said cavity resonator; electron-emissive means disposed in said cavity resonator for introducing therein an electron-stream having a width substantially coextensive with the length of said cavity resonator; means adjacent said electron-emissive means for controlling the density of said electron-stream; and means, spaced from said electron-emissive means, for collecting the emitted electrons.

2,446,532
ELECTRONIC FINE AND COARSE SIGNAL CONTROL SYSTEM
Robert S. Edwards, Hempstead, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application May 27, 1944, Serial No. 537,568
13 Claims. (Cl. 318—30)

11. In a control system for supplying a voltage output dependent upon a pair of control signal voltages, the combination with means for supplying two signal voltages cylically variable through positive and negative values as measures of the same quantity, one thereof having a relatively high ratio of signal magnitude to quantity magnitude and the other having a low ratio, of an electrical circuit including a pair of electronic tubes to which said two signal voltages are respectively applied in controlling relation, one of said tubes being so constructed and arranged as to conduct for all values of signal voltage applied thereto, means for applying a bias to the other tube whereby to render it conductive only for values of controlling signal voltages applied thereto exceeding a predetermined value, and means for combining the outputs of said tubes in like polarity or phase sense relationship.

2,446,533
CONTROL CIRCUIT FOR GAS DISCHARGE TUBES
John H. England, Wellesley Hills, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application April 4, 1946, Serial No. 659,458
7 Claims. (Cl. 315—273)

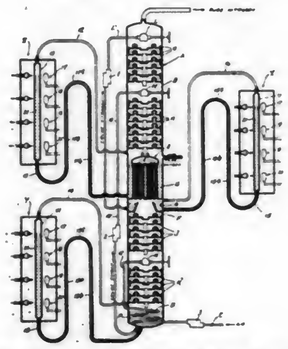


1. A discharge-starting circuit for gaseous discharge devices, comprising a gaseous discharge device having at least anode, cathode, and control elements, a source of direct current, means connecting the negative side of said source through a resistor to said control element, means connecting the positive side of said source to said cathode, a condenser having one terminal connected to said cathode, a relay having a pair of normally-open contacts, and means connecting one of said contacts to said condenser and the other of said contacts to said control element.

2,446,534
LIQUEFACTION AND RECTIFICATION COLUMN
Arthur J. Fausek and Irwing F. Fausek, Clayton, Mo.
Application September 15, 1943, Serial No. 502,447
10 Claims. (Cl. 62—122)

2. In an apparatus for separating gas mixtures a liquefaction and rectification column having a housing in which is maintained a body of liquid whose level varies during operation of the column, an electrically operated pump connected to said housing for withdrawing liquid from said body of liquid, and means for automatically controlling operation of said pump in accordance with the level of said body of liquid, said pump-controlling means including a container formed of material through which light may pass, a plurality of spaced photo-electrical devices associated with said container with the tubes and the

light beam projecting elements of said devices disposed at opposite sides of said container, said tubes of said photo-electrical devices being so connected electrically to said pump that flow of current through the tubes of different photo-electrical devices will cause the pump to be operated at different speeds, means comprising a body of liquid through which the light beams of said photo-electrical devices may not pass and



which is movable longitudinally of said container for interrupting the light beams of the photo-electrical devices, and means for moving the last-mentioned means in accordance with the vertical movement of the level of said liquid within the housing of said column, said body of liquid which is movable longitudinally of said container being different in character from that of the body of liquid of said housing.

2,446,535

LIQUEFACTION AND RECTIFICATION COLUMN

Arthur J. Fausek and Irwing F. Fausek, Clayton, Mo.

Application September 15, 1943, Serial No. 502,448
7 Claims. (Cl. 62—122)

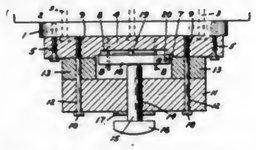
1. In an apparatus for separating gas mixtures, a liquefaction and rectification column having a housing in which is maintained a body of liquid whose level raises and lowers during operation of the column, a pipe through which a medium flows during operation of the column, valve means in said pipe for controlling passage of medium therethrough, and means for actuating said valve means in response to changes in the level of said body of liquid within the housing of the column, said actuating means including a container formed of material through which light may pass, a plurality of spaced photo-electrical devices associated with said container with the tubes and the light projecting elements of said devices disposed at opposite sides of said container, said tubes of said photo-electrical devices being so connected electrically to said valve means that flow of current through the tubes of the different photo-electrical devices will cause said valve means to be subjected to actuation, and means movable longitudinally of said container in response to movement of the level of said body of liquid within the housing of the column for interrupting the light beams of the photo-electrical devices, said means which is movable longitudinally of said container being different in character from that of the body of liquid of said housing.

2,446,536

TREATMENT OF STYRENE-ISOBUTYLENE POLYMER FILMS AND RESULTANT PRODUCT

Paul E. Hardy, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application May 12, 1945, Serial No. 593,543
3 Claims. (Cl. 117—118)



1. A thin, flexible, continuous, self-sustaining film of styrene-isobutylene copolymer having an intrinsic viscosity of about 0.6 to 1.0 and about 60% by weight of combined styrene, only the surface of which has been nitrated so that the interior portion of said film is not nitrated, said film having moisture vapor penetration characteristics substantially as good as those of a film of untreated copolymer, but said treated film having much better solvent-resistance to fatty oils than a film of untreated copolymer.

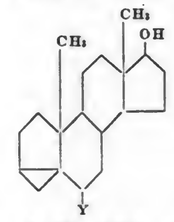
2,446,537

THRUST GAUGE

Clarence N. Hickman, Jackson Heights, N. Y.

Application November 16, 1944, Serial No. 563,739
5 Claims. (Cl. 73—167)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A thrust gage for determining the thrust of rocket projectiles comprising in combination, a rigidly-supported base member disposed in a vertical position, a back plate mounted in front of said base plate and provided with a recess in its front surface and so formed as to provide oppositely-disposed shoulders, a front plate in fixed relation to said back plate but spaced forwardly therefrom so as to provide a space forwardly of and coincidental with said recess in the back plate, a beam element supported in said space and abutting said shoulders, an electric-resistance-strain gage attached to the rear face of said beam element, a plunger member having a main body portion extending through said front plate and a rear end portion in engagement with said beam element and a forward end portion normally spaced outwardly from the front face of said front plate, a power source, and electrical measuring means electrically connected to said strain gage and said power source.



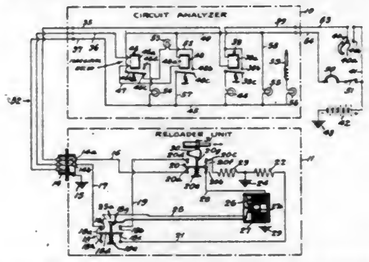
2,446,538

3-AMINO STEROIDS AND THEIR PREPARATION

Percy L. Julian, Maywood, John W. Cole, Chicago, Arthur Magnani, Wilmette, and Edwin W. Meyer, Chicago, Ill., assignors to The Glidden Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Application August 5, 1944, Serial No. 548,318
7 Claims. (Cl. 260—397.5)

7. The process for preparing 3-amino-steroids which comprises treating i-steroids of the general formula



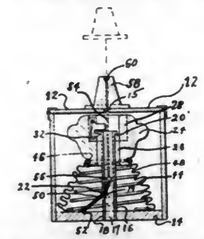
where Y is an alkoxy radical, with a primary amine in the presence of benzyl ammonium paratoluene sulfonate as a catalyst.

2,446,539

GUN RELOADER TESTING INSTRUMENT

Ivan E. Knickerbocker, Havre de Grace, Md.

Application June 28, 1945, Serial No. 602,139
9 Claims. (Cl. 177—311)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In an analyzer for the electrical circuits of a machine gun, a lead adapted to be grounded to said gun, first and second relays, said first relay having double contacts and an armature operable to alternatively close said contacts, said second relay having a single contact, a power lead adapted to be connected to said gun and including in series the coils of said first and second relays, a connection between said leads and including a signal device, the armature, and one contact of said first relay, and a second connection between said leads including in series a second signal device, the armature and other contact of said first relay and the contact of said second relay, said second relay being responsive to flow of current less than that required to operate said first relay.

2,446,540

AMUSEMENT DEVICE

John M. Leach, Port Washington, N. Y.

Application May 21, 1947, Serial No. 749,537
5 Claims. (Cl. 46—146)

4. An amusement device comprising a casing, a hinged closure therefor, a spring within and having one end fixed relative to the casing, a head carried by the spring and having an opening therein, an upstanding flanged member within the casing with the flange received within the opening in the head, a releasable catch carried by the head and seated beneath the flange to hold the spring in compressed condition, a knob outside of the casing, a cable connected to the knob and extending through the closured opening into the casing, a release carried by the cable so that upon the knob being raised the release disengages the catch and permits the spring to expand and force the head along the cable until it strikes the knob, opening the hinged closure and projecting from the casing on its way.

2,446,541

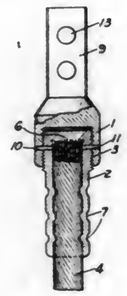
EXTRACTION OF NITROCELLULOSE FROM NITRATING SOLUTION

Edward E. Litkenhous, Nashville, Tenn., assignor to Tennessee Products Corporation, Nashville, Tenn., a corporation of Tennessee

Application November 13, 1942, Serial No. 465,501
6 Claims. (Cl. 260—223)

1. In the process for the manufacture of cellulose nitrate the step which comprises treating cellulose nitrate containing an appreciable amount of its nitrating agents with a normally liquid nitro paraffin and dissolving the cellulose nitrate.

2,446,542



ELECTRICAL CABLE CONNECTOR

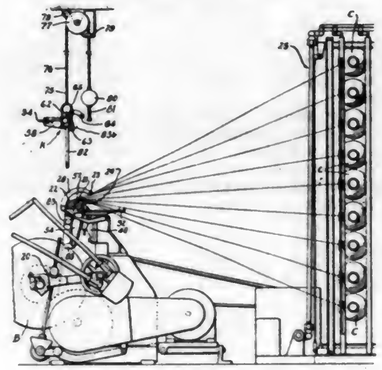
Donald MacInnes, New York, N. Y.

Application March 15, 1945, Serial No. 582,960
3 Claims. (Cl. 174—94)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In combination in an electrical cable connector capable of sustaining high tensile load while providing a highly efficient fused electrical connection, a tubular connector member, a stranded wire cable in said tubular connector member, said wire cable being of a metal which when subjected to high temperature tends to be reduced in tensile strength, a fusion of metal closing the end of said tubular connector member and constituting a fused electrical union between said tubular connector member and the end of said stranded wire cable, a second connector member having a bore, the closed fused end of said tubular connector being received within said bore of said second connector member, and means providing a connection securing said connector members together, said tubular con-

nector member having a compressed portion providing an external depression therein and an internal projection disposed in a depression in the cable in interlocking engagement therewith and providing a mechanical connection for sustaining the tensile load to which the cable and con-

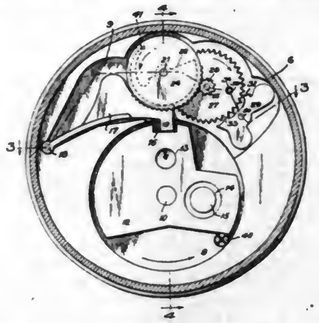
nector are subjected and protecting and relieving the said fused electrical union of tensile load, said compressed mechanical connection being at a point removed from the fused electrical union so that the full tensile strength of the wires of the cable is retained at the compressed mechanical connection.



2,446,543
CABLE SPLICE JOINT AND METHOD OF MAKING SAME
Adolph Z. Mample, Glen Rock, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a corporation of New York
Application November 26, 1942, Serial No. 467,002
7 Claims. (Cl. 174—84)

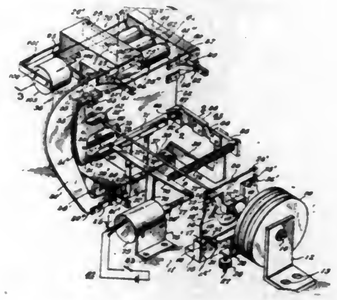
1. In the art of making a cable joint with a sleeve secured at either end to the cable sheath by a wiped joint, the method of providing two seals for the end of the joint which comprises forming in an end of the sleeve an inner beveled end surface, beating in the said end of the sleeve at an angle such that the beveled surface abuts and is substantially parallel to the surface of the cable sheath, applying wiping solder to the sleeve and cable sheath in a manner to produce a sweated sealing joint between said abutting parallel surfaces of the beveled end of the sleeve and the cable sheath, and applying additional wiping solder in a manner to form a wiped joint around said end of the sleeve and the cable sheath.

7. A cable spacer for insertion in the crotch formed by a plurality of cables in a multiple spliced joint, comprising a body portion formed to fit between the cables and flanged portions extending from the body portion for engagement with the beaten-in end of the splicing sleeve, said body and flanged portions having good heat conductivity to transfer heat from the wiping solder applied to the joint to the crotch.



2,446,544
METHOD OF AND APPARATUS FOR OPERATING UPON WARPS
Brooks Marcellus and Burt A. Peterson, Rockford, Ill., assignors to Barber-Colman Company, Rockford, Ill., a corporation of Illinois
Application December 6, 1945, Serial No. 633,192
39 Claims. (Cl. 28—49)

1. In an apparatus for operating upon warps having means for supporting an old warp beam containing an old warp to be united with a new warp leading from a new warp supply, means for pairing the strands of the old and new warps to be united including a comb having uniformly spaced dents each adapted to receive a single pair of strands, means for clamping the paired strands adjacent said comb, and a tying mechanism comprising a carriage supported for traveling movement across the combined warps, drive means for advancing the carriage at a uniform rate, tying means on the carriage operative in successive cycles duirng the advance of the carriage, means operative in said tying cycles for seizing successively presented pairs of strands to separate them from the remaining pairs of strands and moving them into operative association with the tying means, and means for stripping the knots from the tying means, said clamping means acting to hold the paired strands yieldably so as to permit slippage thereof in the operation of said seizing means, and said tying means being adapted to sever the paired strands as an incident to the tying operation.

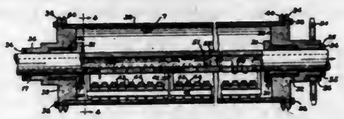


2,446,545
DELAY ARMING DEVICE
James F. McCaslin, Cleveland, Ohio
Application April 17, 1945, Serial No. 588,879
2 Claims. (Cl. 102—80)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A delay arming booster for a projectile of the type which rotates during flight comprising a booster housing interposed between a fuze and its booster charge, said housing having a circular, off center cavity and an off center recess in the same plane with said cavity and communicating therewith; a rotor turnably mounted in said cavity about a rotor shaft, said rotor being eccentrically weighted for rotation about its shaft by centrifugal force upon projectile rotation; a flash passage in said booster housing; a flash hole in said rotor initially out of line with said flash passage to block same; a notch in the periphery of said rotor; a sear eccentrically pivotally mounted in said recess for rotation by centrifugal force from an initial safety position into an armed po-

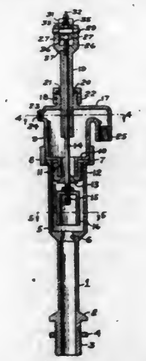
sition; a finger on said sear engaging said rotor notch to maintain said rotor in its initial position; an eccentrically weighted pivotally mounted detent in said recess arranged to initially maintain said sear in the safety engaged position, but rotatable by centrifugal force upon projectile rotation to release said sear; a gear train and escapement mechanism energized by rotation of said detent to delay rotation of same; a stop for said rotor to position same with said flash hole aligned with said flash passage upon disengagement of said sear finger from said peripheral notch.

2,446,546
PRESSURE RESPONSIVE CONTROLLER DEVICE
Alexander W. Meston, Yonkers, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Continuation of application Serial No. 652,477, March 6, 1946. This application June 10, 1947, Serial No. 753,677
16 Claims. (Cl. 177—380)



1. In a device of the character described, the combination of motion input means, a rod-like element coupled at one end to said means, a lever coupled to the other end of said element, means for self-centralizing said lever, a pick-off producing an output and including a movable element connected to said lever and clutch means for coupling and uncoupling said rod-like element and said lever, said lever moving responsive to actuation by said input means to cause the output of said pick-off to change correspondingly.

2,446,547
CATALYTIC CONVERSION OF HYDROCARBONS WITH A THORIUM PHOSPHATE CATALYST
George Alexander Mills, Ridley Park, Pa., assignor to Houdry Process Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 1, 1946, Serial No. 651,427
5 Claims. (Cl. 196—52)



1. In the catalytic production of valuble hydrocarbon materials, the process which comprises subjecting a hydrocarbon oil under catalytic cracking conditions to contact with a thorium phosphate.

2,446,548
CONTACT ROLL CONSTRUCTION
John S. Nachtman, Youngstown, Ohio
Original application January 16, 1939, Serial No. 251,065, now Patent No. 2,341,157, dated February 8, 1944. Divided and this application January 24, 1944, Serial No. 519,429
5 Claims. (Cl. 204—211)

1. In electroplating apparatus for continuous strip, including a guide roll for the strip adapted to receive the strip against the surface thereof and to supply electric current thereto, said roll comprising a rotatable cylindrical metallic shell, a stationary electrically conducting shaft extending axially through the shell, means closing opposite ends of the shell around the shaft and including bearing means journaling the shell on the shaft, and brushes fixed to the shaft in electrical contact therewith and in outwardly bearing contact with the inner surface of the shell along a line adjacent the line of contact between the shell and the strip for supplying current thereto.

2,446,549
FLOAT VALVE
Augustus Norman, Pittsburgh, Pa.
Application April 6, 1945, Serial No. 586,907
3 Claims. (Cl. 137—104)

1. A valve, actuating mechanism, comprising a cylindrical valve casing having a water inlet, a

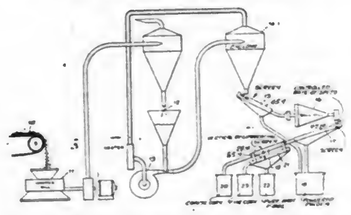
beveled flow control flange about the inlet at its connection with the casing, a hollow flow responsive device in the casing, a housing removably attached to the casing and having a water outlet, a valve stem slidably mounted in the housing and extending into the casing, a flow responsive device being adjustably mounted on the stem, said stem being movable by the flow responsive device, adjustable stem supporting means on the housing, and an operating lever attached to the supporting means, and adjustably engaged with the stem for the movement thereof, said flow responsive device and the stem on which it is mounted, as well as the casing and the housing being axially aligned with the direction of flow of the water into and through the housing whereby scale and foreign matter is intercepted by the flow responsive device to prevent clogging of the housing.

2,446,550

COTTAGE CHEESE

Gerald C. North and Lawrence Little, Chicago, Ill., assignors to Beatrice Creamery Co., Chicago, Ill.

No Drawing. Application October 4, 1944, Serial No. 557,224
3 Claims. (Cl. 99—116)



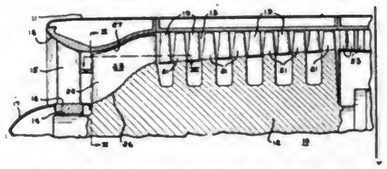
1. The process of making cottage cheese which comprises setting the curd with a coagulating enzyme, cutting the curd when the whey acidity is between 0.25% and 0.45%, cooking the curd to produce a rubbery, tough body, freezing the curd to break down the rubbery tough body, and thawing the frozen curd to thereby produce cottage cheese having a firm body and soft texture and devoid of a chalky, crumbly, mealy nature.

2,446,551

SEPARATION OF PURE BARK FIBER FROM FINELY COMMINUTED BARK

Robert D. Pauley, Longview, Wash., assignor to Weyerhaeuser Timber Company, Longview, Wash., a corporation of Washington

Application October 19, 1945, Serial No. 623,251
7 Claims. (Cl. 209—235)



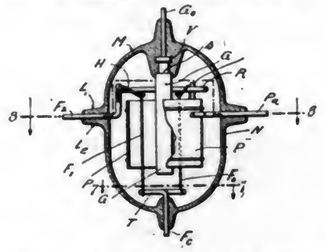
1. The method of producing substantially pure bark fiber comprising dry screening in a plurality of successive screening operations finely divided bark containing loose ultimate fibers having lengths substantially greater than their diameters, the screens employed in the first and final screening operations having mesh openings of a size greater than the diameter and less than the length of the fibers, maintaining a congested layer of material on the screen during the first screening operation to restrain the fibers from passing through the screen, maintaining a relatively thin layer of material on the screen during the final screening operation and vertically vibrating the material in said final screening operation to up-end the fibers and permit them to pass through the screen while rejecting oversize material.

2,446,552

COMPRESSOR

Arnold H. Redding, Swarthmore, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application September 27, 1943, Serial No. 503,930
1 Claim. (Cl. 230—119)



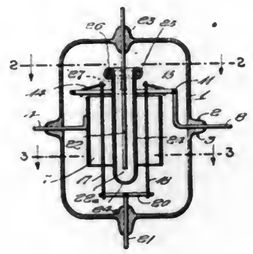
An axial-flow compressor or blower comprising a tubular casing structure, a rotor journaled within said casing structure and defining therewith an annular flow passage of diminishing flow area from inlet to outlet, alternate rows of stationary and movable blades in the flow passage and carried by said casing structure and said rotor, respectively, the first row of blades at the inlet of said compressor being fixed to said rotor, the portion of said passage across which said first row of blades extends being of increasing mean diameter in the direction of flow through said compressor, the remainder of said flow passage extending substantially parallel to the axis of said compressor and merging smoothly with the said portion of said passage.

2,446,553

ELECTROMETER VACUUM TUBE

Auguste Louis Marie Antoine Rouy, New York, N. Y., assignor to L. L. H. Company, Erie, Pa., a partnership comprising Hugh C. Lord, Thomas Lord and Blanche M. Hartman

Application September 6, 1944, Serial No. 552,892
5 Claims. (Cl. 250—27.5)



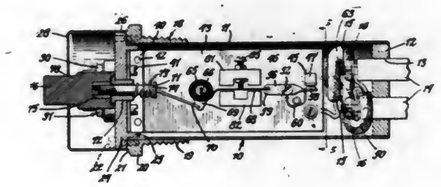
1. An electron discharge tube comprising an envelope of insulation material, a control element pendently supported axially of said envelope, a filament support comprising a ring member concentrically disposed with respect to said control element, a plurality of supports for said ring member extending radially therefrom and supported at spaced intervals by the wall of said envelope, means carried by said ring member supporting the ends of filament elements, a filament mounting device disposed in one end of said envelope, filament elements mounted between said means and said mounting device, a plate element concentrically disposed with respect to said control element with said filament elements disposed between said control element and said plate element and radially extending members attached to said plate element and projecting into said envelope supporting said plate element with respect to said filament elements and said control element.

2,446,554

ELECTROMETER VACUUM TUBE

Auguste Louis Marie Antoine Rouy, New York, N. Y., assignor to L. L. H. Company, Erie, Pa., a partnership comprising Hugh C. Lord, Thomas Lord, and Blanche M. Hartman

Application December 22, 1944, Serial No. 569,403
6 Claims. (Cl. 250—27.5)



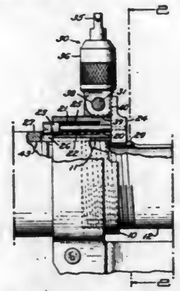
1. An electrometer tube comprising an envelope enclosing a control grid, a cathode system, and an anode, a shield of dielectric material surrounding said control grid and interposed between said control grid and said cathode system and means resiliently suspending said shield within said envelope in spacial relation to the control grid interiorly of said shield and in spacial relation to said cathode system exteriorly of said shield.

2,446,555

THERMOSTATICALLY CONTROLLED ELECTRIC HEATER

Warren M. Sage, Fort Worth, Tex., assignor, by mesne assignments, to Joseph A. Sanders and Nelle Sanders, jointly, both of Buffalo, N. Y.

Application September 26, 1944, Serial No. 555,795
6 Claims. (Cl. 219—38)



1. A thermostatically controlled electric immersion heater, comprising a tubular shell, means at the outer end of said shell for securing it in an opening through the wall of a tank containing the fluid to be heated with the greater part of its length immersed in the fluid, an end head closing the inner end of said shell, a resistance heating element carried by said end head and projecting therefrom into said fluid, a second end head enclosing the outer end of said shell, a thermostatic switch in said shell and wholly enclosed within circuit with said resistance heating element, and means extending through said second end head for connecting said circuit with a power line.

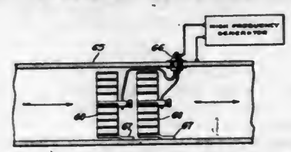
2,446,556

REAR SIGHT AND LATCH FOR FIREARMS

Wilbur A. Schaich, Glen Ellyn, Ill.

Original application October 10, 1945, Serial No. 621,647. Divided and this application May 12, 1947, Serial No. 747,580
10 Claims. (Cl. 42—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a firearm having a breech member and a receiver member threadably secured thereto, the improvement comprising a sight base formed on the breech member, said sight base including a pair of upstanding, transversely spaced brackets, a sight adjusting screw journaled in said brackets, a sight member supported on said screw, and a spring pressed latch having one portion thereof engageable with said sight member to resiliently position said sight member in any selected azimuth position and another portion engageable between the receiver and breech members to lock such members against relative rotation.

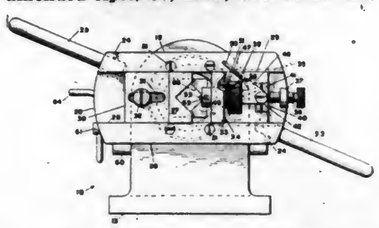


3. In a firearm, a generally cylindrical breech member, a tubular receiver member threadably secured to the forward end of said breech member, a tubular stock member threadedly secured to the rear end of said breech member, and a spring pressed latch engageable between said breech member and said receiver member and also between said breech member and said stock member to lock such members against relative rotation.

2,446,557

DIELECTRIC HEATING OF EMULSIONS

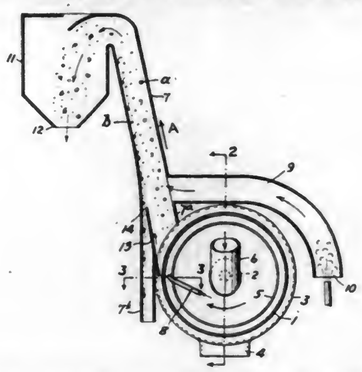
Phillip W. Schutz, Leonia, N. J., and Everett K. McMahon, Jackson Heights, N. Y., assignors to Induction Heating Corp., New York, N. Y., a corporation of New York



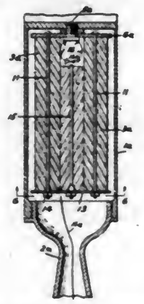
Application December 30, 1944, Serial No. 570,598
3 Claims. (Cl. 252—346)

1. Apparatus for dielectrically heating fluids and fluidized materials having dielectric properties, comprising: a ribbon-like conductive strip shaped in the form of spaced convolutions, with surfaces of the wider dimension of one convolution facing surfaces of the wider dimension of another to thereby form opposed, spaced-apart conductor areas having a substantial amount of distributed capacity therebetween, means for so energizing

said metal strip from a high voltage high frequency source as to cause current to flow therein, and enclosure means for the material, in which enclosure means such convolutions are mounted for immersion in the material whereby the material forms a dielectric between said conductor areas.



2,446,558
BENCH TOOL FOR STRIPPING ARMOR FROM CABLE
Carl W. Schwarz, Washington, D. C., and Theodore Floyd, Hyattsville, Md.
Application March 12, 1945, Serial No. 582,372
9 Claims. (Cl. 164—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

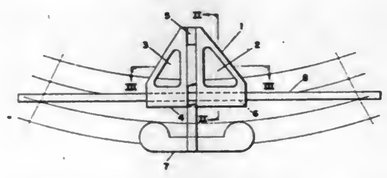


1. A bench tool for stripping sheathing from a cable, comprising a base, an upright supported on said base, a centrally apertured cutter-carrying head journaled on said upright, a cable-supporting means adjustably supported on said cutter head on one side of its central aperture, a cutter block support slidably and adjustably mounted on said cutter head on the side opposite from said cable-supporting means, a cutter block rotatably extending through said cutter block support, yieldable supporting means urging said cutter block away from said cutter head aperture, means for latching said cutter head against said yieldable means, angle positioning means locking said cutter block against rotation when in latched position, a cutter blade adjustably secured in said cutter block, and a cable-embracing vise mounted on said base behind said cutter head aperture in axial alignment therewith, whereby the cable may be held fixed while said head is rotated with said cutter blade extending circumferentially of said cable to cut said sheathing circumferentially, and then said cutter blade may be released, rotated to a position extending longitudinally of the cable, relatched into sheathing cutting position, and then said vise may be released from said cable to permit it to be withdrawn from said tool, cutting the sheathing longitudinally as it is withdrawn.

2,446,559
CENTRIFUGAL APPARATUS
Laurence P. Sharples, Ardmore, Pa., assignor to The Sharples Corporation, Philadelphia, Pa., a corporation of Delaware
Application July 22, 1944, Serial No. 546,198
8 Claims. (Cl. 210—73)

1. In a centrifugal apparatus, the combination comprising a centrifugal rotor mounted on a substantially horizontal axis, said rotor having a perforated peripheral wall and a lateral circumferential opening defined by a circumferential edge of said wall, means for feeding a mixture of liquid and solids of different size into the interior of said rotor and for guiding said mixture outwardly against said perforated peripheral wall, and means adjacent said circumferential edge and adjacent a point in space at which said circumferential edge moves upwardly upon rotation of said rotor for laterally dislodging solids accumulating at said circumferential edge outwardly over said circumferential edge while said last-mentioned solids continue to move upwardly to cause said solids when dislodged to be projected upwardly under the kinetic energy received by said solids from said rotor.

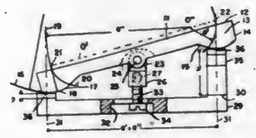
2,446,560
ROCKET CHARGE SUSPENSION ARRANGEMENT
Leslie A. Skinner, United States Army, Washington, D. C., assignor to the United States of America as represented by the Secretary of War
Application September 19, 1941, Serial No. 411,512
20 Claims. (Cl. 60—35.6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a rocket having a charge chamber and formed with a reduced motor nozzle orifice at the rear thereof, a charge suspending means fixed in the chamber having a rear charge engaging support end portion spaced forwardly from the orifice to establish a vacant combustion chamber of predetermined volume between the said charge and said orifice, said means comprising a tension member engaging the rear end surface of said charge and engaged through said charge and secured to a wall of said chamber other than the rearward wall thereof.

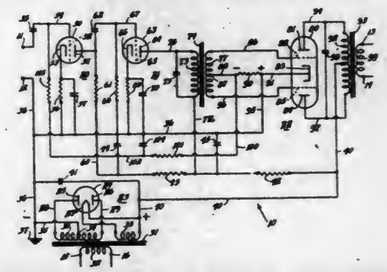
2. In a rocket driving chamber, a plurality of preformed units of driving charge composition having openings therethrough, and suspension members inserted through said openings and fixed to the forward interior wall of said chamber to support the charge units therein.

20. As an improved article of manufacture, a charge unit for rocket motors, comprising a cagework comprising a circular series of parallel longitudinal tension members, a rear common annular explosive-supporting head carried thereby, a plurality of tubular sticks of propellant increments engaged slidably on respective said tension members, a forward transverse connecting member separably connected to all of said tension members forwardly of said increments, and means to separably connect the transverse connecting member to the forward end of a rocket motor chamber.



2,446,561
COMBINATION SQUARE
James E. Streets, Jr., Charleston, S. C.
Application July 11, 1946, Serial No. 682,758
1 Claim. (Cl. 33—95)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



A combination square comprising a flat, relatively thin body portion grooved on opposite sides by perpendicularly intersecting grooves of such depths as to form an opening through the body portion at the intersection, a graduated straight-edge slidably mounted in one of said grooves so that its graduations are visible through the opening, and a bow square slidably mounted in the second groove.

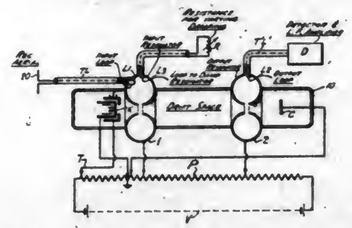
2,446,562
ANGLE MEASURING BAR AND GAUGE
Nikola Trbojevich, Detroit, Mich.
Application February 26, 1945, Serial No. 579,789
7 Claims. (Cl. 33—174)

1. An angle measuring bar comprising a measuring plane and two cylindrical cams having parallel axes supporting it at its two ends, in which at least one of the cams is of an involute cross contour, in which the lines of contact of the said cams with two parallel planes are equidistant as measured in their projection upon the said planes for all angles and in which the said exact distance is a number which when multiplied by π becomes rational.

2,446,563
MOTOR SYSTEM WITH VOLTAGE LIMITING FEEDBACK
Albert P. Upton, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application October 14, 1942, Serial No. 461,955
10 Claims. (Cl. 318—29)

10. Motor control apparatus, comprising in combination, a motor to be controlled and having only two windings one of which is connected to a voltage source fixed in phase, means including a balanceable network for producing an output voltage whose magnitude and effective direction are dependent upon the extent and the direction of unbalance of said network, means for amplifying said voltage including a preliminary stage comprising an electrical discharge device and a final stage comprising two electrical discharge devices connected in phase opposition, each said discharge device having an anode, a cathode and a control electrode, an input circuit for each discharge device including its control electrode and cathode, an output circuit for each discharge device including its anode and cathode, the input and output circuits of said final stage each constituting a pair of corresponding circuits, means for applying to the input circuit of said preliminary stage a voltage dependent upon the voltage produced by said balanceable network, means for coupling the output circuit of said preliminary stage to the input circuits of said final stage in such a manner that upon said network being unbalanced said discharge devices of said final stage are rendered conductive in a manner depending upon the direction of unbalance of said network, a coupling transformer comprising a primary winding having two portions each connected into one of said output circuits of said final stage and a secondary winding connected to said other motor winding so that said winding is energized with current reversible in phase depending upon the direction of unbalance of said bridge, and feedback means comprising impedance means so connected to both circuits of one of said pair of circuits of the final stage as to have a D. C. voltage drop thereacross whenever the network is unbalanced, and means for employing the voltage drop developed across said impedance means to reduce the voltage supplied to said preliminary stage.

2,446,564
CLAMPING DEVICE
Ferdinand D. Vezzosi, Newark, N. J., assignor to the United States of America as represented by the Secretary of War
Application December 19, 1944, Serial No. 568,919
4 Claims. (Cl. 248—361)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



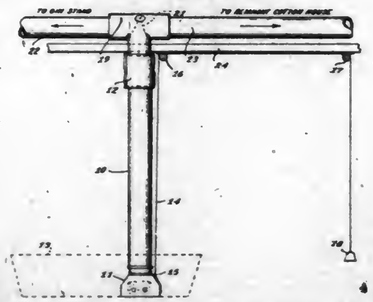
1. The combination of a chassis member, an

2,446,572

DAMPING CIRCUIT EMBODYING ELECTRON DISCHARGE DEVICES OF THE VELOCITY MODULATION TYPE

Cabot Seaton Bull, Hillingdon, England, assignor to Electric & Musical Industries Limited, Hayes, Middlesex, England, a company of Great Britain

Application February 5, 1944, Serial No. 521,230
In Great Britain April 11, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires April 11, 1961
3 Claims. (Cl. 315—6)



1. A velocity modulation amplifier comprising a velocity modulation type vacuum tube having an evacuated envelope and contained therein, a cathode, an electrical input cavity resonator, an electrical output cavity resonator and means to project electrons in the form of a beam from said cathode successively through said input and output resonator, input means coupled to said input cavity resonator, a coupling loop in the interior of said input cavity resonator to couple thereto, a two-conductor line coupled to said coupling loop and extending externally of said input resonator, and a resistance coupled directly across the conductors of said line, the impedance presented to said electron beam by said input resonator with said resistance coupled thereto through said line being substantially equal to the reciprocal of the mutual conductance of the tube to provide an improved signal-to-noise ratio over its value when said resistance is not coupled thereto.

2,446,573

SUCTION FEEDER

Emmett T. Cameron, San Antonio, Tex.

Application August 30, 1946, Serial No. 693,960
3 Claims. (Cl. 302—58)

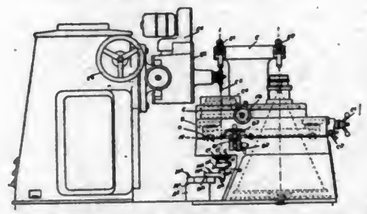
1. A suction feeder for cotton chutes comprising a tube having a flared bottom mouth portion, an outer casing surrounding a part of the tube and the mouth portion thereof and providing a space or closed compartment, partition walls extending between opposite ends of the mouth portion and the outer casing, two spiked reels journaled between the partition walls, the spikes of one reel being staggered longitudinally with respect to the spikes of the other reel, said reels being spaced from each other to an extent such that the spikes of the one reel extend into the spaces between the spikes of the other reel, and drive mechanism for rotating the spiked reels in opposite directions to pick upwardly and direct toward the center of the chute cotton registering with the mouth opening of the chute, said drive mechanism including an electric motor confined within the compartment provided between the outer casing and the tube.

2,446,574

METHOD OF PREPARING PENICILLIN

Chester J. Cavallito, Rensselaer, and Frederick K. Kirchner, Albany, N. Y., assignors, by mesne assignments, to Winthrop-Stearns Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application January 15, 1944, Serial No. 518,458
8 Claims. (Cl. 260—236.5)



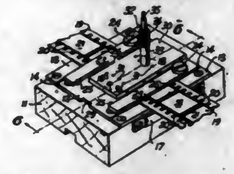
1. The process for purifying a penicillin preparation which comprises extracting an aqueous penicillin solution in a buffer at pH 2.5–3.0 with a liquid aliphatic hydrocarbon, thereafter removing the penicillin from the aqueous phase by extraction with a water-immiscible organic solvent for penicillin, and separating the penicillin in said organic solvent from pigment impurities by preferential adsorption on an adsorbent of the class consisting of magnesium ammonium phosphate and "aged" urea.

2,446,575

COPYING MACHINE WITH OPTICAL SYSTEM

Ernest Albert Cooke, Leicester, England, assignor to Taylor, Taylor & Hobson Limited, Leicester, England, a company of Great Britain

Application September 6, 1944, Serial No. 552,915
In Great Britain July 15, 1943
31 Claims. (Cl. 51—165)



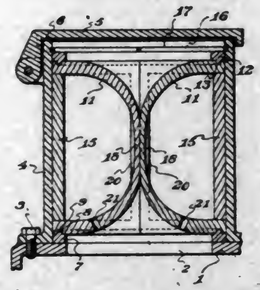
1. A copying machine comprising a supporting base, a tool support carried by the base, a work support angularly adjustable about a work axis on said base, means for translationally adjusting the work support relatively to the tool support, and apparatus for setting the radii of circular arcs to be generated by the tool on the work and comprising a radius arm extending radially with respect to, and angularly movable about, an axis on the base representing the work axis, means whereby the radius arm is constrained to move both angularly and translationally as a unit with the work support, a follower adjustable along the radius arm, an anchoring device carried by the base, means for adjusting the anchoring device relatively to the base and for locking the device in the desired position of adjustment, means on the follower for engaging the anchoring device which thus locks the follower against transational adjustment relatively to the location determined by the anchoring device, a linear dimension gauge carried by the follower, a feeler member carried by the follower and movable relatively thereto, an abutment carried by the radius arm, said feeler member cooperating with the abutment, and means whereby the gauge is controlled in accordance with the movement of the feeler member relatively to the follower.

2,446,576

FILM SPLICER

William C. De Vry, Chicago, Ill., assignor to De Vry Corporation, Chicago, Ill., a corporation of Illinois

Application February 27, 1943, Serial No. 477,387
6 Claims. (Cl. 154—42.1)



1. In a film splicer having a die plate and companion plates spaced therefrom to facilitate the trimming of broken film for splicing, said die plate having die formations therein and upstanding pins spaced therefrom the latter adapted to engage in certain sprocket perforations in the film to locate end portions thereof joined by a strip of adhesive tape in juxtaposition upon said die plate, an auxiliary die plate disposed on said upstanding pins and having punch guiding formations therein for guiding a punch into engagement with the adhesive tape, and a punch coacting with the die formations in said die plate for perforating the adhesive tape to form sprocket perforations therein.

2,446,577

RESILIENT GAUGING GATE

Phillips B. Drane and Clarence D. Laidley, Tulsa, Okla.

Application February 13, 1947, Serial No. 728,262
3 Claims. (Cl. 286—1)

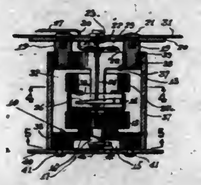
1. A gaging gate for tanks, said gate comprising a rigid casing surrounding a tank opening, similarly shaped reversibly positioned resilient members within said casing, the upper and lower ends of said resilient members being anchored within the casing, the outer sides of the resilient members being inwardly bowed to transverse engagement thereby closing the tank and allowing the passage of a gaging implement between the engagement surfaces of the resilient members horizontal reinforcing ribs carried by the upper and lower ends of the resilient members, the inner ends of the horizontal ribs being connected together by vertical reinforcing ribs at opposite sides of the resilient members.

2,446,578

METHOD OF SOUND RECORD MANUFACTURE

Clifford Eddison, Haddon Heights, N. J., assignor to Radio Corporation of America, a corporation of Delaware

No Drawing. Application October 27, 1944, Serial No. 560,721
1 Claim. (Cl. 106—37)



A method of making a sound record based upon a composition of cellulose acetate, gasoline insoluble, aromatic hydrocarbon soluble extract of pinewood resin, and methyl abietate, comprising melting approximately 25 parts of cellulose acetate, adding approximately 60 parts of said extract of pinewood resin and approximately 15 parts of said methyl abietate, cooling the melt to form a solid composition, grinding the composition into particle form, mixing the ground composition with filler, and processing the resultant composition into record form.

2,446,579

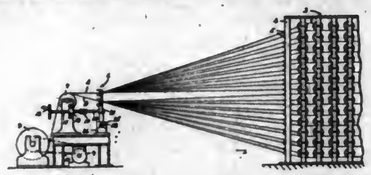
POLARIZED ARMATURE CURRENT RATIOMETER

George H. Fritzinger, West Orange, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey

Application December 20, 1944, Serial No. 569,083
18 Claims. (Cl. 171—95)

1. An electrical instrument comprising a pivoted permanent magnet construction of generally bar shape, said magnet construction having magnetic poles diametrically opposite its pivot axis; a coil offset from the pivot axis of said magnet construction and energizable to exert a torque influence thereon, one pole of said magnet construction subtending a wide angle relative to the pivot axis thereof and the other pole subtending a relatively narrow angle whereby the respective pole end portions have different torque reaction characteristics with said coil; and a surrounding magnetic member for shielding said pivoted magnet construction from external magnetic fields.

2,446,580



BEAMING APPARATUS

Henry B. Garden, Paoli, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware

Application November 29, 1945, Serial No. 631,556
5 Claims. (Cl. 28—40)

4. In combination with apparatus for beaming yarns comprising means for supplying a multiplicity of yarns and means for winding the yarns

upon a common take-up, guide means comprising a plurality of vertically offset rows of guides disposed between the supply means and winding means for maintaining groups of the yarns as separate sheets as they leave the guide means, a

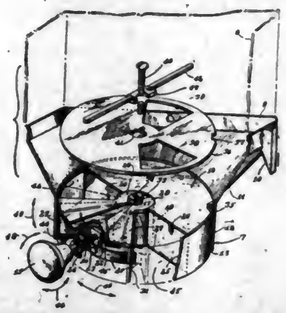
lease-rod-guiding support extending horizontally and transversely of the width of the sheet at a height between that of each two adjacent rows of guides, and means to move said guide means as a unit for adjusting the overall width of the sheets.

2,446,581

ADHESIVE COMPOSITION COMPRISING A POLYALKYLENE GLYCOL AND AN ALKYD RESIN

Leon J. Gold, Shorewood, and Samuel Zweig, Milwaukee, Wis., assignors to Milprint, Inc., Milwaukee, Wis., a corporation of Delaware

No Drawing. Application March 2, 1946, Serial No. 651,617
4 Claims. (Cl. 260—16)



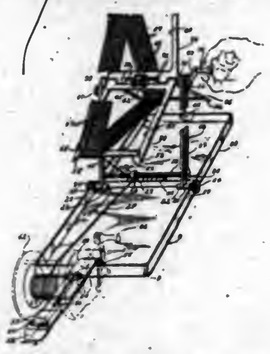
2. A heat activated adhesive composition comprising a predominant proportion, not less than sixty per cent by weight, of a substance containing within its molecule polyalkylene groups, each having from two to three carbon atoms, said substance being selected from the group consisting of polyethylene glycol, polypropylene glycol, polyisopropylene glycol, and their ester derivatives with an average molecular weight of at least 2000 as a heat responsive ingredient of the composition, and a minor proportion in effective amount, not in excess of forty per cent by weight, of an alkyd resin as a cohesion increasing and brittleness suppressing ingredient for the heat responsive ingredient.

2,446,582

ADJUSTABLE DISPENSER FOR COMMINUTED MATERIALS

Ernest Gopner, Elmwood Park, Ill.

Application July 8, 1947, Serial No. 759,570
1 Claim. (Cl. 222—308)



A dispenser for comminuted materials comprising, a body provided with a container retaining portion at its top and a cylindrical extension at its bottom, a slotted portion in the said cylindrical extension located on its peripheral surface, a semi-cylindrical rotor rotatably confined in the said cylindrical extension defining two measuring pockets in the said cylindrical extension, manipulating means passing through the said slot and resting against the central portion of the said rotor, the said manipulating means being provided with a threaded stem portion, means rotatably securing the said stem portion preventing longitudinal movement thereof, a pair of wings angularly and adjustably disposed and pivotably secured to the central portion of the said rotor, resilient means threadably secured at its midpoint to the said threaded stem portion and having its termini secured to the said wings, and a cover plate secured to the central portion of the said rotor confining the said wings rotatably and adjustably.

2,446,583

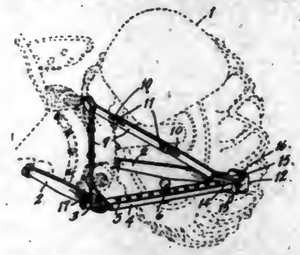
REEL WINDING AND LINE DRYING DEVICE

Ernest Gopner, Elmwood Park, Ill.

Application October 11, 1947, Serial No. 779,325
4 Claims. (Cl. 242—104)

1. A fishing line drying reel comprising, a case, a cover hingedly secured thereto, reel supports articulately secured adjacent the hinged section of said case, collapsible winding reel means rotatably secured to the free ends of the said reel supports, threaded spindle means rotatably secured to the said reel supports, pulley means provided on the said winding reel means and the said threaded spindle means, belt means interconnecting the said pulley means, eye nut means threadably engaging the said threaded spindle means, fishing reel adapter means hingedly secured to the free end of said case, and crank handle means removably secured to the said winding reel means, the said fishing reel adapter means including two slidably connected elements, each of said elements being provided with sockets, and screw means for locking the said slidably connected elements in fixed adjustment.

2,446,584



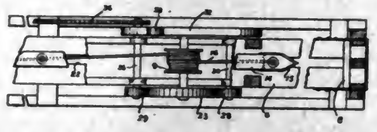
TRACTOR HITCH

Robert H. Green, Kalamazoo, Mich.

Application August 10, 1945, Serial No. 610,064
5 Claims. (Cl. 280—33.44)

1. In a tractor hitch, the combination with a pair of laterally spaced draw bars, of a coupling bar of flat section provided with journals at its ends engaging said draw bars and having a longitudinal series of holes adapted to selectively receive coupling elements, hanger links disposed

with their lower ends on the inner sides of said draw bars to engage said journals, a coupling element selectively engageable with said holes in said coupling bar to project upwardly therefrom, and a detachable yoke having an inner arm and a slotted outer arm, said inner arm being provided with a coupling bar receiving hole extending transversely through the arm, said coupling bar projecting longitudinally of itself through said hole, said hole receiving a flattened portion of the coupling bar at the inner side of



the adjacent hanger bar, said slotted outer arm receiving the end of the adjacent draw bar and engaging the edges thereof whereby pivotal movement of the coupling bar on its journals is prevented when the yoke is in position, said inner and outer arms being laterally spaced from each other to receive therebetween the lower end of the adjacent hanger link pivoted on the coupling bar journal, said coupling bar being free to oscillate on its journals when the yoke is removed.

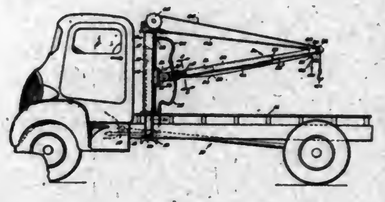
2,446,585

WOOD SPLITTING MACHINE

Cleiburn T. Hanners, Etna, Calif.

Application April 13, 1945, Serial No. 588,154
2 Claims. (Cl. 144—193)

1. A log splitting machine comprising a table adapted for supporting a log to be split thereon, an anvil rising above the table and forming an abutment for one end of the log, an elongated splitting member having a splitting head at one end, said splitting member being slidably mounted on the table, a drum having a cable wound thereon with its ends extending in opposite directions from the cable and attached respectively to the front and rear ends of the splitting member, a swingable support for the drum, a friction wheel secured to the drum for rotation therewith, a pair of oppositely rotating friction drive wheels, and means for moving the first-named friction wheel into and out of engagement with said friction drive wheels to reciprocably actuate the splitting member.



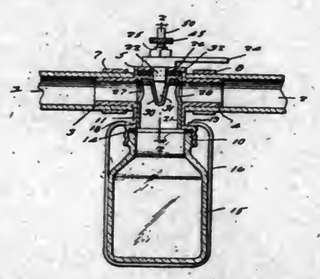
2,446,586

HYDRAULIC CRANE

Walter Harbaugh, Indianapolis, Ind.

Application August 1, 1946, Serial No. 687,619
10 Claims. (Cl. 212—35)

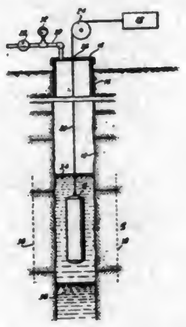
1. A fluid-operated crane comprising an axially-fixed, upstanding mast and a boom hingedly associated with said mast to oscillate about a horizontal axis, said boom comprising a hollow member and a second member telescopically received in said hollow member and projecting beyond the free end of said hollow member, the inner end of said second member being provided with means establishing a sliding fluid seal with



the walls of said hollow member, a source of fluid under pressure, means for controlling the flow of fluid from said source to the interior of said hollow member, means for controlling the flow of fluid from the interior of said hollow member, and an element of fixed length connecting the outer end of said second member with said mast.

2,446,587

SLUDGE TRAP

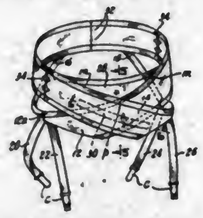


Robert S. Henry, New Hartford, N. Y.

Application June 11, 1946, Serial No. 675,914
2 Claims. (Cl. 210—57)

1. In a sludge trap or the like for a fluid conduit, the combination with a fitting including a tubular portion adapted to be interposed between the aligned open ends of a fluid conduit transversely thereof, aligned apertures in said fitting adapted to be aligned with said open ends of said conduit, an end wall closing one end of said fitting, the other end of said fitting being open, and a sludge trap detachably connected to said open end; of a tubular sleeve valve rotatably mounted within said fitting and concentric thereto, said valve having an end wall closing one end, the other end of said valve being open, said open end of said valve opening through said open end of said fitting, aligned inlet and outlet ports in said valve, means for rotating said valve in said fitting to move said ports into and out of alignment with said apertures of said fitting to open and close said valve, a partition of porous material extending across said valve in inwardly-spaced relation to the end wall thereof, air vents formed through said end walls of said valve and fitting, and means for opening and closing one of said vents.

2,446,588
METHOD OF DETERMINING THE PERMEABILITY OF SUBSTRATA
Gerhard Herzog and Alexander Wolf, Houston, Tex., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
Application April 4, 1944, Serial No. 529,487
7 Claims. (Cl. 250—83)

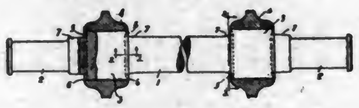


7. A method of determining the permeability and porosity of an underground formation penetrated by a bore hole which comprises placing an artificially radioactive fluid in that portion of the hole which is in the vicinity of said formation, applying a constant pressure to force some of the liquid into the pore spaces of the formation, measuring the rate of increase in the radioactivity of the formation, continuing the application of said constant pressure until no further increase in radioactivity is noted and measuring the total increase in the radioactivity of the formation, the rate of increase being indicative of the permeability of the formation and the total amount of increase being indicative of the porosity of the formation.

2,446,589
SPACER
Kenneth W. Hildenbrand, Monroe, Mich., assignor to Monroe Auto Equipment Company, Monroe, Mich., a corporation of Michigan
Original application April 22, 1940, Serial No. 331,037, now Patent No. 2,355,801, dated August 15, 1944. Divided and this application March 7, 1944, Serial No. 525,419
1 Claim. (Cl. 267—49)

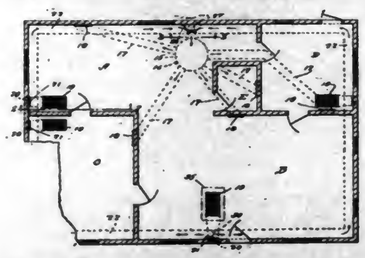
A leaf spring assembly comprising a plurality of leaves arranged in successive pairs of different lengths from a common point of fixed surface contact, each of the leaves, except the longest leaf of the series, having an aperture in its end portion beyond the end of the contacting shorter leaf, a bearing element, a support to which the bearing element is secured, said support being positionable in the aperture of each leaf, the bearing element being of a compressible material and greater in peripheral dimension than the said aperture positioned between the leaves and separating the same for a distance from their ends determined by the thickness of the bearing element therebetween.

2,446,590
ABDOMINAL AND GARTER SUPPORT
Helen Gray Hill, Port Washington, N. Y.
Application June 11, 1947, Serial No. 753,963
3 Claims. (Cl. 2—306)



1. An abdominal and garter support comprising, a strip of elastic or the like extending across the user's back and over the hips, with the end portions crossed in front of the body and extending down over the abdomen to the user's thighs respectively, the upper margins of said crossed ends being interconnected at the point of crossing, but said ends being unconnected below their said upper margins, one of said end portions having a longitudinally extending loop through which the other end portion is threaded, straps interconnecting the intermediate, back portion of the strip with the extremities of said end portions respectively, and garters depending from the points of union of said straps and end portions respectively.

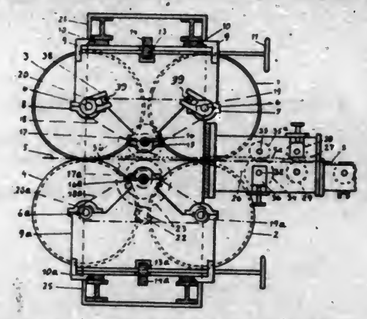
2,446,591
METAL SKI
Christian K. Hoerle, Torrington, Conn.
Application November 14, 1944, Serial No. 563,347
7 Claims. (Cl. 280—11.13)



1. In a metal ski, a flat metal base having grooves rolled in both sides of the undersurface thereof, and a pair of wear-resistant metallic edges welded into said grooves.

2,446,592
CAR WHEEL AXLE
Kristoffer Andreas Huldt, Stockholm, Sweden
Application August 5, 1943, Serial No. 497,499
In Sweden July 30, 1942
Section 1, Public Law 690, August 8 1946
Patent expires July 30, 1962
5 Claims. (Cl. 295—43)

4. A car wheel assembly comprising a wheel axle having a radially enlarged cylindrical portion, and a wheel hub pressed onto said cylindrical portion, the end surfaces of said cylindrical portion being undercut by annular grooves whose inner edges merge into the adjacent portions of said axle.

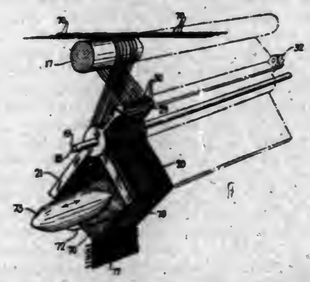


2,446,593
AIR CONDITIONING SYSTEM
Sam C. Jimopoulos, St. Louis, Mo.
Application December 16, 1943, Serial No. 514,552
4 Claims. (Cl. 98—31)

1. In an air conditioning system for a house having rooms above the level of the surface of the ground and a basement below said level, basement side and end walls of concrete below said level, basement inner side and end walls formed of vertical rows of porous tiles laid adjacent to the concrete walls, the tiles having through passages extending lengthwise of the walls and laid end to end to form continuous elongated conduits one above the other, there being a vertical outlet passageway in one of said tile walls into which passageway some of the conduits open, said outlet passageway leading into the house above the basement, a vertical inlet passageway in another of said tile walls opposite said first-mentioned wall and into which inlet passageway other conduits open, said inlet passageway leading from the interior of the house above the basement, a central vertical partition in said inlet passageway dividing incoming air and directing it in opposite directions into conduits opening into opposite sides of the inlet passageway and leading therefrom to the outlet passageway, other similarly leading vertical inlet passageways formed in said tile wall at spaced intervals along the perimeter of the basement, a diagonal baffle in each of said last-mentioned inlet passageways extending from one side of the top of the passageway to a lower portion of the opposite side for directing incoming air to the upper conduits of said tile wall, said upper conduits leading to said first inlet passageway where the air is directed by said partition to the lower conduits leading, beneath said diagonal baffle, to the outlet passageway.

2,446,594
MACHINE FOR PRESSING GROOVES IN PASTEBOARD SHEETS
Arthur Konrad Anders Johansson, Goteborg, Sweden
Application February 8, 1945, Serial No. 576,880
In Sweden February 3, 1944
1 Claim. (Cl. 93—58.1)

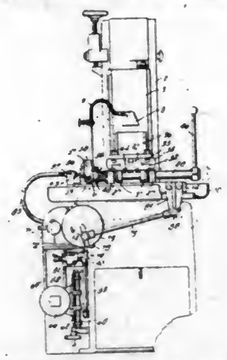
A machine for pressing grooves in pasteboard sheets comprising front rollers arranged in pairs, one roller of each pair being arranged above the other roller and the pairs of rollers being spaced in an axial direction, groove forming means on said rollers, pairs of upper and lower rear rollers arranged behind the front rollers, guiding means to give the sheeting a bow shape at points between and in front of the pairs of front rollers, the guide means being arranged to bow the sheet to such extent that after passing the front rollers the bow is maintained in a similar degree during passage of the sheet between the rear rollers, an adjustable slide supporting each upper front roller and the related rear upper roller, a lower slide adjustably supporting each lower front roller and the related lower rear roller, a drive shaft common



to the upper slides, a drive shaft common to the lower slides and a driving chain extending over each drive shaft in each slide and over the related rollers.

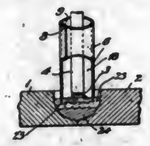
2,446,595
METHOD OF DECOMPOSING ALKALI METAL SALTS
Felix Jourdan and Jorge Beéche, Vina Del Mar, Chile
No Drawing. Application June 18, 1945, Serial No. 600,238
1 Claim. (Cl. 23—184)

The method of decomposing alkali metal salts yielding metal oxides on decomposition together with gaseous decomposition products which comprises preparing a briquette-like mass of the alkali metal salt and a supporting material therefor, heating the mass to decompose the salt, leaching the heated mass to remove alkali metal oxides as hydroxides therefrom while avoiding destruction of the briquette-like supporting mass, impregnating the mass with further quantities of alkali metal salt and heating the mass to decompose the salt.



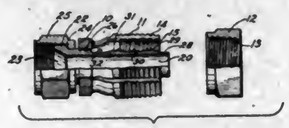
2,446,596
LOOM AND METHOD OF WEAVING
Samuel Kaufman, Brooklyn, N. Y.
Application April 5, 1945, Serial No. 586,708
13 Claims. (Cl. 139—18)

11. The method of weaving which comprises feeding warp strands to a weaving point periodically, separating groups of alternate warp strands to form a succession of sheds, passing a weft strand through the respective sheds, crossing the warp strands over the weft strand to con-



fine the latter, pulling said warp strands in opposite directions and to equal extent after each pass of the weft strand, and so moving the woven material and weaving point relatively of the warp strands that the latter are disposed substantially at right angles to the woven material to force the weft strand into place.

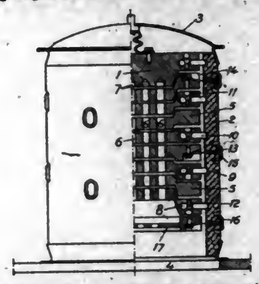
2,446,597
WORKTABLE FOR BELT GRINDERS OR THE LIKE
Henry J. Kingsbury, Kalamazoo, Mich., assignor to Hammond Machinery Builders, Inc., Kalamazoo, Mich.
Application November 15, 1946, Serial No. 710,194
25 Claims. (Cl. 51—143)



20. Actuating mechanism for the work table of a belt grinder having a transversely reciprocable carriage and a longitudinally reciprocable work table comprising a rock shaft journaled on said carriage, a bed plate rotatably supported on said rock shaft and in frictional engagement therewith, said work table being slidable on said bed plate, a pair of lock members secured to the sides of said carriage and having locking bars slidably engaged with said work table to resist the frictional force of said shaft tending to rotate said bed plate, a yoke carried on said rock shaft and engaged with stops on said work table for reciprocating said work table upon oscillation of said rock shaft, a crank lever rotatably mounted on the end of said rock shaft, a manually operable clutch arranged to connect said crank lever to said rock shaft, an air cylinder on said carriage having its piston connected to said crank lever to impart rotary motion to said shaft, a first air valve associated with said air cylinder and arranged to supply air to one end thereof to urge said work table into work engaging position, a first air conduit for supplying compressed air to said first valve, a second air conduit having a piston therein arranged to reverse the position of said first valve to supply air to the other end of said air cylinder, a second valve in said second air conduit spring pressed to closed position, a crank wheel arranged to reciprocate said carriage, said crank wheel having a pair of cams thereon arranged to actuate said second valve during portions of each revolution of said crank wheel, a stop on said crank lever adjustably engageable with said carriage to limit the retracted position of said work table, another stop on said work table adjustably engageable with said bed plate to limit the work engaging motion of said work table, and a motor arranged to drive said crank wheel.

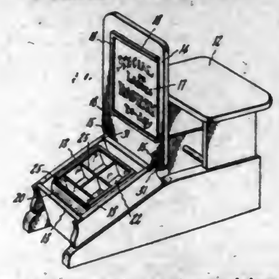
2,446,598
AUTOMATIC ARC WELDING APPARATUS
Henry O. Klinke, Forest Hills, N. Y., assignor to Air Reduction Company, Incorporated, a corporation of New York
Application February 7, 1946, Serial No. 646,078
6 Claims. (Cl. 219—8)

1. Arc welding apparatus comprising a metallic electrode, feeding means for supporting and feeding said electrode towards the work to be welded, means for supplying welding current to the electrode and the work, the welding arc forming a pool of molten metal around said electrode, a shielding tube surrounding and spaced from the electrode, and tube feeding means for supporting and feeding said tube towards the work and maintaining the lower end thereof below the surface of said pool.



2,446,599
HOSE INSERT
Harold J. Knaggs, Cleveland, Ohio, assignor to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio
Application September 23, 1944, Serial No. 555,454
3 Claims. (Cl. 285—84)

1. A hose end fitting comprising a body within which a hose end is received and gripped, and a tubular insert for supporting the hose against the pressure exerted on the exterior of the hose by said body, said insert being in sealing engagement with the bore of the hose, the portion of the insert within the hose comprising two spaced arcuate threaded portions having double lead, substantially 90° threads thereon, and a substantially cylindrical sealing portion between said threaded portions and in a zone wherein said body exerts substantial pressure on the exterior of the hose tightly to clamp said hose against said cylindrical portion to provide a tight seal and simultaneously to clamp said hose at said threaded portions to prevent cold flow of material forcing said hose endwise in either direction away from said cylindrical portion.

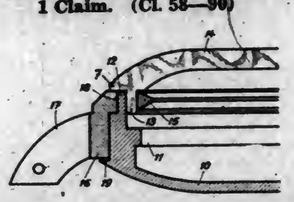


2,446,600
ANODE TUBE FOR IONIC VALVES FOR HIGH-VOLTAGE STATIC CURRENT CONVERTERS
Uno Lamm, Ludvika, Sweden, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a corporation of Sweden
Application January 5, 1944, Serial No. 517,070
In Sweden November 5, 1942
16 Claims. (Cl. 250—27.5)

1. An anode tube for ionic valves for high voltage static current converters, said tube having an anode and a cathode space and at least one current path therebetween, and having means therein to distribute the voltage in said path during the non-conducting parts of the cycles, said means comprising a group of conducting bodies mounted

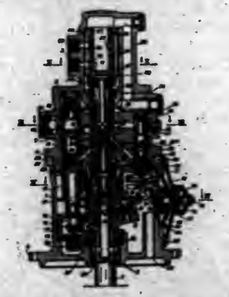
in said tube adjacent the current path, the volume of said bodies being equal to at least half of the volume of the space between the anode and the cathode space.

2,446,601
SHOE FITTING AND FOOTREST ACCESSORIES FOR SHOE STORES
Louis Lelyveld, Weymouth, Mass.
Substitute for abandoned application Serial No. 483,258, September 30, 1930. This application July 13, 1946, Serial No. 683,339
5 Claims. (Cl. 155—35)



1. A shoe store adjunct comprising, in combination, a supporting portion formed as a box adapted to contain samples and having an open top permitting display of the contained samples, marginal portions of said top constituting an inclined upwardly facing plate seat, and a plate hinged to the supporting portion at the higher end of said seat, and having a foot rest side and an advertising side, the plate being adapted to bear on the seat, with the advertising side downward, to constitute an inclined foot rest, protect the advertising side, and conceal samples in the box, and to be separated from the seat to simultaneously display the advertising side and the said samples.

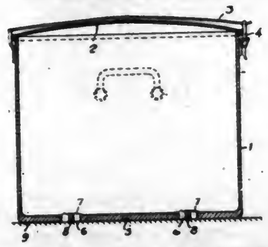
2,446,602
DESTRUCTIVE HYDROGENATION OF HEAVY HYDROCARBON OILS
Joseph B. McKinley, Pittsburgh, and Harry J. Elder, Springdale, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
No Drawing. Application February 17, 1947, Serial No. 729,198
7 Claims. (Cl. 196—53)



1. A process for converting heavy hydrocarbon oils into lower boiling products which comprises forming a fine suspension of molybdenum oxydihydroxydichloride in a heavy hydrocarbon oil, heating said suspension to liberate a substantial amount of hydrogen chloride thereby forming a hydrogenation catalyst in fine suspension in the heavy oil, and subjecting the resulting suspension to destructive hydrogenation conditions in the presence of hydrogen.

2,446,603
WATERTIGHT WATCHCASE
Ernest Morf, La Chaux-de-Fonds, Switzerland
Application January 27, 1945, Serial No. 574,849
In Switzerland October 23, 1944
1 Claim. (Cl. 58—90)

In a watch-case, a combined center and bottom comprising a thinned upper rim and a shoulder, a crystal having a sleeve forced into said upper rim, a caseband supported on said shoulder and surrounding said thinned upper rim, said crystal having a flange outside said sleeve, covering said thinned upper rim and at least a part of said caseband, said combined center and bottom comprising a second shoulder beneath said caseband to allow a tool to be supported thereon for attacking said caseband to remove said crystal.

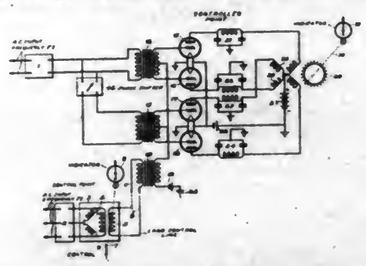


2,446,604
FUEL PUMP
Jean Louis Léon Alexandre Albert Moulet, Oullins, France
Application May 18, 1945, Serial No. 594,483
In France June 27, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires June 27, 1962
6 Claims. (Cl. 103—2)

1. A pump for feeding simultaneously fuel and lubricant to an internal combustion motor comprising at least one cylinder, two pistons adapted to reciprocate in each cylinder, means for interconnecting the pistons in each cylinder with a longitudinal play between them; means for supplying fuel and lubricant to the cylinders, means for driving the first piston in each cylinder, means whereby said first piston forces the lubricant out of the corresponding cylinder, means whereby

said first piston drives the corresponding second piston through the interposed lubricant pressure, means whereby the second piston in each cylinder delivers the fuel into the motor and means whereby the lubricant forced out of each cylinder by the first piston lubricates the pump parts at a pressure which constantly balances that of the fuel.

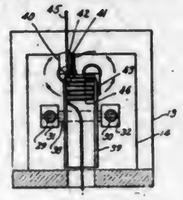
2,446,605
COOKING VESSEL WITH AUTOMATIC PRESSURE REGULATION
Clas Ohlson, Insjon, Sweden
Application January 17, 1946, Serial No. 641,801
In Sweden February 1, 1945
1 Claim. (Cl. 126—374)



In a cooking-vessel adapted to rest on a heat supplying support, means for hermetically closing the vessel, at least one opening in the bottom of the vessel, a diaphragm covering said opening and tightly secured to the inside of said bottom, and stud means operatively associated with said diaphragm and extending into said opening, said diaphragm being adapted, in response to a predetermined increase of the pressure prevailing in said vessel during boiling, to be bent outward and thereby to move part of said stud means out of said opening, whereby to lift said vessel from said support.

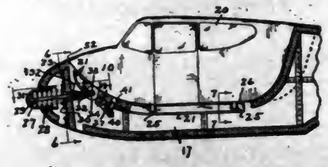
2,446,606
PRODUCTION OF VANILLIC ACID
Irwin A. Pearl, Appleton, Wis., assignor, by mesne assignments, to Sulphite Products Corporation, a corporation of Wisconsin
No Drawing. Application September 6, 1945, Serial No. 614,828
3 Claims. (Cl. 260—521)

3. The method of deriving the corresponding acid from an aldehyde selected from the class consisting of vanillin, syringaldehyde and orthovanillin which consists in subjecting the aldehyde in aqueous solution in the presence of excess alkali to reaction with the alkali and suspended silver oxide, separating the resulting precipitated silver, oxidizing the precipitated silver by means of an aqueous solution of an alkali metal salt of permanganic acid in the proportion of about 6 atom weights of silver to about 2.5 moles of permanganate salt, and employing the regenerated silver oxide to convert an additional quantity of aldehyde to acid.



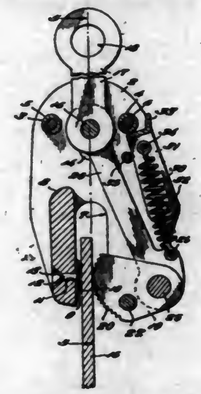
2,446,607
REMOTE CONTROL SYSTEM
Harold O. Peterson, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application January 22, 1943, Serial No. 473,163
1 Claim. (Cl. 318—28)

In apparatus for controlling the position of an element, a motor having a rotor linked by driving means with said element, said motor having windings angularly related, a source of alternating current, two converter stages, each having an output, leads connecting the output of one converter stage to one winding and the output of the other converter stage to the other winding, connections from said source to each converter for exciting the same by alternating current, a phase shifter in one of said connections, apparatus for supplying polyphase currents, of the same frequency as the currents of said source, to angularly related windings, a rotor winding in the field of said angularly related windings, connections from said rotor wind-



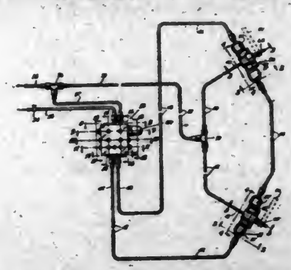
ing to each converter for exciting the same by alternating current of the same frequency as the alternating currents of said source when said rotor winding is stationary, the arrangement being such that the converters then supply zero beat notes to said motor windings, means for rotating the rotor winding in the desired direction at the desired rate, whereby said converters supply beat notes to said motor windings the phase of which denotes the direction of rotation of the rotor winding and the frequency of which depends on the rate of rotation of the rotor winding, and an indicator the position of which is fixedly related to the position of said rotor winding.

2,446,608
MACHINE FOR BENDING WIRE INTO RIBBON FORM
Karl E. Queitzsch, York, Pa.
Application May 2, 1947, Serial No. 745,365
5 Claims. (Cl. 140—71)



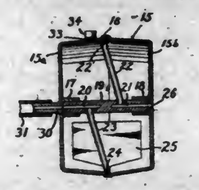
1. A machine for bending wire stock into ribbon form, comprising a vertical support, bearing means adjacent said support, a pair of shafts rotatably and slidably mounted in said bearing means, said shafts being normal to said support, means biasing said shafts toward said support, a first forming arm carried on the end of one of the shafts, a second forming arm carried on the end of the other shaft, means for rotating said shafts in opposite directions and arranged so that said forming arms move inwardly in alternate sequence, said forming arms slidably bearing on said support during inward movement thereof, and a clamping plate pivoted to said support, said plate being spaced from the support at its pivotal plane, each forming arm being arranged so as to engage said plates at the termination of its inward movement so as to exert clamping pressure on said plate.

2,446,609
RELEASABLE AIRPLANE CABIN
Forrest D. Reed, St. Paul, Ind.
Application May 17, 1947, Serial No. 748,721
6 Claims. (Cl. 244—121)



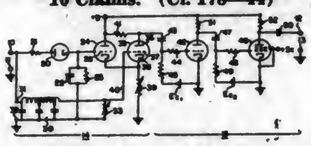
1. An airplane fuselage; track means carried by the fuselage; a compartment unit carried by the fuselage on said track means normally shiftable forwardly under inertia effect; an impact member shiftably carried by said fuselage at a forward portion thereof; means operated by travel of said impact member to elevate in reference to said fuselage the forward end of said unit upon driving said impact member inwardly of the fuselage as may be induced by collision conditions.

2,446,610
PLATE LIFTING CLAMP
Joseph C. Renfroe, Jacksonville, Fla.
Application August 10, 1946, Serial No. 689,722
4 Claims. (Cl. 294—104)



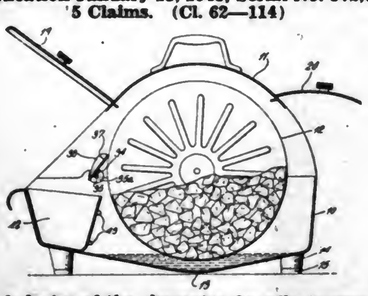
3. A plate lifting clamp comprising spaced parallel interconnected side members having an inwardly directed vertical plate receiving slot formed in its lower edge, a clevis supported in the upper end of said clamp in alignment with said slot for vertical adjustment, a fixed jaw in one side of said slot, a pivoted camming jaw in the opposite side of said slot, linkage connected between said clevis and said pivoted jaw, and a jaw locking and releasing arm pivotally attached to said clamp and connected with said pivoted jaw for locking the jaw in clamped position when said arm is moved past dead center and for releasing said jaw when said arm is moved in the opposite direction.

2,446,611
HYDRAULIC WINDSHIELD WIPER
Howard E. Rose, Normandy, Mo., assignor, by mesne assignments, to Kearfott Company, Inc., New York, N. Y., a corporation of New York
Application November 30, 1942, Serial No. 467,359
23 Claims. (Cl. 15—253)



1. In a mechanism of the kind described, a plurality of windshield wiping units adapted to wipe back and forth, oppositely operable fluid pressure means including opposite fluid connections adapted to receive pressure oppositely for so operating them, means to connect said fluid pressure means in series in a reversible fluid pressure circuit, means to control the fluid pressure means to apply fluid under pressure thereto first in one direction and then in the other, each of said units including means to resist the fluid under pressure with a maximum resistance when the unit is stopped, and said control means being operable in response to the total maximum pressure resistances to reverse the flow of fluid under pressure when all of said units are stopped, but being inoperable to reverse the flow of such fluid when less than all of the units are stopped.

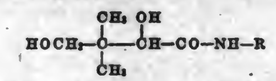
2,446,612
FUEL TANK
Donald J. Sauser and Joseph A. Sauser, Evanston, Ill.
Application May 16, 1946, Serial No. 670,059
1 Claim. (Cl. 244—135)



In a fuel tank structure especially adapted for use with aeroplanes, such as miniature aeroplanes and the like, a fuel supply tank where fuel is forced from the tank under atmospheric pressure, a pendulum-like device in the tank containing substantially opposite fuel pick-up and vent openings and being swingably supported in said tank for movement to different positions in response to tilting of the tank and to enable atmospheric pressure to effectively force liquid from the tank in said different positions, said pendulum-like device comprising a shaft journalled in the tank walls and having at its ends axially aligned passageways, one communicating at its inner end with said pick-up opening and the other at its inner end with said vent opening and at its outer end opening into the atmosphere surrounding the tank.

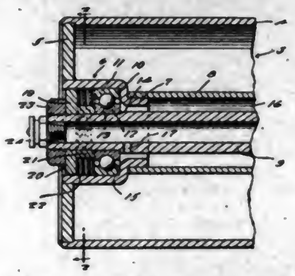
2,446,613
PULSE SLOPE-AMPLITUDE RELATION RESTORING SYSTEM
David L. Shapiro, Kew Gardens, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application February 7, 1946, Serial No. 646,057
10 Claims. (Cl. 178—44)

1. An arrangement for translating an applied signal pulse having a sloping edge that varies between maximum and minimum amplitude values comprising, a first channel for translating said applied pulse including means for deriving therefrom a first signal having a substantial amplitude for an interval at least equal to the duration of said sloping edge and including a portion having a substantially constant amplitude determined by said maximum amplitude of said sloping edge, a second channel for translating said applied pulse while preserving said sloping edge thereof to provide a second pulse occurring in such time relation that a portion of its sloping edge extending from the point of maximum amplitude to a point of a preselected fraction of said maximum amplitude occufs within the duration of said constant-amplitude portion of said first signal, and means for effectively combining said first signal and said second pulse with opposite polarities and with such relative amplitudes that said constant-amplitude portion of said first signal has a value equal to said fraction of the maximum amplitude of said sloping edge of said second pulse to produce an output pulse signal of a given polarity having a sloping edge representing said sloping edge of said applied pulse and intersecting a reference axis at a substantially fixed point in time regardless of variations in the maximum amplitude of said sloping edge of said applied pulse.



2,446,614
FREEZING APPARATUS
Adrian R. Sherick, New York, N. Y., assignor, by mesne assignments, to Master Industries, Inc., New York, N. Y., a corporation of New York
Application January 13, 1945, Serial No. 572,600
5 Claims. (Cl. 62—114)

1. A device of the character described comprising a drum, a shaft parallel to the drum axis and spaced from the drum periphery, a scraper fixed to said shaft and having an edge facing said drum periphery, resilient means for maintaining the scraper with its edge contacting the drum periphery, and means for engaging and retaining said resilient means in a desired position.

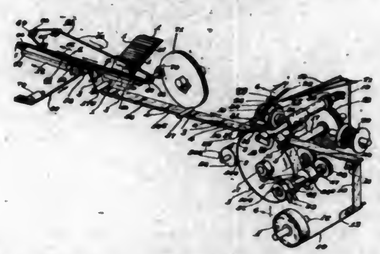


2,446,615
N-SUBSTITUTED PANTOYL AMIDES
William Shive, Austin, Tex., and Esmond Emerson Snell, Madison, Wis., assignors to Research Corporation, New York, N. Y., a corporation of New York
No Drawing. Application May 25, 1946, Serial No. 672,338
2 Claims. (Cl. 260—561)

1. New growth inhibiting amides, represented by the following formula:

in which R represents an alkyl group containing from 3 to 7 carbon atoms.

2,446,616
BEARING STRUCTURE FOR CONVEYER ROLLERS AND THE LIKE
Franklin N. Smith, Cedar Rapids, Iowa
Application December 7, 1945, Serial No. 633,317
2 Claims. (Cl. 308—187.1)

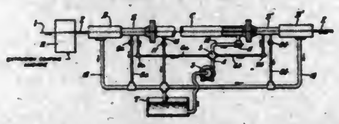


1. In a bearing assembly comprising a hollow shaft, a cup-shaped housing surrounding an end of said shaft, a ball bearing operatively disposed between said shaft and said housing, said shaft and housing having annular shoulders locating said ball bearing relative thereto, a bushing having a flange surrounding said shaft within said housing, said bushing holding said bearing against said shaft shoulder, the flange of said bushing peripherally contacting said housing and being spaced from said bearing to provide at the outer end of said bearing an annular space within said housing, and a helical spring within said annular space loosely circumposed upon said bushing, said spring being spiraled in a direction opposite to the direction of rotation of said housing relative to said shaft to thereby forcibly feed lubricant present in the latter space toward the bearing.

2,446,617
METHOD OF PRODUCING ELECTRICALLY SEMICONDUCTING COATINGS
Bertil Stålhane, Stockholm, Sweden, assignor to Allmanna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a Swedish corporation
No Drawing. Application March 14, 1945, Serial No. 582,790. In Sweden March 11, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires March 11, 1964
4 Claims. (Cl. 117—103)

1. A method of providing a conducting coating, which comprises applying on a base of a metal, capable of forming a substantially insulating oxide, containing aluminum as its principal constituent a soluble salt containing, as alkaline constituent, an oxide of a metal of atomic number from 25 to 29, inclusive of limits, and, as acid constituent, an oxide of a metal selected from the group consisting of chromium, manganese, tungsten and molybdenum, drying, and heating said salt to convert it into an insoluble, electronically conductive coating.

2,446,618
APPARATUS FOR PRODUCING WRAPPER MATERIAL WITH TEAR TAPE SECTIONS
Constantine S. Stephano, Elkins Park, Pa., assignor to Stephano Brothers, Philadelphia, Pa., a corporation of Pennsylvania
Application November 29, 1946, Serial No. 712,956
10 Claims. (Cl. 93—1)

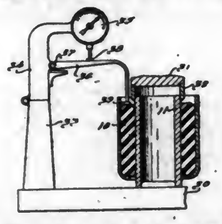


1. In apparatus for individually wrapping articles, a member to support and advance a continuous web of sheet material at a predetermined speed, a second member arranged to support and advance a continuous narrow tape in timed relation to said web, cutting mechanism operable to sever successive tape sections of predetermined length from said tape, means to retain said tape and severed tape sections on said second member, transfer means operable between said members constructed and operable to transfer successive tape sections from the second member to the first member at predetermined equally spaced intervals thereon, means to retain said tape sections on said transfer means during transfer of said tape sections, and means to retain said tape sections in said equally spaced positions on the first member at least until said tape sections are brought into underlying association with the continuous web advanced thereby.

2,446,619
POLYMERIZATION OF OLEFINS IN THE PRESENCE OF HYDROGEN
Meredith M. Stewart and Frank J. Moore, Beacon, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application August 21, 1945, Serial No. 611,912
5 Claims. (Cl. 260—683.15)

2. In the catalytic polymerization of C_2 and C_3 olefins by contact in vapor phase with a solid adsorptive polymerization catalyst in a reaction zone under elevated pressure at a temperature in the range of about 450 to 650° F. and normally conducive to production of a liquid polymer product consisting mainly of trimer and higher molecular weight polymers, the method of increasing the dimer constituent to a major component of the liquid polymer product which consists in effecting said contact with a catalyst containing an oxide of a group VI metal and in the presence of added hydrogen amounting to from 20 to about 100% by volume of the feed olefin vapor flowing into said reaction zone, the proportion of said group VI metal oxide contained in said catalyst being restricted to a small amount such that polymerization is effected in the substantial absence of hydrogenation, the yield of total liquid polymer being substantially greater than that obtained in the absence of added hydrogen and consisting predominantly of dimer.

2,446,620
AUTOMATIC PRESSURE SEALING DEVICE
Herbert A. Swallow and Thomas A. De Vilbiss, Plainfield, N. J., assignors to Bakelite Corporation, a corporation of New Jersey
Application January 28, 1944, Serial No. 520,026
9 Claims. (Cl. 18—6)



7. In an apparatus including a container for fluid under pressure having an exit and an entrant opening for the passing of a rod-like element therethrough, sealing means for the openings to regulate the escape of fluid about the rod-like element comprising in combination with the container a casing secured to the container about the entrant opening, a second casing secured to the container about the exit opening, each casing having one orifice open to and immediately adjacent to the opening about which the casing is secured and a second orifice opposite thereto and in alignment therewith, in each casing a separate tubular bushing of elastic thin-walled material having a bore of larger cross-sectional area than the rod-like element, each bushing being mounted within its respective casing and longitudinally stretched in extending from the first-named orifice to the second-named orifice to form a continuous internal passage for the rod-like element and a sealed space for confining fluid under pressure in the respective casing, said bushing having a wall thinness and degree of elasticity transmitting substantially all the pressure of the confined fluid in the sealed space against the rod-like element but incapable per se of coacting with the rod-like element to form a substantial seal, a common source of fluid pressure having connections to each sealed space and to the container, and interposed between the source of fluid pressure and each connection a differential valve having an opening resistance to automatically maintain at selected differentials a lower fluid pressure in the container than in the sealed spaces.

2,446,621
METHOD OF MAKING PRECISION ANTI-VIBRATION MOUNTINGS
Leon F. Thiry, Montclair, N. J., assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application December 3, 1943, Serial No. 512,841
17 Claims. (Cl. 29—148.2)

1. The method of making a precision antivibration mounting of the type including a pair of relatively rigid members separated by a rubber element, said members being relatively movable in parallel paths only by distortion of said rubber element, at least one of said members having a bumper for engaging said rubber element and thereby resisting such relative movement between

the members, which comprises assembling said rigid members and said rubber element together so that the rigid members are movable only through distortion of the rubber element, holding one of said members stationary, displacing said members axially by subjecting the other member

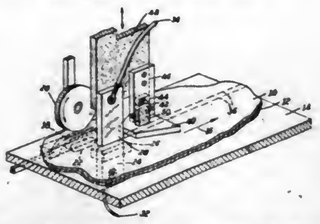
to a force acting in a direction parallel to said paths and toward the bumper on said one member to distort the rubber element, and thereafter progressively displacing said bumper on one of said members toward the rubber element until the deflection characteristic of the mounting reaches a predetermined amount.

2,446,622

METHOD FOR PRODUCING GRIPS FOR HANDLES

Archibald J. Turner, Chicago, Ill., assignor to Wilson Athletic Goods Mfg. Co., Inc., Chicago, Ill., a corporation of Delaware

Application August 30, 1946, Serial No. 693,860
3 Claims. (Cl. 69—21)



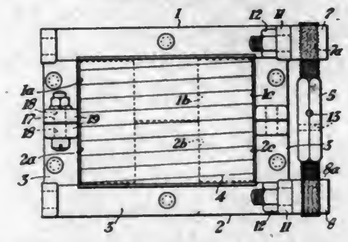
1. The method of producing a grip for handles of golf clubs, rackets and the like which comprises the steps of longitudinally tapering the width of a strip of flexible and relatively soft grip material, spirally wrapping the handle with a smooth layer of said material, and then gouging the external surface of said smooth layer with a pattern of external grooves to provide a treaded gripping surface.

2,446,623

HIGH-FREQUENCY PROGRESSIVE BONDING APPARATUS FOR PLASTIC MATERIALS

Edward Sohier Welch, Jr., Framingham, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey

Application January 31, 1947, Serial No. 725,628
6 Claims. (Cl. 154—42)



1. In high-frequency progressive electric bonding apparatus, the combination comprising a support over which the work may be moved, intermittently operative work-moving means, a lower electrode embodied in said support, a cooperative electrode mounted above said lower electrode, means for reciprocating said cooperative electrode into contact with and away from the work intermittently, and a hammer of greater width than said electrodes and carried by said reciprocating means, said hammer being positioned with respect to the direction of feed to press the work intermittently against said support in an area previously acted upon by said electrodes.

2,446,624

REACTANCE DEVICE

Leslie R. Allison, Forest Hills, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania

Application April 10, 1946, Serial No. 660,961
1 Claim. (Cl. 171—242)

In a reactance device comprising two core members separated by an air gap which can be adjusted to vary the reactance of said device by moving one core member relative to the other, the means for moving said one core member relative to said other core member to effect an accurate and precise adjustment of said air gap comprising a first post member removably secured to one of said core members, a second post member removably secured to the other said core member, and an adjusting member provided with a screw threaded connection with each of said first and second post members in such manner that by turning said adjusting member said core members may be moved relative to each other to vary the air gap between them, said threaded connections being threaded in the same directions with threads having different pitches, whereby the change in air gap which results from each revolution of said adjusting member will be a function of the difference in pitch between the threads on said threaded connections.

2,446,625

SANDPAPER HOLDER

Eric G. Anderson, Davenport, Iowa

Application November 28, 1947, Serial No. 788,621
3 Claims. (Cl. 51—187)

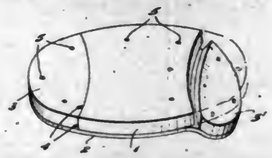
1. A sandpaper holder comprising a head with a flat top and diverging bottom, a handle united to the head, opposed transverse grooves formed in the front and rear of the head, a transverse bore formed in the top of the head, a shaft revolvably mounted in said bore, front and rear yokes having arms with inturned ends pivotally mounted in bores formed in the ends of the shaft and transverse bars seatable in said grooves, and a lever having its inner end rigidly united to the shaft whereby the shaft may be rotated and the transverse bars of the yokes carried into or out of the grooves.

2,446,626

SAFETY VALVE

Benjamin Baxter and Samuel M. Kandarian, Fowler, Calif.

Application June 6, 1944, Serial No. 538,931
6 Claims. (Cl. 277—29)



1. A safety valve comprising a body having a bore therein, opposed valve seats in said bore, a manually controlled valve mounted in the body for opening and closing movement relative to said one valve seat, another valve mounted in the body for opening and closing movement relative to the other seat, said valve being initially closed and said other valve having a restricted flow passage therethrough, and means actuated by said manually controlled valve operative to cause opening of said other valve in one direction after predetermined opening movement of said manually controlled valve in the opposite direction; said manually controlled valve being threaded into the body for rotation, and said means including a push rod threaded into the body for counter-rotation to engage and open said other valve, and an instrumentality connected between said manually controlled valve and the push rod arranged to impart rotation of the latter without restricting opening movement of either valve.

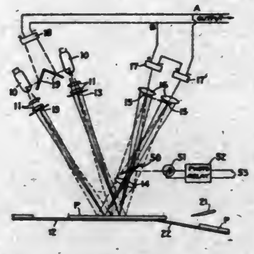
2,446,627

HEELPIECE FOR BOOTS AND SHOES

Edmund Bier, Geneva, Switzerland

Application March 19, 1946, Serial No. 655,388
In Switzerland April 16, 1945
3 Claims. (Cl. 36—35)

1. A shoe heel comprising in combination a main heel body and two equally shaped heel parts easily detachably attached to said main heel body, the first of said equally shaped heel parts being attached to said main heel body at the rear edge thereof and the second of said equally shaped heel parts being attached to said main heel body along another edge thereof and being detached from said main heel body before the same is affixed to a shoe.



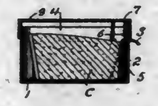
2,446,628

FLATNESS TESTING APPARATUS

Fordyce M. Brown, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

Application March 6, 1947, Serial No. 732,683
12 Claims. (Cl. 250—41.5)

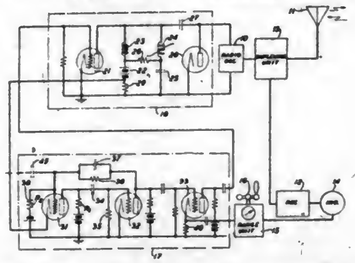
1. An electro-optical system for determining the flatness of a reflecting surface comprising in combination means for supporting and moving the reflecting surface substantially in a given plane; means for projecting two separate and congruent areas of light onto said reflecting surface at an angle to the vertical and in constant spaced relation; a pair of light-sensitive cells connected in series relation; a mask in front of each cell; optical means, including said reflecting surface, for projecting the reflected images of said



light areas onto opposite ones of said cells, whereby each of said masks cut off portions of the images from said cells, said masks being of such shape and so disposed relative to one another that so long as the relative spacing of the projected reflected images is constant corresponding to the cylindrical power of said optical means, when the included reflecting surface is flat, the sum of the outputs of the two cells will remain constant.

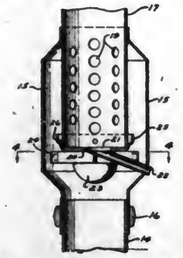
2,446,629

PASTRY LIFTER AND CONTAINER



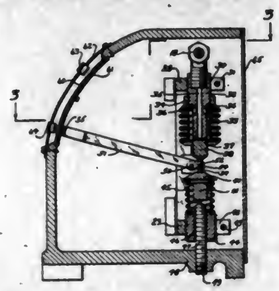
Harry W. Brown and Leo Stanzel, Kansas City, Mo.

Application April 20, 1945, Serial No. 589,366
2 Claims. (Cl. 206—4)



1. A container for a pastry segment comprising, a substantially triangular bottom wall, upwardly extending side walls at the edges of the bottom walls forming an open top box, one of said side walls having an elongated notch in the upper edge thereof, a pastry lifter removably mounted in said container and adapted to support a pastry segment, said lifter having a flat, thin walled base adapted to rest on the bottom wall and substantially conform to the shape thereof, an upstanding wall on the edge of the lifter base adjacent the notched wall, said upstanding wall terminating in an outwardly extending flange forming a finger hold adapted to project through the notch and rest on the notched portion of said wall, a cover removably mounted on the container for closing the open top thereof, and downwardly extending walls on said cover frictionally engaging the upstanding walls, the lower edge of the downwardly extending walls engaging the flange on the lifter for positioning the cover and holding the lifter base against vertical movement.

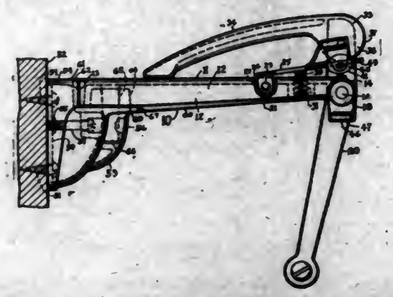
2,446,630
RANGE MEASUREMENT
Newton W. Bryant, Chatham, Elmo E. Crump, East Orange, Merrill R. Dungan, Chatham, and John Strand, Morris Plains, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 2, 1944, Serial No. 533,754
6 Claims. (Cl. 343—13)



6. In a distance measuring system, an ultra-high frequency generator, means for radiating oscillations produced by said generator, means for receiving and observing oscillations produced by the reflection of said radiated oscillations by an object under consideration, a generator of pulses for energizing said ultra-high frequency generator comprising an inductive circuit, a vacuum tube for establishing an intermittent flow of current through said inductive circuit, a storage capacitor connected to be charged by the surge developed upon the interruption of said flow of current, and a saturable core inductor connected to discharge said capacitor to said ultra-high frequency generator, a timing pulse generator, connections for supplying the timing pulse generated thereby to said vacuum tube for controlling its operation, means responsive to the current flow in said inductive circuit for regulating said timing pulse generator, time measuring means for determining the time elapsing between the radiation of said oscillations and the reception of said reflected oscillations, and means responsive to said timing pulse for initiating the operation of said time measuring means.

2,446,631
LIQUID COLLECTING AND DIRECTING MEANS
George E. Burks, Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Application September 1, 1944, Serial No. 552,358
2 Claims. (Cl. 98—60)

1. A trap for preventing entrance of liquid into an engine exhaust comprising the combination with an upright exhaust conduit of an extension pipe aligned over and spaced from the conduit, a sleeve of larger diameter than the conduit and the extension for coupling them together, said extension pipe having its lower end depending into the sleeve and being perforated for the passage of exhaust gases, a closure plate for the lower end of the extension pipe to trap liquid, and a drain conduit communicating between the inner closed end of the extension pipe and the exterior of the sleeve to conduct trapped liquid to the exterior of the exhaust conduit.



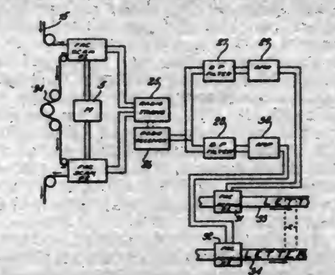
2,446,632
AIR PRESSURE GAUGE
Lysle D. Cahill, Shaker Heights, and Victor T. Uber, Willoughby, Ohio, assignors, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application January 31, 1944, Serial No. 520,434
5 Claims. (Cl. 73—410)

2. An indicator comprising a housing, a hollow frame within said housing comprising a pair of side legs and top and bottom rails, a pressure responsive bellows carried by said top rail, an indicating arm pivotally mounted on one of said side legs, the lower end of said bellows being connected to said indicating arm for moving the latter, an adjustable spring seat carried by said lower rail, a coil spring on said spring seat for opposing expansive movements of said bellows, an opening through said spring seat, means for securing said frame in said housing, and a screw threaded adjustable stop mounted in said housing and extending through the opening in said spring seat to limit the expansive movement of said bellows.

2,446,633
CAN OPENER
James Harvey Chandler, Oak Park, and Myron Jackson Zimmer, Wooddale, Ill., assignors to Ekco Products Company, Chicago, Ill., a corporation of Illinois
Application April 9, 1945, Serial No. 587,364
5 Claims. (Cl. 30—9)

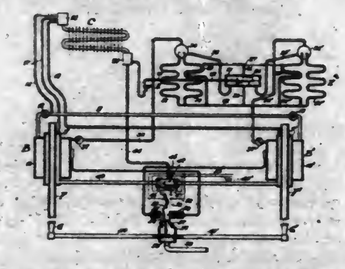
1. In a can opener, the combination with an elongated frame adapted to be attached at one end thereof to a fixed support so as to dispose its opposite end in forwardly projecting relation to the attached end and provided with a bearing at the forward end thereof in transverse relation to the longitudinal axis of said frame, a shaft mounted in said bearing having its ends protruding from the ends of said bearing, a can bead engaging traction wheel fixed to one end of said shaft, means fixed to the opposite end of said shaft for driving the shaft and rotating said traction wheel, a plate positioned above and pivotally secured to the frame for swinging movement about an axis parallel to said bearing, means projecting from the outer swinging end of said plate presenting a pair of opposed legs spaced apart in a direction laterally of the path of movement of said plate in over-hanging relation to said traction wheel, a cutting wheel supported between said legs for rotation about a downwardly inclined axis and movable toward and away from a position in closely overlapping re-

lation to the said traction wheel during swinging movement of said plate, a spring interposed between said plate and frame acting to resist swinging movement of the plate in the direction of a position wherein the cutting wheel overlaps said traction wheel, and means for moving said plate in opposition to said spring including a cam lever mounted on said frame for movement in a path in alignment with the longitudinal axis of the frame.



2,446,634
LOAD SUPPORTING PALLET
Burton C. Colt, Jr., Washington, Pa., assignor to Tri-State Engineering Company, Washington, Pa., a corporation of Maryland
Application November 14, 1947, Serial No. 785,947
5 Claims. (Cl. 248—120)

1. A pallet having a deck and a base, and legs interposed between the deck and the base and welded thereto at their upper and lower ends, the legs each comprising a plurality of upright rod-like elements arranged in group formation and with their mid portions welded together, the upper and lower ends of said elements being extended in various generally horizontal directions and welded to the adjacent surfaces of the deck and the base, respectively.

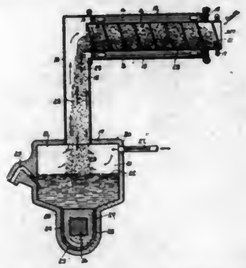


2,446,635
METHOD OF COMPENSATING FOR FADING EFFECTS IN A FACSIMILE SYSTEM
Austin G. Cooley, New York, N. Y., assignor to Times Facsimile Corporation, a corporation of New York
Application October 20, 1945, Serial No. 623,588
5 Claims. (Cl. 178—6)

1. The method of transmitting intelligence by facsimile to overcome the effects of fading periods in the transmission medium which comprises, scanning the same subject matter to produce two series of currents displaced in phase in correlation with the average duration of the fading periods the said series having individual distinguishing characteristics, simultaneously receiving and separating said currents into separate channels under control of said characteristics, and reproducing the subject matter in duplicate under control of the currents in each of said channels,

whereby two similar records are produced of the intelligence but with the effects of the fading apparent in different portions of the recorded intelligence of the two records.

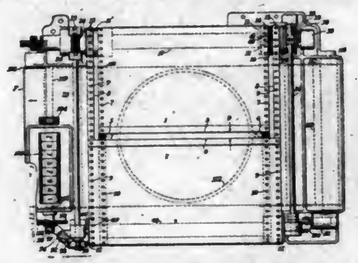
2,446,636
REFRIGERATION
Curtis C. Coons, North Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application October 2, 1943, Serial No. 504,678
14 Claims. (Cl. 62—118)



12. Refrigerating apparatus comprising a pair of absorber-generators, a condenser, means for conducting refrigerant vapor from said absorber-generators to said condenser and for preventing flow from said condenser to said absorber-generators, an evaporator structure, pressure reducing means for translating refrigerant liquid from said condenser to said evaporator structure, means for conducting refrigerant vapor from a first part of said evaporator structure solely to one of said pair of absorber-generators, means for conducting refrigerant vapor from a second part of said evaporator structure separate and distinct from said first part of said evaporator structure solely to the other of said pair of absorber-generators, means for preventing flow of refrigerant vapor from said absorber-generators to said evaporator structure, and means providing for heating and cooling of each of said absorber-generators alternately with respect to each other.

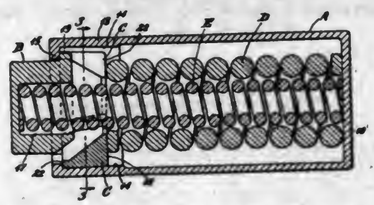
2,446,637
METHOD FOR MELTING BRASS CHIPS
Donald K. Crampton, Marion, and Paul E. Petersen and Maurice L. Wood, Waterbury, Conn., assignors to Chase Brass & Copper Co., Incorporated, Waterbury, Conn., a corporation
Application November 8, 1945, Serial No. 627,426
6 Claims. (Cl. 75—65)

1. The method for melting brass chips and recovering metal contained in the oxidized por-



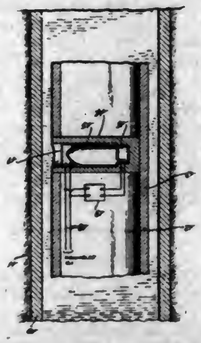
tions thereof, including: maintaining a pool of previously-melted brass chips at a temperature such that the said pool will substantially immediately melt and absorb previously-heated and deoxidized chips as the latter are continuously introduced into the said pool through the surface thereof in the manner hereinafter set forth and at which temperature zinc vapors are emitted from the surface of the said pool; continuously simultaneously advancing and agitating a stream of brass chips through an air-excluding duct together with such iron particles as may be occluded therewith; maintaining an incoming portion of the said stream of chips at a temperature sufficiently low to condense the said zinc vapors thereon while heating a portion of the said stream of chips which is in a position in advance of the cooler incoming portion to a temperature sufficiently above 1000° F. to effectively preheat the chips and to cause the hereinafter-mentioned reducing-gas to effectively deoxidize the said brass chips as well as such iron particles as may be

occluded therewith; continuously passing a reducing-gas through the said stream of chips as the same are agitated and heated as aforesaid to deoxidize the said brass chips and such iron particles as may be occluded therewith; and thereafter introducing the now-heated and now-deoxidized chips through a nonoxidizing atmosphere and into the said pool of previously-melted chips while maintaining the surface of the said pool bright and substantially free of ashes, oxides and other foreign matter to thus enable the said chips to readily make a metal-to-metal contact with the surface of the said pool for being substantially immediately wetted, melted and absorbed in the said pool, the application of heat to the said pool and the introduction of the chips thereinto both being continuous and at coordinated rates to enable the said pool to melt and absorb the heated and deoxidized chips substantially as rapidly as the said chips are fed into the pool.



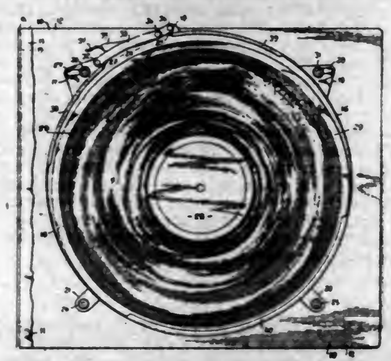
2,446,638
FOCAL-PLANE CURTAIN SHUTTER FOR CAMERAS
Chester W. Crumrine, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application November 8, 1945, Serial No. 627,448
18 Claims. (Cl. 95—57)

1. A curtain shutter for cameras including, in combination, a pair of spaced rotatable supports, one of said supports including two coaxially and adjacently-mounted toothed rollers, and a sleeve shaft carrying said rollers, and a roller coaxially positioned relative to said rollers but spaced therefrom, the other spaced rotatable support including a movable means for carrying curtains, two curtain members each including edge tapes forming with the curtains endless bands looped about the two spaced rotatable supports, each curtain member having the edge tapes of one curtain extending along the curtain portion of the other curtain members with one edge of each curtain in overlapping relationship and the opposite edges of each curtain spaced to form an exposure slot therebetween, and at least one tape attached to each curtain being perforated to engage one



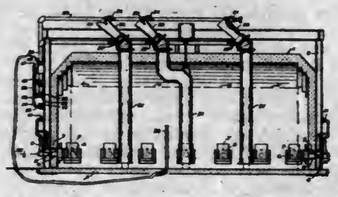
toothed roller, one curtain member being wider than the other curtain member and including a second row of perforations whereby one curtain member may engage both toothed rollers, and means for moving the two coaxially and adjacently-mounted rollers relative to each other both axially and rotatably to vary the slot between the curtains.

2,446,639
FRICTION SHOCK ABSORBING MECHANISM FOR RAILWAY DRAFT RIGGINGS
George E. Dath, Mokena, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application January 18, 1945, Serial No. 573,357
5 Claims. (Cl. 213—24)



1. In a friction shock absorbing mechanism, the combination with a column member having friction surfaces extending lengthwise thereof; of friction shoes having lengthwise sliding engagement with said friction surfaces; a wedge movable lengthwise of said column member, said wedge and shoes having cooperating wedge faces; a preliminary spring reacting between said wedge and column member to yieldingly oppose relative movement of the wedge and column member toward each other lengthwise of the mechanism; a main spring reacting between said column member and shoes to yieldingly oppose relative movement of the shoes and column member toward each other lengthwise of the mechanism; and stop means on said column member engaged by stop shoulders on said wedge to limit outward movement of the wedge with respect to said column member, said shoes shouldering at their outer ends against said stop means to limit outward movement of the shoes with respect to said column member and normally hold said shoes in position with the wedge faces thereof spaced inwardly from the wedge faces of the wedge.

2,446,640
WELL PERFORATOR
Robert F. Davis, Falls Church, Va., assignor to Well Surveys, Incorporated, Tulsa, Okla., a corporation of Delaware
Application July 19, 1946, Serial No. 684,761
4 Claims. (Cl. 164—0.5)

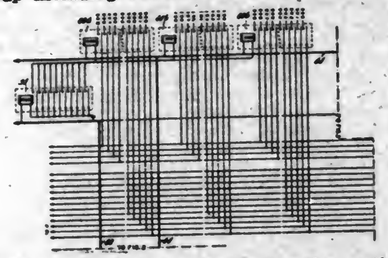


1. A method of perforating the wall of a drill hole that comprises igniting a charge of slow burning powder in a drill hole adjacent the place where the wall is to be perforated and immediately thereafter, before the gas formed by the slow burning powder has had a chance to leave the area, firing a projectile into the wall of the drill hole at the place where the drill hole is to be perforated.

2,446,641
HOLDER FOR DISK-TYPE PHONOGRAPH RECORDS
Wilson Daymon, Hamden, Conn.
Application March 1, 1947, Serial No. 731,840
12 Claims. (Cl. 206—62)

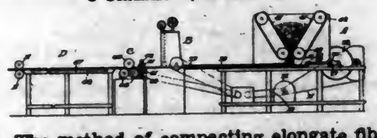
12. A holder for disk-type phonograph records, including in combination: an album having a first cover and a second complemental cover; a laterally-expansible-and-contractible record-holding band of substantially-annular form having its ends spaced from each other to provide a finger-clearance gap and shaped to substantially laterally enclose a plurality of disk records and having its width extending substantially perpendicularly with respect to the said covers when the same are closed; retaining-means carried by the said band and projecting inwardly therefrom in spaced relationship with respect to the said first cover in position to overlie disk records within the said band; connecting-means connecting the said record-holding band to the said first cover against displacement with respect thereto and including a plurality of circumferentially-spaced apertured fingers carried by the said band and projecting laterally therefrom adjacent the said first cover, and a plurality of fastening-members carried by the said first cover and respectively extending through the said fingers, certain of the said fastening-members adjacent the hereinafter-mentioned band-contracting means loosely fitting the apertures in the fingers through which they extend to permit the adjacent portions of the band to move laterally and others of the said fastening-members remote from the said band-contracting means serving to relatively tightly hold the fingers through which they extend; and manually-operable band-contracting means operatively connected to the respective opposite end-portions of the said record-holding band and constructed and arranged to laterally contract the same toward the periphery of a plurality of records within the said band to restrain the said records against displacement with respect to the said first cover.

2,446,642
HEAT-TREATING FURNACE
Harry Dobrin, Pittsburgh, Pa., assignor to Furnace Engineers, Inc., Pittsburgh, Pa.
Application March 27, 1945, Serial No. 585,149
10 Claims. (Cl. 158—1)



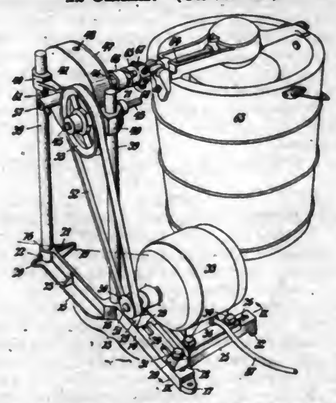
1. In a heat treating furnace, walls defining a heating chamber, a burner therefor directed into the lower portion of the chamber, a conduit for supplying fuel to the burner, said chamber having an open inlet for secondary air for the burner, and also having an outlet for exhaust gases, an air-operated eductor connected to said outlet, a conduit for supplying air to the eductor, means responsive to temperatures in said chamber for controlling the flow of fuel to said burner and air to said eductor to thereby increase said air flow when said fuel flow is increased, and means for directing a stream of air backwardly in the eductor to retard the flow of exhaust gases therethrough when said fuel flow is at a minimum and said air flow to the eductor is substantially stopped.

2,446,643
SELECTIVE CONTROL SYSTEM FOR DISPENSING APPARATUS
Paul M. Farmer, Maplewood, N. J.
Application March 13, 1942, Serial No. 434,550
11 Claims. (Cl. 177—353)



6. In article-handling systems including a multiplicity of dispensing elements and selective circuit-closing means for operating any desired ones of said elements, said circuit-closing means comprising groups of multicontact relays including a "tens" group, duplicate "hundreds" groups and a plurality of "thousands" relays, and operating circuits therefor, the operating circuits for

all of the "hundreds" relays in each "hundreds" group including contacts of one of the "thou-



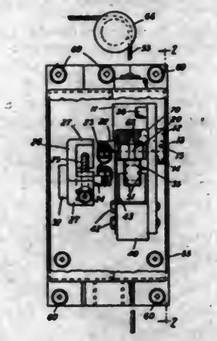
sands" relays which is individual to the particular "hundreds" group.

2,446,644
METHOD AND APPARATUS FOR COMPACTING FIBROUS MATERIAL
Albert C. Fischer, Chicago, Ill.
Application October 6, 1941, Serial No. 413,881
8 Claims. (Cl. 154—1)

4. The method of compacting elongate fibrous material and simultaneously applying said material upon a flexible backing which comprises feeding the flexible backing to a loading station, depositing successive charges of fibrous elongate material thereon without maceration and in a substantially aligned state, compacting the successive charges of fibrous material to obtain a coherent mass of material supported by said flexible backing, and cupping each charge of material and nesting it with respect to the previous charge while maintaining the general alignment of the fibrous material.

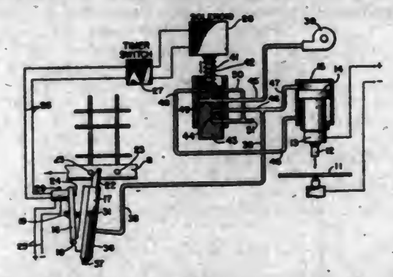
2,446,645
POWER TRANSMISSION UNIT
Henry K. Flinchbaugh, York, Pa.
Application February 15, 1946, Serial No. 647,857
12 Claims. (Cl. 74—16)

1. In a motor operable power-transmission speed-reducing unit having in-put and out-put shafts, a base embodying sections for the respective adjustable support of the speed reducing unit and the motor, said sections running in one direction but offset from each other; spaced members removably attached to one section of the base, said members jointly affording variable support for the speed-reducing unit with its in-put and out-put shafts, both of said shafts having outward projection to each side of said unit and at an equal distance from the center of the unit supporting base; adjustable motor-mountings, flankingly connectable to either side of the other section of the base, for the adjustable seating thereon of the motor; drive means adapted to operatively connect the motor-shaft to either side of the speed-reducer in-put shaft; and adapter-couplings on the projecting ends of the out-put shaft and on one end of the in-put shaft of the speed-reducing unit for inter-connection with the equipment or apparatus to be operated thereby.



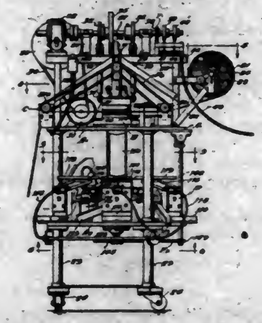
2,446,646
RAISIN STEMMING DEVICE INCLUDING RECIPROCATING LADDERLIKE GRIDS
Thomas W. W. Forrest, Fresno, Calif., assignor to D. R. Hoak, Fresno, Calif.
Application August 13, 1945, Serial No. 610,447
1 Claim. (Cl. 146—55)

In a stemmer for raisins of the type having a plurality of pairs of horizontally disposed and horizontally extending vertically spaced superposed ladder-like members each having a pair of spaced parallel side rails and spaced parallel cross bars extending between said rails at right angles to the latter, means for supporting said members for reciprocation longitudinally thereof, means for simultaneously reciprocating adjacent pairs of said members in opposite directions, and means positioned between the rails of said members extending downwardly across the spaces between the adjacent rails of said members and inwardly toward each other for closing said spaces to ingress of stems and raisins adapted to fall through the spaces between said cross bars and for deflecting such stems and raisins inwardly away from said side walls, said side rails being channel strips with their open sides facing downwardly, and said last mentioned means being strips respectively secured to the uppermost side rail of each pair of superposed rails.



2,446,647
APPARATUS FOR DETECTING IMPERFECTIONS IN FILAMENTARY MATERIALS
Alexander C. Frankwich, Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application March 27, 1946, Serial No. 657,401
8 Claims. (Cl. 28—64)

1. An apparatus for detecting imperfections in filamentary materials, comprising a size-gauge through which a filament may be advanced, pivotally mounted means for supporting the size-gauge while a filament is being advanced therethrough, means for stopping the advancement of the filament, means operable by movement of the supporting means for actuating said filament stopping means, a spring for biasing the supporting means against movement thereof in one direction and arranged to move the supporting means quickly after said supporting means has been moved a predetermined distance against the action of the spring, and means connected to one end of the spring for adjusting the bias applied



by said spring against the supporting means so that the supporting means will not be moved by the passage through the size-gauge of a filament having allowable imperfections therein but will be moved to actuate the filament stopping means when a non-allowable imperfection in the filament engages the size-gauge.

2,446,648
ELECTRICAL RESISTANCE WELDER WITH INDEXING FINGER CONTROL
Russell Millard Glantzer, Washington, Pa.
Application February 21, 1947, Serial No. 729,993
7 Claims. (Cl. 219—4)

1. An indexing and control device for electric welding machines, comprising a member mounted for movement back and forth in a fixed path, a finger on said member and movable relative thereto, means normally urging said member to its retracted position, means normally moving the finger to a projected position for engagement by an element that moves synchronously with a work piece which is to be subjected to welding operation, whereby the said member is moved to its forward position, a control device for a welding electrode, energized through forward movement of the said member, and means operating in timed relation to movement of the work piece, for automatically withdrawing the finger from said element and temporarily holding it withdrawn, until the said member has moved to its retracted position, and for thereupon releasing the finger for movement to its projected position.

2,446,649
AUTOMATIC MACHINE FOR MAKING BEADED CUPS
Whitney J. Gregory, Peoria, Ill.
Application March 26, 1947, Serial No. 737,395
10 Claims. (Cl. 93—47)

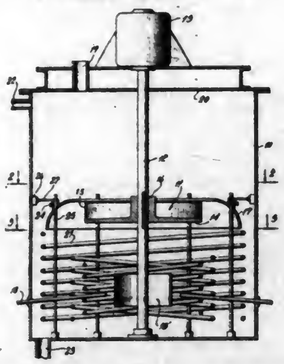
1. An automatic machine for making cup-shaped containers with beaded edges, comprising: a main frame provided at its upper portion with a blanking and forming die; a plurality of beading units arranged in a circle on said frame beneath and around said forming die; conveyor means for directing different cup-shaped containers from the forming die directly to each of said beading units seriatim; and means for driving said blanking and forming die, said conveyor means, and the beading units in timed relation.

2,446,650
ELECTRICAL SCRIBER
James Erwin Hammers, Aberdeen, S. Dak.
Application April 23, 1945, Serial No. 589,802
8 Claims. (Cl. 219—15)

1. An electric scriber of the character described comprising a pair of aligned, spaced apart cores of magnetizable material; a coil tightly wound around both cores and having means for connection at one end to a source of electrical energy; and a work-engaging point in electrical connection with the other end of the coil and movable with one of the cores and a portion of the coil toward and from the other core.

2,446,651
PREPARATION OF ALPHA-AMINO-BETA-HYDROXY ALIPHATIC CARBOXYLIC ACIDS
Walter H. Hartung, Baltimore, Md.
No Drawing. Application December 7, 1944, Serial No. 567,115
7 Claims. (Cl. 260—519)

3. The process for preparing an alpha-amino-beta-hydroxy aliphatic carboxylic acid containing three or four carbon atoms which comprises: reacting a member of the group consisting of the lower alkyl esters of the alpha-halo-beta-hydroxy three- and four-carbon-atom aliphatic carboxylic acids with an amine having the formula $ArCH_2NH_2$, Ar being an aryl radical, hydrolyzing the resulting ester to the corresponding carboxylic acid, and removing the $ArCH_2$ rad-



ical from the amino group of the product by hydrogenation in the presence of a noble metal hydrogenation catalyst.

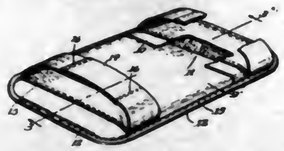
6. A compound having the formula

$$R-CH(OH)-CH(NHCH_2Ar)-COOH$$

wherein R is selected from the group consisting of hydrogen and the methyl radical and Ar is an aryl radical.

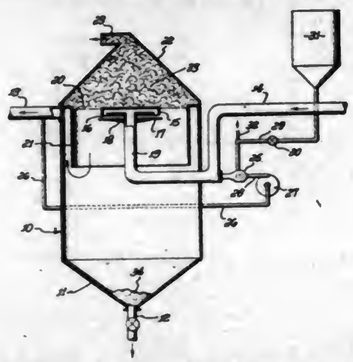
2,446,652
DRYING OIL COMPOSITION AND METHOD OF MAKING SAME
Edward Hazlehurst, West Caldwell, N. J., assignor to Congoleum-Nairn Inc., a corporation of New York
Application April 1, 1943, Serial No. 481,501
6 Claims. (Cl. 260—406)

1. A process which comprises aerating a body of oxidizable oil selected from the group consisting of linseed oil, soya bean oil, fish oil and perilla oil with an excess of oxygen-containing gas distributed in the form of a multiplicity of bubbles in said body of oil while maintaining the mixture of said oil and said oxygen-containing gas at a temperature of the order of 200° F. to 300° F., and promoting rapid uptake of oxygen by said oil during said aeration by subjecting the mixture of said oil with said oxygen-containing gas to mechanical impulsion to break up the oil films at the interface between the oil and the bubbles of said oxygen-containing gas contained therein and to set up a violent circulatory motion of the said mixture, the amount of said oxygen-containing gas maintained in said mixture being at least about 25% of the volume of said mixture, and an amount of said oxygen-containing gas corresponding to at least about 25% by volume of said mixture being passed through the oil about 2 to 7 times per minute, the aeration being continued under said conditions until the oxygen content of the oil is between about 16.2% and about 17.4% and the viscosity of the oil in centipoises at 77° F. is between about 800 and about 4000.



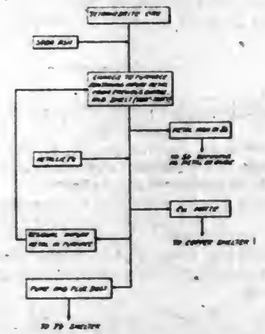
2,446,653
HOLDER FOR ABRASIVES, DETERGENTS, AND POLISHING MATERIALS
Thomas C. Kelly, Hinsdale, Ill.
Application September 30, 1947, Serial No. 776,926
2 Claims. (Cl. 51—186)

1. A holder of the class described, including opposed jaws having lengthwise slots and bearing oppositely directed teeth, a spring bow connecting the jaws and urging them apart, a pin ex-



tending through and slidable in said slots, and two heads on the pin on opposite sides of said jaws.

2,446,654
PROTECTOR PAD
Joseph A. Krcmar, Chicago, Ill.
Application December 17, 1945, Serial No. 635,462
7 Claims. (Cl. 2—24)

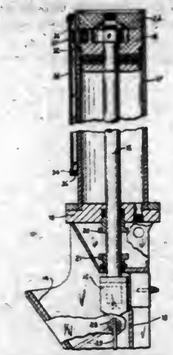


1. A protector comprising a resilient pad and a separate resilient cover therefor, the cover having opposite enclosing sides, one of the sides having transverse overlapping portions forming a joint through which the pad is insertable into the cover, and arm bands one at each side of the joint at that side of the cover to hold the joint closed when the protector is worn.

2,446,655
METHOD AND APPARATUS FOR CLARIFYING ALKALINE WELL WATERS
Levering Lawrason, Palos Verdes Estates, Calif., assignor to Deepwater Chemical Co. Ltd., Compton, Calif., a corporation of California
Application October 6, 1945, Serial No. 620,809
5 Claims. (Cl. 210—53)

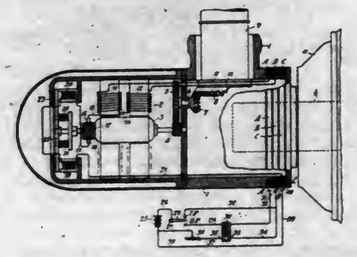
1. A method of treating alkaline brines contaminated with insoluble inorganic solids and soluble and insoluble organic matter comprising the steps of: establishing a relatively quiescent body of brine; continuously supplying fresh contaminated brine to the upper portion of said body and withdrawing clarified brine from substantially the medial portion of said body at a predetermined rate to maintain the surface of the body at a substantially constant level; continuously injecting air and an aqueous solution of ferric chloride simultaneously and at a common point exteriorly of the body into a moving stream of brine being supplied to said body; discharging the mixture including products of reaction in the form of a buoyant air-filled froth immediately beneath the surface of the quiescent body; and collecting the froth above the surface of the liquid body.

2,446,656
PYROMETALLURGICAL TREATMENT OF TETRAHEDRITE ORES
Yurii E. Lebedeff, Metuchen, and Harold H. Monson, Avenel, N. J., assignors to American Smelting and Refining Company, New York, N. Y., a corporation of New Jersey
Application January 18, 1946, Serial No. 642,021
3 Claims. (Cl. 75—21)



1. A pyrometallurgical method for the treatment of tetrahedrite ores which comprises smelting a charge comprising tetrahedrite ore and soda ash, rabbling metallic iron into the melt, tapping matte containing the bulk of the copper, smelting a further quantity of such a charge with the remaining melt, and tapping a metal containing the bulk of the antimony.

3. The process for treating tetrahedrite ores which comprises forming a charge by mixing such ore with soda ash, charging the mixture to a furnace containing impure metal from a previous charge and smelting same therein, tapping metal high in antimony from the furnace, charging metallic iron to the melt remaining in the furnace, tapping copper matte from the furnace leaving a residual impure metal therein, and charging further quantities of tetrahedrite and soda ash thereto.

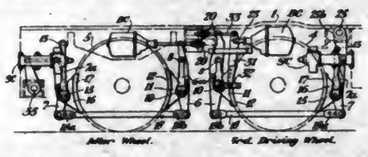


2,446,657
INDICATOR FOR RUBBER MIXERS OR THE LIKE
Douglas W. MacLeod, Ansonia, and Raymond H. Perkins, Milford, Conn., assignors to Farrel-Birmingham Company, Inc., Ansonia, Conn., a corporation of Connecticut
Application September 26, 1947, Serial No. 776,182
7 Claims. (Cl. 18—2)

7. A rubber masticating machine comprising a chamber, a charging stack communicating with the chamber, a weight slidably mounted in said stack, a cylinder supported upon the stack, a piston within the cylinder connected to said weight to move the same, means for introducing fluid pressure into the cylinder to move the piston, a permanent magnet carried by the piston, an indicating means mounted upon the outside of the cylinder, said means comprising a follower of magnetic material adapted to be moved by said magnet, and guide means to maintain said follower against the cylinder wall, said follower comprising an element of hollow semi-cylindrical

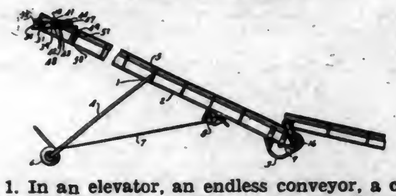
form, and said magnet being of semi-cylindrical form and presenting opposite poles substantially flush with the lateral surface of the piston.

2,446,658
PROPELLER PITCH CHANGING ARRANGEMENT
Meade J. Maynard, West Caldwell, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application December 9, 1943, Serial No. 513,600
6 Claims. (Cl. 170—163)



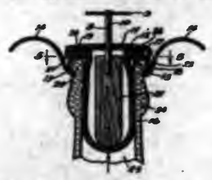
1. In combination, a reversible motor adapted to change the pitch of a propeller blade, field coils adapted to establish magnetic fields of similar flux density and opposite polarity, respectively, with respect to the armature winding of said motor when excited by currents of equal magnitude, electromagnetic means for preventing said motor from over-speeding in decreased pitch operation, said means being operative in response to energizing of said decrease pitch field coil, and means for suspending the operation of said first named means and operating said motor at desired speed in increased pitch direction.

2,446,659
CLASP BRAKE RIGGING
Emil G. Mueller, Churchill Borough, Allegheny County, Pa., assignor to The American Brake Company, Swissvale, Pa., a corporation of Missouri
Application July 6, 1946, Serial No. 681,636
8 Claims. (Cl. 188—56)



1. In a brake mechanism, the combination with a truck frame and a supporting wheel therefor, live and dead truck levers pivotally supported

intermediate their ends at opposite sides of said wheel by means of hangers, straddle rods connecting the lower ends of said levers, an automatic slack adjuster mounted on the truck frame outboard of the wheels, a horizontally disposed crankshaft journaled in the truck frame and provided at one end with a crank arm connected

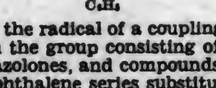


to said slack adjuster and at the other end with a crank arm connected to the upper end of said dead lever, a brake cylinder secured to the truck frame outboard of the wheels, and a horizontal brake cylinder lever operatively connecting said brake cylinder with the upper end of said live lever.

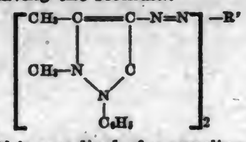
2,446,660
VARIABLE-SPEED DRIVE FOR ELEVATORS
Stanley A. Mulkey and Grant E. Hatcher, Lee's Summit, Mo., assignors to Sam Mulkey Company, Kansas City, Mo., a partnership
Application May 27, 1946, Serial No. 672,662
4 Claims. (Cl. 198—203)

1. In an elevator, an endless conveyor, a conveyor shaft on the elevator, means on the conveyor shaft engaging the conveyor for driving same, said shaft extending outwardly from said elevator, a driving mechanism, a driving shaft in the driving mechanism, said driving shaft having a bore removably sleeved over a portion of the conveyor shaft and having driving connection therewith for supporting the driving mechanism for pivotal movement about the axis of said conveyor shaft, and means pivotally mounted on the driving mechanism and spaced radially of said driving shaft adapted for adjustably connecting the driving mechanism with the elevator for holding said mechanism in adjusted position.

2,446,661
BOTTLE STOPPER
James A. Murdock, Chicago, Ill.; Iris M. Murdock, executrix of said James A. Murdock, deceased, assignor to Iris M. Murdock, individually
Application November 11, 1944, Serial No. 562,931
5 Claims. (Cl. 215—52)



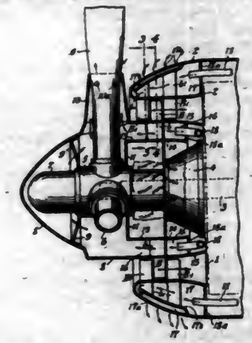
1. A closure for application to a bottle having an external bead about its mouth comprising a pair of spring clasps for engaging diametrically opposed portions of said external bead, an expansible stopper, a plunger mounted for movement toward and away from a position to contract said expansible stopper for inserting the latter within the mouth of said bottle, each of said clasps having an extension terminating in a finger piece conjointly presenting surfaces against which the fingers of a hand may be applied to spread said clasps while the thumb of the same hand is applied against the plunger to cause the latter to move toward a position to contract said expansible stopper.



5. A closure as claimed in claim 1 in which said spring clasps are connected by a bridge portion and means cooperating with said expansible stopper to secure the latter to said spring clasps including a cap provided with a channel in which the bridge portion connecting the spring clasps is retained against movement peripherally of the cap.

2,446,662
CHROMIUM COMPLEXES OF PYRAZOLONE AZO DYES
Abby Ware Nies, Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application September 9, 1944, Serial No. 553,456
7 Claims. (Cl. 260—147)

1. Chromium complexes of azo dyes selected from the group consisting of monoazo dyes having the formula:



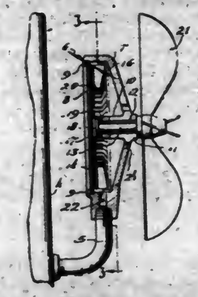
in which R is the radical of a coupling component selected from the group consisting of acetoacetic arylides, pyrazolones, and compounds of the benzene and naphthalene series substituted ortho to the azo linkage by a substituent selected from the group consisting of amino and hydroxy and disazo dyestuffs having the formula:

in which R' is a radical of a coupling component of the benzene and naphthalene series substituted ortho to the azo linkages by substituents selected from the group consisting of amino and hydroxy.

2,446,663
FAN DEICING OR ANTI-ICING MEANS
Everett P. Palmatier, Upper Montclair, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application January 11, 1944, Serial No. 517,875
6 Claims. (Cl. 244—134)

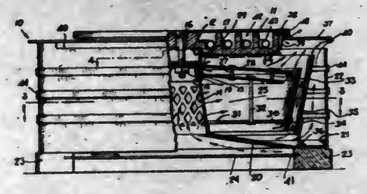
1. In an aircraft a set of annularly arranged stator blades, a set of annularly arranged fan blades coaxial therewith, an annular cowl masking outer portions of the stator blades, an annular cowl masking inner portions of the fan blades, said cowls defining an annular air passage occupied by the inner portions of the stator blades and the outer portions of the fan blades, heating means for the masked portions of the fan blades, and heating means for the masked portions of the stator and fan blades, the heat thus

imparted to said portions traveling conductively to the air-exposed parts of the blades for deicing purposes.



2,446,664
SHOULDER PAD CONSTRUCTION
Helene Pons, New York, N. Y.
Application May 12, 1944, Serial No. 535,251
2 Claims. (Cl. 2—268)

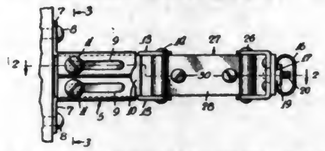
2. The combination with the shoulder structure of a garment having a shoulder seam, of a shoulder pad container of generally triangular shape having side edges and a base edge positioned at the armhole, said container having a front portion and a rear portion defining a pocket for receiving padding material, the front portion having a mouth for insertion of said padding material, the rear portion having meeting edges along substantially the longitudinal center line forming extension members, said extension members being secured along the shoulder seam on the inside of the garment, and the side edges of the container being free of connection to the shoulder region of the garment whereby the container may be freely flexed for insertion and removal of padding material.



2,446,665
HUMIDIFIER
Joseph J. Rozner, Chicago, Ill.
Application January 15, 1944, Serial No. 518,426
4 Claims. (Cl. 261—25)

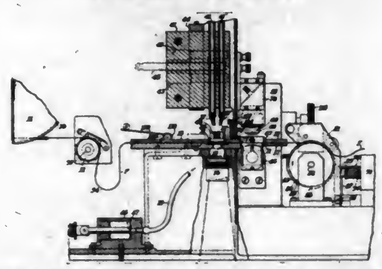
1. In a humidifier adapted to be operated by steam under pressure, the combination of a casing having an opening at one end, an inlet port at the bottom, an exhaust port in the end opposite said opening in a position higher than said inlet port, a closure plate secured in said opening, a shaft journaled in said exhaust port end and adjacent said exhaust port, an impeller secured to said shaft within the casing, said impeller including a disc provided with a multiplicity of circumferentially disposed equi-distantly spaced integral blades, said impeller revolving in a plane parallel with the closure plate, said blades being in position to intercept the steam entering the casing through the inlet port so as to drive said impeller, said blades also serving to atomize the moisture of condensation within the casing,

and a fan mounted on the shaft outside of said casing adjacent said exhaust port and in the path of steam issuing therefrom, said steam entering the ambit of said fan on the low pressure side thereof, said fan being driven by said impeller to disseminate the steam into the atmosphere, said fan by mechanical action atomizing condensate which forms after the steam escapes from the exhaust port.



2,446,666
ELECTRIC COOKING HEATER
Frank W. Thompson, New Haven, Conn., assignor to Ernest Gregory, Hamden, Conn.
Application August 7, 1946, Serial No. 688,854
3 Claims. (Cl. 219—37)

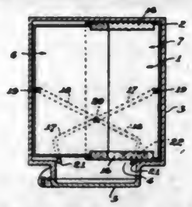
3. An electric cooking heater of the character described comprising a refractory channeled member, heating elements within the channels of said refractory member, a central supporting bracket for said refractory member connected to a source of current supply, a perforated frusto-conical central supporting member attached to said bracket, a bottom member attached to said central supporting member, said bottom member attached to a housing for said heater, a central top plate having a depending flange overlapping and covering said refractory member, a top plate having an upturned flange fitting beneath the depending flange of said central top plate and spaced apart from said flange and top plate to permit air to pass therebetween, openings between said top plate and said housing to vent air from within said heater to escape therethrough, legs to support and raise said heater to permit air to enter said heater, an auxiliary bottom plate supported by said legs to permit air to vent into said heater, a bolt holding said central top plate, said refractory member, said supporting bracket and said central supporting mem-



ber together, an inverted circular member fitted upon the top of said central supporting member, a smaller inverted circular member fitted within the top of said central supporting member wedging said top between said circular members, whereby an upward draft is created keeping the lower part of said heater cool.

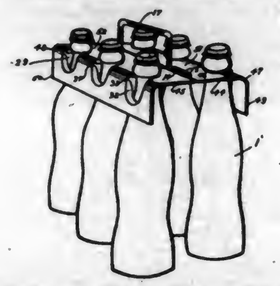
2,446,667
DRAPERY FIXTURE
Walter H. Toelle and Frank R. Ulbrich, Wallingford, Conn., assignors to H. L. Judd Company, Wallingford, Conn., a corporation of Delaware
Application May 3, 1945, Serial No. 591,680
2 Claims. (Cl. 211—105.2)

1. In a device of the character indicated, a wall bracket including horizontally extending spaced ears, a pintle pin positioned vertically and held by said ears, a rod bracket having horizontally extending spaced ears, a pintle extending vertically and held by said last mentioned ears, a link for connecting said pintles, said link comprising plates positioned in vertical planes and at their ends embracing said pintles, and means for securing said plates to each other.



2,446,668
COMBINED CAMERA, PROCESSING APPARATUS, AND PROJECTOR
Clifton M. Tuttle, Charles J. Kuns, and Fordyce M. Brown, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application June 19, 1945, Serial No. 600,250
21 Claims. (Cl. 95—14)

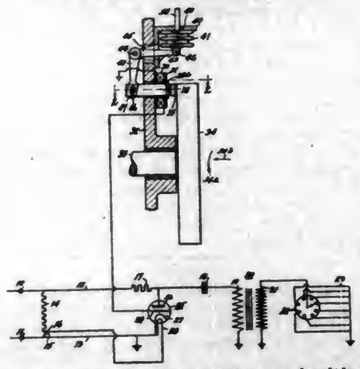
1. In an apparatus of the type described the combination of a light-tight housing; means in said housing for exposing a light-sensitive film strip, and including an objective lens in the wall of said housing, and means for holding a film strip substantially flat in the focal plane of said objective; means in said housing displaced from said exposure means for rapidly processing the area of film exposed by said exposing means, and including a plurality of conduits for directing quantities of said processing solutions to the emulsion surface of the exposed film, means associated with said conduits for heating each of said solutions to a known-elevated temperature just prior to their application to the film to speed up the processing step, means for periodically causing a volume of air to sweep across the emulsion surface of the film while in said processing position to remove a quantity of processing solution applied to the film after it has been in contact therewith for a given time; and means outside of said housing for projecting the developed image on said film onto a suitable image receiving surface, and including a film gate, a light source behind said gate and a projection lens system in front of said gate; means for intermittently feeding an unexposed film from a supply in said housing through each of said exposure, processing, and projecting means in that order; said processing and projecting means so arranged relative to one another that a frame of film immediately after processing is moved into said film gate by a single operation of said film feeding means, whereby while said frame is being projected a subsequently exposed area of film can be processed.



2,446,669
FURNACE ASHPAN
Kalman Satchik, Pittsburgh, Pa.
Application May 24, 1947, Serial No. 750,332
4 Claims. (Cl. 126—243)

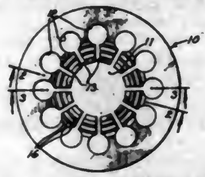
1. An expandable and contractable ash pan for a furnace ash pit, comprising inner and outer tray members each having a bottom, end walls and one side wall, the upper edges of said end walls of the outer member being bent inwardly and downwardly and the end walls of said inner member being telescopically received within said bent portions, and a pair of pivotally connected lever arms each having one end attached to a different one of said tray members and the other end projecting forwardly of said pan, said pan

being contractable for placing it in an ash pit by swinging said arms toward each other and being expandable when in the pit by swinging said arms away from each other.



2,446,670
CARRYING DEVICE
Horace E. Shikles, Jr., and Dyle E. Williams, Kansas City, Mo.
Application July 15, 1944, Serial No. 545,024
4 Claims. (Cl. 294—87)

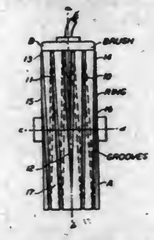
1. A device for carrying a plurality of articles comprising, angle-shaped body portions hingedly connected together substantially midway thereof and provided with a handle and said body portions having apertures therein for engaging the



articles, said body portions having flanges adjacent said apertures and the flanges on the outer portions of said body members contacting said articles to hold the same in rigid position.

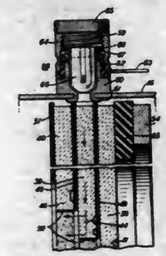
2,446,671
IGNITION SYSTEM
Brooks H. Short and Herman L. Hartzell, Anderson, Ind., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 14, 1946, Serial No. 669,495
1 Claim. (Cl. 123—148)

Ignition apparatus comprising an ignition coil having a secondary winding for connection with a spark gap and having a primary winding, a condenser connected with the primary winding and charged by a current source, means responsive to a certain voltage to provide for the discharge of the condenser at the required instant of ignition and a magneto generator having a pick-up coil providing a voltage for said means, a core surrounded by the coil and having a pole face and a permanent magnet moved by the engine past the pole face and presenting to the pole face a surface of such contour as to provide an air gap of varying width, a portion of the magnet which provides a wider air gap being ahead, in direction of movement of the magnet, of a portion of the magnet which provides a narrow air gap whereby the timing of ignition is advanced or retarded as engine speed increases or decreases and means for moving the core toward the magnet as engine intake suction increases.



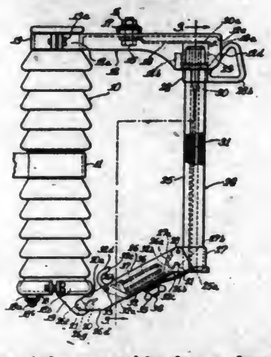
2,446,672
METHOD OF MACHINING ARTICLE BLANKS
Emil Sirp, Downers Grove, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application July 26, 1944, Serial No. 546,714
1 Claim. (Cl. 29—25.17)

A method of machining copper anode insert blanks for magnetron type vacuum tubes without the formation of burrs, in which the blank has preformed interior spaces and narrow cross-sections which comprises casting into and filling said spaces with a zinc base die casting alloy harder than the copper blank to intimately contact the metals and support said cross-sections to be machined, machining the blank in paths intersecting said filled spaces and cross-sections, and then dissolving said filling metal by acid.



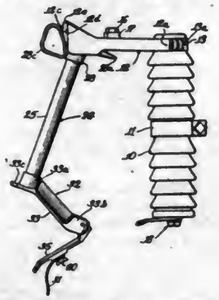
2,446,673
GROOVED SLIP RING
Desmond Sprague, West Caldwell, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application November 16, 1944, Serial No. 563,640
2 Claims. (Cl. 173—324)

2. As an article of manufacture, a slip ring for a current collecting device having a brush engaging peripheral surface, said surface having a pair of helical grooves of opposite hand disposed side-by-side in the surface, having their outer ends open at the opposite edges of the ring and their inner ends intercommunicating with each other substantially in the medial plane of the ring, said ring being adapted for rotation in a



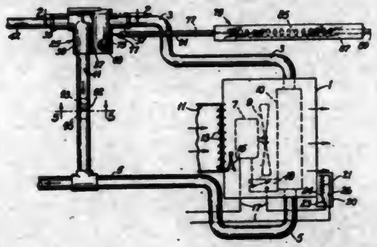
direction to lead matter in said grooves from the center of the ring surfaces toward its edges.

2,446,674
CATHODE-RAY DEVICE MOUNTING
Philip T. Sproul, Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 18, 1944, Serial No. 522,907
13 Claims. (Cl. 250—164)



1. In combination, a cathode-ray tube having a fluorescent screen on one end thereof activated by a beam of electrons, a metallic casing extending along a portion of the length of said tube, means for supporting said tube in said casing, a multiscale scope supported on said casing in front of the screen including a solid transparent plate and a plurality of similar plates having central cut-out portions superimposed over said solid plate, said similar plates having indicia along the lateral boundaries of said cut-out portions, and a plurality of lamps around the periphery of said casing to selectively illuminate said plates through the edges thereof.

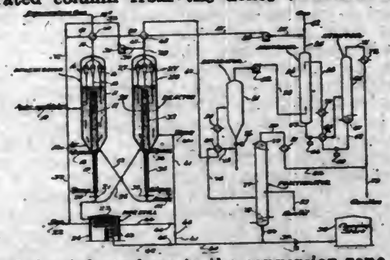
2,446,675
FUSED CUTOUT
Edward H. Yonkers, Chicago, Ill., assignor to Joslyn Mfg. and Supply Co., Chicago, Ill., a corporation of Illinois
Application December 30, 1944, Serial No. 570,526
16 Claims. (Cl. 200—114)



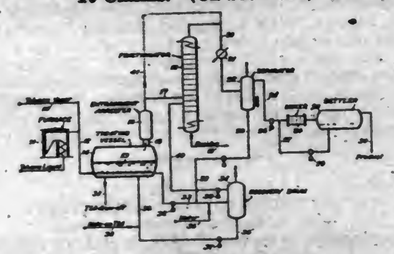
1. A fuse tube assembly for a fused cutout, comprising a fuse tube provided with an open end, a supporting arm pivotally mounted upon said tube adjacent said open end, a fuse extracting arm pivotally mounted upon said supporting arm at a point removed from the open end of said tube and provided with a part for interlocking said tube and supporting arm against relative rotation, means for connecting a fuse link conductor projecting from the open end of said tube to said extracting arm, thereby to hold said extracting arm in a position where said supporting arm and tube are interlocked, and spring means biasing said extracting arm for movement away from the open end of said tube, thereby to extract the connected conductor upon fuse rupture and to release said tube and supporting arm for relative rotation.

2,446,676
FUSED CUTOUT
Edward H. Yonkers, Chicago, Ill., assignor to Joslyn Manufacturing and Supply Company, Chicago, Ill., a corporation of Illinois
Application December 30, 1944, Serial No. 570,527
8 Claims. (Cl. 200—114)

1. In a fused cutout which comprises insulating supporting means provided with a terminal member and a fuse tube provided with a terminal at one end pivotally engageable with said terminal member to support said tube for swinging movement of the other end thereof; a second terminal member carried by said supporting means, a second terminal mounted upon said other end of said tube and comprising a spring biased pivotally supported fuse extracting member, said second terminal member and said extracting member respectively including complementary parts engageable in response to swinging movement of said tube toward at least a part of said supporting means to latch said second terminal and second terminal member in engagement, at least one of said parts being resiliently deformable to permit latching engagement between said parts, and a fuse disposed within said tube to be tensioned by said extracting member, to normally hold said extracting member in a position such that said complementary parts are engaged and to have a part thereof extracted from said tube by said extracting member upon rupture thereof, said extracting member including a part adjacent the pivoted end thereof for reacting against the complementary part of said terminal member to disengage said complementary parts in response to the movement of said extracting member which results from rupture of said fuse, thereby to permit swinging motion of said tube away from said supporting means.



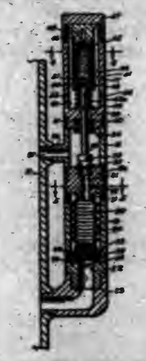
2,446,677
HEATING CONTROL SYSTEM
Victor G. Vaughan and John O. Moorhead, Attleboro, Mass., assignors to Metals and Controls Corporation, Attleboro, Mass., a corporation of Massachusetts
Application April 25, 1945, Serial No. 590,200
9 Claims. (Cl. 237—8)



5. A heating control system comprising a unit heater for heating a space, said heater including a heat exchanger, a conduit for supplying heated fluid to said exchanger from a variable-flow source thereof, a conduit for returning fluid from said exchanger to said source, valve means in said supply conduit for controlling flow of fluid to said exchanger, and by-pass means connecting said supply and return conduits and connected into said supply conduit at a point between said source and said valve means, whereby flow through said by-pass means is determined by the pressure in said supply conduit between said source and valve means, said valve means comprising a plurality of valves exposed to pressure of fluid in opposite directions so as to be substantially balanced hydraulically.

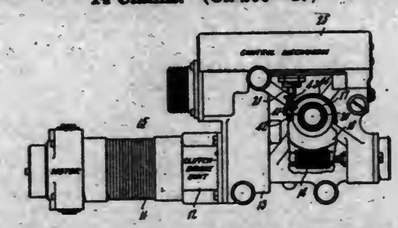
2,446,678
POWDERED CATALYST CONVERSION SYSTEM
Vanderveer Voorhees, Homewood, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application August 30, 1941, Serial No. 409,081
4 Claims. (Cl. 196—52)

1. The method of operating a powdered catalyst conversion system which comprises superheating a carrier gas, suspending regenerated catalyst in said superheated carrier gas, introducing said suspended catalyst by means of said carrier gas into a conversion zone, maintaining a vertical gas velocity in said conversion zone sufficiently low to keep catalyst in dense turbulent suspended condition therein, introducing a charging stock stream at a low point directly into the dense turbulent suspended catalyst in said zone, removing catalyst particles from gases leaving the upper part of said zone and returning said particles to said dense turbulent suspended catalyst phase, directly withdrawing catalyst as an aerated column from the dense turbulent suspended catalyst phase in the conversion zone, introducing catalyst from the base of said column into a regeneration zone, introducing a regeneration gas at a low point in said regeneration zone and passing said gas upwardly in said zone at a vertical velocity for maintaining dense phase turbulent catalyst suspension therein, separating catalyst particles from regeneration gases leaving the upper part of said regeneration zone and returning said separated particles to said dense phase and downwardly withdrawing catalyst directly from the dense turbulent suspended phase in the regeneration zone as an aerated column for said suspension in said superheated gas.



2,446,679
REFINING TOLUENE WITH TOLUENE SULFONIC ACID
Francis T. Wadsworth, Texas City, Robert J. Lee, La Marque, and Preston L. Brandt, Galveston, Tex., assignors to Pan American Refining Corporation, New York, N. Y., a corporation of Delaware
Application May 11, 1945, Serial No. 593,146
10 Claims. (Cl. 260—674)

1. The process of refining synthetic toluene boiling in the range of about 90 to 120° C. obtained by catalytically hydroforming petroleum naptha followed by concentration with a selective solvent of the toluene contained in the hydroformer distillate which comprises contacting the vapors of said synthetic toluene with a toluene solution of toluene sulfonic acid at a temperature in the range of about 100 to 150° C. and a concentration range of about 5 to 50 per cent by weight of toluene sulfonic acid, based on the weight of said toluene solution.



2,446,680
WELL FLOW DEVICE
Robert O. Walton, Dallas, Tex., assignor to Merla Tool Corporation, Dallas, Tex., a corporation of Texas
Application October 21, 1944, Serial No. 559,709
16 Claims. (Cl. 103—232)

1. A flow device including, a well tubing, a housing adapted to be connected in said tubing having

a flow passage for establishing communication between the exterior and interior of the well tubing, a main valve element for controlling the flow through said passage, movable means connected to the main valve and having opposite sides thereof exposed to the pressure exteriorly of the tubing whereby the pressures across said means are equalized, resilient means for normally holding said means in a position maintaining the main valve closed, and pilot valve means arranged to be actuated when the pressure exteriorly of the tubing reaches a predetermined point for releasing the pressure acting on one side of the movable means, whereby said movable means may be actuated to open the main valve and admit flow into the tubing.

2,446,681
ADJUSTABLE SWITCH OPERATOR
John M. Wehner, Culver City, Calif., assignor, by mesne assignments, to Lear, Incorporated, Grand Rapids, Mich., a corporation of Illinois
Application January 5, 1945, Serial No. 571,508
14 Claims. (Cl. 200—47)

1. Mechanism for adjustably presetting the limits of rotation of an electric motor driven splined shaft by opening limit switches controlling the energization of the motor comprising, in combination, sleeve means having inwardly extending splines adapted to interfit with the shaft splines for angularly adjustable mounting of said sleeve means on the shaft; a switch operator adjustably mounted on said sleeve means and including a member adapted to actuate the operating element of a limit switch at one limit of operation of the shaft; an abutment carried by said

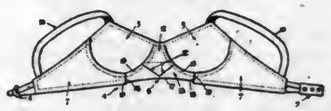
sleeve means; and resilient means normally urging said operator into engagement with said abutment, said resilient means providing for movement of said operator away from said abutment when said member engages such element to prevent damage to the limit switch in the event of overrunning of the rotatable shaft.

2,446,682

MODIFYING CELLULOSE TEXTILES WITH AN ALKYLOLAMINE-COPPER COMPLEX

Thomas C. Whitner, Elizabeth, N. J., assignor to Chemical Laboratories, Inc., a corporation of New Jersey

No Drawing. Application May 10, 1944, Serial No. 534,989
10 Claims. (Cl. 8—54.2)



9. The process which comprises treating undyed cellulose fibers with an aqueous solution of an alkylolamine-copper complex as the essential treating agent, the alkylolamine being substantially the only alkaline substance present, removing substantially all adsorbed alkylolamine-copper complex from said cellulose fibers by treatment with an aqueous solution of an agent forming a water-soluble copper compound, and dyeing the treated fibers.

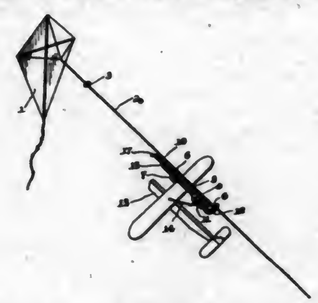
2,446,683

BRASSIÈRE

Pierre Amyot, Quebec, Quebec, Canada

Application August 22, 1944, Serial No. 550,581
1 Claim. (Cl. 2—42)

A brassière comprising breast-pocket sections, side sections joined to the outer side and outer lower edge portions of said breast-pocket sections and a central section joining the inner side and inner lower edge portions of said breast-pocket sections, said central section comprising upper and lower parts sewn together in overlapping relation, the upper part of said central section comprising a single ply panel formed with concavely curved side edges joined to convexly curved upper inner side edges of the breast-pocket sections, said upper part of said central section being formed with a lower end overlapping the central portion of the lower part of said central section, said overlapping end being sewn along its lower marginal edge to the central portion of the lower part of said central section, said lower part of said central section comprising a woven fabric folded to provide a two-ply insert having the fold line at the upper edge thereof, said edge presenting a straight central portion and concavely curved portions lying at opposite sides of said central portion and sewn to the inner lower edge portions of said breast-pocket sections, said insert also presenting straight end edges sewn to corresponding end edges of portions of the side sections which extend beneath and underlie the breast-pocket sections and a full-length concavely curved lower edge portion, said insert consisting entirely of inelastic yarns woven so that, by virtue of its shape and weave, the insert is relatively non-stretchable in the vertical direction of the insert and is capable of considerable elastic stretch in the circumferential of the insert.



2,446,684

TOY-CARRYING AND RELEASING DEVICE FOR KITES

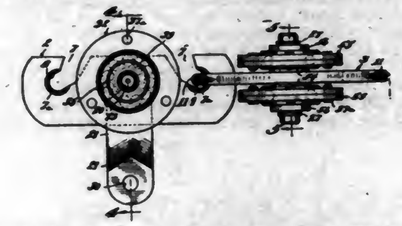
Paul C. Armbrust, Columbus, Ohio

Application April 4, 1947, Serial No. 739,445
2 Claims. (Cl. 244—155)

1. In combination with a toy kite and a ground string therefor, a toy-carrying and releasing device comprising an elongated body provided at its upper surface with longitudinally disposed hook devices adapted for detachable sliding engagement with a kite string to support said body longitudinally thereon, forward and rear guide brackets carried in longitudinal alignment with said body and depending therefrom, said rear bracket being formed with a downwardly open slot, a keeper slidably mounted within said brackets for limited longitudinal movement with respect to said body, said keeper being formed at its rearward end with a downwardly offset bail cooperative with said rear bracket for opening or closing the slot formed therein upon relative longitudinal movement of said keeper with respect to said body and for releasably supporting a droppable toy, said keeper being formed at its

forward portion with a shoulder adapted for holding engagement with the foremost end of said body, said shoulder when so engaged serving to prevent longitudinal movement of the keeper with respect to the body, said keeper being formed at its extreme outer end with a beveled striking surface, and a stop adapted for stationary positioning upon said ground string substantially at its kite-receiving end, said stop being formed with a beveled surface cooperative with the striking surface of said keeper, said stop serving upon striking engagement with the forward end of said keeper to disengage said shoulder from said body and to impart longitudinal sliding movement to said keeper thereby effecting the release of a toy carried by said bail.

2,446,685



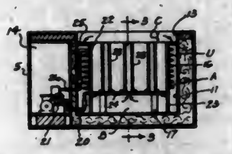
CONVEYER CHAIN STRUCTURE

Seth S. Barker, Ottumwa, Iowa

Application February 6, 1946, Serial No. 645,724
7 Claims. (Cl. 198—177)

4. In a chain structure, alternate links, each comprising a flat plate-like member, adapted to normally travel in a vertical plane, having in its upper edge near its ends, notches with portions near their bottoms undercut toward the respective ends of the link, and connecting links, each comprising a flat plate-like member, adapted to normally travel in a horizontal plane and having near each end a hole tapered toward its adjacent end, and interfitting with notches of alternate links, hanger arms on opposite sides of each alternate link, projecting downwardly therefrom

and having their lower ends connected together, a shaft extending through the arms and the central part of each alternate link, and wheels on the



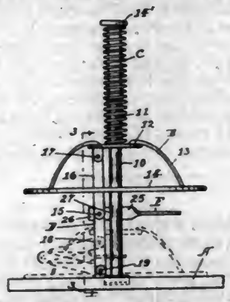
ends of the shaft, a shaft extending vertically through each connecting link, and wheels on the ends of said last shaft.

2,446,686

REFRIGERATOR CABINET AND MEANS FOR MAINTAINING A LAYER OF COLD AIR THEREIN

Louis H. Behrens, Denver, Colo.

Application February 26, 1945, Serial No. 579,717
16 Claims. (Cl. 62—89)



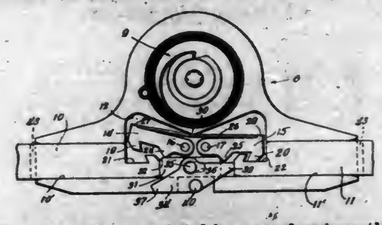
1. A refrigerating cabinet including, a casing having a refrgerating compartment therein, a product-receiving receptacle having its upper end open mounted within the compartment and of a smaller size than said compartment whereby a space is provided around the side walls and bottom of said receptacle for air circulation, the upper portion of the receptacle being spaced below the top of the cabinet to form an air space immediately above the receptacle and within the casing, means for establishing communication through the receptacle between the area below the receptacle and the space thereabove, and a cooling coil unit mounted within the compartment between the inner walls of said compartment and the receptacle.

2,446,687

TRAP

Edward E. Billings, Los Angeles, Calif.

Application May 8, 1946, Serial No. 668,042
1 Claim. (Cl. 42—79)



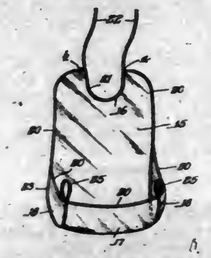
A trap comprising a base, an upwardly extending shaft on said base, a plunger reciprocable on said shaft, an actuating spring on said shaft normally urging said plunger downwardly upon said base, a catch movably connected by its end portions to said plunger and base and having a joint between its ends permitting it to fold from the extended position and adapted when extended to support said plunger elevated above said base in set position, and a trigger hinged to said joint and having an outwardly extending trip arm and a stop co-operating with the side of said shaft to break said joint and release the catch by the movement of said trip arm.

2,446,688

SHUTTLE LATCHING MECHANISM

Raymond H. Book, Sterling, and Lee E. Gilbert, Dixon, Ill., assignors to Reynolds Wire Co., Dixon, Ill., a corporation of Illinois

Application January 25, 1946, Serial No. 643,216
10 Claims. (Cl. 139—141)



1. A shuttle and latching mechanism therefor for use in a loom of the type having a pair of reciprocating carrying arms adapted alternately to carry a shuttle, said shuttle latching mechanism comprising, in combination, connecting means for alternately connecting the shuttle to said carrying arms, a slidable member for disconnecting said connecting means from said carrying arms, said slidable member being operable by the thrust of said carrying arms, and a rockable member mounted on and carried by said slidable member for receiving the thrust from said carrying arms and transmitting the same to said slidable member.

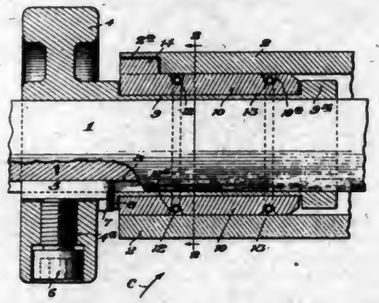
2,446,689

BIB

Horace B. Brose and Lauetta D. Brose, Chicago, Ill.

Application August 6, 1947, Serial No. 766,642
2 Claims. (Cl. 2—49)

2. A child's bib of flexible sheet material having at the top a recess to provide a neck opening and at the bottom an upwardly and forwardly extending relatively low front panel spaced from the main panel of the bib by an intervening crosswise pocket, closures at the pocket ends in connection with both the main panel and front panel adapted to limit the distance of separation therebetween, a pair of free ties extending away from opposite sides of the neck opening for attachment



at the back of the neck of the child wearing the bib, an edge reenforcement extending down along the main panel and across one end closure for the pocket and thence across the top of the front panel and back again across the other end closure and up along the opposite side of the main panel, and a pair of loops each having one end joined to the edge reenforcement at a point proximate to the juncture of the front panel with one end closure for the pocket, the loops being adapted for attachment to a fixed support to sustain the front panel in an up position.

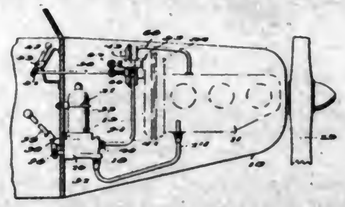
2,446,690

SELF-LOCKING PAPER ROLL CHUCK

Albert James Carpenter, Jr., Battle Creek, Mich., assignor, by mesne assignments, to Goss Printing Press Company, Chicago, Ill., a corporation of Illinois

Application March 15, 1944, Serial No. 526,613
12 Claims. (Cl. 242—68)

2. In combination, a shaft having a keyway, a paper roll core on said shaft, a self-locking chuck comprising a member on said shaft adjacent an end of said core and having a bore eceiving said shaft, a key within said bore engaging said keyway, means for locking the member in adjusted position on said shaft, said member having a hub extension entering the end of the core, said extension being polygonal in external shape, segmental plates seated on the respective polygonal faces of the hub extension and having aligned transverse grooves in their outer faces, the outer surfaces of the segmental plates when assembled forming a substantially cylindrical surface contacting the inner wall of the core, and an endless coil spring in said aligned grooves around the segmental plates yieldably maintaining the plates in position on the faces of the hub extension, whereby as the roll is unwound from the core any drag on the shaft will shift the segmental plates laterally on their related faces of the hub and into forced contact with the inner wall of the core.



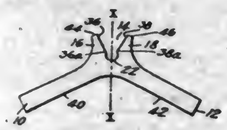
2,446,691

ENGINE STARTING APPARATUS

George Clyde and Karl F. Dailey, Columbus, Ohio

Application April 6, 1944, Serial No. 529,834
4 Claims. (Cl. 123—179)

1. In a fluid-actuated starting system for internal combustion engines, a servo-motor embodying a casing having an internal impeller chamber and fluid inlet and outlet ports in communication with said chamber, rotary impellers mounted in said chamber, a slidable spool-type valve mounted in a valve chamber intersecting said inlet port, said valve being normally positioned so that the body thereof arrests fluid flow through said port into said impeller chamber, said valve being formed with an external annular groove normally spaced from said inlet port, a spline shaft driven by one of said impellers, a gear slidably mounted on said shaft for movement into and out of engagement with a toothed turning member of an associated engine, a slidably mounted manually actuated shaft, means carried by said shaft and connected with said slidable gear for governing the operating posi-



tions of the latter with respect to the turning member of the engine, and means carried by said shaft and connected with said inlet valve for actuating the latter simultaneously with said gear, the position of the inlet valve in its chamber being such that said gear will occupy a position of meshing engagement with the teeth of the engine turning member before the annular groove in said valve is registered with said inlet port to admit the operating fluid into the impeller chamber of said motor.

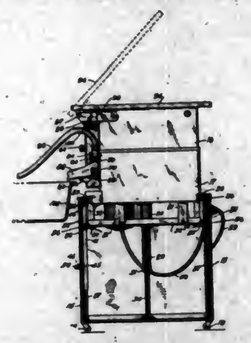
2,446,692

STRUCTURAL MEMBER

Tappan Collins, Dormont, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey

Original application April 7, 1942, Serial No. 438,043. Divided and this application July 26, 1944, Serial No. 546,637
2 Claims. (Cl. 29—190)

1. A rolled metal article of such shape in cross-section as to comprise two equal and oppositely inclined flanges symmetrically disposed on opposite sides of a median center line between them, respective thickened fillet bodies of equal cross-sectional area spaced symmetrically about said median line and located in the region thereof, said fillet bodies being of such cross-sectional contour as to define the boundaries of a notch with outwardly flaring faces connected by an arcuate central groove which is bisected by said median line, the whole element being thus shaped to facilitate economical production on a rolling mill.



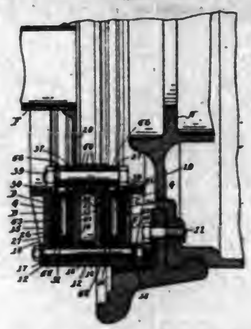
2,446,693

DISHWASHING MACHINE

Harold G. Davis, Denver, Colo.

Application January 5, 1942, Serial No. 425,679
6 Claims. (Cl. 134—117)

1. A dishwashing machine comprising: a dishwashing tub for receiving the dishes; an impeller in said tub for throwing water on said dishes; a motor operating said impeller; a supporting structure in which said tub is vertically movable; and means for employing the power of said motor



when desired for raising said tub sufficiently in said supporting structure to allow it to drain by gravity into a sink of standard height.

2,446,694

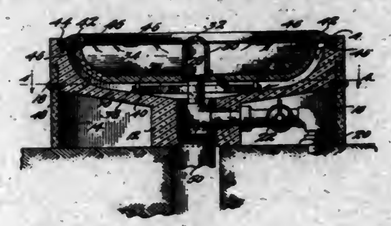
PRESSURE ACTUATOR FOR BRAKES

James T. Dickson, Los Angeles, Calif.

Application September 4, 1944, Serial No. 552,707
4 Claims. (Cl. 137—157)

1. A fluid motor for actuating a brake, comprising, two cooperative elements, one a rigid disc having a broad shallow annular groove in its face bounded by a pair of inner and outer marginal mortise channels, and the other a resilient substantially flat annulus corresponding substantially in cross section with and normally seated in and generally spaced from the bottom of said groove, said annulus also having its inner and outer concentric marginal edges seated in said mortise channels and having reverting flaps forming self sealing joints between said elements, and a fluid induction duct connected between said discs.

2,446,695



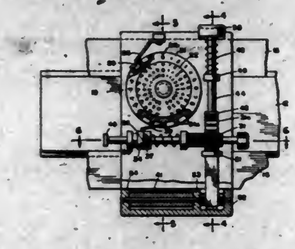
AUTOMATIC POULTRY FOUNTAIN

Adna Stanley Didget, Cape May Court House, N. J.

Application April 5, 1946, Serial No. 659,898
7 Claims. (Cl. 119—74)

1. A drinking fountain comprising, a shallow plastic bowl, a central water inlet to said bowl,

a nozzle on said inlet and terminating above the rim of said bowl, peripherally spaced overflow grooves in said rim, a supporting casing for said



bowl, and an annular plastic sealing ring secured to said supporting casing and overlying the said rim.

2,446,696

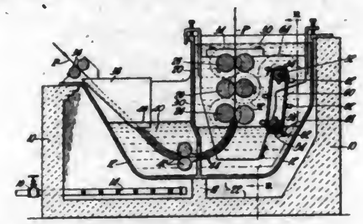
DECIMAL POINT LOCATOR FOR SLIDE RULES

Arthur Frederick Eckel, Chicago, Ill., assignor to Myrtle Scott Eckel, Chicago, Ill., and Louise Wickersham Pickett, La Grange, Ill.

Application August 29, 1946, Serial No. 693,612
10 Claims. (Cl. 235—64.3)

1. A decimal point locator for a slide rule comprising a pair of dials rotatably mounted on the cursor of the slide rule, said dials having indicia representing units of circumferential movement, an element slidable on the cursor, a pawl carried thereby for effecting rotation of either of said dials in one direction, said pawl normally coacting with one of said dials, said element being engageable by the slide of the rule as the left index thereof registers with the hair line of the cursor for actuating said pawl, a lock carried by said cursor for locking the cursor relative to the stator of the slide rule, means to unlock said cursor when it is desired to move the cursor relative to the stator, and means operable by said last means for shifting said actuating pawl from normal position to another position coacting with the other of said dials.

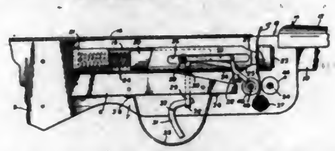
2,446,697



APPARATUS FOR COATING METAL SHEETS

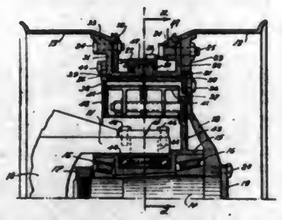
Frank E. Fairley, Canton, Ohio, and Louis T. Lindquist, Bessemer, and Clyde D. Michaels and Howard C. Rodgers, Birmingham, Ala., assignors to Tennessee Coal, Iron and Railroad Company, a corporation of Alabama

Original application February 2, 1943, Serial No. 474,460. Divided and this application May 2, 1945, Serial No. 591,508
4 Claims. (Cl. 91—12.1)



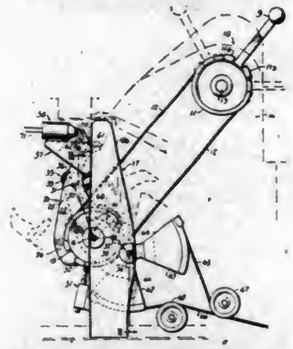
1. Metal-coating apparatus comprising a vessel adapted to contain a bath of molten coating metal covered by a body of oil, a bucket conveyor

mounted within said vessel and having one portion extending below the normal level of the metal bath and another portion extending into the body of oil, said conveyor being adapted to



discharge small quantities of molten metal successively into the oil so as to effect an exchange of heat from the molten metal to different regions of the oil.

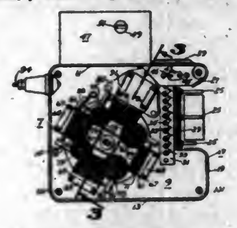
2,446,698
TOY CAP GUN
Mack M. Fujiwara, Chicago, Ill., assignor of forty per cent to Hatsue Fujiwara, Chicago, Ill.
Application December 18, 1946, Serial No. 716,975
5 Claims. (Cl. 42—57)



1. In a toy cap gun, a spring projected sliding hammer having a lateral handle for retracting the same to cocked position, a guide cylinder for said hammer, an anvil mounted in one end of the guide cylinder, said guide cylinder being slotted for the upward passage of a cap strip therethrough directly behind the anvil, a vertically sliding sear engageable with the hammer handle to releasably retain the hammer in cocked position, a spring for elevating the sear into the path of the hammer handle, and a trigger for lowering the sear and permitting projection of the hammer for firing a cap positioned at the back of the anvil.

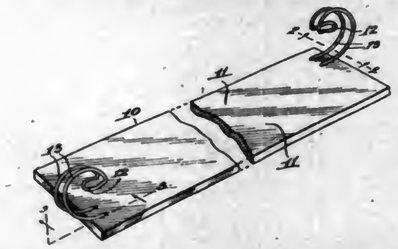
2,446,699
DUAL WHEEL CONSTRUCTION
Vactor G. Garnett and Edward V. Garnett, Denver, Colo.
Application January 1, 1945, Serial No. 570,852
6 Claims. (Cl. 188—18)

1. A dual wheel construction for vehicles comprising; an axle bearing; a first wheel journalled on said axle bearing and having an inner face and an outer face; an annular bearing extending from the inner face of said first wheel; a second wheel rotatably mounted on said annular bearing; a first brake drum on the inner face of said first wheel; a second brake drum on said second wheel adjacent to and in alignment with the first brake drum; said brake drums being positioned within the periphery of said annular bearing and on each side thereof, and braking means for said drums.



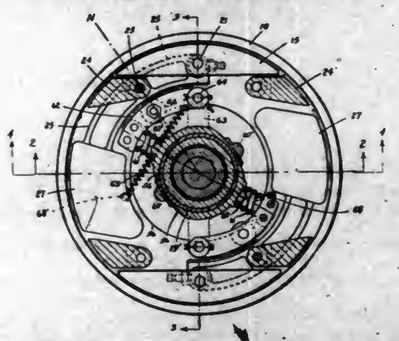
2,446,700
THROTTLE CONTROL DEVICE OPERABLE TO CONTROL REVERSIBLE PITCH PROPELLERS
William M. Giles, San Diego, Calif., and Clement M. Kucera, Houston, Tex., assignors to Consolidated Vultee Aircraft Corporation, San Diego, Calif., a corporation of Delaware
Application January 4, 1947, Serial No. 720,258
17 Claims. (Cl. 244—102)

13. In an airplane, landing gear, mechanism for controlling the power of an engine and for effecting the operation of propeller reversing mechanism comprising a throttle lever, means actuable by said throttle lever upon movement of said throttle lever on each side of its neutral position to effect throttle opening and closing, means for operating propeller reversing mechanism, said means being associated with said actuable means and being operable thereby on movement of said throttle lever on a predetermined side of its neutral position, and means under the control of said landing gear for controlling the operation of said actuable means whereby said means for operating propeller reversing mechanism may be operated by said actuable means only when said landing gear is in contact with the ground.



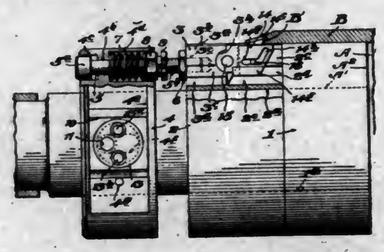
2,446,701
RADIO APPARATUS OF REPLACEABLE STANDARDIZED UNITS
George B. Greene, Los Angeles, Calif., assignor to Leo M. Harvey, La Canada, Calif.
Application April 27, 1943, Serial No. 484,789
7 Claims. (Cl. 250—16)

1. Radio apparatus comprising a plurality of replaceable individual cell units, each including a container having a side wall and an end wall provided wtih a gap therein, a terminal strip on said side wall having a plurality of contacts exposed in openings through said side wall, a terminal panel bridging the gap in said end wall and carrying a plurality of pairs of aligned split-end terminal posts extending outwardly therefrom, and circuit elements carried by said container and connectible to said contacts; a plurality of tie bolts binding said individual cell units into a unitary assembly; and a plurality of bus bars ex-



tending through the openings in said side walls and contacting the corresponding contacts of said cell units.

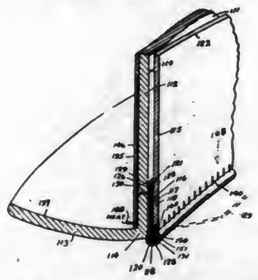
2,446,702
TARGET FOR A BALL GAME
James C. Heath, Los Angeles, Calif.
Application July 25, 1945, Serial No. 606,955
1 Claim. (Cl. 273—127)



In a ball rolling game, a target or objective comprising a single piece of narrow material bent double to form a pair of laterally spaced rails which curve forwardly and upwardly, thence downwardly and the central portion of said strip of material terminating in a substantially horizontally disposed loop located below the curved upper portions of said rails and which loop is adapted to receive and hold a ball after same has traversed the curved portions of said rails.

2,446,703
VARIABLE SPEED CLUTCH PULLEY
Hans Honigman, East Cleveland, Ohio
Application May 11, 1944, Serial No. 535,163
1 Claim. (Cl. 192—104)

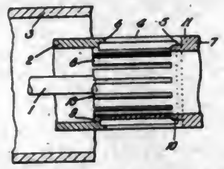
In a variable speed pulley having a driving member and a driven member and friction means connected to said driven member and adapted under the pressure of manually operated means to variably frictionally couple the driving member to the driven member, the improvement which comprises, a spider connected to said driven member, a counter-weight connected to said friction means to form a pivotal assembly, means pivotally connecting said pivotal assembly to said spider, a pressure roller movably mounted in engagement with said pivotal assembly near the said pivot point, said pressure roller upon motion from said pivot point toward said counter-weight reducing the pressure between said driving member and said friction means and upon motion from said pivot point toward said friction means increasing the pressure between said driving member and said friction means; rotatably mounted governor means driven by said driven member, and means for permitting said governor means to rotate at a different rate of speed than said driving member, said governor means upon being driven at an excessive rate of rotation by said driven member automatically acting to shift the location of said pressure roller with respect to said pivot point to vary the frictional coupling between said friction means and said driving member thereby altering the speed of said driven member.



2,446,704
END CLIP ASSEMBLY
Earl P. Lacure, Battle Creek, Mich., assignor, by mesne assignments, to Goss Printing Press Company, Chicago, Ill., a corporation of Illinois
Application June 13, 1946, Serial No. 676,533
16 Claims. (Cl. 101—378)

1. An end clip assembly for clamping a tubular stereotype printing plate on a plate cylinder having a reduced end portion overlapped by an end of the said plate, comprising a clip collar on the reduced portion underlying the end of the plate and secured to the cylinder, said clip collar having a series of spaced longitudinally extending slots in its periphery having undercut enlargements adjacent their lower ends; slides in the respective slots of cross-sectional shape corresponding with that of the slots; means for simultaneously shifting the slides in the slots; plate clips in the slots pivotally connected to the inner ends of their related slides and having plate engaging lugs adapted in one position to engage the edge of the plate and in another position to be retracted within the slots; and cam means in the slots adapted to project the clips outwardly of the slots when the clips are shifted towards the plate and to retract the clips within the slots when shifted away from the plate, each slot in the clip collar having an outer parallel walled portion with a pair of oppositely located, sidewise extending, recesses in the upper portion of same, and having an inner parallel walled portion of greater width than the outer portion, and having an intermediate parallel walled portion of greater

width than that of the inner portion; each slide having its inner end reduced in width and provided with a transverse bore; and each clip being of less height than the depth of the slot and having spaced perforated ears at its outer end straddling the reduced end of the related slide, a pivot pin passing through said ears and the bore of the slide, the plate engaging lug thereof being wider than the outer walled portion of the slot in the clip collar but of less width than said sidewise extending recesses in the upper portion of same and into which the ends of said lug are adapted to be completely retracted, said lug having an arcuate inner edge conforming with the curvature of the plate, the lower portion of the clip being of less width than the inner walled portion of the slot in the clip collar but wider than the outer walled portion thereof.



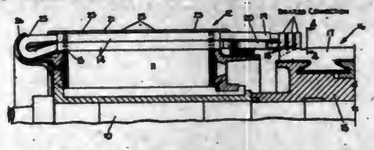
2,446,705
HAT CONSTRUCTION
Milton Lampert, New York, N. Y.
Application July 29, 1946, Serial No. 686,822
4 Claims. (Cl. 2—181)

1. In a hat construction, in combination: a hat body having a substantially vertical wall and a brim extending outwardly therefrom; a sweat band of absorptive material; a first liner element composed of substantially perspiration impervious material, said first liner element being folded to form a first inner member, a first outer member and a first bight; a second liner element composed of substantially perspiration impervious material having an inner edge, a bight and a second outer member; first stitch means interconnecting the lower edge of the sweat band, first inner member, and first outer member; second stitch means interconnecting the first outer member, the second outer member and the said wall, said second stitch means being spaced a substantial distance above the first stitch means; and third stitch means connecting the inner edge of the second liner element to the first inner member and the first outer member, said second liner being folded downwardly and then upwardly upon itself to enclose said first bight.

2,446,706
PLUG AND SOCKET JOINT SUITABLE FOR ELECTRICAL CONDUCTORS CARRYING HIGH-FREQUENCY CURRENTS
Kenneth Eric Latimer and Stanley Carlos Smith, London, England, assignors to The Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application July 10, 1944, Serial No. 544,198
In Great Britain February 25, 1943
6 Claims. (Cl. 174—21)

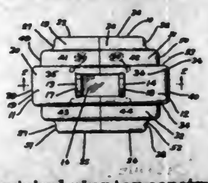
1. A metal plug and socket connector for connecting intermediate tubular conductors of two three-conductor high frequency lines in which the intermediate and the outer conductors surround the inner conductor, whereby the electric current of the field between the outer conductor and the intermediate conductor and the current of the field between the intermediate conductor and the inner conductor may each respectively travel along a substantially continuous surface path without having to traverse a crevice formed by the metal elements of the plug-and-socket connector, said connector comprising a tubular contact element adapted to be connected to one

of said conductors and a second contact element adapted to be connected to the other conductor, the second element extending into said first contact element and having an end portion in contact with the inner surface of the first element, said first contact element having its end portion in contact with the outer surface of said second contact element and the adjacent surfaces of said elements between said contact end portions being spaced apart to provide two separate series electrical current paths along the inner and the outer surfaces of said connector elements.



2,446,707
EAR PLUG
Charles Leight, Los Angeles, Calif.
Application March 10, 1945, Serial No. 582,081
3 Claims. (Cl. 128—152)

1. An ear plug comprising a thin resilient skin of cylindrical shape having one end pointed and the other end open, a spongy resilient filler within the major portion of said skin, a resilient plug for closing the end of said skin, and a handle having a section extending at right angles to the axis of said plug and a second section attached to the end of said first section and extending parallel with said plug.

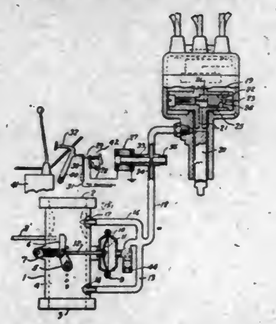


2,446,708
ELECTRIC MOTOR ARMATURE
Nils D. Levin, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, a corporation of Ohio
Application February 6, 1946, Serial No. 645,919
9 Claims. (Cl. 171—252)

3. A high temperature motor rotor including a body, coil slots in said body, a commutator on said body, coils mounted on said body in said slots with looped coil ends extending beyond said slots at one side, the coil ends on the other side being connected to said commutator by brazed connections, bracket means carried by said body extending around the looped coil ends and over the peripheries thereof to hold them against centrifugal force when said rotor rotates, and glass coil slot

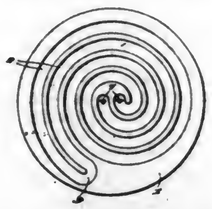
sticks in said slots on top of and holding the coils therein, the coil ends adjacent said commutator including long and short leads, the short leads being on top of the long leads.

2,446,709
PLUG TAP
Louis Ludwig, New York, N. Y.
Application April 18, 1944, Serial No. 531,622
2 Claims. (Cl. 173—334)



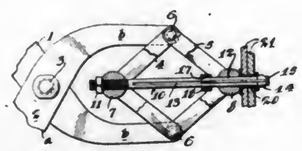
1. In an electrical plug tap construction adapted to receive the prongs of a standard plug member in electrical attachment thereto, the combination of a main body having four contiguous walls angularly disposed with respect to each other, a pair of prongs extending from one wall thereof, a pair of laterally spaced prong receiving openings in each of the other three walls, said pairs of openings being in alignment, a continuous unbroken ridge raised above the outer surfaces of said three walls and disposed between the openings of all of said pairs of prong receiving openings, the width of said ridge being slightly less than the distance between the prongs of such standard plug member, whereby once the prongs of said plug member are positioned so as to straddle the said raised ridge they may be slidably guided therealong to facilitate insertion into the next pair of prong receiving openings to be reached.

2,446,710
SAFETY TYPE SKI TOWROPE GRIP
Gregory Makaroff, Lanesboro, Mass.
Application November 30, 1945, Serial No. 631,911
4 Claims. (Cl. 104—202)



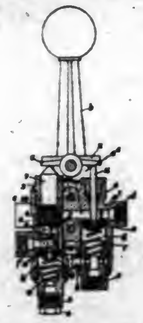
1. In a ski trail apparatus of the class shown and described, in combination, a conventional-type skier's tow rope adapted to be motivated by way of customary powering means, a pull rope anchoring belt adapted to embrace the body of a skier, a relatively short highly flexible hand applied pull rope, the rear skier towing end of said pull rope being detachably connected, by way of a ready-to-release safety knot, with said belt, a smooth surfaced hand-grip free of surface protrusions and shoulders fastened against forward slippage on the forward end of said pull rope, said hand-grip being of a size to be gripped in the hand of a skier and, while simultaneously gripping the tow rope, pressed and held fast against said tow rope, said hand grip being of tapered rearwardly diminishing form and the smaller rear end merging gradually and unobstructedly with the surface of said pull rope, the intermediate portion of said pull rope, rearwardly of said hand-grip and forwardly of said belt, being looped and once wrapped around said tow rope and providing, once said wrapping is under tension, a friction retained single hitch connecting the moving tow line and correspondingly moving pull rope, said single hitch being partially tautened and held against slippage and unwinding by the tensioned rearwardly trailing end portion of the pull rope connected to said anchoring belt, and further tautened and held in place by clasping and holding said hand-grip fast against the tow rope.

2,446,711
THROTTLE CONTROL FOR INTERNAL-COMBUSTION ENGINES
Marion Mallory, Detroit, Mich.
Application November 1, 1944, Serial No. 561,465
11 Claims. (Cl. 74—472)



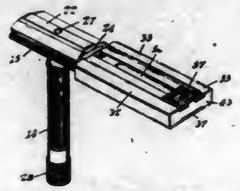
1. In a power mechanism of the class wherein an internal combustion engine transmits its power through a variable speed transmission, the combination of an intake passageway for said engine, a throttle valve controlling the flow of motive fluid through said passageway, a suction device actuated through changes of pressure in the intake passageway for imparting movement to said throttle valve, said suction device responding to sub-atmospheric pressure in the intake passageway on the engine side of the throttle valve for closing said valve, mechanism actuatable to shut off the below-mentioned valve controlled fluid bleed means preliminary to effecting a change of the speed ratio of said variable speed transmission, and valve controlled fluid bleed means for said suction device controlled by the actuation of the aforesaid mechanism to close off the fluid bleed to said suction device whereby the suction device responds to intake passageway pressure and moves said throttle valve toward closed position and slows down the speed of the engine to thereby facilitate changing the speed ratio of the variable speed transmission.

2,446,712
LAMP DEVICE
Hubert A. McIlvaine, Geneva, Ill., assignor to Continental Electric Company, Geneva, Ill., a corporation of Illinois
Application April 13, 1942, Serial No. 438,806
4 Claims. (Cl. 176—122)



1. A lamp device comprising a body having a double spiral groove therein containing a gaseous or vapor atmosphere, the sides of which are closed at one end and in communication at the opposite end, said groove being disposed at one face of the body and having a plurality of walls intermediate the opposite sides thereof, a cover plate fitted over said face of the body covering the groove therein with the peripheral edges of said cover plate sealed to the peripheral edges of the body, said cover plate having the intermediate portions thereof spaced from the edges of said walls less than the mean free path of the gas, and electrodes in the closed ends of the grooves for gas-discharge therethrough, said body and cover plate being constructed of glass.

2,446,713
HAND RIVETER
William E. Melick, Toledo, Ohio
Application August 6, 1946, Serial No. 688,776
7 Claims. (Cl. 218—19)

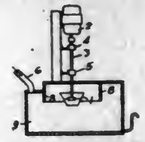


1. In a tool of the class described, a pair of handles in pivoted plier-like connection with laterally spaced parts, two sets of toggle links connecting said parts for opposed breaking and straightening movements, a stem carried by and projected from one set of said links across the other set, said stem having its projected end portion longitudinally split to permit lateral collapsing to reduce its diameter and being provided with an enlargement for projection through a hollow rivet when the stem end is contracted and for thrust engagement with the outer end of the rivet when the stem end is expanded, means movable lengthwise of the stem to hold the stem end expanded, and a thrust member on said other pair of links for acting against the adjacent end of a rivet when the stem is drawn inwardly to cause its enlargement to have upsetting coaction with the opposite end of the rivet by outward opposing movements of the two sets of links.

2,446,714
VALVE
Charles Eric Milner, Birmingham, England
Application November 27, 1944, Serial No. 565,267
In Great Britain December 16, 1943
2 Claims. (Cl. 137—144)

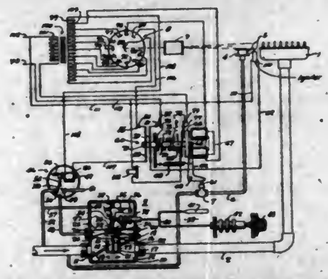
2. A valve of the kind specified having in combination a hollow body provided with a fluid inlet and outlets and with passageways leading to the inlet and outlets, a hand lever mounted on the body, a closure member movable to an open position by movement of the hand lever in one direction for establishing communication between the passageways leading to the inlet and one of the outlets, a spring biassing the closure member to a closed position, a plunger arranged to act on the hand lever and operable by the fluid pressure under the control of the said closure member for holding the hand lever against unintentional return movement, another closure member movable to the open position through the medium of the plunger by movement of the hand lever in the opposite direction for establishing communication between the passageways leading to the last mentioned outlet and another of the said outlets, and a spring biassing the last mentioned closure member to a closed position.

2,446,715
MAGAZINE FOR SAFETY RAZOR BLADES
Joseph Muros, Cambridge, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a corporation of Delaware
Application November 15, 1945, Serial No. 628,687
20 Claims. (Cl. 30—40)



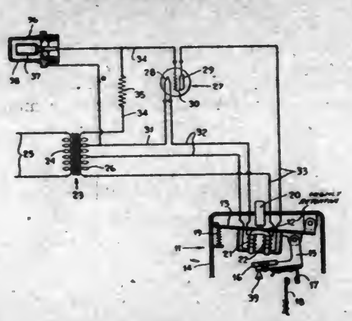
1. A blade magazine comprising an elongated enclosure with a blade exit-opening at one end, means on said enclosure for fitting the same to a razor, means in said enclosure for locating therein a stack of sharp edged blades, a feed slide movable in said enclosure to advance by endwise movement through said exit-opening the uppermost blade of the stack into the razor, said slide including means for masking the cutting edges of the blade while being advanced into the razor, and means on said slide for detachably retaining thereon and withdrawing a used blade from the razor.

2,446,716
TERNE ELECTROPLATING BATH
John S. Nachtman, Youngstown, Ohio
No Drawing. Original application June 26, 1940, Serial No. 342,525, now Patent No. 2,370,986, dated March 6, 1945. Divided and this application March 2, 1945, Serial No. 580,729
1 Claim. (Cl. 204—43)



A terne electroplating bath formed from the following components substantially in the ratios set out: white lead—112.5 g./l., stannous oxide—11.35 g./l., boric acid—186.8 g./l., hydrofluoric acid (30%)—650 g./l., nicotine—10 g./l., and beta-naphthol—2 g./l.

2,446,717
METHOD AND MEANS FOR DESTROYING FROTH
Johan Olof Nauclér, Stocksund, Sweden
Application June 16, 1944, Serial No. 540,715
In Sweden July 10, 1943
9 Claims. (Cl. 252—321)

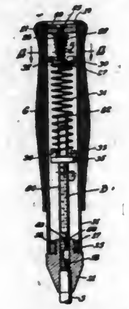


9. A method for destroying or quenching froth characterized in rotating a solid body having a cavity therein along its axis of rotation, said cavity being narrower at its lower end than at the upper end and having a peripherally continuous, unobstructed wall defining its wider upper end, supplying froth in such a manner that the froth first contacts the rotating body adjacent the narrower lower end of said cavity, said body being rotated at such speeds of rotation as to cause the froth to be spread out in the form of a successively attenuating layer, the distance between the rotating body and other solid, stationary bodies in at least most of the directions of the spreading out being so great relative to the speed of rotation of the rotating body that the froth will be substantially transformed into liquid before reaching the stationary solid bodies.

2,446,718
THERMOSTATIC SAFETY CONTROL FOR FUEL BURNERS
William A. Ray, Glendale, Calif., assignor to General Controls Co., a corporation
Application November 13, 1944, Serial No. 563,166
12 Claims. (Cl. 158—117.1)

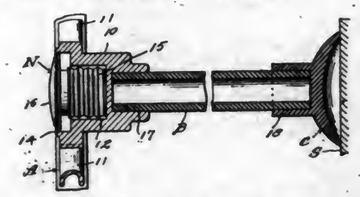
3. In a system of the character described: a pilot burner for producing a pilot flame; a main burner; a control valve for the main burner; a valve for the pilot burner; an electronic emission device adapted to be energized by a source of alternating current, and activated by the pilot flame; means forming a circuit in which current from said device operates to hold the control valve open; an actuator having a pair of relatively movable parts, one of said parts being biased to an inactive position, said actuator, when operated, serving through both said parts to open the pilot burner valve, said one part being returnable to its inactive position independently of said pilot burner valve; means operating on the other part for maintaining said pilot burner valve open by current from said device; and means for conditioning said circuit for the control valve for a holding operation only when said one part is in its initial position.

2,446,719
ELECTRIC CIRCUIT FOR ELECTROMAGNETS
William A. Ray, North Hollywood, Calif., assignor to General Controls Co., Glendale, Calif., a corporation of California
Application January 19, 1946, Serial No. 642,469
6 Claims. (Cl. 175—335)



1. The method of energizing an electromagnet which consists of: producing alternating magnetic flux in the core of said electromagnet; simultaneously producing in said core, only during each alternate half-wave alternation of said alternating flux, a pulse of unidirectional flux which opposes the alternating flux produced during said half-wave alternation; and making said pulses so much greater than the flux alternations which they oppose that the resultant flux produced in the core is in the same direction and substantially uniform in magnitude during each half-wave period.

2,446,720
GAFF-WEIGH HOOK
James A. Rominski, Chicago, Ill.
Application July 19, 1946, Serial No. 684,993
7 Claims. (Cl. 265—66)



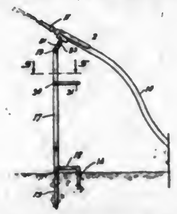
5. A gaff-weigh hook in which is combined a hollow handle, closed at its upper end, a coiled spring extending lengthwise within the handle, means adjustably connecting one spring end to the closed end of the handle, a tension device for resisting movement of the adjusting means, a coupling separably affixed to the opposite open end of the handle to provide a closure therefor, a gaff hook rigidly connected to the coupling and extending therefrom away from the handle, a weight bar connected to the coupling and extending therefrom into the handle, and means form-

ing a nonrotatable connection between the weight bar and the spring such that, with the coupling

separated from the handle, any load carried by the gaff hook is transmitted therefrom directly to the weight bar for sustention by the spring.

2,446,721
MINIATURE STEERING WHEEL
Adolph Martin Rothbardt, Chicago, Ill., assignor to Statler Mfg. Co., Chicago, Ill., a corporation of Illinois
Application April 28, 1947, Serial No. 744,366
3 Claims. (Cl. 46—1)

1. A steering wheel toy comprising a steering wheel having a hub, with a rim outwardly spaced from said hub by a plurality of radially spaced spokes integrally extending between said hub and said rim, said hub having a front opening, a toy noise making means housed within said front opening, an operating member attached to said noise making means substantially closing said front opening, said hub having a rearward extension with a rear opening, a post made of resilient flexible material, said post having one end extending within said rear opening and removably secured therein, a suction attaching cup having a hollow boss, the other end of said post extending within said hollow boss and removably secured therein, said suction attaching cup adapted to be removably and instantly attached to any substantially flat surface of sufficient area to receive it so as to permit a child to operate the wheel in simulated driving operations, said post adapted upon pressure on the steering wheel by the child to flex and permit limited lateral and radial movement of the steering wheel.

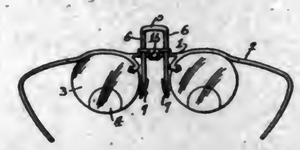


2,446,722
HAIR CURLER
Henri Rust, Paris, France
Application August 27, 1946, Serial No. 693,258
In France November 5, 1945
1 Claim. (Cl. 132—44)

A hair curler which comprises an unbroken hollow annular element made of resilient material, a portion of which is cut away to form a recess, and an oval member, the ends of which are adapted to be inserted in the open edges of

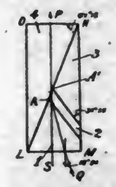
said annular element, said oval member pinching, between itself and the wall of said annular element below said recess, the tip of the tuft of hair to be curled.

2,446,723
LAWN NOZZLE SUPPORT
Henry Schaechterle, Denver, Colo.
Application September 21, 1945, Serial No. 617,753
1 Claim. (Cl. 248—81)



A garden hose nozzle support comprising: an inverted U-shaped, ground-engaging foot member; two frame bars extending upwardly from said foot member in parallel relation; a pair of hinged bars; a first clamp bolt securing the lower extremities of the hinged bars on opposite sides of said frame bars; a short angle member; a long angle member; a second clamp bolt, said latter bolt securing the vertical legs of both angle members between the upper extremities of said hinged bars with the horizontal legs in parallel relation; an angle bracket member; a third clamp bolt clamping the horizontal leg of said angle bracket member between the horizontal legs of said short and long angle members; a U-shaped hose socket secured to and supported by the vertical leg of said angle bracket member; means for securing the hose nozzle in said socket; a fourth clamp bolt extending through said hinged bars intermediate the extremities of the latter; a handle member; and a hinged brace member, said handle member and said brace member being mounted on and secured in place by said fourth clamp bolt.

2,446,724
INTRODUCER
William L. Schmitz, Jr., San Marino, Calif.
Application April 11, 1945, Serial No. 587,658
9 Claims. (Cl. 128—127)



1. A device of the class described comprising a positioning member notched at its forward end to seat the forward side of a pessary rim, a handle member pivotally connected to the positioning member intermediate the ends of the positioning member, said handle member having a passage therethrough through which the rear end of the positioning member extends, one of said members providing a seat to seat the rear portion of a pessary rim adjacent the rear end of the positioning member and the other of said members presenting a cam surface adjacent said seat for dislodging the pessary rim upon relative movement taking place between the members.

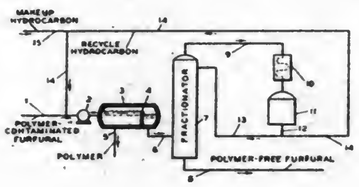
2,446,725
ADJUSTABLE NOSE BRIDGE SUPPORT FOR BIFOCAL SPECTACLES
Jean Hughes Seguin, St. Eustache, Quebec, Canada
Application December 3, 1945, Serial No. 632,398
2 Claims. (Cl. 88—51)

1. A support for spectacles comprising an inverted U-shaped nose bridge, a slide having apertured ends slidably receiving the sides of said bridge, and a clamp carried by said slide between the sides of said bridge and adapted to be attached to the cross piece of an ophthalmic mounting, each of the apertures of said ends being enlarged at both top and bottom to permit angular adjustment of said sides in said apertures.

2,446,726
RANGE FINDER, HEIGHT FINDER, AND LIKE OPTICAL OBSERVATION INSTRUMENT
John Martin Strang and Joseph H. Bull, Glasgow, Scotland, assignors to Barr & Stroud, Limited, Glasgow, Scotland
Application December 1, 1944, Serial No. 566,224
In Great Britain January 21, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires January 21, 1963
2 Claims. (Cl. 88—2.6)

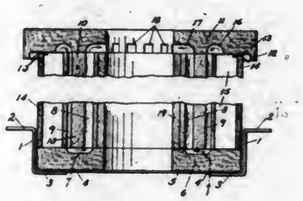
1. For use in an optical observation instrument of the rangefinder type working on the coincidence principle, a separating prism combination comprising at least three prisms of glass secured together to form a solid body having parallel end faces for light entry and light emergence, a first prism on one side of a diagonal plane at an obliquity of about 67° to the end faces, a refracting prism having a refracting angle of about 122° with said refracting prism face nearer the light entry side of the combination extending inwards to the said diagonal plane intermediate the ends of the first prism and said face forming said refracting angle with said diagonal plane, the refracting prism being of glass of different quality from the other prisms and having a refractive index of about 1.6100, the glass of the other prisms having a refractive index of about 1.5300, the edge of the refracting prism in the interior of the combination constituting a separating line by virtue of the refraction of light at one side of that edge by passage through the refractive prism, the separating prism combination receiving the two beams of light for the formation of partial images in the field of view, said prism combination to be mounted in said instrument with said prism combination positioning the refracting prism with the path of the principal ray of the refracted beam meeting the entrance face and leaving the emergence face of the refracting prism at substantially the same angle, the incident ray meeting the light entry face of the combination at an angle of about 19° to the normal thereto, and the axis of main and refracted beams at emergence and of the main beam at entry being normal to the surface of the combination.

2,446,727
GYROSCOPE CONSTRUCTION
Fred P. Strother, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application September 21, 1945, Serial No. 617,775
15 Claims. (Cl. 74—5)



1. In a gyroscope apparatus, the combination with a universally mounted rotatable member having a predetermined axis of spin, of means for returning said axis to its predetermined position upon a departure therefrom, said means comprising a rotatable body, fluid friction means for driving said body at a constant speed when said spin axis is in its predetermined position, said fluid friction means for driving said body comprising a member positioned within said rotatable body and connected to be driven at the same rate as said rotatable member, said body being unbalanced to provide for retardation of its rotational movement due to gravitational force when said spin axis departs from its predetermined position and thereby apply a net precessing force to said apparatus causing it to precess toward said predetermined spin axis position.

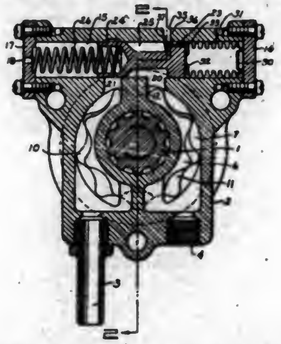
2,446,728
FURFURAL PURIFICATION
George Thodos, Evanston, Ill., assignor to Phillips Petroleum Company, a corporation of Delaware
Application January 12, 1945, Serial No. 572,532
10 Claims. (Cl. 260—347)



1. The process of removing furfural polymers from furfural contaminated therewith which comprises extracting the contaminated furfural in liquid-liquid manner with from one to ten times its weight of an aliphatic hydrocarbon selected from the group consisting of paraffins and olefins having from 3 to 8 carbon atoms per

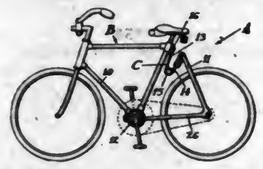
molecule at a temperature in the range from 150 to 250° F., and separately withdrawn a polymer

phase and a phase of hydrocarbon and furfural essentially free of polymer.



2,446,729
CHIMNEY INSULATION
Richard F. Van Alstyne, Davenport, Iowa
Application August 13, 1946, Serial No. 690,212
6 Claims. (Cl. 72—94)

1. A chimney comprising a base block having an approximately circular groove formed in its upper surface, a plurality of units stacked thereon in longitudinal alignment, said units having channels in the interior thereof which are placed in alignment when the units are stacked, and a cap on top of the upper unit, said cap having openings formed in its under face to connect one series of the channels with the interior opening of the chimney and another series of channels with the exterior air, the channels in the bottom unit opening into the groove in the base block.

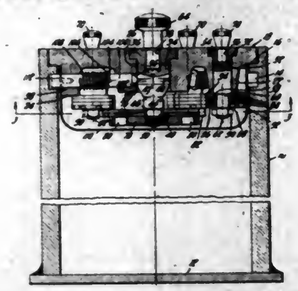


2,446,730
PRESSURE CONTROL FOR HYDRAULIC SYSTEMS
Ernest E. Wemp, Detroit, Mich., assignor of five per cent to Eleanor May Wemp, Los Angeles, Calif., twenty per cent to Lila A. Wemp, five per cent to Leah Kathleen Smith, and five per cent to Clyde J. Smith, all of Detroit, Mich.
Application February 18, 1946, Serial No. 648,255
14 Claims. (Cl. 103—42)

1. A pressure control device for a hydraulic system comprising, a chambered body, said body having a high pressure inlet port and first and second relief outlet ports, valving means in the chamber including a member for opening and closing a connection between the high pressure inlet port and the first outlet port, said valving means being subject to and movable by the pressure of the hydraulic medium whereby to establish said connection when moved by the pressure of the medium to thereby govern the pressure, said valving means including a valving member for controlling the second relief outlet port, and a thermo-sensitive member for positioning the second named valving member to throttle the

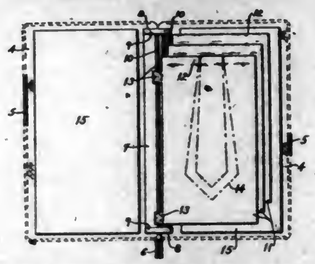
second named relief port in accordance with temperature changes.

2,446,731
BICYCLE
John Ross Wheler, Toronto, Ontario, Canada
Application December 8, 1945, Serial No. 633,637
1 Claim. (Cl. 280—284)



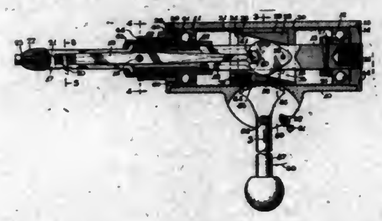
A bicycle frame comprising a frame body including a forward frame section designed operatively to connect with a front wheel, a main hub carried thereby for mounting the bicycle pedal shaft, a rear wheel, lower parallel arms connecting between the main hub and said rear wheel, said arms each being provided with a ring-like element designed to encircle the main hub of the frame in swingable relation thereto, said hub and said ring-like elements being provided with mating rib and groove elements to maintain said elements in movably mounted position on said hub, said arms being swingably mounted and having a centre of swing substantially coincident with the centre of said hub, means extending upwardly from said arms and said rear wheel, and spring means in connection with the upper extremity of said latter means and the upper portion of the front frame section substantially to obviate imparting shock to the front frame section caused by the swingable movement of said arms and said rear wheel about said hub.

2,446,732
TUMBLERLESS SAFE
Henry C. Whittall, Oakland, Calif., assignor of twenty-four per cent to Harold G. Geltz, Oakland, and twenty-four per cent to Walter H. Kassebohm and twenty-four per cent to Thomas H. Harvey, both of Berkeley, Calif.
Application December 31, 1946, Serial No. 719,558
5 Claims. (Cl. 70—293)



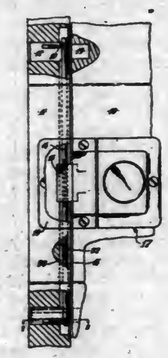
1. A safe comprising a casing, an end plate, and a locking mechanism, said mechanism comprising a locking groove in the casing, a centrally

disposed rotatable and slidable spindle carried by the end plate, a plurality of slidable bolts carried by the end plate, the inner ends of said bolts abutting said spindle and the outer ends of said bolts being adapted to extend within the locking groove to secure the end plate to the casing, spring means to urge said bolts inwardly toward said spindle, means operable upon a pre-



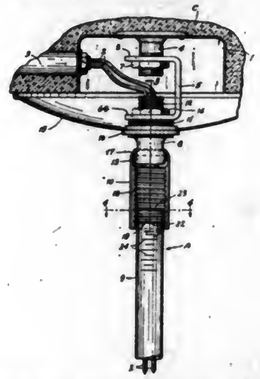
determined rotational orientation of said spindle to allow said spindle to be moved outwardly of said end plate, and a cam surface on said spindle adapted to allow an inward movement of said bolts to free the ends thereof from said locking groove upon the outward movement of said spindle.

2,446,733
NECKTIE PRESS AND CASE
Kenneth P. Abbe, Longmeadow, Mass.
Application March 8, 1946, Serial No. 653,027
4 Claims. (Cl. 38—72)



4. A necktie case which comprises a back member, front and rear cover members hinged along one edge to the back member, a plurality of relatively stiff tie supporting plates positioned between the covers, said plates each having bearing members formed on the edge thereof adjacent the back member, a bead formed along one of the other edges of each plate about which bead a tie may be folded, rods extending through said bearing members, the ends of the rods being connected to the back member, said rods and bearings providing hinge connections between the plates and the back member, the plates being so positioned on their respective rods as to position the bead portions of the plates in overlapping relation and stagger the bearings of each plate relative to the bearings of the adjacent plate, cushions of sponge rubber carried by the inner faces of the cover members and between which the plates are engaged when the case is closed, and slide fastener means releasably connecting the free edges of the cover members to close the case and compress the plates between the covers when the case is closed.

2,446,734
TUBE CUTTING DEVICE
Robert Stewart Armstrong, Leonia, N. J.
Application August 8, 1946, Serial No. 688,279
19 Claims. (Cl. 30—108)

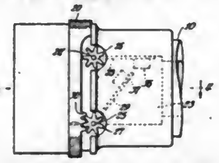


15. In a tube cutter, a spindle provided with a longitudinal slot, one end of the spindle being adapted to be inserted into the tube to be cut, a shank mounted in said slot and pivoted at its mid-portion to said spindle, a cutter carried by the forward end of said shank, a camming member mounted on the rear end of the spindle for rotation therewith but axially shiftable with respect thereto, and a cam follower mounted in said slot and engaging the rear end of the shank, said camming member and cam follower being so related that axial movements of the camming member will cause said shank to rock and thereby effect corresponding radial movements of said cutter.

2,446,735
LOCK BOLT OPERATED DOOR FASTENER
William Francis Banham, London, England
Application April 29, 1947, Serial No. 744,544
In Great Britain March 26, 1946
Section 1, Public Law 690, August 8, 1946
3 Claims. (Cl. 292—33)

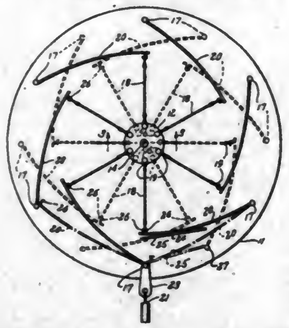
1. A lock or door fastening of the kind described having at least two mortice bolts fitted within the jamb of a door and interconnected by an axially rotatable rod carrying an abutment member movable by the latch of the door lock to force said mortice bolts into engagement with the door, resilient means being provided to return said mortice bolts to the inoperative position when the door latch is withdrawn to open the door.

2,446,736
SUSPENSION SUPPORT FOR ELECTRIC LIGHTING FIXTURES
David J. Biller, St. Louis, Mo., assignor to Day-Brite Lighting, Inc., St. Louis, Mo., a corporation of Missouri
Application September 27, 1945, Serial No. 618,839
2 Claims. (Cl. 248—343)



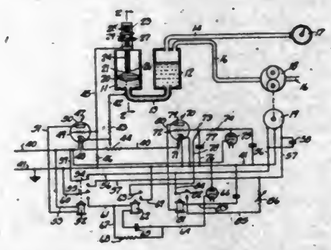
1. A suspension support for an electric lighting fixture or the like comprising a conventional downwardly opening overhead outlet box having an anchor stud depending therefrom, a hanger fixed to said stud, a lower stem member adapted to be non-rotatably secured at its lower end to said fixture and having a threaded upper end portion, an upper member adapted to be non-rotatably secured to said hanger and an intermediate coupling member having a ball-and-socket connection at its upper end with the lower end of said upper member and a threaded connection with the threaded upper end of said stem member, whereby said stem and coupling members are angularly adjustable relative to said hanger supported upper member and said coupling member is rotatable relative to said upper member and stem member to raise and lower the latter and the fixture secured thereto relative to said ball-and-socket joint.

2,446,737
MANUFACTURE OF YEAST
Firmin Boinot, Melle, and Jean Boige, La Noblette-Melle, France, assignors to Les Usines de Melle (Societe Anonyme), Saint-Leger-les-Melle, France, a company of France
No Drawing. Application May 16, 1945, Serial No. 594,156. In France September 17, 1943
3 Claims. (Cl. 195—102)



1. A process for the production of yeast in a sugar containing nutrient medium, which comprises the successive steps of adding yeast to said medium in a proportion considerably less than 2 per cent by weight, the amount of yeast being reckoned in terms of yeast containing 72 per cent of moisture; propagating said yeast in said medium until the yeast concentration has risen to about 2–3 per cent by weight, so that the medium still contains a fraction of its original sugar content; removing said yeast from said medium; adding yeast to said medium having its substantially unaltered sugar fraction content, in a proportion not substantially above 0.02 to 0.03 per cent by weight; propagating said newly added yeast in said medium until the yeast concentration has risen to about 2–3 per cent by weight; removing said yeast from said medium; and repeating the same sequences of yeast addition, yeast propagation and yeast removal, until no sugars can be detected through analysis in the yeast freed medium.

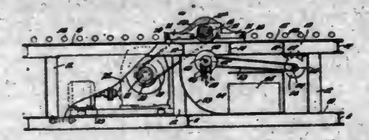
2,446,738
VIEW FINDER
Jack Briskin and Joseph Golick, Chicago, Ill., assignors to Revere Camera Company, Chicago, Ill., a corporation of Delaware
Application October 6, 1945, Serial No. 620,692
4 Claims. (Cl. 33—64)



4. A view finder comprising a tubular member having a chamber at its forward end, two parallel shafts rotatably mounted in said tubular member and extending into said chamber, a mask secured to each shaft and disposed within said chamber, the dimension of each mask in a direction perpendicular to said shaft being less than the distance between said shafts, so that one or the other of said masks may be rotated alternatively into a position substantially perpendicular to the longitudinal axis of said tubular member, whereby different fields of vision may be defined by said masks, and common means disposed on the exterior of said tubular member for causing rotation of one or the other of said shafts alternatively, said means being arranged so that only one of said shafts is rotated thereby at any one time.

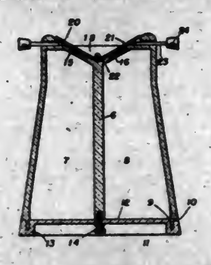
2,446,739
REPEATING ELECTRIC FUSE
John W. Bryan, Traphill, N. C.
Application October 24, 1947, Serial No. 781,862
1 Claim. (Cl. 200—126)

An automatic multiple fuse comprising an insulated base plate, a centralized terminal plate fixed on said base plate, a series of circumferentially spaced studs projecting therefrom, a series of circumferentially spaced contacts projecting from said base plate surrounding said terminal plate in concentrically spaced relation to said terminal plate, a series of conductive leaf springs secured at one end to said contacts and free at their opposite ends, said leaf springs being outwardly tensioned to electrically engage their free ends with circumferentially adjacent ones of said contacts when released so as to bridge adjacent contacts, and fusible elements stretched between said studs and the free ends of related leaf springs whereby said leaf springs are deflected inwardly and tensioned out of engagement with the contacts related thereto, whereby fusing of one of said fusible elements permits the leaf spring related thereto to spring outwardly and engage the circumferentially adjacent contact and thereby restore a circuit in which said terminal plate and said studs are connected, a second series of similar studs, contacts, fusible elements, and leaf springs on the opposite side of said base plate, an intermediate contact between two of adjacent contacts of the first series and electrically connected to a contact of the second series, and a bridging element carried by one of the leaf springs of the first series in position to bridge said intermediate contact and an adjacent contact of the first series whenever the last of the first series fusible elements is fused and the related leaf spring is released to engage such adjacent first series contact, whereby the circuit is restored by the first fusible element of the second series thereof.



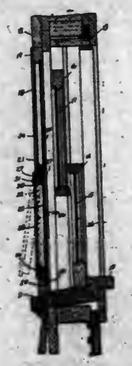
2,446,740
APPARATUS FOR CALIBRATING FLUID PRESSURE GAUGES
Frank Donald Burns, Long Beach, Ind., assignor to The Hays Corporation, Michigan City, Ind., a corporation of Indiana
Application September 24, 1943, Serial No. 503,606
21 Claims. (Cl. 73—4)

1. In a testing device, a pressure gage, a reversible air pump connected with said gage and adapted for connection with a pressure sensitive device to be tested, a reversible motor operating said pump, a switch associated with said gage and including manually adjustable and pressure responsive contacts, and means controlled by said switch for controlling said motor and pump to generate and apply a pressure factor corresponding to the setting of said manually adjustable contact.



2,446,741
LUMBER RECLAMATION MACHINE
Myer R. Chidakel, Washington, D. C.
Application July 6, 1945, Serial No. 603,439
17 Claims. (Cl. 254—18)

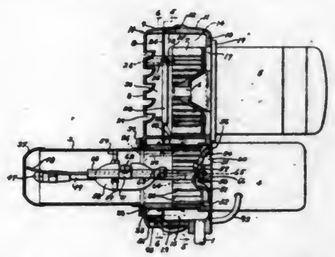
1. A lumber reclaiming machine comprising a frame carrying a rotary shaft thereon, a nail extracting claw on said shaft and rotating therewith, and means adjacent said claw engaging nails that remain in the claw after extraction



from the lumber to positively expel the nails from the claw.

2,446,742
SALT AND PEPPER SHAKER
Oscar H. Crowell, Russellville, Ala.
Application December 27, 1946, Serial No. 718,702
1 Claim. (Cl. 65—45)

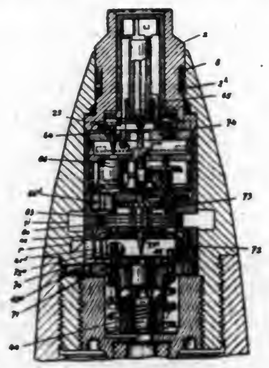
A salt and pepper shaker comprising a container formed into a pair of compartments each having an oppositely sloping sifter top forming a trough at the center of the container, a V-shaped resilient closure positioned in the trough and closing the sifter tops, a rod anchored at its ends to the container and extending longitudinally above the valley of the closure to provide a central fulcrum for either end of the closure, said closure being free of the rod and resting free of the sloping sifter tops, and manually operated means engaging the underside of the closure to raise the ends thereof.



2,446,743
SCREENED STORM SASH
Latta O. Davis, Greenfield, Ind.
Application June 12, 1945, Serial No. 599,031
3 Claims. (Cl. 160—43)

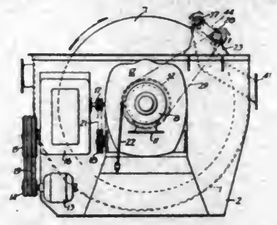
2. A storm sash structure having a rigid frame adapted to be secured in a window casing in storm

window relation, a pair of glass plates slidable in said frame between raised and lowered positions, each of said plates extending over substantially half of the opening of said frame to leave the lower half of said frame open when both of said plates are moved to the upper half thereof, means for supporting said plates in their upper raised position, at least one of said means comprising a pair of dowel pins removably inserted in said frame to extend inwardly therefrom, and a screened frame adapted to swingably fit within the lower half of said frame and to be removed therefrom said screened frame having a groove provided therein opening from the top thereof for reception of said dowel pins when said screen is entered into said frame at an angle thereto, and interlocking with said pins when said screen is swung to closed position for removably securing it in said frame.



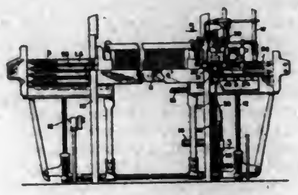
2,446,744
FAN HOUSING CONSTRUCTION FOR OIL BURNERS
Warren H. De Lancey, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a corporation of Massachusetts
Application December 3, 1945, Serial No. 632,420
5 Claims. (Cl. 158—76)

1. In a burner, housing means providing a scroll chamber and a plenum chamber and including separate, spaced, parallel front and back walls; a tubular member separate from each wall and mounted in said chamber with its ends engaged one with the front wall and one with the back wall, means for holding said walls together with said member clamped between them, said member having a circular series of angularly-spaced slots through its periphery for admitting air from said chamber into the interior of said member, each said slot extending from one end of said member part way toward the other end thereof and the ends of all said slots being closed by one of said walls, one of said walls having an opening therethrough coaxial with said member, an air tube secured to and projecting outwardly from the last-named wall coaxially of said member, a fan in said scroll chamber, and a nozzle mounted in said tube for emitting a spray of atomized oil to mix with the air flowing through said tube.



2,446,745
CLOCKWORK-OPERATED TIME FUSE
Fernand Delay, Geneva, Switzerland
Application June 22, 1942, Serial No. 448,026
In Switzerland June 20, 1941
6 Claims. (Cl. 102—71)

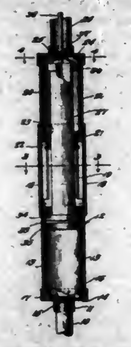
1. A clockwork-operated time fuse for projectiles, comprising a hollow body made in one piece, an annular groove in the inner wall of said body, a setting member arranged rotatably with respect to said body, a clockwork casing made in one piece rotatably mounted in said fuse body for unrestrained angular displacement in either direction, means coupling said casing to said setting member for rotation thereby, centrifugally actuated means operable on firing of the projectile for locking said setting member and said casing against rotation with respect to said fuse body, said casing including an integral body portion with a median transverse wall separating two chambers, the upper chamber housing the gear train of the clockwork, the balance and the escape wheel; the lower chamber housing a centrifugal driving member for actuating the clockwork and a rotating control member, said centrifugal driving member being adapted to swing under the action of the centrifugal force after firing and to project through an opening provided in the casing into the annular groove of the fuse body; inertia responsive means operative on firing for locking said centrifugal driving means and cooperating balance during the linear acceleration of the projectile, said inertia means releasing said balance when the linear acceleration ceases, and a time percussion assembly within said hollow fuse body adjacent said clockwork casing, said time percussion assembly including a primer holder, a primer seated in said holder and means cooperating with said control member to detonate said primer upon rotation of said control member into a predetermined angular position with respect to said time percussion assembly.



2,446,746
CONTINUOUS ROTARY FILTER
Harry W. Denhard, Sebastopol, Frank W. Brittain, Piedmont, and Anthony G. Serpas, Oakland, Calif., assignors to Oliver United Filters Incorporated, Oakland, Calif., a corporation of Nevada
Continuation of application Serial No. 513,958, December 11, 1943. This application February 16, 1948, Serial No. 8,673
3 Claims. (Cl. 210—201)

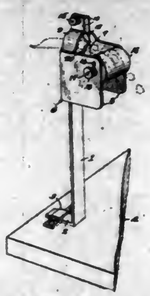
1. In a continuous rotary drum filter, including a filter drum mounted for rotation on a horizontal axis and wherein a cake is formed and carried on the filter drum under the influence of an inwardly directed differential pressure; means for discharging said cake comprising: a discharge roll mounted parallel to and immediately adjacent the face of the filter drum on the descending side thereof for rotation in the same direction as the rotation of said filter drum, the function of said discharge roll being to cause

the cake carried by the drum continuously to roll up upon itself in a direction opposite to the direction of rotation of the filter drum along the ascending and rear face of said discharge roll; and a discharge screw mounted over and parallel to said drum and immediately adjacent to the rear of said discharge roll for rotation in the same direction as the direction of rotation of the filter drum, the function of said screw being continuously to advance a portion of said cake along said screw.



2,446,747
WEFT DETECTING SYSTEM FOR CONVERTIBLE LOOMS
Raymond F. Dion, Leominster, and Walter H. Wakefield, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application April 2, 1947, Serial No. 738,824
9 Claims. (Cl. 139—233)

1. In an electric weft detecting system for a loom, a solenoid which when energized initiates a weft replenishing operation, an electric weft detector, a normally discharged electric condenser, electric circuit means effective when the detector indicates weft exhaustion to charge said condenser, a normally open switch, means operative subsequent to indication by the detector to close said switch, and electric means including said solenoids, condenser and switch causing said condenser to energize said solenoid when said switch is closed.

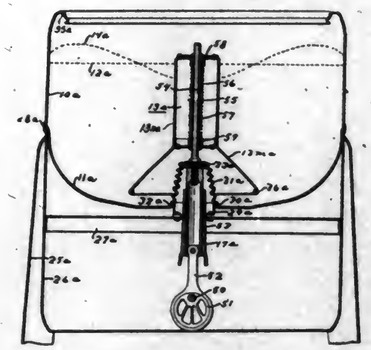


2,446,748
PUMP
Henry L. Etter, Lemasters, Pa.
Application August 22, 1945, Serial No. 611,953
3 Claims. (Cl. 103—179)

1. In a constant flow pump, a pump cylinder system comprising a pair of spaced axially aligned cylinders of equal capacity, a cylinder reciprocable through adjacent ends of the spaced cylinders, said reciprocable cylinder having a capacity equal to that of one of the spaced cylinders, a piston carried at one end of the reciprocable cylinder,

said piston cooperating with one of the spaced cylinders simultaneously to fill it while the reciprocable cylinder empties the other spaced cylinder, and valves arranged in the system automatically to maintain the system fluid filled.

2,446,749
BEAN AND PEA POD SPLITTER
George D. Evernden, Dallas, Tex.
Application August 1, 1947, Serial No. 765,292
3 Claims. (Cl. 130—30)

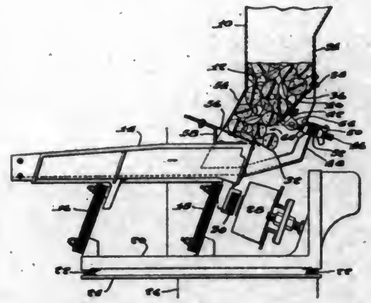


1. A device of the class described comprising a standard, a head mounted on the standard, said head including a front plate and spaced side wings, a roller adjustably mounted between the wings, said wings having bowed arms carried thereby and terminating in spaced plates, a body adjustably mounted between the plates and having a splitting blade thereon, said blade operating to split an article as it passes between the bowed arms and engages the roller.

2,446,750
CLOTHES-WASHING MACHINE
Donald K. Ferris, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application April 3, 1944, Serial No. 529,331
4 Claims. (Cl. 68—131)

1. Apparatus of the character described comprising a tub having side and bottom walls adapted to contain a body of washing fluid and clothes, an agitator mounted for vertical reciprocatory movement in the central portion of said

tub close to its bottom wall, said agitator being small relative to said tub and being substantially cone-shaped with the large end of the cone directed downwardly, and means to impart short, rapid, vertical reciprocations to said agitator with a motion delayed near the lower limit of the reciprocations to a greater extent than the motion produced by the usual crank and connecting rod drive, said means including mechanism to produce short, rapid, reciprocatory motion with a

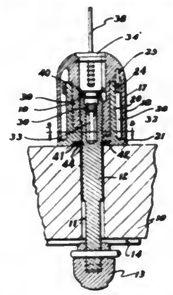


greater dwell at the lower limit of reciprocation than at the upper limit and a lost-motion resilient device actuated by said mechanism to reciprocate said agitator, and said device having movably supported means actuated by said mechanism, driven means connected to said agitator and actuated by said movably supported means, and resilient means interconnecting said movably supported means and said driven means to give flexibility to the reciprocatory movement of said agitator.

2,446,751
METHOD OF OPERATING DIFFUSION BATTERIES
André Marie Auguste Ferté, Terny, par Margival, France
Application September 26, 1945, Serial No. 618,751
In France January 14, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires January 14, 1964
5 Claims. (Cl. 127—43)

1. In a method of operating a diffusion battery comprising a plurality of diffusion cells, a measuring tank, means adapted for circulating the extraction liquid in a number of said cells connected in series and for conducting the juice from the head cell to the measuring tank, piping means connected in parallel with each of the cells, valve means for controlling the communication between said piping means and each of the cells and an auxiliary tank distinct from said measuring tank and connected with said piping means, the steps which consist of mashing a cell by feeding an excess of extraction liquid to the said cell, while the said valve means of said cell only are open, in collecting the excess of liquid in said auxiliary tank and in driving back both the liquid in excess contained in said auxiliary tank and the liquid contained in the mashed cell to the said measuring tank, whereby the first named fraction of the liquid passes through said cell before reaching the measuring tank.

2,446,752
MATERIAL FEEDING DEVICE
Earl Fiddyment, North Quincy, Mass., assignor to Pneumatic Scale Corporation, Limited, Quincy, Mass., a corporation of Massachusetts
Application July 31, 1945, Serial No. 608,015
1 Claim. (Cl. 198—56)

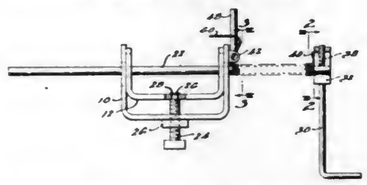


A material feeding device for coarse material comprising a substantially horizontal vibratory feeding conduit, a non-vibratory supply hopper mounted above and independently of the vibratory feeding conduit and having a downwardly extended delivery conduit terminating above, and in a position to discharge the material into, the rear end of the vibratory feeding conduit, the rear end of the delivery conduit being provided with a steeply inclined and forwardly extending plate hinged thereto, and adjusting means connecting the hinged plate and the rear end of the horizontal vibratory feeding conduit for transmitting to the plate vibrations from the vibratory feeding conduit whereby to effect forward movement of, and to assist in the downward movement of, material passing thereover in its descent through the delivery conduit, and a second plate carried by the vibratory feeding conduit and arranged to extend angularly rearwardly and spaced a short distance below the forward wall of said delivery conduit and at a substantial distance below the forward end of the hinged plate whereby the material moved by the vibrations of said hinged plate may subsequently fall by gravity into engagement with said second plate to be moved by its vibrations rearwardly under the end of said hinged plate to be discharged into the rear end of the vibratory feeding conduit, said cooperating vibratory plates imparting vibration to the lower portion only of the column of material within the delivery conduit and the supply hopper.

2,446,753
DOOR HANDLE ASSEMBLY
Burton S. Floraday, Toledo, Ohio, assignor to Detroit Harvester Company, Detroit, Mich., a corporation of Michigan
Application September 6, 1945, Serial No. 614,633
5 Claims. (Cl. 70—221)

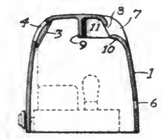
1. A door handle assembly comprising a handle portion, a hub portion having inner and outer concentric sleeves, an escutcheon having an integral bearing sleeve fitting said inner sleeve, an arcuate recess in said escutcheon, an extension on said inner sleeve projecting into said recess

whereby turning movement of said hub portion is limited by the ends of said recess, and spring



means normally holding said extension against one end of said recess.

2,446,754
RATE GENERATING MECHANISM
Elmer E. Garrett, Floral Park, and Walter F. Conable, Bellerose, N. Y., assignors to Ford Instrument Company, Inc., Long Island City, N. Y., a corporation of New York
Application April 12, 1940, Serial No. 329,216
8 Claims. (Cl. 74—1)



1. Means for obtaining an output rate proportional to a function of an input over a wide range comprising input means including two cams mounted to rotate about parallel, laterally displaced axes, means to introduce input values into said input means including a transmission operable on the cams individually and at different ratios, output means settable by said cams one at a time and continuously over the said wide range.

2,446,755
SPRING WINDER
